Ukraine's National Recovery Plan

National Recovery Council

July 2022

Context and objectives for Ukraine National Recovery Plan

Context

The Russian invasion of Ukraine has caused **massive disruption of economic activity** in Ukraine and **damage** to infrastructure, environment and livelihoods of Ukrainian people; current estimate of damages is ~$100bn and growing

Historically, **Ukraine has been lagging Central European** peers in terms of economic performance; Ukrainian GDP over the last 20y has been growing <2% p.a. vs. ~3.5% for Poland

Target Economic Recovery Plan is a unique opportunity not just to **recover war-related damages**, but to **leap-frog economic growth and quality of living in Ukraine**

Objectives for National Recovery Plan

Resilience

Provide economic, social and environmental resilience in the marathon to victory

Recovery

Find efficient solutions for the soonest recovery of the crucial economic and social processes, and natural ecosystems

Modernization and growth

Develop a modernization plan to ensure expedited sustainable economic growth and wellbeing of the people

Key guiding principles and implementation approach

Guiding principles	Comments
Start now, ramp up gradually	Need to **start recovery initiatives asap to build resilience and agility for the economy** to function under continuous security threats and provide the foundation to win the war. **Plan for gradual ramp-up of activities, with gradual increase of risk appetite,** as unlikely to have “clean victory” and “clean peace”, or clear milestones to transition from “recovery” to “modernization”.
Grow prosperity in equitable way	**Ukrainian people are the ultimate beneficiaries** of the Recovery Plan. Objective of the plan is to **grow GDP, and ensure equitable distribution of wealth, and overall wellbeing**
Integrate into EU	Overarching strategic imperative defining the **institutional and regulatory framework** Integration of Ukrainian economy into European **value chains**, incl. “green” ones, and **knowledge/information networks**
Build back better (for the future)	**Build back for better quality and more advanced and sustainable technologies** than the damaged/destroyed assets Align Ukraine's recovery and modernization with **EU principles: Green Transition and Digital Transformation**
Enable private investment & entrepreneurship	Recovery should enable Ukraine’s **private investment and boost nation-wide entrepreneurship** Support **SMEs as an important pillar** of the new economic model

Implementation approach

Region focused
Recovery projects to be localized in specific regions and supported by specific international partners

Parameter-based approach
The National Recovery Plan to provide overall guiding framework for the regional recovery plans and projects

The National Recovery Council was set-up by the President of Ukraine to coordinate Recovery Plan development

The President of Ukraine

National Recovery Council

Co-head: Head of the OPU

Co-head: Head of the Parliament

Co-head: Prime Minister

Secretary of the National Recovery Council

Secretariat of Cabinet of Ministers and Reforms Delivery Office – technical, organizational, analytical and information support

Advisory Board (reputable international experts)

- Verifying and discuss working hypotheses
- Providing experts support on selected priority topics
- Endorsing key decisions

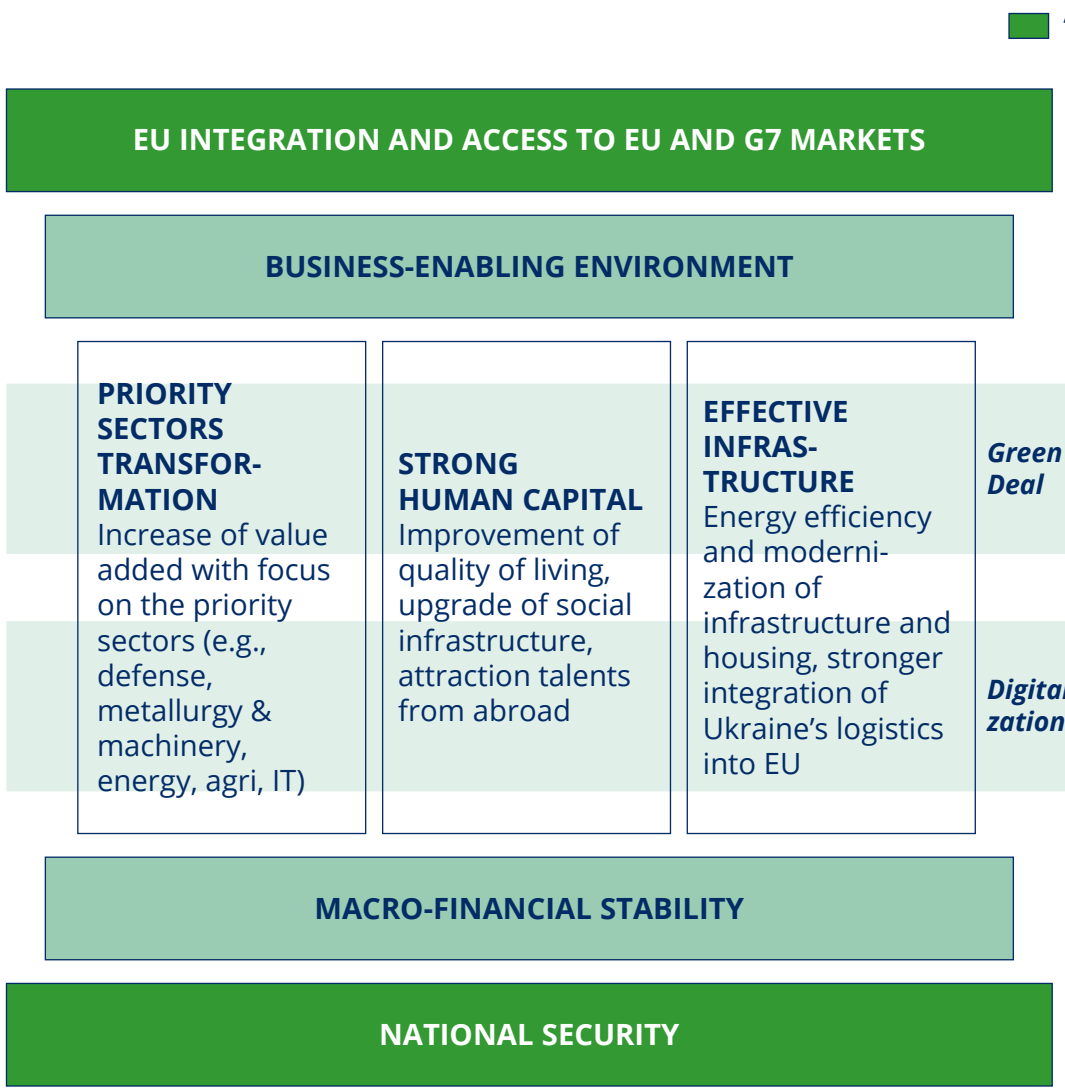
Ministers and Deputy Ministers

Parliament Representative

OPU Representative

24 Working Groups

- Coordinating content development for respective programs
- Aligning the programs with the priorities of branches of power
- Synthesizing final program blueprint



>2.500 experts, business and civil society representatives

- Providing inputs for respective working groups
- Validating hypothesis based on practical experience

Agenda

- **Recovery priorities**
- National programs – priority projects
- National programs – overview

Ukraine Recovery Vision: «Strong European Ukraine is a "magnet" for international investment»[1]

EU INTEGRATION AND ACCESS TO EU AND G7 MARKETS

- Fulfillment of **Copenhagen criteria**
- **Strengthening of institutional capacity**
- **Supportive trade regimes** with the key exports markets
- Synchronization with the **European Green Deal**

BUSINESS-ENABLING ENVIRONMENT

- **Investment attractiveness** (rule of law, tackling corruption)
- **Streamlined regulation and growth-promoting fiscal system**
- **Efficient and effective labor market (incl. reskilling programs)**
- **Entrepreneurship** development and **SME support**
- **Access to capital**

PRIORITY SECTORS TRANSFORMATION

- **Sectors' prioritization** in the context of economic opportunity, Ukraine's competitive advantage, global trends and Green Deal
- **"Catalyst projects"** to unlock private investment into priority sectors
- **Competitive cost of capital** (esp. in context of military risks)

STRONG HUMAN CAPITAL

- **Increased quality of life** (education, social protection, health care, environment, culture, sport) **and strong identity**
- **Proactive and efficient immigration policy,** aimed at brining Ukrainians back to Ukraine as soon as possible

EFFECTIVE INFRASTRUCTURE

- **Debottlenecking of logistics to reroute sea exports**
- Upgraded physical infrastructure to ensure **quick logistics between Ukraine and Europe**
- **Modernized and energy efficient housing** and urban design
- Developing **digital infrastructure** (inc. 5G) to transform Ukraine to a digital hub for European and Asian traffic

MACRO-FINANCIAL STABILITY

- **Fiscal stability** (incl. growth-promoting taxation and customs system, budget and debt policy)
- Effective **banking system and financial markets**
- Effective **public wealth** management

NATIONAL SECURITY

- Adequate level of **defense spending, self-sufficient military industrial complex** able to produce weapons for self-defense
- **Energy security**
- **Ecosafety**

1. «Сильна європейська Україна – магніт для іноземних інвестицій»

Ukraine's Recovery Plan also offers potential synergies for EU integration

Potential European Union synergy areas

- **Supporting EU's economic growth and resilience** thanks to market expansion, more compact and resilient supply chains and nearshoring, and access to cost-competitive critical resources
- **Strengthening security, incl. cybersecurity, energy security** through Ukraine's defense sector and strong energy sources and infrastructure
- **Contributing to implementation of EU Green Deal** thanks to the vast Ukrainian low-carbon energy resources, incl. RES, and existing energy infrastructure
- **Contributing to innovation,** on the back of strong talent pool, entrepreneurial track record and already high innovativeness position (3rd in Global Innovation Index among lower-middle income group)

Ukraine's Recovery ambition is to accelerate sustainable economic growth

2032 targets

>7%

Annual GDP growth rate

>$750 bn

Accumulated investment

TOP 25

Economic Complexity Index[1]

TOP 25

World Bank Human Capital Index[1]

-65%[2]

CO2 reduction from 1990

1. Current positions: WB HCI – 53 (2020), ECI – 47 (2019)
2 According to current NDC-2

Strengthening institutional capacity and "de-oligarchization" are fundamental pre-requisites of the Recovery Plan

	Priority initiatives (non-exhaustive)
Public data transparency	• **Centralization and digitalization of public registers**, ensuring physical and cyber protection • Providing restricted access to digital registers to **strengthen transparency and accountability**
Rule of law reform	• **Finalizing anti-corruption system** relaunch (SAP, NABU, ARMA) • **Implementing legislature** re High Qualification Commission of Judges of Ukraine and Supreme Council of Justice • **Implementing law-enforcement agencies reform** (e.g., reducing punitory function of Security Service of Ukraine, strengthening independence of Economic Security Bureau of Ukraine)
Corporate governance	• Implementing **new corporate governance legislation** (expanding authority of the Supervisory Board, incl. appointment of the CEO, approval of the financial plan) • **Finalization of corporatization** of SOEs (e.g., EnergoAtom) • Centralization of public wealth management function, setting-up **National Wealth Fund** • **Privatization of non-critical enterprises**
Anti-trust	• **Synchronization with European best practices** (e.g., introduce mechanism to detect cartels, review merger threshold definition, review of concentration in key industries) • **Professionalization** of the anti-trust organization
Public service reform	• Streamlining of the **public services organizational structure** • **Digitization of all key public services**, with supportive infrastructure measures to provide equal access • Development of **architecture for climate governance** (e.g. creation of coordinating agency ensuring sustainability strategy implementation across ministries, alignment of sustainability performance with budget, creation of accountability institutions) • **Professionalization of the public service** (incl. market level compensation level)

National Recovery Council have identified 15 “National Programs” to boost Ukraine’s Recovery and achieve growth targets

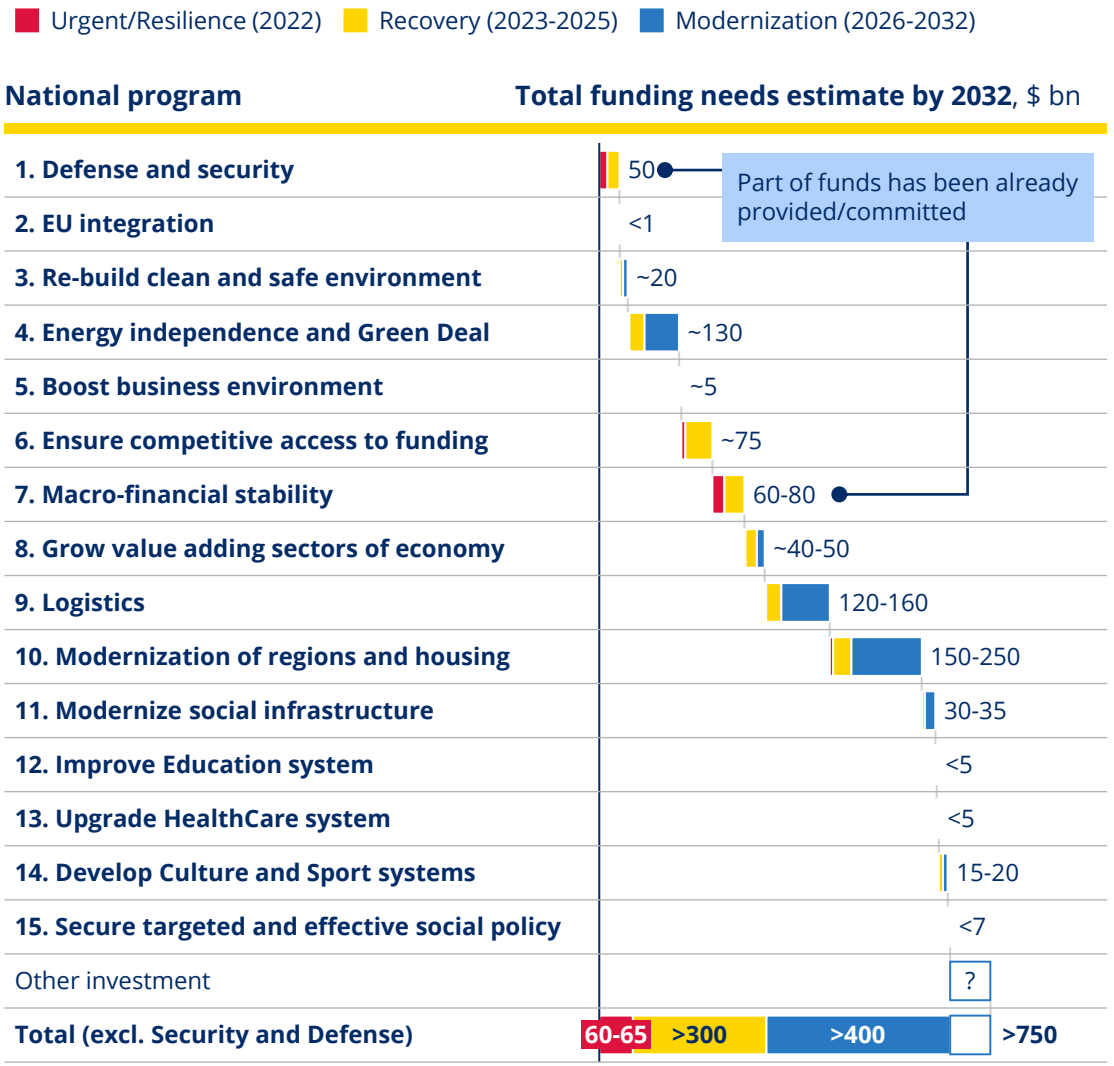
Ukraine’s National programs (see program details and priority projects in the Annex)

	“War time economy” (2022)	“Post-war recovery” (2023-2025)	“New economy” (2026-2032)
“Strategic imperative”	1 **Strengthen defense and security:** secure defense sector modernization, build-up of the defense industry		
	2 **Strive for EU integration**, incl. ensure synchronization of Ukraine regulation with Copenhagen criteria, secure access to markets		
	3 **Re-build clean and safe environment** and ensure sustainable development in line with the EU Green Deal		
	4A **Strengthen integrated energy system resilience:** increase ENTSO-E interconnects, link EU oil refineries with the storages in Western Ukraine, build-up gas storage	4B **Support EU’s zero-carbon energy transition:** develop zero-carbon power generation (nuclear and RES), increase gas and biofuels production, develop H2 ecosystem linked with EU	
Enablers	5 **Boost business environment:** streamline regulation, transform Tax and Customs services into service and compliance-focused, develop effective labor market and at-scale reskilling program, strengthen Investment Promotion Agency to attract FIDs		
	6A **Ensure emergency funding** (grants, guarantees, interest rate compensation	6B **Ensure competitive access to funding: provide access to funding with competitive cost of capital by** support growth of loans, establish targeted state/donors guarantees, introduce war insurance	
	7 **Secure macro-financial stability:** ensure stability of budget deficit and banking system while maintain healthy debt level		
Transformation engines	8 **Grow value adding sectors of economy** on the back of global trends, Green Deal and Ukraine’s competitive position: incl. steel, machine building (incl. defense and aerospace), agri and wood processing, construction sector, and IT		
	9A **Logistics de-bottleneck and integration with EU: de-bottleneck logistics with EU** for supply chains resilience, incl. in railway, river and roads	9B **Logistics de-bottleneck and integration with EU: strengthen interconnectivity of Ukraine by** develop 1435 gauge, re-build roads and bridges, expand corridor to EU	
	10A **Recovery and upgrade of housing and regions infrastructure: launch housing upgrade program** with priority focus on at scale Energy Efficiency program and new urban planning pilots (e.g., Bucha, Chernihiv)	10B **Recovery and upgrade of housing and regions infrastructure: ramp-up housing new-build and infrastructure upgrade** in line with the urban planning and sustainability best practices (incl. transport), upgrade utilities, incl. electrification, heating and water systems, digital	
	11 **Recovery and modernization of social infrastructure:** re-build destroyed social objects (education, healthcare, culture, sport), ramp-up PPP projects in social infrastructure in line with system reforms of education, health care, culture and sport		
	12 **Improve Education system** with focus on key competencies and innovation**:** NUS and core school reform, universities standards harmonization with EU, develop R&D at universities, reform vocational education, boost IT education, create science parks		
	13 **Upgrade HealthCare system:** advance on universal health coverage and financing reform, develop efficient health care network, develop and promote digital health, conduct targeted interventions campaigns		
	14 **Develop Culture and Sport systems** to enable human capital growth		
	15 **Secure targeted and effective social policy:** upgrade targeted subsidies system, introduce 2nd level (accumulative) of pensions system, develop comprehensive ecosystem for children protection, develop support programs for refugees and veterans integration, streamline immigration regulation		

Assistance, needed from Partners

- Support on the way towards EU integration and unlocking access to markets
- Assistance in strengthening mutual defense and security system
- Financial support, incl. facilitation of private investment

Funding analysis of the immediate priorities estimated at ~$60-65bn (excl. Security and Defense)



Immediate priorities for Ukraine

- Ensure military security
- Ensure macro-financial stability
- Support business and employment (incl. state supported work opportunities)
- Strengthen energy sector and logistics resilience
- Provide social support to IDPs and war affected population
- Minimize negative impact on environment

National programs	Critical projects	Funding needs, $bn
1. Defense and security	• Secure critical military supplies and needs	15-20[4]
2. EU integration	• Continue systematic effort on synchronization of Ukraine's legislation with Copenhagen criteria	<0.1
3. Re-build clean and safe environment	• Launch massive demining effort (up to 5% of UA territory in 2022) • Secure military waste utilization	1-2
4. Energy independence and Green Deal	• Power: prepare blocks for max. availability during winter, incl. mothballed gas blocks • Switch to biomass and biogas for district heating, where possible • Launch Energy Efficiency program (see Program #10) • Push work on interconnect extension (power, oil products) • Build-up gas reserves in storages (working capital)	~5-10
5. Boost business environment	• Improve ease of doing business via a deregulation crowd-sourcing initiative • Set-up PPP re-employment platform with short-term reskilling program (up to 700 thsd people coverage)	<0.1 ~0.5
6. Ensure competitive access to funding	• Provide wartime emergency financing for SMEs affected by war • Introduce mechanism of guarantees / "war insurance" for targeted investments (e.g. infrastructure, construction, agri processing)	~3-10[1] <0.5
7. Macro-financial stability	• Secure sources of financing for the state budget	~30-35[4]
8. Grow value adding sectors of economy	• Agri: provide low-cost financing of liquidity, storage, destroyed equipment; unlock quick processing expansion • Construction: launch investment into supply chains for key rebuilding and energy efficiency materials (e.g., glass, windows, insulation)[3] • Other low capex: unlock new investment into wood processing, textile, IT[3]	~1-2
9. Logistics	• De-bottleneck rail, road and Danube exports to/thru EU, secure 2x export volumes compared to April-May	~2-3
10. Modernization of regions and housing	• Roll-out at-scale energy efficiency ("EE") and prepare housing (incl. IDPs) for winter; >20k housing units thermo modernized in 2022, >100k new housing units constructed (finishing construction started before war)	~2-3
11. Modernize social infrastructure	• Launch program to re-build destroyed social infrastructure (educational, healthcare, culture, sport)	~1
12. Improve Education system	• Introduce mobile education & science facilities, scale up tutoring programs to address learning losses	0.1
13. Upgrade HealthCare system	• Launch psychological rehabilitation program, incl. through telemedicine • Start preparing for e-Health: expand healthcare data, create specialized modules, medicines register and strengthen IT infrastructure	0.1
14. Develop Culture and Sport systems	• Support national and international UA media	0.1
15. Secure targeted and effective social policy	• Launch transformation of complex social benefits system • Introduce communication and incentives[2] campaign to attract back Ukrainian refugees to target positive balance of migration of >1 million people in H2 2022	~2
	TOTAL:	**60-65** (excl. Security and Defense)

1. Broad range explained by different types of funding mechanism – interest rate compensation vs. grants
2. Incl. housing support, reskilling program subsidy, add. social support subsidy
3. Conditional to war insurance
4. Incl. provided commitments

Total funding needs are >$750 bn; ~2/3 will require support from partners (grants, debt and equity)

Potential structure of funds (illustrative), bn USD
(numbers excl. Security and Defense)

	2022	2023-2025	2026-2032	TOTAL
Partner grants, e.g.:	**~60-65**	**~100-150[1]**	**~100-150[2]**	**~250-300**
Defense				
Emergency budget financing				
Rebuilding of destroyed housing/infrastructure				
Enablement/de-risking of private investment (incl. "war insurance" subsidy)				
Infrastructure development as part of EU Structural Funds (when eligible)				
Partner debt/ equity, e.g.:	**-**	**~100-150[3]**	**~100-150[4]**	**~200-300**
Infrastructure/housing modernization				
Large-scale energy projects				
Financial system support				
Co-financing of private investment				
Private investment	**-**	**>50**	**>200**	**>250**
Co-financing into infrastructure projects (incl. PPP)				
Value-adding sectors				
Other commercially viable investments				
			TOTAL:	**>750**

Cost of recovery of damaged assets currently estimated at ~$165bn

1. Damaged infrastructure
2. Potentially financed via EU Structural Funds, based on CE countries benchmarks
3. Non-damaged infrastructure assumed, banking system support
4. Infrastructure needs, not covered by EU Structural Funds

Recovery Plan next steps

Stage #1 (ongoing)

Recovery Plan blueprint

- Defining top-down development targets
- Collecting development projects and initiatives via inclusive process
- Prioritization of projects and initiatives, identifying “catalyst” projects
- Consolidation of the priority initiatives into a holistic Recovery Plan Blueprint

Stage #2

Recovery Plan drill down and road-map

- Specification and elaboration of the Recovery Plan with the local stakeholders and international partners
- Setting-up Recovery governance structure to support implementation
- Synchronization of the Recovery Plan with the Government Program
- Preparing a detailed implementation road-map, defining clear deadlines and responsible
- Launching immediate priorities projects

Jul 4th-5th
Lugano Conference

Stage #3

Implementation

- Launching Recovery Plan implementation
- Regular monitoring of results and adjusting the program as needed

Agenda

- Recovery priorities
- **National programs – priority projects**
- National programs – overview

Data provided by the Working Group, The Ministry of Defense of Ukraine

Programs deep-dive (1/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 **"Strategic imperative"**	**1A. Defense Modernization and Development**	1A.1 Professional Armed Forces of Ukraine, other components of the defense forces 1A.2 Comprehensive rearmament of the defense forces 1A.2 Solving the housing problem and infrastructure development	~To be determined by the results of the Government's capabilities review	Savings in terms of training costs for staff and departments Percentage of new (modernized) armament	Restoration of military infrastructure New system of military education	2022-2025	Overall economy Investments Light industry Construction
	1B. Development of the Defense Industry	1B.1. State target program for the development of the aviation industry 1B.2. Establishment of the Defense Technology Agency and Defense accelerator (Diia Tech & Defense) 1B.3. State target defense program for the implementation of projects for the development of new technologies 1B.4 State target program of reform and development of the defense-industrial complex. 1B.5. State Targeted Defense Program for Missile Weapons Development.	~0.5 <0.5 ~0.1 0.5 5	Creation of jobs Increase of production Increase of export Investment into defense industry	Launch of public-private partnership projects Development of armored vehicles production Development of radar production Development of shipbuilding Development of exhibition activities to promote exports	2022-2030	Defense industry Steel Machinery

"Strategic imperative"

Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
3. Re-build clean and safe environment **Funding: ~20 $ bn**	**3A. Ecological safety**	**~18.4**	Reduction of greenhouse gas emissions compared to 1990 Improving environmental safety Reduction of environmental pollution	Restoration of scientific and research infrastructure within the "Chornobyl Scientific Hub"		Economy in general
	3A. 1. Creation of an ecological web portal "EcoSystem"	<0.1			2026-2032	
	3A. 2. Assessment of damage and damage to the environment and the need to restore the environment as a result of Russian armed aggression	<0.1			2022	
	3A. 3. Ecological restoration of the territory of the Radical plant	<0.1			2023-2025	
	3A. 4. Ecological restoration of salt mines Solotvino	<0.1			2026-2032	
	3A. 5. Taking fire safety measures in the exclusion zone	<0.1			2023-2025	
	3A. 6. Transformation of the Shelter object into an ecologically safe system	<0.1			2026-2032	
	3A. 7. Modernization of the radiological monitoring and dosimetry system in the exclusion zone	<0.1			2026-2032	
	3A. 8. Creating a network of enterprises for processing pneumatic tires	<0.1			2023-2025	
	3A. 9. Restoration and development of waste management infrastructure	~8			2023-2025	
	3A. 10. Ecomodernisation of industrial enterprises	~10			2026-2032	
	3A. 11. Restoration of radwaste management infrastructure and its development	<0.1			2026-2032	
	3B. Balanced use of natural resources	**~0.2**				
	3B. 1. Construction of 7.5 km of forest roads	<0.1			2023-2032	
	3B. 2. Increasing the mineral resource base of Ukraine	0.2			2026-2032	
	3C. Preservation of natural ecosystems	**~1**				
	3C. 1. WOW-nature: national parks for people	0.7			2023-2025	
	3C. 2. Creation of a network of regional centers for rehabilitation and rescue of wild animals in Ukraine	<0.1			2023-2026	
	3C. 3. Restoration of wildlife in Ukraine	0.3			2026-2032	
	3C. 4. Creating a network of 15 ecoducs in Ukraine	<0.1			2026-2032	
	3D. Other	**N/A**				
	TOTAL	**~20**				

Note: Some projects are included in other national programs

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Programs deep-dive (3/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 "Strategic imperative"	**4A. Strengthen integrated energy system resilience** **Funding: ~14 $ bn**	4A.1 Expanding interconnect with ENTSO-E	~0.6	Decrease % of primary energy imports from Russia and Belarus Investments into infrastructure	Agreement with EU, development of network in Poland Anti-missile security of assets in Ukraine, war-proof design	2022-2025	Energy Construction Infrastructure
		4A.2 Oil, oil products emergency stock for 30+ days	1.2+				
		4A.3 Natural gas stock replenishment	5				
		4A.4 Securing gas supplies/storage for EU and Ukraine (e.g., extension of Świnoujście/Gdansk LNG and/or interconnect or import from Turkey/Italy/Germany)	0.7[1]				
		4A.5 Expanding oil refining capacity post-war (rebuild Kremenchuk refinery, building/modernizing +1 plant) + oil pipeline Brody-Adamova Zastava	~2.5				
		4A.6 Oil products infrastructure linked to EU and secure oil products storage hub in Western Ukraine	0.7				
		4A.7 Modernizing gas transmission and distribution networks	2.5				
		4A.8 Re-build damaged energy objects, including Kremenchuk, Chernihiv, Okhtyrka CHPs)	0.6				
	4B. Support EU's zero-carbon energy transition **Funding: ~114 $ bn**	4B.1. Build out 5-10 GW RES and ~3.5 GW hydro and pumped hydro capacities (can be more if export opportunity secured)	15	Decrease % of primary energy imports from Russia and Belarus Decrease CO2 emissions Investments into infrastructure	Deoccupation / derisking of southern regions Green tariff regulation IAEA licensing of Ukraine's new and existing nuclear blocks H2 regulations Collaboration with Western partners (incl. potential offtakers and TSOs)	2024-2032	Energy Construction Infrastructure
		4B.2. Increasing nuclear capacity (prolongation, safety, higher utilization of existing capacities, and 2 GW new blocks at Khmelnytskyi NPP)[2]	~14				
		4B.3. Developing biofuels (bioethanol, biodiesel, biomethane) production from agri produce, residues and waste	~4.2				
		4B.4. Localizing nuclear value chain (sustainable uranium mining, plant for fuel production, waste storage)	1.3				
		4B.5 Increase gas production from existing fields, develop tight gas fields (not including Black Sea shelf ~$11 bn)	~18				
		4B.6. Build 1.5–2 GW peaker and 0.7–1 GW of storage	~2.8				
		4B.7. Localize RES equipment production (towers, transformers, cables, electrolyzers, Li batteries…)	~2				
		4B.8. Build out ~15 GW electrolyzer capacities	~7				
		4B.9. Develop H2 transport infrastructure to connect H2 production sites with consumers in Ukraine and abroad	2				
		4B.10. Build 30+ GW RES for H2 production	38				
		4B.11. Build smart grids	5-10				

1. Not including cost of LNG terminal expansion (~$0.6 bn/2.5 bcm of gasification capacity)
2. Extra blocks (up to 7) require additional cost-benefit consideration due to significant CAPEX and limited baseload requirements (i.e. likely export-oriented). Memorandum with Westinghouse is non-binding

Programs deep-dive (4/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 Enablers	**5. Boost business environment** **Funding:** **~5 $ bn**	**Deregulation**		Rank in business environment rankings Time to get electricity	Urban master planning alignment with energy needs Land use regulations Tariffs adjustment to charge for unused capacities	2023-2025	Overall economy
		5.1. Assess scope for deregulation through (a) running Red Tape reduction program with crowdsourcing of ideas and optimized process of regulations review, (b) establishing systematic regulatory burden measurement and regulatory impact analysis of draft laws and regulations	<0.1				
		5.2 Review concentration degree in the priority industries	<0.1				
		Tax and Customs transformation					
		5.3. Transform Tax service to compliance and service-oriented organization; resolve immediate blockers in tax administration	<0.1				
		5.4. Review potential for decreasing the share of tax revenue in GDP	<0.1				
		5.5. Transform Customs services to security and trade-facilitation focused organization	~0.1-0.5				
		Business support					
		5.6. Further develop Diia.Business as a one-stop-shop and key repository of information for SMEs	<0.1				
		5.7. Expand the functions and mandate of Investment Promotion Agency to proactively solicit FDIs for Reconstruction investment projects	<0.1				
		Infrastructure					
		5.8. Facilitate access to electricity for businesses	<0.1				
		Reconstruction procurement					
		5.9. Establish procurement practices for Reconstruction projects in line with EIB guidelines	<0.1				

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Programs deep-dive (5/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 Enablers	**5. Boost business environment** **Funding: ~5 $ bn**	**Labor market**		Unemployment reduction	Harmonization of labor market legislation with the EU Building collaborative links with labor agencies of EU countries for info and vacancies sharing	2023-2025	Overall economy
		5.10. Establish a program aimed at incentivizing new business creation (e.g., financing to start a business, etc.)	2				
		5.11. Increase labor mobility through (a) funding the transfer to other regions for job purposes, (b) simplifying regulations for foreigners' employment in Ukraine and Ukrainians' employment abroad	~0.1-0.5				
		5.12. Launch PPP re-employment program with reskilling part (physical and financial infrastructure, employers funding matching), up to 1 mn people coverage	~1-2				
		5.13. Transform Employment agency to re-employment focused organization, matching supply and demand (e.g., provide career advisory services, advanced demand planning model for skills)	<0.1				
	6A. Provide access to emergency funding **Funding: ~10 $ bn**	6A.1. Introduce wartime government grants, loan guarantees and interest rate reduction	~10	Share of businesses paying their workers and suppliers	Expansion of 5-7-9 program	2022	Overall economy

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Programs deep-dive (6/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 Enablers	**6B. Provide access to funding with competitive cost of capital** **Funding: ~65 $ bn**	6B.1. Fine tune "5-7-9" program to target borrowers in priority sectors	~4	Loans / GDP SME loans / GDP Mortgages / GDP Deposits / GDP NPLs / total loans Capital adequacy ratio	Legal framework for covered mortgage financing Law on deposit guarantees Legal framework on pension funds Legal framework on a systemic NPL solution Legal framework for compensation for destroyed or damaged property	2023-2032	Overall economy
		6B.2. Introduce war insurance for investment projects in priority sectors	<3				
		6B.3. Develop covered financing to encourage mortgage lending (supported by IFIs with funding from institutional investors)	~40				
		6B.4. Strengthen banking capital (post war recapitalization and post-war capital increase to sustain lending growth)	~15-20				
		6B.5. Consider a possibility to establish a development bank	n/a				
		6B.6. Adopt regulatory measures to attract deposits (e.g., raise deposit guarantee ceiling, Introduce pension accounts)	n/a				
		6B.7. Consider a systemic solution to clean up banks' balance sheets and resolve non-performing loans (incl. "Bad Bank" option)	n/a				
	7. Secure macro-financial stability **Funding: ~60-80 $ bn**	7.1. Secure sources of financing for the state budget until Ukraine regains market access (2022-2025 time horizon, preliminary)	~60-80	Government debt to GDP	-	2022-2025	Overall economy Government Banking

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Programs deep-dive (7/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
Transformation engines	**8. Grow value adding sectors of economy** **Funding: ~50 $ bn**	8.1. **Agri:** Develop agri processing (starch, corn syrup, gluten, lecithin, protein) in alignment with EU Green Deal principles	~10.2	Investments into priority sectors Increase economic complexity Growth of exports New jobs created	H2 regulations Collaboration with Western partners (incl. potential offtakers) Deoccupation and protecting of eastern regions Reskilling program for employees with technical background Harmonize data management legislation with EU Develop attractive business environment for start-ups and R7D FDI (e.d. taxation)	2023-2032	Energy Steel Machinery Construction IT
		8.2. **Agri:** Build 1 mha irrigation system in compliance with EU directives	~4				
		8.3. **Agri:** Develop high-value-add agri produce (vegetables, fruits, berries, seeds)	~7.7				
		8.4. **Agri:** Recultivation of damaged land	1.6				
		8.5. **Agri:** Increase meat and milk production and processing	~5.5				
		8.6. **Agri:** Promoting the transition of the agri-food sector to "green" growth (by enabling precision farming)	~1.1				
		8.7. **Agri:** Fast restoration after the war of 10.5k agricultural enterprises	~6.5				
		8.8. **Furniture:** Development of production clusters	~0.8				
		8.9. **Machine building:** create automotive component hub, incl. production of automotive components (e.g., wiring sets, tires, glass, seats) for automotive clusters in CE and development of production of batteries for EVs	~3				
		8.10. **Machine building:** Grow agri machinery	~0.2				
		8.11. **Metallurgy**: Localize finished rolling production in the context of reconstruction: coated steel, plates, rails and beams (up to 5 Mt), imported steel articles	~2.6				
		8.12. **Metallurgy**: Build/modernize iron ore beneficiation (floatation) and build new pelletizing capacity to produce 7 Mt of DR-grade pellets	~0.7				
		8.13. **Metallurgy**: Build H2-compatible DRI/HBI modules to produce 5 Mt of DRI/HBI	~1.5				
		8.14. **Metallurgy**: Build 2,5-5 Mt EAF for green steel	~1				
		8.15. **IT:** Attract R&D companies	~0.5				
		8.16. **IT:** Develop start-up ecosystem (innovation hubs, accelerators , incubators, platform)	~0.5				
		8.17. **IT:** Support start-ups through grant funding, VC development, matching programs	~0.6				
		8.18. **IT:** Development of Open Data platform	<0.01

Programs deep-dive (8/13)

Transformation engines

Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
9A. De-bottleneck logistics with EU **Funding: >2,4 $ bn**	**9A.1 Extending throughput capacity on the border with the EU**	**>2.4**	Growth of exports to/through EU Investments into infrastructure Capacity of export routes to EU	Simplified/ streamlined process (single check on border, acceptance of veterinary certificates) EU railroad/rolling stock capacity	2022-2025	Infrastructure Construction Machinery Steel Agri
	9A.1.1. Construction of ~200 km of 1435 rail and ~330 km of 1520 rail to the EU border and Danube	~1.4				
	9A.1.2. Construction of EU cross-border agri. storages and terminals	~0.2[1]				
	9A.1.3. Reparation and modernisation of sorting stations on key routes (particularly export ones)	~0.2				
	9A.1.4. Maintenance of 20+ freight car relocation equipment from 1520 to 1435 mm rail track	~0.0				
	9A.1.5. Modernisation of 12 existing EU road border points and construction of 3 additional ones	~0.1				
	9A.1.6. Expansion of throughput of Danube port infrastructure (incl. agri)	~0.5[1,2]			2026-2032	
9B. Strengthen interconnectivity of Ukraine by upgrading logistics **Funding: >114 $ bn**	**9B.1 Short-term reconstruction and modernisation of infrastructure**	**>35.4**	Growth of exports to/through EU Investments into infrastructure Growth of economic complexity Capacity of export routes to EU	Attraction of foreign locomotives technologies with possibility of high degree of localization Monetisation of the road infrastructure for trucks with a full weight of >12 t Implementation of road maintenance contracts	2022-2025	Infrastructure Construction Machinery Steel
	9B.1.1. Construction, reconstruction and modernisation of rail tracks and bridges (incl. war damages)	~N/A[3]				
	9B.1.2. Reconstruction of 293 km of rail tracks, 95 turnouts, supporting stations	~0.2				
	9B.1.3. Renewal of ~5,800 railcars and ~190 locomotives	~0.1[4]				
	9B.1.4. Construction, reconstruction and modernisation of 24,900 km of roads and 1,750 bridges (incl. War damages)	~33.9				
	9B.1.5. Reconstruction of 5-7 damaged by war airports	~1.2				
	9B.2 Long-term reconstruction and modernisation of infrastructure	**>75.7**			2026-2032	
	9B.2.1. Construction, reconstruction and modernisation of rail tracks and bridges	~N/A[3]				
	9B.2.2. Electrification of rail tracks	~N/A[3]				
	9B.2.3. Renewal of railcars and locomotives	~N/A[4]				
	9B.2.4. Construction, reconstruction and modernisation of 27,200 km of roads and 3,000 bridges	~75.7				
	9B.2.5. Construction of public green charging power stations (incl. grid update)	~N/A[3]				
	9B.3 Construction of high-speed rail Kyiv–Warsaw	**~1.2**				
	Other	**~1.5**			2022-2032	

1. Including agriculture working group suggestions for infrastructure estimated at ~$0.5 bn in total 2. Construction of the Danube-Black Sea deep navigation to be estimated when Romanian authorisation is obtained 3. To be estimated when war outcomes are more clear 4. Before the war plan was to renew 46,000 freight railcars by 2024; >90% of ~3,600 locomotives are outdated 5. Converted to USD based on 1:29.25 exchange rate

Programs deep-dive (9/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
Transformation engines	**10a. Modernize regions: launch housing upgrade program** **Funding: ~70-150 $ bn**	**Rolling-out energy efficiency and securing supply chain**		Decrease % of primary energy imports Reduce annual gas consumption Decrease unemployment	Regulation: Require higher energy efficiency in DBN Set-up Energy Efficiency fund (e.g. ESCO) to subsidize switching-cost Develop communication program Secure materials availability Simplify the administrative process for funding	2022-2025	Construction Energy Infrastructure
		10a.1. At-scale residential energy efficiency program	~59				
		10a.2. Develop communication program	<0.1				
		10a.3. Launch reskilling program for 150-200K employees[1]					
		10a.4. Localize insulation materials production (~13 mln m^3 p.a.)	~0.6				
		10a.5. Localize glass production (300 k t p.a.)	~0.4				
		10a.6. Localize windows production (5-6 mn units p.a.)	~0.1				
		Modernizing district and individual heating					
		10a.7. Modernize district heating (incl. installation of heat pumps, biomass)	~11				
		10a.8. At-scale installation of heat pumps to replace gas boilers in individual heating	~18				
		Providing temporary and re-building damaged housing[2]					
		10a.9. Temporary housing (converting non-residential buildings, social rent), financing (mortgages, compensation)	~10				
		10a.10. Build new housing infrastructure in line with the urban planning best practices (starting with high-visibility pilots, e.g. Bucha, Irpen, Chernihiv)	~31				
	10b. Ramp-up housing new-build and infrastructure upgrade **Funding: ~80-100 $ bn**	**Modernizing infrastructure and housing**		Decrease % of primary energy imports Reduce annual gas consumption Decrease unemployment	Regulation: Require higher energy efficiency in DBN Regulation: Require adherence to best practices in urban planning norms (e.g. population density, # of stores, …)	2023-2032	Construction Energy Infrastructure Steel Machine building
		10b.1. Modernize water and wastewater management system	up to ~42				
		10b.2. Current and capital repairs of existing building stock	~45				
		10b.3. Pilot projects for near-zero energy buildings (NZEB)	~1.4				
		10a.4. Pilot district cooling systems	~1.5				
		10b.5. Upgrade and electrify city transport based on local production of buses/trolleybuses, suburban rail e.g. in Kyiv	~1.5				
		Other priorites					
		10b.6. Diversification of economy and improvement of infrastructure of coal mining "monocities"	~1.7				
		10b.7. Other development programs and enabling projects	~6				

1. Funding included in other programs
2. There is partial overlap with mortgage program. Includes shorter-term (re-build damaged) and longer-term (build new) construction

Transfomation engines	**11. Modernize social infrastructure** **Funding: ~30-35 $ bn**	**Rebuilding social infrastructure:**		Number of objects restored / built Implementation of effective PPP mechanism			
		11.1. Restore destroyed or damaged infrastructure	~3.7			**2022-2023**	Education
		11.2. Modernize social infrastructure in accordance with principles of energy efficiency and accessibility	~28.7			**2022-2023**	HealthCare
		11.3. Build spaces for youth development	~0.6			**2022-2023**	Culture
		11.4. Building of industrial parks	~0.6				
		11.5. Develop special PPP program at government level with respective advantages for private investors					
	12. Improve education with focus on key competences and innovation **Funding: <5 $ bn**	**A. Primary and secondary education**		Grow in Human Capital Index and Global Innovation Index to TOP-25 countries	Enable continuation of education in Ukraine Review schools footprint to address displacement and demographic change		Overall economy
		12.A1. Short-term response: introduce mobile education facilities and programs for learning gaps compensations	<0,5			**2022-2025**	Education
		12.A2. Increase quality of education (including NUS reform roll-out and programs on performance improvement of the lagging schools)	<0,5			2023-2025	IT
		12.A3. Together with partners build / modernize / finalize flagship schools in regions (in line with education reforms in terms of content and format)	~1-2			2023-2032	
		12.A4. Project for new quality of teachers: teachers professional development , along with model of financial compensation, career path and growth programs	<0,5			2023-2025	
		B. Higher and vocational education			Overarching Digital Education Passport (covering all stages of education)		
		12.B1. Universities quality assurance - harmonization with Standards and Guidelines for Quality Assurance in the European Higher Education Area (ESG)	<0,1			2023-2025	
		12.B2. Investing in R&D through grants for researchers, private co-investment in researchers and think-tanks creation on a base of key universities	<0,5			2023-2032	
		12.B3. Updating IT programs for TOP-5 universities together with private sector	<0,1			2023-2025	
		12.B4. Reform of vocational education with private sector engagement, including integration to IT innovation hubs	<0,5			2023-2025	
		C. Science			Approve incentives for private sector for science investments (e.g. tax deductions)		Overall economy
		12.C1. Performance based grants system for researchers	<0,1			2023-2025	
		12.C2. Creation of Centers of Excellence (science parks) in cooperation with TOP international center	<0,1			2023-2032	

Programs deep-dive (11/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 **Transfor-mation engines**	**13. Upgrade Health Care system to enable human capital growth** **Funding: <5 $ bn**	13.1. Launch war-time and post-war mental health and well-being program "National program of mental health and psychological support "	<0,5	Grow in Human Capital Index from 53 rank to TOP-25 countries Increase Life expectancy from birth to EU avg level	Finalize reform of financing system in HealthCare (focusing state funding on critical and primary services), subsidize voluntary insurance for specific groups *(*with prior VHI model design and appropriate accompanying regulation to be approved)*	**2022-2023**	Overall economy HealthCare
		13.2. Rehabilitation services improvement program	<0,1			2023-2032	
		13.3. Strengthening primary healthcare to addressing the rising burden of non-communicable diseases (including promoting and increasing quality of family doctors service)	<0,1			2023-2032	
		13.4. Bring investments into and develop healthcare facility network (regional facilities with focus on primary care, heart diseases, cancer hospitals)	~3-3.5			2023-2032	
		13.5. Expand health care data, create specialized modules, medicines register and strengthen IT infrastructure	<0,1			**2022-2025**	
		13.6. Enhance digital health (e.g. patient cabinets, teleconsultations)	<0,5			**2022-2025**	
		13.7. Develop the mechanism for health workforce planning based on the needs, Improve leadership and management skills of hospital managers	<0,1			2023-2025	
		13.8. Develop and implement emergency and response plans: including launch national-wide campaign to address cardiovascular diseases	<0,5			2023-2025	

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Programs deep-dive (12/13)

	Program	Projects	Funding needs, $ bn	KPI	Other initiatives	Time horizon	Addressed sectors
 **Transfor-mation engines**	**14. Modernize Culture and Sport systems** **Funding: ~15-20 $ bn**	**A. Culture and Information Policy**					
		14.A1. Support international, national, regional and local media to enforce freedom of information, provide media literacy education	~3.4	Increase of culture infrastructure coverage	Develop financial (grants) and institutional (governance, education) capabilities of culture system	2023-2032	Culture and Information Policy Media
		14.A2. Develop physical culture infrastructure to promote national identity and cultural diversity (museums, memorials, centers of cultural services etc.)	~5.8			2023-2032	
		14.A3. Restore cultural heritage and infrastructure to promote national identity, access to culture	~0.7			**2022-2032**	
		14.A4. Develop digital culture (e.g. national e-library, e-services, e-archive, e-management)	1.1			2023-2032	
		14.A5. Develop Ecosystem for culture, history, memory, heritage and creative industries with focus on identity, arts, arts education	2.9			2023-2032	
		14.A6. Develop cinema and audio-visual production industry, creative industries infrastructure by granting financing, transformation of education system to make it more practical	~3.7			2023-2032	
		B. Youth and sport		Grow in National Exercise Level from current 105 rank	Targeted Ukraine learning programs for youth	**2022-2025**	Youth and Sport
		14.B1. Massive communication campaign to promote physical activity, Active parks development in Ukraine	<0,1				
		14.B2. Launch of «club system» of mass sport financing	<0,1	TOP-20 at Olympic games	Develop institutional capability in sport and youth management	**2022-2025**	
		14.B3. Reconstruction of 18 sports boarding schools and 100 CYSS	<0,5			2023-2025	
		14.B4. Realize Presidential “25 sport magnets”	<0,5			2023-2025	
		14.B5. Open 5+ flagship top-class sport objects that will ensure Ukraine’s ability to conduct world and regional level competitions, prepare athletes to Paralympic, Deaflympic, World Games	~2-3			2023-2032

Source: based on extensive discussions with government and industry experts within NRC Working Groups

Agenda

- Recovery priorities
- National programs – priority projects
- **National programs – overview**

National program #3: Re-build clean and safe environment

Position in the world

55
The Environmental Performance Index

46
Pollution Index for Country

Basic systemic challenges

- Low adaptive capacity to climate change
- Critical level of environmental safety
- Depletion of natural resources
- Critical loss of biodiversity

Effects of war

48 459
Movable assets seized, destroyed or damaged

1 334
Real estate seized, destroyed or damaged

20 %
Protected areas affected by the war

17
(627,3 k ha)
Ramsar sites in danger of extinction

160
(2,9 mln ha)
Territories of the Emerald Network in danger of extinction

4
Biosphere reserves in danger of extinction

Climate neutrality

- Adaptation to climate change

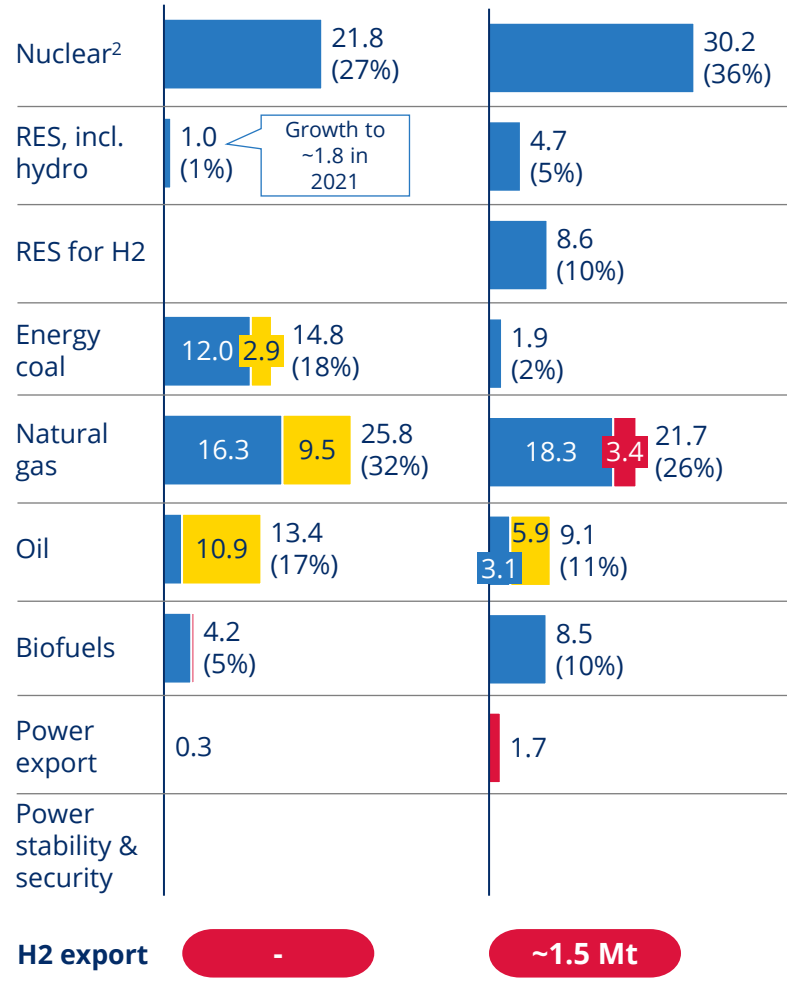
Ecological safety

- Creating an ecological web portal "Ecosystem“
- Fixation and calculation of losses of war consequences
- Ecological restoration of the territory of the Radical plant
- Ecological restoration of Solotvino salt mines
- Revitalization of the exclusion zone, reduction from 30 to 15 kilometers of zone
- Construction of about 130 modern waste processing complexes
- Ensuring the proper functioning of radioactive waste management facilities

Balanced use of natural resources

- Construction of 9 selection complexes for growing tree seedlings
- Increase of forest cover, renewal and improvement of forests (20% of the country's area)
- Creation of 170 recreational facilities
- Revitalization of 10 thousand km of rivers and reduction of losses from destruction of flood protection structures by 20%
- Increasing the mineral resource base of Ukraine

Effective public administration in the industry



- Reboot of the environmental control body

Preservation of natural ecosystems

- Construction of 10 European nature parks
- Construction of a network of ecoduks (15)
- Construction of 10 centers for rehabilitation and rescue of wild animals
- Increasing the area of protected areas up to 30%

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #4: Ukraine will support Europe's energy security and zero-carbon transition

Current challenges

- **Lifetime extension** required for 8 blocks by 2030
- **Decreasing capacity factor** (КВВП) of blocks
- **Dependence on Russian** fuel and waste processing

- **Fast growing sector with vast capital needs** and not-fully-resolved feed-in tariff and debts
- Increasing **balancing needs** for the energy system

- To avoid need for balancing, this part is not necessarily connected to energy system, but **directly to electrolyzers;** in case of grid connection, electrolyzers are providing balancing services

- **~46% imported,** both thermal and coking coal
- Ukraine made a commitment to **stop coal power generation by 2035**

- **Import accounts for ~30%** of gas consumption
- Low energy efficiency in mostly gas-based **house heating**
- **Depletion** of largest gas fields **exceeds 80%**

- Significant **imports from Russia and Belarus**
- **Refineries damaged** during the war
- Most oil fields are **80+% depleted**

- **Large resources, but lack of systemic push** for various kinds of biofuel production (biomethane, biomass, bioethanol, biomethanol, biodiesel)

- **Fast growing RES require balancing capacities** to maintain security and stability of the system

Key developments included in National Program

Short-term

- Roll-out **energy efficiency** at scale
- Replenish **natural gas stock in storages**

- **Expand oil product interconnector** w/ EU
- Build **strategic oil product reserve**

- Installation of STATCOM 4 x 50 MVA
- Reconfiguration of power system stabilizers at TPPs and HPPs, excitation systems of NPP units

Long-term

- **Extend lifetime, increase availability** of existing blocks
- **Build 2 new blocks**[3] at Khmelnytskyy NPP (more – in case long-term export agreements/low-cost financing secured)
- Build **fuel fabrication** and expand **waste storages** to stop reliance on Russia

- **Increasing RES capacity** (5-10 GW) as power source with the lowest LCOE (no green tariff for new build)

- **Vast buildup of RES** (up to 30 GW) **and Integration in EU's low-carbon H_2** value chain (pilot and then build-up up to 15 GW of electrolyzers) – volume may be higher depending on EU "appetite" for H2

- **Thermal:** phase out coal generation after the war ends and once extra capacity is secured from nuclear and/or gas/biomethane ramp up

- **Ramp up gas production** from existing fields, develop unconventional gas fields (e.g. in Poltava region) [4]
- **Expand gas interconnector with EU LNG terminals**
- **Energy efficiency** and **district heating** modernization

- **Expand refining capacities** (rebuilding Kremenchuk refinery and building/modernizing additional refinery)
- **Decrease reliance** on oil due to push towards electrification, H2 and biofuels (below)

- **Development of biofuels production and use:**
- Biomethane/biogas/waste gas (2 bcm – but higher potential exists with up to 5 bcm) and biomass for district heating and industrial use; bioethanol and biodiesel from agri produce

- Expanding **interconnector with ENTSO-E** (~7 GW) to potentially reach export of **~20 TWh**

- Build up **hydro accumulating** power plants (3.2 GW)
- Development of **peaker capacities / batteries** to balance additional RES capacities
- Development of **storage capacities** (e.g., lithium batteries) with **potential localization**
- Modernizing and expanding **power network**

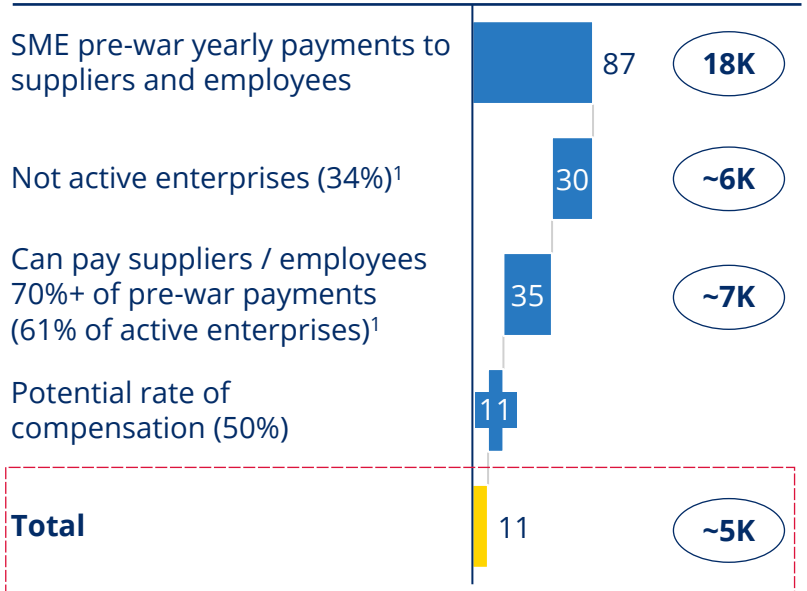
1. Base year is 2019, in order to conduct analysis without consideration of COVID lock-down disruptions
2. Nuclear energy is produced domestically; however, nuclear fuel is imported. Power output is 33% of input fuel
3. Extra blocks (up to 7) require additional cost-benefit consideration due to significant CAPEX, limited baseload requirements, and potential new blocks in CE countries
4. Extra upside (not included in base scenario): Black Sea shelf development
5. Conversion: 1 million toe = 11.6 TWh = 1.1 bcm of natural gas

Source: based on extensive discussions with government and industry experts within NRC Working Groups; Ukrenergo, Ukrstat, Powering Past Coal, Ukrgasvydobuvannya, A-95

National program #5: Boost business environment with aim to increase number of new businesses in Ukraine

Dimension	Blockers		Initiatives
Deregulation	**Ease of doing business 2020,** rank 	**Monopolization of the markets and cumbersome and frequently changing legislation** are considered respectively 3rd and 4th key obstacles to investment in Ukrainian assets[1]	**Assess scope for deregulation** through (a) running Red Tape reduction program with crowdsourcing of ideas and optimized process of regulations review, (b) establishing systematic regulatory burden measurement **Review concentration degree** in priority industries and implement measures to enhance competition
Tax and Customs transformation	**Paying taxes dimension**, rank 	**Tax service remains oriented towards primarily fiscal function**, further service improvement is possible Up to **40% of tax revenue in GDP** in Ukraine indicates rather high tax burden (against peers' ≤30%) Insufficient capacity, inconsistent requirements and procedures and lack of harmonization with the EU legislation remain pain points for Customs	Transform Tax service to **compliance and service-oriented organization**; resolve immediate blockers in tax administration Review potential for decreasing the share of tax revenue in GDP Transform Customs services to **security and trade-facilitation** focused organization
Business support	**Foreign direct investment, net inflows**, % of GDP 	For SMEs: central support platform (Diia.Business) exists, but requires further **functionality development** and promotion among businesses For investors: UkraineInvest serves as one-stop shop for investors; the agency might be **transformed for Reconstruction purposes**	**Further develop Diia.Business** as a one-stop-shop and key repository of information for SMEs (e.g., exports block, legislation updates) Expand the mandate of Investment Promotion Agency to **proactively solicit FDIs for Reconstruction investment projects**
Infrastructure	**Time to get electricity**, days 	**Shortage of distribution capacities** due to former inefficient regulations **Allocation of unused capacities:** e.g., capacity is blocked for an enterprise that is not active **Regulations delaying the process:** need to receive an approval for external wiring works from landowners, limited audit of land	Simplify the process of land allotment for **connection to electricity network** Consider including the **charge for guaranteed capacity** to the tariff, to incentivize disconnection from unused capacities Finalize the **audit of land**, develop plans of territories development from the standpoint of electrification
Employing workers	**Notice period for redundancy dismissal for a worker with 1 year of tenure**, weeks of salary 	**Outdated labor legislation** leading to complicated hiring and firing process, regulation of overtime, etc Ineffective control of **legislation execution** and weak infrastructure for employee rights protection Significant **mismatch between labor supply and demand**, professional education does not correspond to economy needs Focus on mostly **reactive support of unemployed** through financial help, rather than proactive investment into reskilling and integration of people into the workforce	Establish a program aimed at **incentivizing new business creation** (e.g., financing to start a business, etc.) Increase **labor mobility** through (a) funding the transfer to other regions for job purposes, (b) simplifying regulations for foreigners' employment in Ukraine and Ukrainians' employment abroad Launch PPP re-employment program with **reskilling** part (physical and financial infrastructure, employers funding matching), up to 1 mn people coverage Transform Employment agency to **re-employment focused organization**
Reconstruction procurement	Local businesses are likely to face **barriers while participating at the Reconstruction projects**: e.g., access to financing, infrastructure, labour, etc.		Establish procurement practices for Reconstruction projects in line with **EIB guidelines** (i.e., 15% margin of preference for goods manufactured or produced in the country)

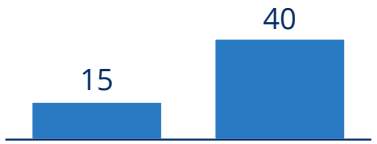
1.According to Foreign Investor Survey 2020, conducted by EBA, Dragon Capital and CES

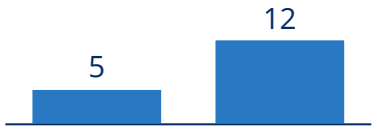


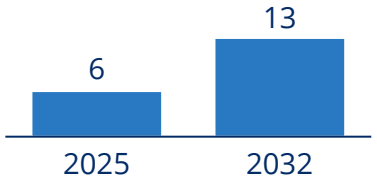
Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #6: Providing competitive access to funding is critical enabler for economic development

Emergency funding ~10







Emergency funding need estimation, bln USD

# of SMEs (medium)

Potential mechanisms to cover the funding needs

- Direct grants
- Credit guarantees
- Interest rate reduction (including loans to start a new business)

Post-war access to funding	Key initiatives	Funding needed, $bn
Loans / GDP, % 	Consider a systemic solution to **resolve non-performing loans** (e.g. "Bad Bank" option) **Raise banking capital** to support the growth of lending (incl. post-war recapitalization) Attract **private capital into banking system**, incl. privatization of SOBs	~15-20
SME loans / GDP, % 	Provide **credit guarantees for SME loans within priority sectors** • up to 80% of SME loan amount to be guaranteed • ~20-30% of SME loans to be support-ed in the priority sectors (e.g., agri and wood processing, construction)	~4
Mortgages / GDP, % 	**Introduce long-term covered financing / bonds** (similar to Pfandbriefe) supported IFIs and institutional investors to grow mortgages portfolio	~40

Additional measures to be considered:

- Introduce war partners' sovereign guarantees and/or insurance, backed by partners to facilitate private investment post-war
- Adopt regulatory measures to attract deposits (e.g., raise deposit guarantee ceiling, Introduce pension accounts)
- Establish development bank
- Develop capital market (incl. Pension system reform, Program #15)

1. Assumption based on the Survey conducted by Gradus and Kyiv School of Economics
2. Assumptions: 31% share of SME loans in total loans; 30% of SME loans are covered by credit guarantee; guarantees cover 80% of the loan volume

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #8: Grow value adding sectors of economy by accelerating Ukraine's competitiveness

Sector	Ukraine's competitiveness	Challenges and limitations	Key projects of the National Program	CAPEX, $ Bn[1]
Agriculture	• Land resources • Competitiveness, top export positions in crops and some other products	• Land degradation • Low level of processing • Low value added • High reliance on bulky imports	• Push to develop higher share of processing, esp. in corn (starch, syrup), wheat, sunflower oil (specialty oils), etc. • Development of high value-add sectors (e.g. berries, fruits, meat and milk) • Irrigation system to boost productivity	**~37**
Metallurgy	• Vast iron ore resource, suitable for DR-grade products • Cost competitiveness, top export positions in semifinished products	• Low competitiveness in finished products, net imports in many positions • High carbon intensity • Assets lost during war	• Casting and mills construction/modernization to produce finished products with local demand, incl. from recovery/rebuilding (plate, rail and beam, coated) • Push "green steel" value chain: DR-pellet production, DRI/HBI production with switch to H2, EAF/SAF green steel	**~6**
Machine building	• Asset base in few sectors • Educated and cost-competitive labor	• Limited technological advancement and export potential	• Focus on sectors to satisfy strong local demand, incl. from recovery/rebuilding (transportation, energy, agri) • Build auto components hub to nearshore production for EU producers, incl. batteries for EVs	**~4**
Construction and materials	• Available natural resources (wood, aggregates, ...) • Cost-competitive labor	• Limited capacity to match post-war recovery demand	• Focus on sectors to satisfy strong local demand, incl. from recovery/rebuilding (cement, insulation, glass)	**~1**
Furniture and wood processing	• Wood resources • Cost-competitive labor	• Underdeveloped asset base • Regulations	• Develop transparent EU-compliant wood/timber market • Grow competitive furniture production, incl. for exports (clusters in the Western Ukraine)	**~1**
IT	• Fast-growing exports • Educated and cost-competitive talent pool	• Low diversification • Underinvested start-up space	• Grow quantity and quality of talent pool • Stimulate start-ups, incl. through funding • Attract global R&D, incl. in automotive, telco, health	**~2**

1. Include both private and public investment. Majority of investment is expected to be originated by private players once competitive interest rates, war zone insurance and business environment measures are implemented

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #9: Transport infrastructure upgrade serves two goals – EU integration and interconnectedness within Ukraine boosts economy

	Urgent need: **De-bottleneck logistics with EU**	Long-term goals: **Upgrade infrastructure and strengthen interconnectivity**
Issue	• In 2021, Ukraine's **main exports** (80% by volume) and large share of critical imports (e.g., coal) were **going through ports, which are now blocked** • Even if ceasefire/lift of blockade is achieved, **diversification** of logistics is of high priority	• Transport infrastructure has been **heavily underinvested** in the past (e.g., 94% of locomotives are 25+ years old, and active road reconstruction has started in 2018 only) • On top of that, there are significant **damages from war** • Additionally, Ukraine is a **large country**, and negative impacts of poor infrastructure are amplified
Solution	**Extending throughput capacity on the borders with EU**: • Construction of **additional rails to the EU border and Danube** to expend multimodality with EU railways and Danube ports • Construction of **EU cross-border agri. storages and terminals** • Reparation and modernisation of **railway sorting stations** on key routes (particularly export ones) • Maintenance of **freight car relocation equipment** from 1520 to 1435 mm rail track • Modernisation of existing **EU road border points** and construction of additional ones • Expansion of throughput of **Danube port infrastructure**	**1/ Short-term reconstruction and modernisation of infrastructure** • Construction, reconstruction and modernisation of **rail tracks and bridges (incl. war damages)**, ensuring multimodality with Ukrainian ports and EU railways • Renewal of **railcars and locomotives** • Construction, reconstruction and modernisation of **roads and bridges (incl. war damages)**, ensuring multimodality with Ukrainian ports and railway • Reconstruction of damaged by war **airports** **2/ Long-term reconstruction and modernisation of infrastructure** • Construction, reconstruction and modernisation of rail **tracks and bridges (incl. electrification)**, ensuring multimodality with Ukrainian ports and EU railways • Renewal of **railcars and locomotives** • Construction, reconstruction and modernisation of **roads and bridges**, ensuring multimodality with Ukrainian ports and railway • Construction of **public green charging power stations** (incl. grid update) **3/ Construction of high-speed rail** Kyiv–Warsaw to expend multimodality with EU railways
Enablers	• **Alignment of infrastructure sector regulation with the EU acquis** by developing and adopting needed laws, regulations, frameworks, standards • **Adoption of regulations needed to create an attractive environment for private investors** e.g., potential compensations, insurance • **Continuation of launched before the war infrastructure sector modernisations**, including road safety, digitalisation, tolling • **Optimisation and making transparent tariffs** used for infrastructure utilization • **Stimulation of multimodal transportation** by developing control and regulatory measures	
Cost	**>$2 Bn USD[1]**	**>$114 Bn USD[2]**

1. Construction of the Danube-Black Sea deep navigation to be estimated when Romanian authorisation is obtained

2. Railway long-term investments not included ($30-40 high-level estimate), to be more accurately estimated

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #10: Modernization of regions and housing, incl. large-scale energy efficiency program, is a strategic priority

Large-scale energy efficiency

Energy efficiency improvement of buildings

~$60 Bn

incl. $1 Bn for localization of materials production

Modernization and optimization of heating (district and individual)

~$26 Bn

incl. $18 Bn for individual heat pumps

Modernization and optimization of heat distribution network

~$3 Bn

Better buildings and new urban planning

New housing in accordance with urban planning best practices

~$41 Bn

incl. temporary housing and re-build of damaged housing

Capital repairs of housing stock

~$45 Bn

Piloting near-zero energy buildings and centralized cooling

~$3 Bn

Other infrastructure modernization

Drinking water and wastewater treatment modernization

~$42 Bn

incl. $11 Bn for building new networks to provide wider access

Modernization and electrification of urban transport

~$2 Bn

Other priority programs

~$8 Bn

incl. $1.7 Bn for diversification of economy and improvement of infrastructure of coal mining “monocities”

1. Add-on effect after decrease in demand due to energy efficiency modernization of buildings is taken into account

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #11: Modernization of social infrastructure

Project	Scope	Required investment
Modernizing optimized social infrastructure to achieve high energy efficiency and accessibility standards	Depends on target network configuration	**~$29 Bn**
Building new social infrastructure in accordance with high energy efficiency and accessibility standards to develop the optimal network of social infrastructure	Depends on target network configuration	**~$2.4 Bn**
Repairing damaged infrastructure for provision of vital social services (healthcare, pre-school and school education, social protection and administrative services)	33% of damaged infrastructure	**~$0.6 Bn**
Preserving lightly-damaged non-critical infrastructure (higher education, sport, culture, part of administrative buildings)	12% of damaged infrastructure (463 objects)	**<$0.1 Bn**
Modeling optimal network of social infrastructure	Development of geodata system to define target network for social infrastructure	**<$0.1 Bn**
Post-war: repairing / rebuilding non-critical infrastructure, that was preserved and fits into optimal network of social infrastructure	Depends on target network configuration	**~$0.6 Bn**
Build out of development centers for children and youth	Private schools (25), creative economics centres (10), centres for patriotic education (25), science museums (35)	**~$0.6 Bn**
Build out of infrastructure for industrial parks	~60 parks	**~$0.6 Bn**
Develop special PPP program at government level with respective advantages for private investors	Covering healthcare, education, sports	**TBD**

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #12: Improve Education system with focus on key competences and innovation

Primary and Secondary education

- **Short-term response:** introduce relevant solutions (i.e. distant/mobile education applications/facilities) and programs for assessment-based learning gaps compensations
- **Increase quality of education**
  - Improve content and curriculum by full-scale implementation of **NUS reform** to adapt learning program and approach to prepare children to modern challenges developing critical thinking, entrepreneurship
  - Improve performance of the lagging schools by teacher rotation and additional financing
  - Build / Modernize regional schools that can become flagship schools for the region and boost quality of education
- **Project for advancement quality of teachers:** teachers professional development, along with model of financial compensation, career path and growth programs
- Integration of science and innovation to the classroom

Higher and vocational education

- **Higher education system harmonization with European Higher Education Area**
- **Invest in R&D** (grants for researchers, private co-investment in researchers) **and think-tanks on a base of key universities**
- **Co-development of IT programs in TOP-5 universities** together with private sector
- **Reform of vocational education:** curriculum redesign, teachers studies, optimizing network, prioritizing areas, private sector engagement, including integration to IT innovation hubs

Science

- **Performance based grants system for researchers**
- **Creation of Centers of Excellence (science parks)** in cooperation with TOP international centers

Enablers

- **Overarching Digital Education Passport**

Indicator	Current state	2032 indicative target
PISA Math score (secondary education) for Ukraine comparing to 516 for Poland	**453**	**520**
Pupils per school	**220**	**300**
Ukraine's universities in **TOP-1000 QS World University Rankings**	**6**	**20**
Attractiveness of vocational education for school graduates	**35%**	**55%**
Average impact of articles as measured by citations/article	**7.7**	**12.8**

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #13: Upgrade Health Care system, that will help unlock human capital growth

Healthcare network and capabilities

Develop efficient healthcare network

- Implement integrated service delivery model that ensures provision of safe and quality health care services
- Develop and invest in the efficient health care facility network with increasing quality of technologies (e.g. regional facilities with focus on primary care, heart diseases, cancer hospitals)

Strengthen health workforce

- HealthCare education reform, upgrade of health workforce planning
- Improve leadership and management skills of hospitals managers

Promote health data and digital health

- Create drug registers to improve pharmaceutical supply chains and monitoring
- Facilitate telemedicine solutions to enhance preventive & primary care services
- Modernize health care facilities IT infrastructure (computers and internet coverage) to efficiently support 31M+ of already existing clients with signed e-declaration (eID)

Financing

Advance Universal Health Coverage

- Expand Program of Medical Guarantees to ensure adequate access to services and essential medicines; Finalize "pay for performance"; Secure transparent, fair tariffs for services

Subsidize voluntary health insurance for special groups of people (*with prior VHI model design and appropriate accompanying regulation to be approved)

Targeted campaigns

Develop public health programs to address risk factors for diseases and conditions that are leading causes of DALYs

- Nationwide program to address high death rate associated with cardiovascular diseases (#1 cause of DALY in Ukraine) that will include communication campaign, upgraded incentives, proactive outreach, screening programs, etc.
- Develop comprehensive national emergency preparedness and response plan at all levels, including national (multi-sectoral), regional and facility level interventions

Wartime and post-war mental health program to support needs of people affected by the war (at least 60% of Ukrainians need psychological help)

- Rehabilitation services improvement program and integration across health care delivery continuum

Indicator	Current state	2032 indicative target
Increase outpatient expenditures share to the corresponding share in Poland	24%	31%
Optimize hospitals beds per 1000 people (currently 40% more than EU average) to the corresponding UK ratio	6,4	3
Increase satisfaction rate in inpatient care services to the level of satisfaction with family doctors	52%	73%
Increase teleconsultation market penetration in Ukraine to the level of Spain	0,9%	3%
Increase share of GDP allocated to domestic general government health expenditure	3,2%	5%
Decrease share of Out-of-pocket spending on healthcare to the level of Poland	70%	20%
Decrease probability of dying between age 30 and exact age 70 from NCD to the level of Poland	25,5%	17%
Decrease depression rate (the highest worldwide) to the level of UK	6,3%	4,5%

Source: based on extensive discussions with government and industry experts within NRC Working Groups; Health Index Ukraine, Ministry of healthcare of Ukraine, Statista, WHO

National program #14: Modernize Culture and Sport systems to enable human capital growth

Infrastructure

- **Culture: Develop physical culture infrastructure to promote national identity and cultural diversity** (museums, memorials, centers of cultural services etc.)
- **Culture:** Develop digital culture instruments (e.g. national e-library, issuing e-books, war-time map, e-services, e-archive, e-management)
- **Youth and Sport: Develop sport infrastructure for mass sport and high achievements sport** (e.g. reconstruction of sports boarding schools, realization Presidential "25 sport magnets", creation of flagship top-class sport objects)
- **Youth and Sport: Develop Active parks across Ukraine with supportive communication campaign** to promote physical activity

Information policy

- Support national, regional and local media and broadcasting, via government emergency funding for resilience period, via state order during reconstruction and modernization
- Provide media literacy education and counter disinformation
- Develop Ukrainian international media

Capabilities

- **Culture: Improve education of specialists through global integration** (e.g. cinema directors and specialist)
- **Culture: Develop ecosystem for culture, memory, heritage and creative industries** with focus on decentralization, art development and education

Financing infrastructure

- **Culture: Increase financing of UCF and / or introduce similar competition based funds** to stimulate independent culture development and creative industries
- **Youth and Sport:** Launch of «club system» of mass sport financing

Indicator	Current state	2032 indicative target
World Happiness Index, rank	**108**	**50**
Culture financing as % of GDP	**0.3**	**0.5**
Household expenditure on culture, %	**0.9**	**2.9**
National Exercise Level, rank	**105**	**35**
State expenses per capita, $	**8**	**58**

Source: based on extensive discussions with government and industry experts within NRC Working Groups

National program #15: Secure targeted and effective social policy, including returning refugees

Broader social protection measures for Ukrainians

~29%
Pension replacement rate in Ukraine vs **62% OECD average**

~29,5%
Social safety net targeting accuracy[1] for housing benefits, comparing to **52% EU average**

Accumulation System of Compulsory State Pension Insurance	Implement Accumulation System of Compulsory State Pension Insurance to ensure an increase in the level of social protection of people of retirement age
Targeted social help	Targeted universal social help as an alternative to the extensive system of social benefits
Develop capabilities in social sphere	Develop efficient network of social service providers to secure timely assistance in the areas where it is needed Carry out a comprehensive digital transformation of all components of the social protection system that will enable budget cost savings Secure transparent and efficient use of social funds by analyzing current state of things and addressing the most crucial problems Develop holistic policy to secure full inclusion of people with limited abilities into all aspects of social life

Returning refugee diaspora, achieve positive balance of migration

7m IDPs
since 24 February 2022

4.8m
individual refugees from Ukraine recorded across Europe with 15% plan to stay*

Returning and reintegration of refugees, IDPs and veterans

Maintain ties → **Return** → **Re-integrate**

- Special social protection with financial compensation, access to temporary housing, healthcare, education
- System for transition from military to civil life, support programs for veterans
- "Return talents back" program for entrepreneurs in specific sectors, including for creative industry, up to 50 ths people coverage
- Jobs/internships opportunities
- Dedicated communication campaign aiming to create positive image of returnees
- Digital platform for return and reintegration

Achieve long-term positive balance of migration

Streamline immigration regulation in order to achieve long-term positive balance of migration by attracting talented people to Ukraine (supported by priority sector transformation and boosting business environment)

1. Percent of the total program spending that goes to the poorest 20 percent of the population

Source: based on extensive discussions with government and industry experts within NRC Working Groups; ILR; UNHCR

Annex
to National Recovery Plan

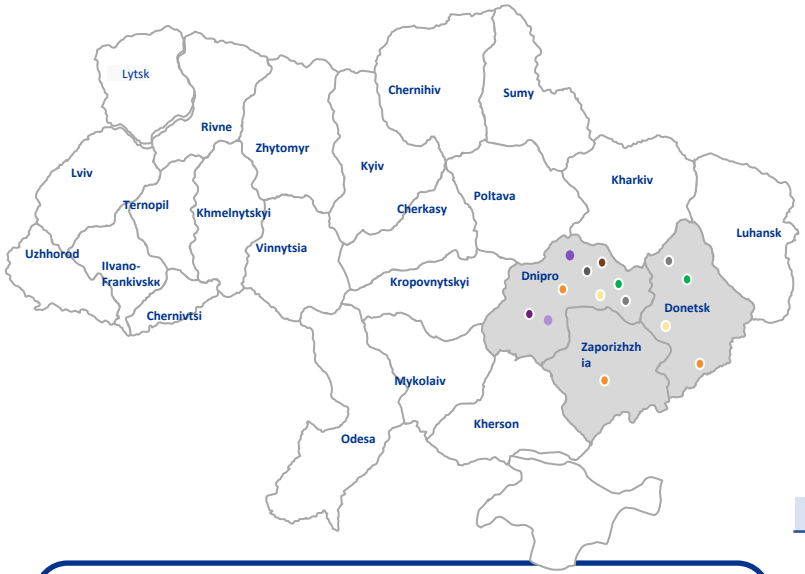
Industrial investment menu of Ukraine

Planning the development of the processing and related industries for 2023-2032.

Investments in >614 projects in the amount of ~$425 billion will save and create 931,000 jobs (~33% of capital investment to GDP over 5 years)

№	Industry direction	Quantity of projects	Investments amount $ billion	Number of workplaces, k of people
1.	Defense industrial complex	14	43	60
2.	Metallurgy and metalworking	27	26,3	101
3.	Agriculture	340	33,9	189
4.	Energy	29	177,4	457
5.	Machinery	20	15,8	21
6.	Mining industry	8	1	4
7.	Logistics	>33	~122,5	13
8.	Furniture and woodworking	143	4,6	86
	Total by direction	**614**	**425**	**931**
	including multiplier			*1 954*

Defense and security: 14 projects worth $43 billion will create and maintain 60 thousand jobs in all regions



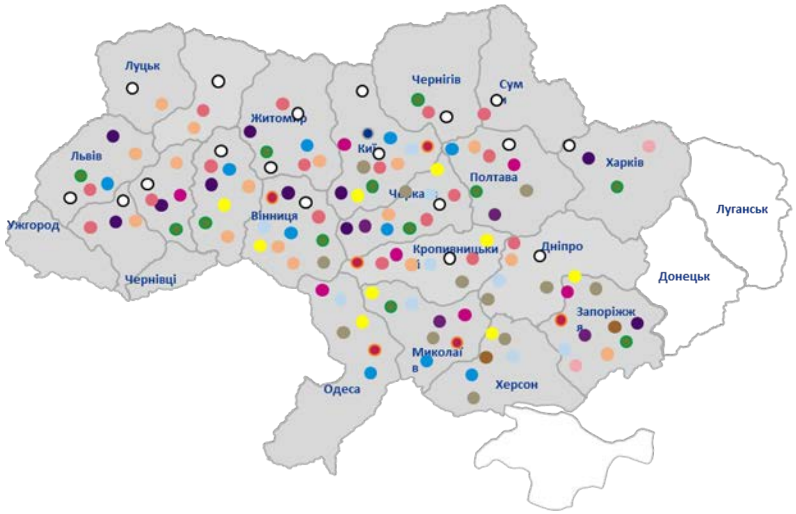
All of Ukraine

Note: locations are not listed for security reasons

* Including staff of DP "Antonov"

Grouping/ blocks	№ п/п	Project	Projects quantity	Investments, $ billion	Jobs, people
Projects aimed at expanding own production	**1**	Construction of new facilities/plants (modernization of production facilities, relocation and/or creation of duplicate enterprises)	11	1,3	4 900
	2	Construction of airplanes of the AN family	1	1,5	12 000
	3	Modernization and development of equipment, creation of weapons and military equipment reserves, production of new samples according to NATO standards at domestic enterprises	1	40	55 000*
Total per block:			**13**	**42,8**	**59 900**
Military culture development projects	**4**	Development of military culture (South Korean or Swiss model of involving the population in defense, work with veterans, preparation for external threats)	1	N/A	N/A
Total per block:			**1**	**N/A**	**N/A**
Total per direction			**14**	**43**	**59 900**

METALLURGY AND METAL PROCESSING: 27 projects worth $26 billion. will create 101,000 jobs in 3 regions



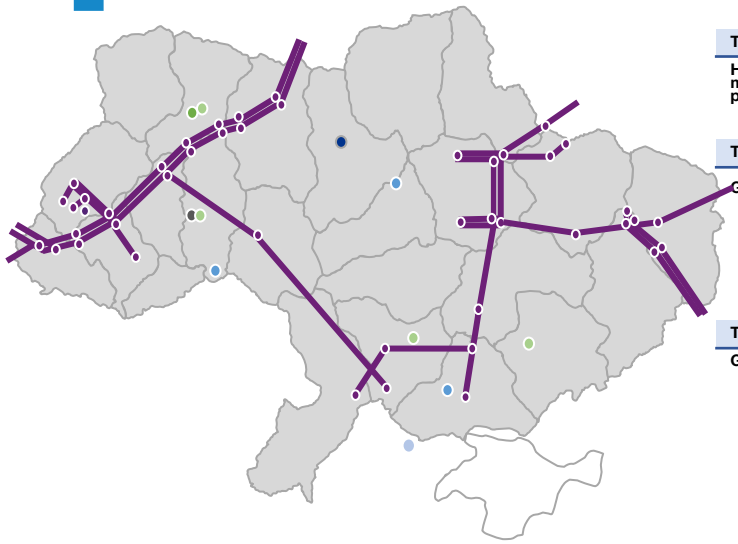
1; 2; 3 ; 4; 5; 6; 7; 8; 9 ; 10; 11; 12

Note: the map schematically shows objects that require investment infusions.

*preliminary assessments. Their scope can be specified after the deoccupation of Mariupol

Grouping/ blocks	№	Project	Number of projects	Investments, $ billion	Jobs, people
Projects aimed at meeting domestic demand and competitive capable of exporting finished products	1	Restoration of production capacities Mariupols' steel mills (Azovstal and MMK named after Ilyich)*	2	5	25 000
	2	Modernization of steelmaking and rolling production at Zaporizhstal (replacement of Marteniv furnaces with electric steel, thin steel rolling), at ArcelorMittal KR	2	4,5	40 000
	3	Coated flat-rolled steel (capacity building)	1	1,0	1 750
	4	Modernization of rolled production: flat product (including thick sheet)	1	1,0	5 000
	5	Modernization of rolled production: long product (including rails, beams)	1	0,5	5 000
	6	Pipe production (development of new production facilities)	2	1,0	800
	7	Production of metallurgical products: wire, cables, ropes, nets, fasteners, etc. (capacity development)	2	1,2	600
	8	Production of metallurgical products: wire, cables, ropes, nets, fasteners, etc. (capacity development)	12	1,2	600
Total per block:			**23**	**15,4**	**78750**
Розвиток зеленої металургії з інтеграцією в ланцюжки поставок ЄС	9	Construction/modernization of ore enrichment facilities (flotation) and construction of pellet production facilities for direct recovery of iron	1	0,7	н/д
	10	Completion of KGOKOR for the production of DRI from oxidized ore	1	1	3 500
	11	Construction of a plant for the production of DRI based on one of the existing iron ore GZK (in the future with the transition to hydrogen)	1	3,2	1 000
	12	Construction of new electric steelmaking facilities	1	6	18 000
Total per block:			**4**	**10,9**	**22 500**
Total per stream :			**27**	**26**	**101 250**

AGRICULTURAL AND INDUSTRIAL COMPLEX: 340 projects worth $34 billion. will create 189,000 jobs



1; 2; 3 ; 4; 5; 6; 7; 8; 9 ; 10; 11; 12

Note: the map schematically shows objects that require investment infusions.

Grouping/ blocks	№	Project	Number of projects	Investments, $ billion	Jobs, people
Infrastructure projects to increase productivity	1	Development of reclamation systems	2	4,1	4 500
	2	Vegetable storage Refrigerators	20	0,5	3 000
	3		10	1,0	1 500
Total per block:			**32**	**5,6**	**9 000**
Livestock breeding projects	4	Production of pork and beef	10	3,1	13 000
	5	Poultry farming (meat and egg production)	75	1,0	3 250
	6	Meat and dairy processing	6	1,4	11 250
Total per block:			**91**	**5,5**	**27 500**
Projects of processing and increasing the added value/ crop production	7	Cultivation and processing of horticulture, berry, nut products (2.9 million tons)	3	7	115 000
	8	Processing of wheat into flour (5.2 million tons)	50	3,3	15 000
	9	Production of semi-finished products and ready-made food products from flour	50	5	6 000
	10	Processing of corn into starch, lecithin (5.6 million tons) Processing of corn into starch, lecithin (5.6 million tons)	50	5,7	10 000
	11	Processing of soybeans into oil, meal (1.8 million tons)	20	0,5	1 600
	12	Rapeseed processing into oil, meal (1.4 million tons)	20	0,5	1 600
	13	Seed	4	0,3	600
	14	Production of ready feed for animals	20	0,5	2 400
Total per block:			**217**	**22,8**	**152 200**
Total per stream:			**340**	**34**	**188 700**

ENERGY: 29 projects worth $177 billion.

1; 2; 3*; 4*; 5*; 6*; 7; 8*; 9*; 10*; 11*; 12*; 13; 14*; 15; 16*; 17*, 18*, 19, 20*

*all of Ukraine/ the location is not specified

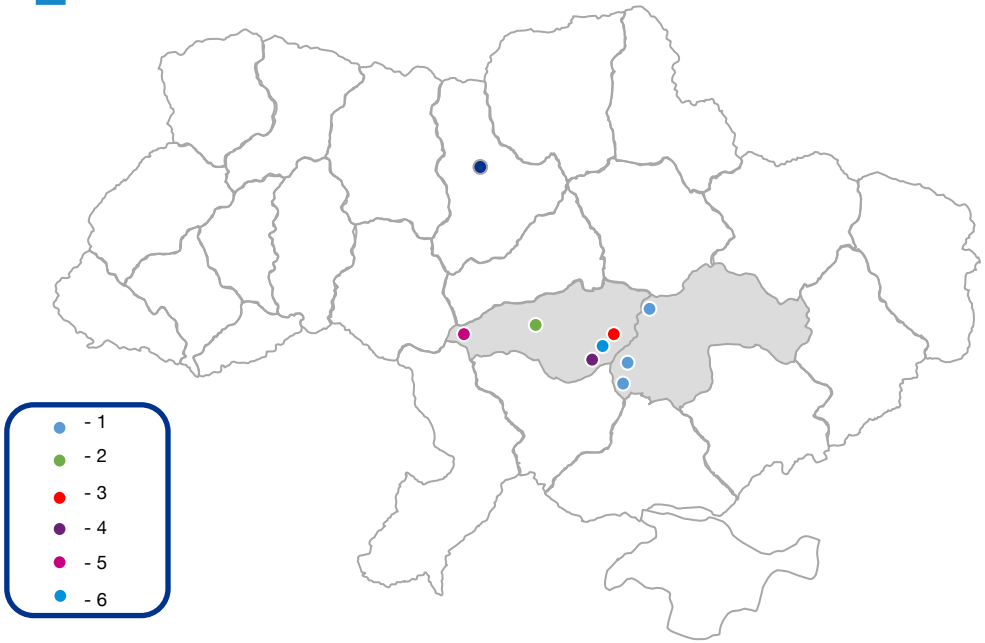
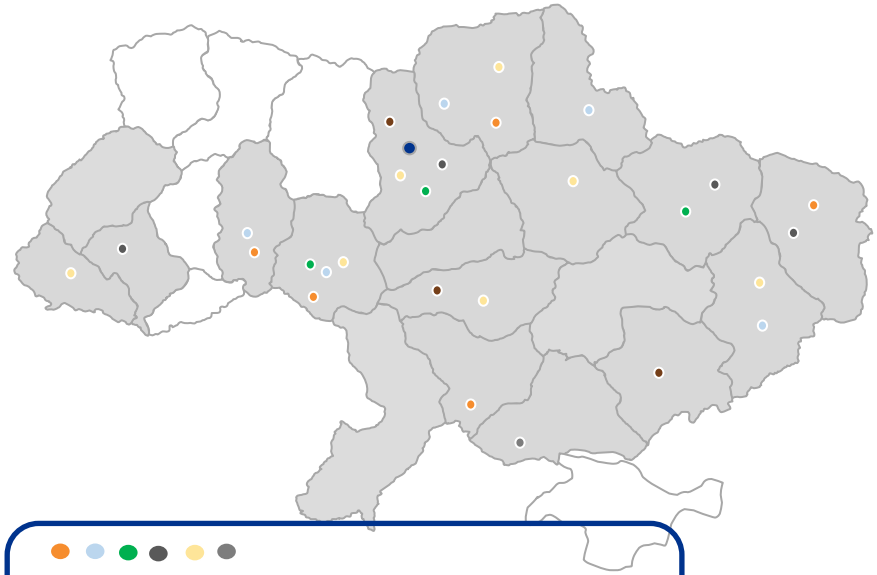
Grouping/ blocks	№	Project	Number of projects	Investments, $ billion	Jobs, people
Atomyc energy	1	Modernization of power units, an extension of service life, improvement of safety indicators	1	1,8	н/д
	2	Design and construction of two new power units	1	12	4 500
	3	Creation of an incomplete nuclear fuel production cycle (uranium mining, plant, storage)	3	1,3	670
Total per block:			**5**	**15,1**	**5 170**
Highly maneuverable power	4	Construction of peak and semi-peak generation capacities, 2 GW	1	2	400
	5	Construction of energy storage systems, 0.75 GW	1	0,6	н/д
Total per block:			**2**	**2,6**	**400**
Green energy	6	Construction of solar and wind power plants	2	6,1	2 000
	7	Construction of HPP and HPP, 3.5 GW	1	3,5	400
	8	Production and transportation of hydrogen (including development of RES), 2 million tons	1	49,5	72 800
	9	Production of biomethane (2 billion cubic meters/year), bioethanol, and biodiesel	3	4,2	61 000
Total per block:			**7**	**63,3**	**136 200**
Gas and oil	10	Development of gas from traditional deposits, up to 10 billion cubic meters / year	1	6,3	н/д
	11	Development of gas from dense rocks, up to 4.2 billion cubic meters / year	1	11,3	н/д
	12	Development of the Black Sea shelf, up to 18 billion cubic meters/year	1	10,8	н/д
	13	Creation of strategic gas reserves of the EU based on Ukrainian gas pipelines, gas pipelines, and LNG terminals of the EU	1	5	н/д
	14	Design of an oil refining cluster and underground storage facilities	3	3,7	800
Total per block:			**7**	**37,1**	**800**
Мережі	15	Modernization and optimization of GRS and HTM	1	2,5	н/д
	16	Restoration of interstate commercial trade with the EU with capacity expansion	1	0,6	н/д
Total per block:			**2**	**3,1**	**н/д**
Трансформаційні проекти	17	Transformation of coal projects within the framework of the NPSV implementation	1	2,0	н/д
	18	Decommissioning of two power units	1	3,0	н/д
Total per block:			**2**	**5,0**	**н/д**
Енерго-ефективність	19	Energy efficiency of buildings	3	38,0	315 000
	20	Modernization of the centralized heat supply system	1	13,2	н/д
Total per block:			**4**	**51,2**	**315 000**
Total per stream:			**29**	**177**	**457 570**



MACHINERY: 20 projects worth $16 billion

Grouping / blocks	№	Project	Projects quantity	Investments $ billion	Jobs, people
Projects aimed at satisfying internal demand	**1**	Renewal of rolling stock of Ukrzaliznytsia	6	6,36	17 000*
	2	Renewal of urban transport rolling stock and arrangement of subway lines	5	1,63	308
	3	Energy engineering (wind turbines, cables)	1	1,5	n/a
	4	Development of own production of agricultural machinery/localization	4	1,5	n/a
	5	Shipbuilding	2	2,3	3 500
Total per block:			**18**	**13,3**	**20 808**
Integration into EU value added chains	**6**	Development of a gigafactory	1	2,4	n/a
	7	Increase in production volumes of auto components	1	0,4	n/a
Total per block:			**2**	**2,8**	**n/a**
Total per direction:			**20**	**16**	**20 808**

*all of Ukraine/ the location is not specified
Note: the map shows objects that require investments

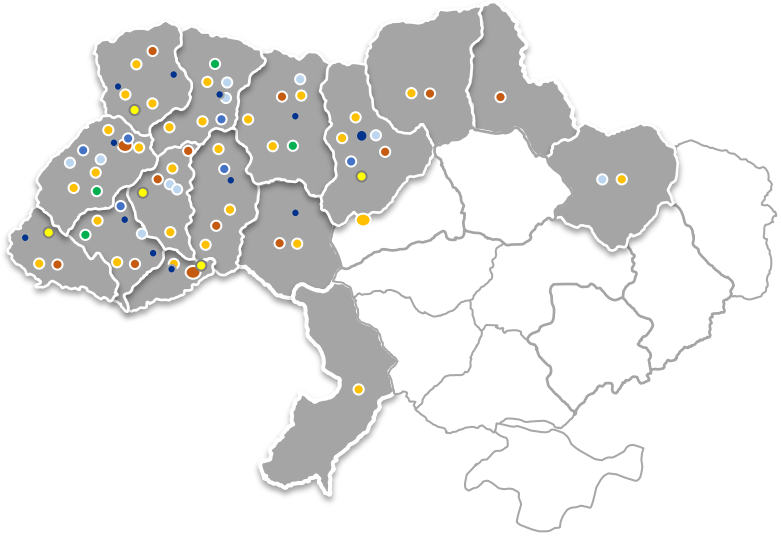


MINING INDUSTRY: 8 projects worth $1 billion. in 2 regions

Note: the map schematically shows objects that require investment infusions.

Grouping / blocks	№	Project	Projects quantity	Investments $ billion	Jobs, people
Projects aimed at increasing the raw material base	**1**	Iron ore raw materials	3	0,8	3 500
	2	Development of production and processing of uranium ores	1	0,08	250
	3	Development of gold ore mining	1	0,037	70
Total per block:			**5**	**0,917**	**3 820**
Projects aimed at satisfying internal demand	**4**	Development of kaolin production and processing	1	0,008	150
	5	Development of chrome ore mining	1	0,025	10
	6	Development of brick raw material deposits	1	0,046	200
Total per block:			**3**	**0,079**	**360**
Total per direction:			**8**	**1,0**	**4 180**

DEVELOPMENT OF LOGISTICS, including restoration of lost infrastructure, modernization and construction of a new one to increase its capacity: 33 projects worth $123 billion.



1; 2; 3; 4; 5; 6; 7* ; 8*; 9*;
* All of Ukraine

Note: the map schematically shows objects that require investment infusions.

Grouping / blocks	№	Project	Projects quantity	Investments, $ billion	Jobs, people
Projects that will contribute to the expansion of export potential/capacity	**1**	Railway transport tracks (535 km), sorting stations, points for changing wagons	13	1,6	2 600
	2	Ports on Danube	3	0,5	1 000
	3	Logistics and warehouse complexes (including agriculture)	9	6,4	n/a
Total per block:			**25**	**8,5**	**3 600**
Projects of reconstruction and modernization of critical and road infrastructure	**4**	Highways (52 thousand km) and bridges (4.7 thousand km)	n/a	109,6	n/a
	5	Airports	5-7	1,2	8 500
	6	Railway tracks (293 km) and auxiliary facilities	2	0,2	n/a
	7	Sea ports infrastructure	n/a	0,328	800
Total per block:			**>7**	**111,3**	**9 300**
Projects to expand cooperation with Europe	**8**	High-speed railway (HSR) connecting Kyiv-Warsaw	1	1,2	n/a
Total per block:			**1**	**1,2**	n/a
Other projects	**9**	**Other**	n/a	**1,5**	n/a
Total per direction:			**>33**	**~123**	**12 900**

FURNITURE AND WOODWORKING INDUSTRIES: 143 projects worth about 5 billion dollars. will create almost 86,000 jobs in 15 regions

1; 2; 3; 4; 5; 6; 7 All of Ukraine

Note: the map schematically shows objects that require investment infusions.

Grouping / blocks	№	Project	Projects quantity	Investments, $ billion	Jobs, people
Projects aimed at expanding own production	1	Construction, modernization, expansion of furniture factories	80	1,2	70 000
	2	Construction and modernization of factories for the production of building structures, sandwich panels, modular and frame buildings, etc.	5	0,1	2 000
Total per block:			**85**	**1,3**	**72 000**
Projects aimed at expanding the primary processing of raw materials (wood)	3	Modernization, expansion of woodworking plants for the production of board materials, - (chipboard, plywood, fiberboard, laminate, etc.).	7	1	2 000
	4	Construction and modernization of pulp and paper plants, enterprises for the production of packaging materials.	4	0,7	5 000
	5	Construction of factories and workshops for the production of furniture fittings, mechanisms and structures, foam rubber, foam plastic, glues, glass and mirrors	6	1	800
	6	Modernization of existing woodworking productions (beams, boards, pallets, building materials, etc.).	40	0,1	3 000
Total per block:			**57**	**2,8**	**10 800**
Wood industry development projects	7	Modernization of the logging system and wood logistics in the wood industry (harvesters, forwarders, logistics machines, warehouses, etc.).	1	0,5	3 000
Total per block:			**1**	**0,5**	**3 000**

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Anti-corruption policy” working group

July 2022

DRAFT

ANTI-CORRUPTION POLICY PRIORITIES

TABLE OF CONTENTS

Preamble. 2

- Anti-corruption policy priorities before the war
- The impact and consequences of the war on industries and spheres
- Anti-corruption policy Recovery Plan

Goal 1. Ensuring Ukraine's compliance with international commitments related to combating corruption, particularly within the process of European integration and aligning the national legislation with international standards and best practices for preventing and counteracting corruption . 5

Task 1. Ensuring Ukraine's compliance with international commitments related to combating corruption, particularly within the process of European integration and aligning the national legislation with international standards and best practices for preventing and counteracting corruption 5

Goal 2. Introducing a comprehensive anti-corruption policy and eliminating conditions, including at the legislative level that contribute to commissioning of corruption offenses

Task 1. Ensuring anti-corruption policy formation, coordination, implementation monitoring, and performance assessment in accordance with international standards and best practices 6

Task 2. Increasing the effectiveness of the system of control over political parties' activities and conducting of election campaigns 7

Task 3. Increasing the effectiveness of corruption prevention and conflict of interests 7

Task 4. Creating an ethical alternative to common corrupt practices 8

Task 5. Ensuring state-owned enterprises (SEs) management structure integrity and activities 8

Task 6. Transparency of privatization 8

Goal 3. Ensuring anti-corruption bodies independence and effective work to prevent, detect and punish acts of corruption

Task 1 Ensuring the effective work of the National Agency on Corruption Prevention (NACP) in all areas of its activities 10

Task 2. Strengthening the institutional capacity of the National Anti-Corruption Bureau of Ukraine (NABU) 11

Task 3. Ensuring the effective work of the Specialized Anti-Corruption Prosecutor's Office (SAPO) 11

Task 4. Ensuring the effective work of the Asset Recovery and Management Agency (ARMA) 11

Goal 4. Creating an effective system for combating legalization (laundering) of funds obtained from corruption crimes, as well as a system for searching and returning assets obtained through corruption

Task 1. Increasing the effectiveness of the system for preventing legalization of illegally obtained assets 13

Task 2. Increasing the effectiveness of the system for search and management of illegally obtained assets 13

Goal 5. Promoting a culture of integrity in public and private sectors

Task 1. Developing a culture of zero tolerance to corruption among citizens of Ukraine 14

Task 2. Ensuring an adequate level of financial support for civil servants 14

Task 3. Reducing the level of tolerance to corruption in private and public sector of the economy 14

Goal 6. Eliminating corruption risks arising during recovery measures in the course of martial law period and post-war reconstruction (planning, receipt, distribution, use of funds)

Task 1. Preventing corruption abuses during provision, receipt and use of aid in the course of martial law period and creating special mechanisms to minimize corruption manifestations for post-war reconstruction 16

Task 2. Improving the state audit and monitoring system to minimize corruption manifestations during post-war reconstruction of Ukraine 17

Annex. The list of bills required for Anti-Corruption Policy Section implementation 18

PREAMBLE

Anti-corruption policy priorities before the war

Prior to the war, Ukraine managed to create an effective legal and institutional basis for combating corruption. The anti-corruption infrastructure includes a number of state bodies covering various aspects of anti-corruption activities.

In particular, the National Agency on Corruption Prevention (“NACP”), activities of which have significantly intensified since 2020, ensures formation and implementation of the State Anti-Corruption Policy. In turn, an important role in the system of anti-corruption bodies is played by the National Anti-Corruption Bureau ("NABU") thoroughly investigating corruption at a high level under the procedural guidance of prosecutors of the Specialized Anti-Corruption Prosecutor's Office ("SAPO"), as well as the newly created High Anti-Corruption Court (HACC). which managed to make important decisions in high-level corruption cases in the pre-war period.

On a separate note, one should mention the Business Ombudsman Council, which since 2015 has introduced certain integrity standards in the public and private sectors of the economy.

At the same time, in the pre-war period, it was impossible to complete several tasks that were important for the anti-corruption reform implementation (particularly, the appointment of a new head of the SAPO, election of a new head of ARMA, etc.).

Also, before the war, the Law on prevention of threats to national security related to the excessive influence of persons having significant economic and political weight in public life (oligarchs) and a plan of measures for its implementation was adopted.

Nowadays, on the one hand, trust in the actions of the authorities has increased, but there is still a serious public demand for anti-corruption reform, while corruption as a problem continues to be considered an important problem by both citizens and investors.

The impact and consequences of the war on industries and spheres

The war affected functioning of many public and private institutions. Because of the war, submission of electronic declarations of persons authorized to perform functions of the state and local self-government has been suspended, and financial control measures, particularly, full verifications of officials' declarations, are temporarily not carried out. Since martial law is in effect, it is necessary to develop and adopt balanced decisions on how to fully apply anti-corruption legislation even under martial law. Many anti-corruption officers as well as civil society volunteers have joined the armed forces to fight the enemy at the front.

Meanwhile, the war created new opportunities for corruption, and may also create a great risk for the post-war reconstruction of Ukraine and its further development directed towards European integration and recognized international practices and standards implementation.

Despite the aforementioned, one cannot but note that even in wartime Ukraine is moving decisively towards establishing systemic work of all state bodies in the fight against corruption. So, in particular, on June 20, 2022, the Verkhovna Rada adopted the Anti-Corruption Strategy for 2021-2025. The latter, first of all, is designed to significantly reduce the level of corruption in areas that Ukrainians consider to be the most corrupt (customs and taxation, courts and law enforcement agencies, state regulation of the economy, construction and land relations, the defense sector, health care and social protection). The law that approved the strategy also provides for changes to help improve work procedures of anti-corruption bodies. The document defines the following five basic principles of anti-corruption policy for 2021-2025:

1) optimizing functions of the state and local self-government authorities, particularly elimination of powers duplication of different bodies;
2) digital transformation of powers exercised by state authorities and local self-government bodies, transparency of activities and data disclosure;
3) creating more convenient and legal ways to meet the needs of individuals and legal entities, in contrast to existing corrupt practices;
4) ensuring inevitability of legal responsibility for corruption and corruption-related offenses;
5) forming public intolerance to corruption, establishing a culture of integrity and respect for the rule of law.

At the same time, today there are urgent problems for Ukraine not allowing to fully carry out anti-corruption activities in the conditions of martial law:

1) no appointed heads of SAPO, NABU, ARMA;
2) the lack of a transparent mechanism for receiving and using funds for reconstruction and humanitarian aid, as well as a public open platform for publication and monitoring by the government,

donors and civil society of receipts and expenditures of funds and humanitarian aid;

3) inadequate level of provision of anti-corruption bodies and institutions with personnel and material resources to perform their tasks (during and after martial law);

4) inconsistency of some anti-corruption legislation norms with international and EU standards, as well as some easing of anti-corruption legislation during martial law.

To sum it up, solving the problem of corruption should be one of the priorities for the Ukrainian society, especially at the stage of state restoration. At the same time, solving such a problem is impossible without the application of a comprehensive approach combining anti-corruption policy, policy of de-oligarchization of Ukraine, legislation and institutions, as well as specific measures in sectors with a high risk of corruption. The use of such a comprehensive approach is proposed in the Recovery Plan under the Anti-corruption Policy direction.

The anti-corruption recovery plan provides for:

1) **Ensuring compliance with Ukraine's international commitments related to combating corruption, particularly those within European integration process** (aligning the national legislation with international standards and best practices for preventing and combating corruption, its proper implementation, increasing the effectiveness of the system of monitoring the activities of political parties and conducting election campaigns, increasing the effectiveness of prevention of corruption and conflict of interests);

2) **ensuring independence and effective work of anti-corruption bodies** for prevention, detection and punishment of corruption manifestations (providing for the effective work of the NACP in all areas of its activities, strengthening the institutional capacity of the NABU, ensuring the effective work of the SAPO) and **creating an effective system for tracing and returning assets obtained through corruption** . as well as the use of these assets for the post-war reconstruction of Ukraine (increasing the effectiveness of ARMA, the system for preventing legalization of illegally obtained assets, the system for tracing and managing illegally obtained assets, preventing corruption abuses during implementation of procedures related to forced seizure and collection of state income assets of Russia and its residents);

3) **promoting a culture of integrity** in the public and private sectors (developing a culture of zero tolerance to corruption among citizens of Ukraine, improving corporate governance in state and private companies, ensuring transparency during privatization, creating an ethical alternative to common corrupt practices, including the legislative establishment of the work of the Business Ombudsman, reducing the level of tolerance of corruption in the private and public sector of the economy);

4) **eliminating corruption risks arising during recovery measures** during martial law period and post-war reconstruction: planning, receipt, distribution, use of funds (prevention of corruption abuses during the provision, receipt and use of aid during martial law, creation of special mechanisms to minimize corruption manifestations during Ukraine's receipt of international aid for post-war reconstruction, improvement of the state audit and monitoring system to minimize corruption manifestations during Ukraine's post-war reconstruction).

Septe mber			RECOVERY PLAN LOGFRAMEWORK		
	Committee No	**5**			
	Group	**Anti-corruption policy**			
	A separate component) analysis area within the direction:	Anti-corruption policy as the constant implementation of successive measures of the state and society aimed at eliminating causes and conditions that give rise to and feed corruption in various spheres of life and create risks for stable economic growth and the development of democratic institutions as a condition for the integration of Ukraine into the EU, as well as to ensure inevitability of punishment for corruption offences.			
1	**Key pressing issues to be solved under the Recovery Plan within the direction**				
	The war influence on a defined analysis area:	The war affected functioning of many public and private institutions. Because of the war, submission of electronic declarations of persons authorized to perform functions of the state and local self-government has been suspended, and financial control measures, particularly, full verifications of officials' declarations, are temporarily not carried out. Since martial law is in effect, it is necessary to develop and adopt balanced decisions on how to fully apply anti-corruption legislation even under martial law. Many anti-corruption officers as well as civil society volunteers have joined the armed forces to fight the enemy at the front. Meanwhile, the war created new opportunities for corruption, and may also create a great risk for the post-war reconstruction of Ukraine and its further development directed towards European integration and recognized international practices and standards implementation. Despite the aforementioned, one cannot but note that even in wartime Ukraine is moving decisively towards establishing systemic work of all state bodies in the fight against corruption. So, in particular, on June 20, 2022, the Verkhovna Rada adopted the Anti-Corruption Strategy for 2021-2025. The latter, first of all, is designed to significantly reduce the level of corruption in areas that Ukrainians consider to be the most corrupt (customs and taxation, courts and law enforcement agencies, state regulation of the economy, construction and land relations, the defense sector, health care and social protection). The law that approved the strategy also provides for changes to help improve the work procedures of anti-corruption bodies. At the same time, today there are urgent problems for Ukraine not allowing to fully carry out anti-corruption activities in the conditions of martial law: 1) no appointed heads of SAPO, NABU, ARMA; 2) the lack of a transparent mechanism for receiving and using funds for reconstruction and humanitarian aid, as well as a public open platform for publication and monitoring by the government, donors and civil society of receipts and expenditures of funds and humanitarian aid; 3) inadequate level of provision of anti-corruption bodies and institutions with personnel and material resources to perform their tasks (during and after martial law); 4) inconsistency of some anti-corruption legislation norms with international and EU standards, as well as some easing of anti-corruption legislation during martial law.		
1.1	Key challenges (summarized for the defined area):	● No appointed heads of SAPO, NABU, ARMA; ● The need for introducing a transparent mechanism for receiving and using funds for reconstruction and humanitarian aid, a public open platform for publication and monitoring by the government, donors and civil society of receipts and expenditures of funds and humanitarian aid; ● Inadequate level of provision of state bodies, including anti-corruption bodies, institutions with personnel and material resources to perform their tasks (during and after martial law period); ● Inconsistency of some of anti-corruption legislation norms with international standards, EU standards, as well as certain relaxations of anti-corruption legislation during martial law; ● Lack of coordination of anti-corruption measures and low pace of their implementation; ● Incomplete judicial and the Prosecutor's Office reforms ● Inadequate protection of whistleblowers ● The need for eliminating prerequisites for corruption in high-risk corruption areas (such as construction and infrastructure, social and health care, land use, etc.); ● Reduction of public awareness of the fight against corruption and reduction of tools for public participation, public control implementation.		
1.2	Key opportunities (summarized for the defined area):	Anti-corruption reforms have been carried out in a way meeting all the criteria for membership in the European Union and other Ukraine's international commitments and also allow to avoid corruption in the process of Ukraine’s recovery.			
1.3	Key constraints	Limited financial resources along with the workload on civil servants			

2	**Goals, tasks, and stages of the Recovery Plan within the direction**	**Anti-corruption policy**			
		Stage 1: Urgent measures (ensuring proper functioning of corruption prevention and combating system during the war and the early postwar period)	Stage 2: Medium-term measures (bringing corruption prevention and counteraction system in line with international standards and best practices)		Stage 3: Long-term measures (proper functioning of anti-corruption institutions and effectiveness of respective measures).
2.1.	**Description of Issue 1 to be solved under the defined analysis area:**	**Gaps in anti-corruption legislation, its improper law enforcement being a challenge on the way to Ukraine's membership in the European Union**			
2.1.1.	**Stages:**	**06/2022 - 12/2022**	**01/2023 - 12/2023**	**01/2024 - 12/2025**	**01/2026 - 12/2032**
2.1.2.	**Goal 1 to be achieved to solve the problem at each stage:**	**Ensuring Ukraine's compliance with international commitments related to combating corruption, particularly within the process of European integration and aligning the national legislation with international standards and best practices for preventing and counteracting corruption**			
	Task 1. Ensuring Ukraine's compliance with international commitments related to combating corruption, particularly within the process of European integration and aligning the national legislation with international standards and best practices for preventing and counteracting corruption	(i) Urgent development of legislation aimed at Ukraine's compliance with international commitments related to combating corruption, particularly within the European integration process and aligning the national legislation with international standards.	(i) To ensure full compliance of Ukrainian legislation and its implementation practice with the requirements of: - UN Convention against Corruption; - Criminal Law Convention on Corruption, its Additional Protocol; - Civil Law Convention on Corruption; - OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions. (ii) To develop and adopt draft laws to fully comply with the requirements of the Convention on the Protection of the European Communities' Financial Interests and Directive 2017/1371 of the European Parliament and of the Council of 5 July 2017 on the fight against fraud to the Union's financial interests by means of criminal law; (iii) To ensure compliance of Ukrainian legislation and its implementation practice with the requirements and recommendations of: - OECD Istanbul Anti-Corruption Action Plan of Anti-Corruption Network for Eastern Europe and Central Asia - Conference of UNCAC member states (iv) To ensure that Ukraine joins the OECD Working Group on Bribery in International Business Transactions. (v) To provide for full implementation of	(i) Accession to the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions; (ii) To provide for disciplinary and administrative liability of managers (heads) for non-compliance with the law to bring anti-corruption legislation violators to disciplinary responsibility. (iii) To develop and adopt a law to bring the provisions of the Criminal Code of Ukraine on corruption and corruption-related offences in line with international standards: - to bring the list of foreign officials in line with the standards of the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions; - to align provisions on exemption from criminal liability with the international standards in accordance with Part 5 of Art. 354 of the Criminal Code of Ukraine (as for immediate notification of a crime and impossibility of applying this provision to the person who initiated provision of an unlawful benefit); (iv) To adopt a law on the possibility of bribery provocation to provide for the rules and procedure for taking such actions, guarantees of legality and control, consequences of their taking (encouragement or bringing to disciplinary responsibility), as well as the fact that such inspections are not covert investigative actions, their results cannot be used in the criminal trial as	(i) Completion of aligning the national legislation with the Directive (EU) 2019/1937, taking into account the experience of introducing an institution for whistleblowers protection in Ukraine.

			recommendations on preventing and combating corruption provided to Ukraine within the framework of international monitoring mechanisms (GRECO assessment, the Istanbul Anti-Corruption Action Plan implementation monitoring, the UN Convention against Corruption implementation monitoring).	means of proof, criminal proceedings are not launched based on their results. (v) To amend legislation to improve the whistleblower protection effectiveness.	
2.1.3.	Timeframe under the stage:	(i) Urgent review of draft laws prepared and submitted to the Verkhovna Rada aimed at complying with Ukraine's international obligations related to combating corruption, particularly within the European integration process.	(i) A package of draft laws on amendment of some legislative acts of Ukraine on bringing the national legislation of Ukraine in line with international acts in the field of preventing and combating corruption prepared - December 2023.	(i) To adopt a law on ratification of the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions - December 2024; (ii) Adopt a law on amendments to some legislative acts on the introduction of liability of managers for non-fulfillment of the requirements of the legislation on bringing violators of anti-corruption legislation to disciplinary responsibility - June 2025.	(i) To adopt the law on bringing the national legislation in line with the EU Directive 2019/1937 (full adaptation completion) - December 2028)
2.1.4.	Risks related to the goal achievement:	Limited funding	Limited funding	Limited funding	Limited funding
2.1.5.	Goal achievement indicator:	(i) Ukraine's international obligations fulfilment monitoring shows progress.	(i) Reports of international monitoring missions of the OECD, GRECO, the Council of Europe confirm compliance of national legislation with international conventions and decisions;	(i) Reports of international monitoring missions of the OECD, GRECO, the Council of Europe confirm compliance of national legislation with international conventions and decisions;	(i) Reports of international monitoring missions of the OECD, GRECO, the Council of Europe confirm the compliance of national legislation with international conventions and decisions
2.1.6.	General need for funds for the goal achievement:	(i) Within the framework of planned expenditures of the State Budget of Ukraine (ii) Within the framework of international technical assistance projects funding	(i) Within the framework of planned expenditures of the State Budget of Ukraine (ii) Within the framework of international technical assistance projects funding	(i) Within the framework of planned expenditures of the State Budget of Ukraine (ii) Within the framework of international technical assistance projects funding	(i) Within the framework of planned expenditures of the State Budget of Ukraine (ii) Within the framework of international technical assistance projects funding
2.1.7.	Goal connections with other directions:	European integration, justice, digital transformation	European integration, justice, digital transformation	European integration, justice, digital transformation	European integration, justice, digital transformation
	Description of Issue 2 to be solved under the defined analysis area:	**The need for achieving significant progress in preventing and counteracting corruption to ensure Ukraine's stable economic growth and building effective and inclusive democratic institutions.**			
	Stages:	**06/2022 - 12/2022**	**01/2023 - 12/2023**	**01/2024 - 12/2025**	**01/2026 - 12/2032**
	Goal 2 to be achieved to solve the problem at each stage:	**Introducing a comprehensive anti-corruption policy and eliminating conditions, including at the legislative level, that contribute to commissioning of corruption offenses**			
	Task 1. Ensuring anti-	(i) To develop and approve the State Anti-	(i) To provide for online monitoring of the	(i) To introduce a unified system of collection,	(i) To present the National Report on

	corruption policy formation, coordination, implementation monitoring, and performance assessment in accordance with international standards and best practices	Corruption (AC) program for the implementation of the AC strategy for 2021-2025 with the engagement of parties concerned; (ii) To approve the procedure for monitoring and coordinating the AC strategy implementation for 2021-2025; (iii) To create a Coordinating Working Group on AC policy issues, involve the public and international partners in its work, determine the procedure for its activities and provide the necessary resources for its operations.	state AC policy measures implementation;	processing and publication of statistical information on detection of corruption and corruption-related offenses, conducting proceedings against them, searches and return of assets obtained from corruption and other crimes; (ii) To create a single online system for collecting, processing and publishing statistical information on the detection of corruption and corruption-related offenses, conducting proceedings against them, searches and return of assets obtained from corruption and other crimes; (iii) To present a final report on the state AC policy effectiveness, which will also contain recommendations on anti-corruption policy priorities for the upcoming years; (iv) To prepare and approve the AC Strategy for 2026-2030 as well as the state program for the of the AC Strategy implementation for 2026-2030.with the participation of parties concerned.	the state anti-corruption policy effectiveness in 2021-2025 as well as recommendations on the content and priorities of the AC Strategy for the new period (2026-2030); (ii) To approve the AC Strategy for 2026-2030 and respective documents (state program and provide for its funding).
	Task 2. Increasing the effectiveness of the system of control over the of political parties' activities and conducting of election campaigns	(i) To legally restore the obligation of political parties to submit reports on property, income, expenses and liabilities of a financial nature.	(i) To develop and adopt draft laws on financing of political parties and their control, taking into account recommendations and standards of the Council of Europe, GRECO, the Venice Commission (particularly, in matters of state financing of non-parliamentary political parties; indirect state support of political parties; clear demarcation of functions of controlling bodies; introduction of effective, deterrent and proportional sanctions for violation of established requirements); (ii) To develop and adopt a draft law to restore the implementation of measures of financial control of officials and prevent declarations submission gaps; (iii) The NACP to improve the effectiveness of financial control and verification of political parties reporting; (iv) The NACP to ensure the functioning of political parties reports submission and publication electronic system (in the form of a data set and machine-readable format, as well as with access via API); (v) The NACP to ensure the functioning of the electronic reporting system on the receipt and use of election fund funds.		

	Task 3. Increasing the effectiveness of corruption and conflict of interests prevention		(i) To develop and adopt a draft law on clarifying the list of subjects of declaration taking into account corruption risks assessment results, grounds for checking declarations, eliminating gaps regarding deadlines for submitting declarations, improving mechanisms for checking declarations to detect signs of offenses (false declarations in the form of considerable assets concealment and/or their value and illegal enrichment); (ii) To increase the effectiveness of control and verification of declarations owing to further development of digital tools and their wider application, ensuring the unity of the practice of the NACP, development of international cooperation, wider access of the NACP to information on assets value.	(i) To prepare and adopt a draft law improving the procedure for identifying and settling conflict of interests, including in connection with the presence of corporate rights, regulating receipt of gifts, eliminating discrepancies in legislation for the purposes of implementing the Law "On Prevention of Corruption"; (ii) To legislatively enshrine the ethical conduct for People's Deputies of Ukraine	
	Task 4. Creating an ethical alternative to common corrupt practices.	(i) To identify top ten common corrupt practices based on corruption studies conducted by the NACP, other bodies and public associations representatives, scientific institutions, educational institutions, and experts having proper qualification.	(i) To provide for implementation of the Law of Ukraine "On the Administrative Procedure" and bring the regulatory framework in line with the provisions of the law.	(i) To ensure the use of electronic services as the main way of providing administrative services.	
	Task 5. Ensuring state-owned (enterprises (SEs) management structure integrity and activities	(i) Amend regulatory legal acts on providing for the flexibility of SE management bodies to make decisions necessary to ensure economic security during martial law period (without changing the OECD corporate governance principles) (regarding delegation of powers, appointment and extension of powers of supervisory boards members and heads, other corporate governance peculiarities).	(i) To align SEs corporate governance legislation with the OECD Guidelines on Corporate Governance of State-Owned Enterprises, particularly in terms of transferring powers to supervisory boards to approve strategic, investment, and financial plans and to appoint and dismiss a head; (ii) To develop anti-corruption programs and implement anti-corruption standards and practices of SE; (iii) To bring the corporate governance of SEs in line with the OECD Guidelines for Corporate Governance of State-Owned Enterprises in terms of corporate governance code implementation, code of ethics and business conduct, provisions on supervisory board formation principles, SE corporate governance measures individual plans, regulations on supervisory board committees and the corporate secretary, etc.	(i) To develop anti-corruption programs and implement anti-corruption standards and practices of SE; (ii) To regularly assess corruption risks (both internal and external) in SEs at least every three years.	(i) To provide for compliance with the OECD Guidelines on Corporate Governance of State-Owned Enterprises.
	Task 6. Transparency of privatization		(i) To review and cancel unsubstantiated moratoriums on enforcement of judgments the debtors by which are state-owned enterprises, including moratoriums on application of rehabilitation and liquidation procedures in bankruptcy cases; (ii) To approve the draft law on the list of state property objects that are not subject to	(i) To provide a communication strategy regarding privatization and actions of the CMU	

			privatization; (iii) To accelerate the sale of public sector non-earning assets to ensure rapid receipt of significant budget revenues upon abolition of martial law.		
	Timeframe under the stage:	(i) To provide funding for the Anti-corruption Strategy measures - September 2022 in the draft Law "On the State Budget for 2023"; (ii) To amend the legal act regarding specifics of corporate governance of legal entities whose shareholder (founder, participant) is the state during the period of martial law in Ukraine - September 2022;	(i) To adopt a law that to provide for mechanisms for coordination, monitoring and evaluation of anti-corruption policy and interaction of anti-corruption institutions with other state and local authorities - September 2023; (ii) To provide for online monitoring of the state anti-corruption policy measures implementation on the Single e-Government web portal - April 2023; (iii) An automatic political parties' reports checking introduced - February 2023. (iv) The functioning of the electronic reporting system on the receipt and use of election fund funds ensured - March 2023; (v) A draft law on improving political parties financing mechanism and its control prepared - December 2023; (vi) A draft law on the abolition of unsubstantiated moratoriums on the enforcement of judgments the debtors by which are state enterprises, including moratoriums on application of rehabilitation and liquidation procedures in bankruptcy cases submitted to the Verkhovna Rada; (vii) A draft law on the list of state property objects that are not subject to privatization approved; (viii) The legislation aimed at the accelerated sale of non-earning public sector assets to ensure the rapid receipt of significant budget revenues after the abolition of martial law amended; (ix) The OECD Guidelines on Corporate Governance of State-Owned Enterprises implemented and transparency of activities and decision-making processes of SC " Ukroboronprom" increased; (x) The Law on Amendments to Some Legislative Acts of Ukraine on Improvement of Corporate Governance of Legal Entities whose Shareholder (Founder, Participant) is the State adopted.	(i) To adopt a law on amendments to some legislative acts to improve provisions related to conflict of interests settlement; (ii) Adopt the Law of Ukraine "On Amendments to the Law "On the Status of a People's Deputy of Ukraine" regarding the ethical conduct of members of the Parliament; (iii) To regulate the lobbying issue at the legislative level; (iv) To update executive authorities' regulatory acts resulting from the Law "On the Administrative Procedure to ensure that they enter into force simultaneously with the entry of this Law in force - December 2023; (v) The CMU to inform the Verkhovna Rada of the implementation state of the Law "On the Administrative Procedure" - 2024.	
	Risks related to the goal achievement:	Limited funding	Limited funding	Limited funding	Limited funding

	Goal achievement indicator:	(i) Budgetary funding for the implementation of the AC Strategy in the amount of at least 90% of the request provided; (ii) International partners (OECD, EBRD, World Bank, etc.) monitoring reports show that supervisory boards of SEs are created on a transparent basis, taking into account the professional achievements of the candidates and consist of at least one third of independent directors.	(i) At least 30% of the AC Strategy measures and of the Program for its implementation put into practice; (ii) Budget funding for the implementation of the AC Strategy in the amount of at least 90% of the budget request allocated; (iii) Online monitoring of the state AC Policy measures implementation on the Single e-Government web portal ensured; (iv) An automatic checking of political parties' reports and the use of election fund funds introduced; (v) AC Programs implemented and are subject to proper monitoring in the ten largest SEs; (vi) The corporate governance of the 10 largest SEs complies with the OECD Guidelines on Corporate Governance of State-Owned Enterprises (a code of corporate governance, ethics and business conduct implemented, provisions on the supervisory board formation principles, provisions on the supervisory board committees and the corporate secretary are in place); (vii) After reviewing and canceling moratoriums on the enforcement of judgments by which the debtors are state enterprises, including moratoriums related to application of rehabilitation and liquidation procedures in cases of bankruptcy, "big" and "small" privatization processes will be unblocked.	(i) To perform at least 90% of the AC Strategy measures and of the Program for its implementation; (ii) State funding of non-parliamentary political parties that did obtain seats in the Verkhovna Rada, but received a certain level of support restored; (iii) The OECD monitoring confirms that SEs risk assessment covers corruption risks and is carried out properly.	(i) 100% of the AC Strategy measures and of the State Program for its implementation was put into practice; (ii) The AC Strategy for 2026-2030 and the respective state program for its implementation approved; (iii) Budgetary financing for the implementation of the AC strategy in the amount of not less than 90% of the request provided; (iv) As a result of increased competition, business entities are more responsibly and rationally use assets in their possession; (v) The application of the envisaged of corporate governance model will not only increase the amount of revenues to the state budget, but also contribute to the improvement of the quality of services provided to the population
	General need for funds for the goal achievement:	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing (iii) Within the limits of SE's own resources	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing (iii) Within the limits of SE's own resources	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing (iii) Within the limits of SE's own resources	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing (iii) Within the limits of SE's own resources
	Goal connections with other directions:	European integration, justice, economy, digital transformation	European integration, justice, economy, digital transformation	European integration, justice, economy, digital transformation	European integration, justice, economy, digital transformation
2.2.	**Description of Issue 3 to be solved under the defined analysis area:**	**Insufficient institutional and operational independence and capacity of specialized bodies to prevent, detect and punish manifestations of corruption**			
2.2.1.	**Stages:**	**06/2022 - 12/2022**	**01/2023 - 12/2023**	**01/2024 - 12/2025**	**01/2026 - 12/2032**

	achieved to solve the problem at each stage:				
	Task 1 Ensuring the effective work of the National Agency on Corruption Prevention (NACP) in all areas of its activities	(i) To complete an external independent assessment of the NACP performance effectiveness; (ii) To implement recommendations given based on the NACP performance effectiveness assessment results and to publicly inform of their implementation status, as well as to review the NACP KPIs taking into account the audit recommendations; (iii) It is necessary to regulate the procedure for monitoring subjects of declaration lifestyle; (iv) To put the Single Whistleblower Reporting Portal into operation and approve the NACP by-laws related to its functioning;		(i) To provide for periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methods); (ii) To ensure division of powers between the CEC and the NACP regarding control over the financing of political activities and pre-election campaigning; (iii) To provide for civil servants' declarations risk-oriented monitoring (by also using IT tools).	(i) To provide for periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methods);
	Task 2 . Strengthening the institutional capacity of the National Anti-Corruption Bureau of Ukraine (NABU)	(i) To conduct competitive selection for the position of NABU Director in full compliance with the requirements of the law, transparently and impartially, without unreasonable delays.; (ii) To enable NABU to autonomously intercept communications from electronic communication networks, by implementing a set of necessary technical, organizational and technical solutions; (iii) To develop and adopt a bill to clarify the maximum number of NABU employees; (iv) To ensure proper NABU financing, particularly for the implementation of autonomous removal of information from electronic communication networks.	(i) To conduct an external independent NABU performance assessment with the participation of international experts, publish the results of the audit, and provide for informing of the provided recommendations implementation status; (ii) To ensure the possibility of independent expert institutions functioning for carrying out expert examinations in criminal proceedings.		(i) To provide for periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methods);
	Task 3 . Ensuring the effective work of the Specialized Anti-Corruption Prosecutor's Office (SAPO)	(i) To complete the procedure for appointing the head of the SAPO based on competition results; (ii) To develop and adopt draft laws to expand the institutional and operational autonomy of the SAPO, as well as the SAPO leadership team powers; (iii) To improve the selection procedure for administrative positions in the SAPO and prosecutors; (iv) To introduce external independent SAPO audit.	(i) To introduce and ensure the conduct of an external independent assessment of the SAPO performance effectiveness simultaneously with the NABU audit and, with the participation of international experts, publish the audit results, auditors' recommendations and provide for a monitoring system for given recommendations implementation.		(i) To provide for periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methodology);
	Task 4. Ensuring the effective work of the Asset Recovery and Management Agency (ARMA)	(i) To hold a transparent, impartial competition for the position of the Chairman of ARMA, with selection based on the criteria of integrity and competence, with subsequent appointment to the position of the winner of the competition without unreasonable delays; (ii) To ensure the full functioning and putting of the Unified State Register of Assets Arrested in Criminal Proceedings into industrial operation.	(i) To develop and adopt a draft law to guarantee the institutional and operational independence of ARMA, introduce an effective procedure for external independent ARMA's performance effectiveness assessment, and also improve the selection procedures for the Head of ARMA for the sake of transparency, objectivity of selection based on the merits of candidates; (ii) To develop and approve Standards of Interaction between ARMA, Prosecutor's	(i) To provide for carrying out an external independent ARMA's performance effectiveness assessment, implementation of provided recommendations and information on their implementation status.	

			Office, pre-trial investigation bodies, other competent authorities regarding seizure planning, asset tracing, management and recovery; (iii) To introduce effective procedures for cooperation and information exchange between ARMA and the State Financial Monitoring Service.		
2.2.3.	Timeframe under the stage:	(i) The Head of SAPO appointment - July 2022;	(i) Independent expert institutions being beyond law enforcement bodies management are functioning.	(i) Periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methods) ensured; (ii) The division of powers between the CEC and the NACP regarding control over the financing of political activities and pre-election campaigning regulated.	(i) Periodic external independent assessment (including recommendations implementation, informing of recommendations implementation status, review of evaluation criteria and methodology) ensured;
2.2.4.	Risks related to the goal achievement:	Deterioration of the level of financing and material and technical support of the activities of the AC bodies	(i) Deterioration of the funding and logistic support for AC bodies activities; (ii) A temporary restriction (for the period of martial law) regarding declarations submission by candidates and those appointed to certain positions during the period of martial law (the Law of Ukraine "On Amendments to Certain Laws of Ukraine Regarding the Functioning of the Civil Service and Local Self-Government during the Martial Law Period "	(i) Deterioration of their financing level and logistic support for activities	(i) Deterioration of the financing level and logistic support for AC bodies activities.
2.2.5.	Goal achievement indicator:	(i) Budget financing of NACP, NABU, SAPO and ARMA is at the level of not less than 90%; (ii) The Head of SAPO appointed; (iii) Director of NABU appointed; (iv) The Head of ARMA appointed; based on transparent and impartial competition results. (v) Recommendations according to the Report on NACP performance effectiveness implemented; (vi) Lawful interception of communications using NABU's own technical capabilities ensured (vii) Amendments to Articles 2, 5, 12 of the Law on ARMA made; (viii) A by-law on the unified electronic register adopted; (ix) Monitoring and control over the seizure of assets of the Russian Federation and its residents, their management and sale, as well as over the distribution and targeted use of state budget funds is carried out. (x) The results of operational audits (management audits) of ARMA testify to the effectiveness of assets transferred to its management	(i) Declarations for 2021 and 2022 submitted by the subjects of declaration; (ii) A report on the SAPO external independent assessment results published; (iii) Independent expert institutions for conducting expert examinations in criminal proceedings are functioning; (iv) An external independent assessment was conducted and its results were made public; a system for monitoring the commission's recommendations implementation developed; (v) The National Asset Recovery Strategy and its implementation plan approved; (vi) The national assessment of risks of legalization of funds obtained through criminal means for 2020-2022 carried out; (vii) Amendments to legislation regarding the improvement of mechanisms for checking information on the ultimate beneficial owners and the ownership	(i) The report based on anti-corruption bodies external independent performance assessment results is made public in a timely manner; (ii) Implementation of at least 90% of recommendations based on anti-corruption bodies (NACP, NABU, SAPO, ARMA) external independent performance assessment results ensured; (iii) At least 1,000 full verifications of declarations per year conducted;	(i) The external independent anti-corruption bodies assessment results show their impeccable work.

			structure of legal entities have adopted.		
2.2.6.	General need for funds for the goal achievement:	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing
2.2.7.	Goal connections with other directions:	European integration, justice	European integration, justice	European integration, justice	European integration, justice
2.3.	**Description of Issue 4 to be solved under the defined analysis area:**	**Unreadiness of the system for tracing and returning assets obtained through corruption, including challenges related to the military aggression of the Russian Federation against Ukraine and overcoming its consequences.**			
2.3.1.	**Stages:**	**06/2022 - 12/2022**	**01/2023 - 12/2023**	**01/2024 - 12/2025**	**01/2026 - 12/2032**
2.3.2.	**Goal 4 to be achieved to solve the problem at each stage:**	**Creation of an effective system for combating legalization (laundering) of funds obtained from corruption crimes, as well as a system for tracing and returning assets obtained through corruption**			
	Task 1 . Increasing the effectiveness of the system for preventing legalization of illegally obtained assets	(i) To develop and adopt legislative changes make the national legislation fully compliant with the Financial Action Task Force (FATF) recommendations, taking into account MONEYVAL evaluations and opinion; (ii) To develop a draft law to fully align the national l with the requirements of the Directive of the European Parliament and of the Council (EU) 2015/849 of May 20, 2015 (as amended)	(i) To conduct an analysis of the national legislation compliance with the requirements of the Directive of the European Parliament and of the Council (EU) 2015/849 of May 20, 2015 (as amended); (ii) To develop and adopt a draft law on introduction of an effective procedure for verification of the ultimate beneficial owners of legal entities, as well as on strengthening of sanctions for failure to submit or submission of inaccurate information on the ultimate beneficial owners."	(i) To conduct the next national assessment of risks in the field of prevention and countermeasures against legalization (laundering) of criminal proceeds and financing of terrorism, determine measures in response to identified risks based on its results and implement them.	

	Task 2 . Increasing the effectiveness of the system for search and management of illegally obtained assets		(i) To improve the procedures for determining managers for assets transferred to ARMA to eliminate corruption risks; (ii) To introduce a mechanism for directing part of the income from management of assets transferred to ARMA (cash in particular) to the state budget .	(i)To improve the legislation on transferring assets for ARMA management; (ii) To prepare and conclude bilateral and multilateral agreements, memoranda, etc. with respective authorities of other countries on issues of identification, search, return of assets obtained through corruption or other criminal means; (iii) To implement and develop digital tools used by ARMA for asset tracing, information exchange, access to registers and databases; (iv) To conduct trainings and other educational events for authorized bodies employees on international cooperation procedures for identifying, searching, and returning assets obtained through corruption or other criminal means.	
2.3.3.	Timeframe under the stage:	(i) National legislation is fully compliant with the Financial Action Task Force (FATF) recommendations, taking into account MONEYVAL evaluations and opinion – by the end of 2022;	(i) Report on the analysis of the national legislation compliance with the requirements of the Directive of the European Parliament and of the Council (EU) 2015/849 of May 20, 2015 (as subsequently amended) - May 2023; (ii) The Law of Ukraine on introduction of an effective procedure for verification of ultimate beneficial owners of legal entities, as well as strengthening of sanctions for failure to submit or submission of inaccurate information on ultimate beneficial owners adopted - October 2023.		
2.3.4.	Risks related to the goal achievement:	corruption risks	Insufficient institutional and material support of the Commission for external assessment of ARMA performance; Insufficient funding for creating the register		
2.3.5.	Goal achievement indicator:	(i) Financial Action Task Force (FATF) recommendations, taking into account MONEYVAL evaluations and opinion implemented; (ii) Forcibly seized assets and income from their sale go to the State Budget of Ukraine;	(i) The National Asset Recovery Strategy and its implementation plan approved; (ii) The national assessment of the risks of legalization of funds obtained through criminal means for 2020-2022 conducted; (iii) Amendments to the legislation adopted to improve the mechanisms for verifying information on ultimate beneficial owners and legal entities ownership structure.	(i) The MONEYVAL Committee approved the 4th report on the progress of Ukraine based on the results of the 5th round of assessment of Ukraine regarding FATF recommendations implementation; (ii) Standards of cooperation between NABU, SAPO, ARMA, NACP, SFMS on counteraction to legalization, search and return of assets (iii) A centralized register containing legal entities' and individuals' bank accounts created.	(i) The National Asset Recovery Strategy implemented; (ii) Not a single disciplinary, administrative, or criminal offense was detected during the reporting period, which could have been committed by officials during exercising powers to prevent legalization of funds and other assets obtained through corruption, as well as their search and return
2.3.6.	General need for funds for the goal achievement:	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects financing	(i) Within the limits of planned expenditures of the State Budget of Ukraine (ii) Within the limits of international technical assistance projects

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Audit of war damage” working group

July 2022

1. The main issues to be addressed in the Recovery Plan

In general, since the beginning of the war between russia and Ukraine, according to a quick analytical evaluation of the Kyiv School of Economics (hereinafter - KSE), the amount of direct documented damage to residential and non-residential real estate and other infrastructure as of June 13, 2022 amounted to more than $ 95.2 billion). Estimates of direct losses do not take into account the value of undamaged assets in the territories occupied after 24.02.2022 and the value of assets occupied and/or damaged before 24.02.2022.

The total indirect losses of Ukraine's economy are estimated at $ 126.8 billion or 3.7 trillion hryvnias.

According to the KSE team's evaluation, the total amount of needs for the reconstruction of Ukraine is $ 164.9 billion or almost 4.8 trillion hryvnias. At the same time, the assessment of the need for recovery does not take into account the total losses of the economy from the war (loss of GDP, investment, labor, etc.).

The total losses of Ukraine's economy due to the war, including both direct and indirect losses (GDP decline, investment cessation, labor outflows, additional defense and social support costs, etc.), range from $ 564 billion to $ 600 billion.

The main problem is to determine the amount of damages and the availability of all evidence for their proper compensation. As a result, the state will be able to determine losses, methods and objectives of assessment, to record evidence of losses properly; assess losses, store and use evidence and valuation results. The result of solving these issues will be as follows:

1. A unified conceptual approach and a methodology for determining losses, recording and storing information and evidence (depending on the purpose of the assessment) have been developed and implemented for state bodies, local self-government bodies, and stakeholders.

2. The state has information on the extent of destruction, indirect damage by industry and region, and has identified a financial need to restore damaged / destroyed assets for effective planning of its activities.

The methodological basis for determining losses is internationally recognized standards.

Key challenges in the field:

· Uncertainty of the ultimate objectives of the collection of information on losses and their assessment, as depending on the objectives of determining the amount of damage, different methods and approaches may be used;

· Lack of a unified approach to determining the amount and monetary value of losses incurred as a result of armed aggression, as well as responsible institutions in terms of damage assessment, because different authorities, NGOs, forensic experts determine losses based on their methods, which leads to different interpretations and certain amounts;

· Lack of a unified approach to the procedure for recording losses, which leads to social tension, chaotic actions, which in the future may cause outrage at the need to repeat certain procedures to obtain correct estimates, or lead to poor initial data for assessments;

· Lack of a single state electronic register (digital resource), where all data on losses and their assessment would be collected, accumulated and processed;

· Lack of the order for accounting data on damaged and destroyed things (movables, animals), while accounting for data on damaged and destroyed real estate (real estate, real estate) is provided by the resolution of the Cabinet of Ministers of Ukraine dated 26.03.2022 № 380 "On collection, processing and accounting for information on damaged and destroyed real estate as a result of hostilities, terrorist acts, sabotage caused by the military aggression of the russian federation. "

Key features:

· Subordination of the choice of approaches and methodology for assessing damages to the legal strategy for future claims against the aggressor state (for example, violation of the Convention on the Laws and Customs of Land Warfare of 18.10.1907; appeal to the Agreement between the Cabinet of Ministers of Ukraine and the Government of the Russian Federation investment of 27.11.1998, use of UN resolution A / RES / 60/147 or other options), as improper or incorrect preparation of evidence of damages may worsen Ukraine's position in the courts;

· Use at least two separate approaches to assess the amount of damage, namely: (1) preliminary (analytical) damage evaluation, which will be used mainly for crisis communication, policy assessments and a simplified methodology that can be used by ministries, other central and local executive authorities. However, these estimates will generally not be able to be used to pay compensation and cannot be considered as appropriate evidence in the courts; (2) detailed (object-by-object) assessment of damages, which will be carried out in accordance with the legislation on property valuation, land valuation, forensic examination, will be determined by experts with special qualifications and, unlike previous assessments, will be verified and have legal significance, and can be used for the following lawsuits (including in international courts and courts of other countries), compensation payments, etc.;

· The possibility, with the support of international technical assistance projects, to start creating a single information and communication geoinformation system and the State Register of Damage Caused by Armed Aggression - to record destruction and damage, including using a single cartographic basis, as well as remote zoning technologies for monitoring of mass damage and destruction.

Key constraints/framework:

· The main challenge for developing a recovery plan is the considerable uncertainty surrounding the lack of possible timelines when the war will end. There are several scenario plans to end the war (from the return to the borders of 1991/on 24.02.22 to the attempts of the Russian Federation to capture the entire territory of Ukraine and a significant number of options between them), which can significantly change the content and priorities of such a plan;

· It is very likely that the active phase of hostilities in the East and South-East of Ukraine will continue both during the work on the document and at the end of June - the expected period of presentation and approval of the plan. Estimates of the duration of this phase and the end of the war vary from a few months to several years.

2. Goals, objectives, stages of the Recovery Plan in the direction of "Audit of war losses"

2.1 Purpose - one or more generalized goals, proposed changes to solve problems in the area

A unified conceptual approach and action plan should be developed and implemented for state and local governments to identify the damage caused by the war, to unify the approaches and methods of such determination.

2.2 The main tasks indicating the necessary measures / steps for their implementation, divided into stages

· Setting loss targets and general approaches to achieving loss targets (in terms of each target);

· Identification of those responsible for the implementation of general approaches in terms of objectives;

· Unification of methodological support and digitalization of loss determination (including inventory, fixation of losses, determination of their volume, evaluation and storage of loss determination results);

· Identification of final executors of the processes of determining losses (inventory, recording of losses and their volume, assessment);

· Introduction of the main ways of coordination and interaction of state authorities and local self-government bodies in the processes related to the determination of losses;

· Establishing requirements for documents confirming the legality of damage due to war (elimination of falsified cases of damage not caused by hostilities) and belonging of the damages to the declared persons (documents confirming the right of ownership or use of destroyed / damaged property);

· Developing approaches to the possible preservation of destroyed / damaged objects with a view to their possible further use in lawsuits;

· Development of the necessary changes in the legislation to determine the terminology, rights and obligations of the parties, the peculiarities of the exercise of powers by public authorities, including the temporary management and storage of destroyed / damaged property.

Proposed national projects and relevant regulatory and legal support

Project description	Justification	Criteria / indicators of the proposal implementation (quantitative or qualitative)	The main responsible state body	Estimated need for financing (UAH million)	Proposed sources of funding	Regulatory and legal support
Creation of unique state information and communication system for the collection, accumulation, accounting, processing, storage and protection of information (documents) about damaged and destroyed property, spatial coordinates of objects, persons whose property is damaged or destroyed, damage and losses caused by the damage of such property, and other information, using a cartographic basis and information products of remote sensing of the Earth, in particular space photography.	The need to implement a unified approach to the collection, accumulation, accounting, processing, storage and protection of information (documents) about damaged and destroyed property, spatial coordinates of objects, persons whose property is damaged or destroyed, damage and losses caused by damage to such property, in order to carry out law enforcement activities, prepare lawsuits for international disputes, conduct assessments, manage recovery projects, as well as the queue for compensation / square meters, carry out analysis and public control over the recovery process.	Phase I (July 2022) - creation and implementation of the State Register of property damaged and destroyed as a result of hostilities, terrorist acts, sabotage caused by military aggression of the Russian Federation (MVP for real estate) Phase II - development of a business process for collecting and processing information on damaged and destroyed movable property Phase III - collection and processing of information about damaged and destroyed movable property in the information and communication system	Ministry of Infrastructure Ministry of Regional Development Ministry of Reintegration Ministry of digital transformation Ministry of Justice Ministry of Culture State Property Fund MIA SES local governments military administration	tbd	international technical assistance	Law of Ukraine, which, in particular, will provide for the creation and operation of a single register, which will accumulate and store all information and data on damages caused by armed aggression Procedure for maintaining the State Register of property damaged and destroyed as a result of hostilities, terrorist acts, sabotage caused by the military aggression of the russian federation Resolution of 26.03.2022 № 380 On the collection, processing and accounting of information on damaged and destroyed real estate as a result of hostilities, terrorist acts, sabotage caused by military aggression of the russian federation

Creation and filling of the Unified register of objects of the state and municipal property on single methodological bases in the order established by the Cabinet of Ministers of Ukraine	Today there is a Unified Register of State Property, the software of which is outdated. There is no single unified approach to the accounting of communal property. This situation complicates the comparison and identification with the objects that have suffered damage, as well as makes it impossible to work analytically with the relevant data. Purpose: to create on a single modern IT platform a centralized information resource (portal), which should unite all assets (enterprises, institutions, organizations and property) that belong to the state in terms of subjects of management of state property as well as of territorial communities.	Technical tasks for the new software are developed, the order of maintaining the register is approved, the software is developed and adjusted, digital data are collected and transferred to the Unified register	SCMU SPFU Ministry of digital transformation Ministry of Regional Development local governments Ministry of Economy Ministry of Finance Ministry of Justice State Geocadastre Ministry of Infrastructure Derzhkomstat, national securities commission	tbd	internatio nal technical assistance	Development and adoption of the Law of Ukraine on Amendments to the Laws of Ukraine “On Management of State Property” and “On Local Self-Government”, as well as the Law of Ukraine on Amendments to the Code of Ukraine on Administrative Offenses and the Criminal Procedure Code of Ukraine on improving the state policy of management of state and communal property (determination of liability for failure to enter information in the Unified Register). Development and adoption of Resolutions of the Cabinet of Ministers of Ukraine on the procedure for maintaining the Unified Register of State and Communal Property (to replace the resolutions of April 14, 2004 №467 “On approval of the Regulations on the Unified Register of State Property” and 30.11.2005 № 1121 “On approval of the Methodology conducting an inventory of state property ”)

DRAFT

REPORT ON DIRECT INFRASTRUCTURE DAMAGES, INDIRECT ECONOMIC LOSSES AND PRELIMINARY ASSESSMENT OF UKRAINE'S RECOVERY FINANCING NEEDS

Contents

1. General conclusions

2. Assessment methodology:

2.1. Key terms

2.2. Damages assessment

2.3. Losses assessment

2.4. Reconstruction and recovery needs

3. Damages, losses and preliminary needs assessment by sector breakdown:

Social sector

- Housing and administrative buildings
- Healthcare facilities
- Educational institutions and scientific infrastructure
- Social services
- Culture, religion, sports, and tourism

Productive sector

- Industry and business services
- Commerce
- Agri sector and land resources

Infrastructure

- Transportation infrastructure
  - Roads
  - Railway infrastructure
  - Aviation industry
  - Water transport
- Postal services
- Digital infrastructure
- Vehicles
- Energy
- Housing, utilities and communal services

Financial sector

Environment

Executive Summary

On February 24, 2022, an unprovoked full-scale Russian invasion of Ukraine took place. Since the beginning of the war, Ukraine's losses have been enormous: thousands of civilians have died, dozens of cities have been damaged, hundreds of infrastructure facilities, medical, social and educational institutions, enterprises, and thousands of homes have been destroyed.

Within the National Council for the Recovery of Ukraine, a preliminary assessment of Ukraine's damages, losses and recovery needs from the war with Russia was conducted.

This report presents the results of the assessment of the damages to Ukraine's physical assets; preliminary assessment of losses by sector breakdown, as well as preliminary assessment of the reconstructions and in part - of recovery needs (excluding additional needs for modernization, investment projects, etc.).

The report covers the period from February 24 to **June 13, 2022.**

This report covers only damages and reconstruction needs directly related to russia's military aggression, and **does not cover financial needs for modernizing Ukraine's economy.**

The total amount of Ukraine's recovery needs, as of June 13, 2022; breakdown by type of needs.

The damage assessment was carried out within the National Council for the Recovery of Ukraine by the Kyiv School of Economics (KSE) together with the Ministry of Communities and Territorial Development, coordinated by the Ministry for Reintegration of the Temporarily Occupied Territories and in cooperation with line ministries and the National Bank; the assessment of losses and preliminary reconstruction and recovery needs was carried out by the KSE team, taking into account contributions from central executive bodies.

The assessment of environmental losses was carried out by the team of the Ministry of Environmental Protection and Natural Resources, together with partners, according to its own methodology, and currently contains only certain/ fragmentary estimates of the financial costs of environmental damage caused to Ukraine as a result of hostilities.

The overall assessment of damages and losses under this report was carried out according to the World Bank methodology, and in close collaboration with the World Bank team, but taking into account the significant amount of microdata collected by relevant authorities after the full-scale war outbreak.

The assessment methodology involves the use of indirect methods, statistics and certain assumptions, in particular on the extent of damage in areas where active hostilities are still underway, physical inspection of which is limited due to danger (e.g. mining) or in areas occupied by the aggressor. To calculate the value of damaged and/ or destroyed assets, the average values calculated on the basis of data from the State Statistics Service, line ministries, Prozorro tenders, etc., and adjustment ratios according to the level of damage to objects are used. To calculate the value of damaged or destroyed assets of large industrial facilities, identified institutions, information from the financial statements as of the last available date is used.

At the same time, the receipt of information on the actual (compared to the preliminary assessment) state of damage to facilities in the liberated and controlled territories of Ukraine is used as a proxy to clarify assumptions about the level of damage and the extent of destruction.

The research methodology is described in more detail in the relevant section of this report.

Damages assessment

As of June 13, the total amount of damages to residential and non-residential real estate and other infrastructure **counts over $95.5bln or approximately UAH 2.6 trillion (at replacement cost).**

The largest share in the total damages belongs to residential buildings (39% or $36.8bln) and infrastructure (33% or $31.3bln). Damages of business assets amount to at least $8bln and are growing rapidly. Another $4.3bln is the damages of the agricultural sector.

Damage of public sector facilities (social facilities and institutions, educational, scientific and health care institutions, cultural, sports facilities, administrative buildings, etc.) amount to about $6.7bln.

Damages are estimated at the replacement cost (market value of an appropriate analogue that could be purchased before the military aggression, at the $/ UAH exchange rate as of December 31, 2021). Damages do not take into account undamaged assets in the territories occupied after 24.02.22 and the assets occupied and/ or damaged before 24.02.22.

The most affected are the regions of Ukraine in which direct hostilities took place: Donetsk (25% of damages in monetary terms), Kharkiv (18%), Luhansk (over 13%), Mykolaiv (9%), Zaporizhzhia (7%), Kyiv (7%) and Chernihiv (6%) regions.

Losses, by sector breakdown

The total preliminary assessment of losses of Ukraine's economy are $126.8bln or UAH 3.7 trillion (as of June 13, 2022).

Missile attacks cause great damage to industry, infrastructure and other assets. This leads to a complete or partial shutdown of a significant number of enterprises and institutions, which, in turn, results in significant indirect losses.

The largest share belongs to the business assets and industry – $28.7bln, the agri sector and land resources - $23.4bln. $ 23.3bln is indirect losses to trade.

This estimate does not take into account the total economic losses from the war (GDP decline, cessation of investment, outflow of labour force, additional defence and social support costs, etc.), which according to joint estimates of the Ministry of Economy and KSE, range from $564bln to $600bln.

Reconstruction and recovery needs

According to preliminary estimates, **Ukraine's reconstruction needs amount to $165.1bln or almost UAH 4.8 trillion**. This assessment **does not take into account the need to implement other modernization projects than related to the war time damages.**

The recovery needs include technological modernization and the principle ‘Build Back Better’ when rebuilding destroyed assets, and are assessed in prices and official $/ UAH exchange rate as of June 2022.

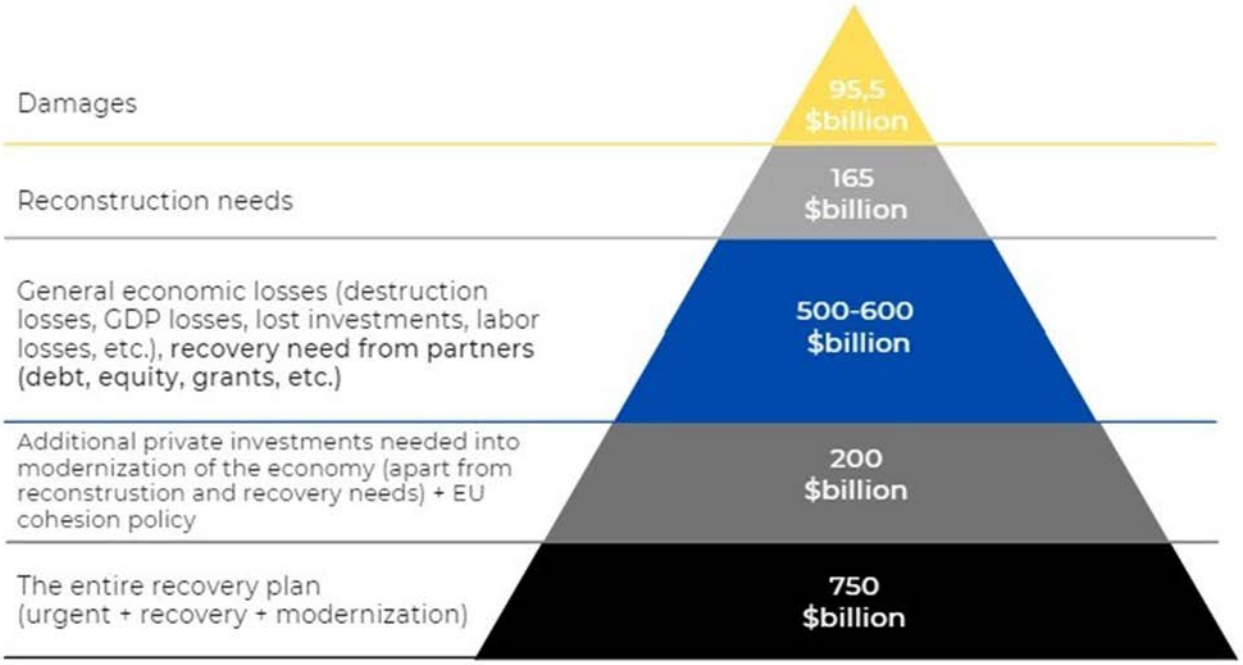
Ukraine's housing stock reconstruction needs are the biggest – $57.9bln. Another $41.8bln will be needed to rebuild infrastructure assets, at least $17.5bln – to restore full-fledged agricultural sector operations; $17bln – to restore the business assets and activities.

The assessment of reconstruction needs is preliminary and subject to further clarification. As the war is still going on, it is difficult to predict how many citizens will return to Ukraine and their regions of residence after the end of the war. This makes it difficult to forecast changes in the volume of demand for public services by region; the demand for the social infrastructure, etc. Recovery needs should also take into account the territorial development plans designing; energy balance forecast; prospects for development/ unblocking of trade routes, etc. Therefore, at the

moment there is no final vision of all sectoral development strategies to be assessed in the recovery needs.

Another limitation of the current assessment is that it does not take into account the damage caused by the war to the equipment of enterprises; additional measures to strengthen the institutional capacity of the authorities to support Ukraine's economic recovery; as well as total economic losses from the war (loss of GDP, investment, labour forces, etc.).

The comprehensive assessment of demining needs also yet needs to be made due to the limited information on the forestry, waterways' mining pollution, except modest estimates for the agricultural sector ($0.5bln) and tourism ($0.2bln). According to the World Bank's assessment, demining all territories (including forests, waterways) requires more than $70bln.



Thus, the total needs including demining are close to 235 $bln.

Damages, losses and reconstruction and recovery needs by sector breakdown, in monetary terms, as of June 13, 2022, $blns

Property type	Damages	Losses	Reconstruction and recovery needs
Housing	36.8	2.7	57.9
Transportation infrastructure	31.3	17.7	41.8
Industry and business services	8.0	28.0	16.8
Agri sector and land resources	4.3	23.4	17.5
Social services	0.2	6.4	6.6
Vehicles	2.3	0.2	4.6
Education	3.5	2.1	4.4

Financial sector	0.02	0.2	0.02
Total	**95.5**	**126.8**	**165.1**
Additional needs for demining			
Demining (according to the World Bank preliminary assessment)			**70**
Total, with demining			**235,1**

Chart 1. General needs for financial support of Ukraine, $ billion

Introduction

The war launched against Ukraine by the russian federation on February 24, 2022, became the largest military conflict in Europe since the World War II. The aggressor undertakes its standard methods of combat previously used in Syria and Chechnya with the maximum use of indiscriminate attacks, artillery and rocket fire on settlements, including the largest cities of Ukraine, as well as on critical and other infrastructure facilities.

This results in significant civilian casualties, both as a result of direct hostilities and numerous war crimes. According to the UN, as of June 14, 2022, 4,432 Ukrainians were officially killed and another 5,499 were injured. 288 children were killed and at least 527 were injured. Information on civilian casualties during the war has been delayed considerably and, in all likelihood, does not cover the number of casualties in the occupied territories and does not take into account the deaths of Ukrainian servicemen.

It also leads to large-scale destruction and damage to housing, office buildings, infrastructure facilities, cultural and architectural sites throughout the country, and especially in areas of active hostilities. In the first weeks of the war, in late February – early March, hostilities took place in 10 regions. As of the beginning of June 2022, hostilities continue in Kharkiv, Luhansk, Donetsk, Kherson, Mykolaiv, Zaporizhzhia and Dnipropetrovsk regions. The cities that suffered the most during the war include Mariupol, Kharkiv, Chernihiv, Sievierodonetsk, Lysychansk, Sumy, Rubizhne, Izium, Mykolaiv, and Bakhmut.

The extremely massive nature of damage and destruction, the continuation of active fights, the constant change of the front line, as well as the lack of physical access to a large number of settlements make it difficult to conduct a detailed, objective, comprehensive assessment of damage. Prior to the full-scale invasion, 43,300 sq. km of Ukrainian territories were occupied, which made 7% of Ukrainian territory. Currently, the uncontrolled area is 2.9 times larger and is more than 20% of the total area of Ukraine. However, the use of indirect valuation methods allows to make preliminary calculations on the total volume and structure of damages to physical assets (residential, non-residential buildings; infrastructure); losses of the economy by sector breakdown, as well as needs to rebuild the damaged assets.

This report presents such assessment of damages, losses (by sector breakdown) and preliminary assessment of the reconstruction and recovery needs (excluding additional needs for modernization, investment projects, etc.).

The date on which this estimate is valid is **June 13, 2022.**

The assessment is based on the methodology used by the World Bank and described in the Bank's key methodological documents[1][2][3], taking into account the limitations that exist in Ukraine, in particular the availability of datasets.

Damages assessment is updated on a regular (weekly) basis, based on the latest micro data on damages available. This allows to quickly adjust assumptions used in the assessment as the available and verified micro data is used as a proxy to assess the damage to other assets and/ or regions where such microdata is limited. Therefore, the assessment methodology provides a more accurate approach than purely indirect methods. In the meantime this led to a slight reduction of the damage value in categories of roads, airports, and housing **(Chart 2).**

Recovery needs assessments as well is subject to regular updates going further, taking into account the determination of sectoral recovery strategies; development of territorial development plans, etc.

The final assessment of the damages, losses and needs assessment is possible only after the war ends in Ukraine.

The report is based on a sectoral principle. At the end of the report there are summary tables with the relevant data for each sector/ industry.

Chart 2. Dynamics of the total damages assessment reflecting adjustments made on obtaining microdata for different sectors, $blns.

Source: Kyiv School of Economics

General principles of assessment methodology

The assessment is carried out by the Kyiv School of Economics, in partnership with the Ministry of Development of Communities and Territories of Ukraine, in coordination with the Ministry for Reintegration of the Temporarily Occupied Territories, and in cooperation with other central authorities, also taking into account information received from military-civilian administrations. The assessment is based on the World Bank's Damage, Loss, and Needs Assessment Guidance Notes, Volumes 1-3, and FAO[4] (Methodology For Damage And Loss Assessment). The assessment is carried out by an indirect method and in close collaboration with the World Bank team.

According to WB methodologies, the assessment of recovery needs includes three steps, which are carried out in sequence: (1) damages assessment to physical assets; (2) losses assessment; (3) assessment of reconstruction and recovery needs.

Key terms:

Damages – total or partial destruction of physical assets existing in the affected area;

Losses – a decrease in the number and value of flows (production, sales of goods and services, cash flows) caused by external factors; temporary changes in economic flows as a result of the war. Losses arise from the moment of invasion to the moment of achieving full economic recovery and reconstruction, which often lasts for many years. In the case of this assessment, this period is 18 months, starting in June 2022, as well as the first three months of the war (a total of 21 months). Losses are expressed in current monetary value.

The replacement cost is the cost of replacing the property with its equivalent at market prices prior to the war start (for the purposes of this report – in December 2021).

The recovery needs include the cost of repairing and replacing damaged assets based on the market price existing immediately after the end of the war, or in this case, the cost of replacement as of June 2022; the Build Back Better principle – that is, measures to improve functionality, energy efficiency, universal access, sustainability and the necessary upgrades. On top of that recovery needs can include part of losses, for example, for clearing debris, demining; additional costs of service providers associated with the restoration of basic services; and providing equitable and accessible services to vulnerable groups and affected population.

Damage assessment methodology:

Damage assessment is calculated in replacement cost; does not take into account objects in Ukrainian territories occupied after 24.02.2022, but considered undamaged.

For the calculation, micro data (where available) and assumptions (where unavailable) about the level of damage is used, according to three coefficients (no damage; damage up to 40%; damage above 40%, which according to the WB approaches is equal to the need for complete reconstruction/replacement of the object). 4 coefficients are applied to buildings (0% of damages; up to 10% of damages; up to 40% of damages; above 40%).

To clarify the assumptions about the level of damage, data from the analysis of satellite and aerial photographs of individual areas are used. High-precision images from drones collected by the Rebuildua project initiated by SmartFarming and Vkursi Zemli were used to calculate the damage to the infrastructure of cities, villages and settlements in Kyiv region (Moshchun, Horenka, Ozera,

[4] https://www.fao.org/3/ca6990en/CA6990EN.pdf

Pushcha-Vodytsia, Zabuchchia). Thanks to cooperation with the World Bank, access to Maxar's images has been gained, which will help clarify the degree of destruction in other cities of Ukraine in the coming months.

Data collection/ in-depth interviews with market participants/ enterprises are also conducted to improve understanding of the damage level.

Damage to large facilities (airports, large industrial enterprises, ships, aircraft, etc.) is assessed individually using financial statements. Individual coefficients of destruction can be used to estimate large infrastructure objects. The value of fixed assets as of the beginning of 2021 is taken for the identified enterprises. Medium-sized objects that can be counted (schools, hospitals, shops, cultural facilities, etc.) are valued at the average unit cost (estimated from financial statements, Prozorro tenders, etc.). Mass facilities (real estate, vehicles, small business assets) and networks (road and rail, electricity and gas distribution, telecommunications) are estimated via indirect methods, a combination of relevant regional statistics and the level of damages for individual regions or cities.

The assessment includes only losses from destruction/ ruining of buildings, not taking into account the cost of equipment. These estimates will be gradually added in the next stages of updating the indicator.

Losses assessment methodology:

This estimate is preliminary, and includes the main "side" effects of the loss suffered by different sectors as a result of the war, in particular: loss of potential income incurred by citizens, the state, businesses and additional expenditures of the state, business entities, citizens incurred as a result of the war. Such lost income and additional expenditures could be used by producers to finance their current activities (including the payment of wages, taxes, etc.), investment in working capital, or capital investment to expand production.

Losses are estimated in relation to our defined baseline scenario, which reflects the basic scenario of economic development without war. In determining the baseline scenario, we used data on production, consumption and trade for the 2021 calendar year (or the last reporting year for which official statistics are available).

To determine losses by project analysts use a regional approach, according to which differentiated loss coefficients were used (according to the duration and/or intensity of hostilities in the region, and, accordingly, the expected production losses). The losses assessment was carried out taking into account the industry specifics, which are described in more detail in the following sections of the report in the relevant areas.

The starting point for estimating losses is the period from the beginning of the war (February 2022) to the moment of full recovery of the economy and infrastructure, complete resolution of social and humanitarian challenges arising from the war. We anticipate that the resumption of such business chains and processes will take **more than 18 months, starting in June 2022. Thus, the total period for which indirect losses are calculated is 21 months (March 2022 - November 2023),** with certain exceptions for industries where the recovery of economic activity will take longer (e.g., horticulture, animal husbandry).

Reconstruction and recovery needs assessment methodology:

The needs for economic recovery reflect a mutually agreed vision of the recovery strategy of Ukraine as a whole and of each sector of the economy in particular as an important prerequisite

for the planning of the reconstruction process, which is designed to restore the country's economic capacity and solve the social and humanitarian challenges that arose as a result of the war. The assessment of Ukraine's recovery needs is based on estimates of damages and losses, described in the relevant sections.

This assessment **does not take into account the need to implement other modernization projects than related to the war time damages.**

According to international approaches, recovery needs are calculated as the aggregate need for financing the recovery of destroyed and damaged assets, which includes:

- the cost of restoring destroyed/damaged assets, taking into account the Build Back Better principle;
- multi-year inflation (for objects that will be reconstructed/built after 2022)
- the Government's vision of structural changes that should occur, for example:
    - changing the location for individual objects (and, accordingly, the costs of land acquisition; relocation of enterprises and employees);
    - a change in the demographic structure of the population, the movement of the population inside and outside the country, and accordingly - a change in the structure of citizens' demand for public services by region;
    - replacing outdated facilities/objects with fundamentally new, more economically justified and energy efficient ones;
- sequence and priority of recovery needs (building a timeline of recovery needs, taking into account real opportunities and priority in recovery)
- the additional need for liquidity for business entities to resume their activities (usually calculated as a ratio of the volume of annual losses);
- an additional need to strengthen the institutional capacity of the Government to support economic development/relaunch of economic entities, for example, the launch of additional electronic services; registers; creation of credit institutions, etc.

As part of this report, the preliminary recovery needs assessment was built on these principles and takes into account the following approaches.

(1) Reconstruction and Transformation. We took into account the needs for reconstruction and rebuilding of damaged infrastructure considering the Build Back Better principle and thus taking into account the additional need for:

- ensuring the energy efficiency of buildings, productions;
- building bomb shelters;
- technological modernization.

(2) Recovery. The restoration of economic activity will require, among other things, the restoration of liquidity of business entities and organizations (to the pre-war level), investments in lost working capital, restoration of personnel potential, accounting and management systems, etc. We estimate such a component of recovery needs as a function (share) of the lost income of such business entities as a result of the war. The assessment of needs has industry-specific features, which are described in more detail in the following sections of the report by relevant areas.

In the meantime, taking into account ongoing military conflict on the territory of Ukraine, within the framework of this report **the preliminary needs assessment was carried out with a number of limitations:**

(1) The assessment of Ukraine's recovery needs is carried out in current prices. Since we assume that the process of reconstruction of physical infrastructure objects will take at least 10 years, the assessment of reconstruction needs in future periods should be adjusted for the level of expected inflation.

In the meantime, as the war still goes on, the current needs assessment does not take into account long-term inflation and uses current prices as of June 2022. According to preliminary calculations of the Ministry of Development of Communities and Territories of Ukraine, the increase in prices for construction materials in June 2022 compared to December 2021 is about 27%. The recovery needs are assessed at the official $/ UAH exchange rate as of June 13, 2022.

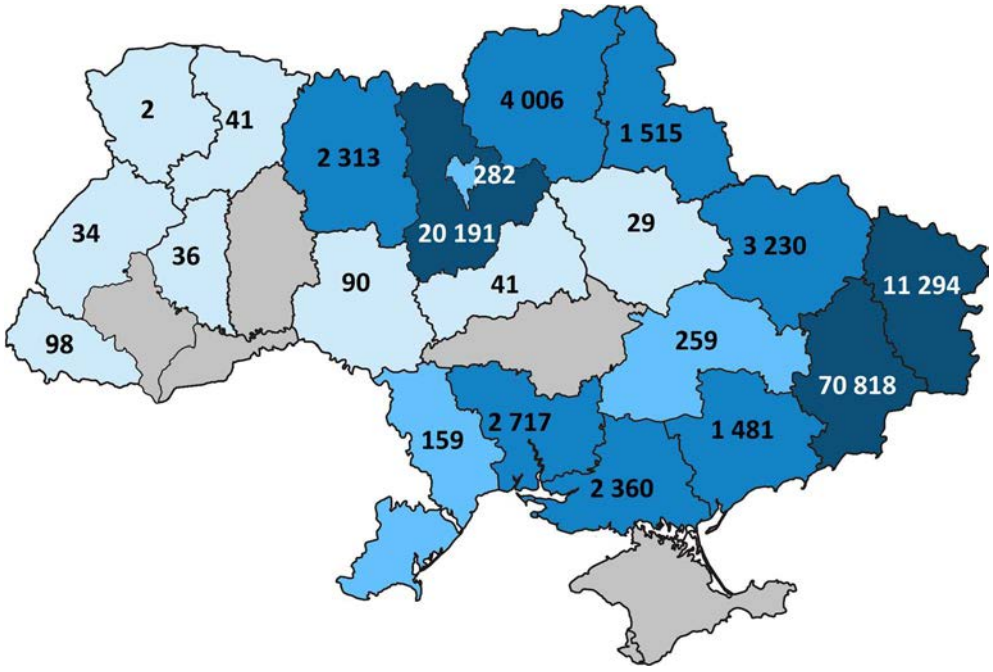
Another significant factor is the availability and price fluctuations of construction materials, both on the Ukrainian and international markets.

(2) Current needs assessment does not take into account changes in the scope of service provision due to significant demographic changes in Ukraine; additional measures to strengthen the institutional capacity of authorities.

(3) Another limitation of the current assessment is that it does not count for the monetary value of damages and needs for the environmental recovery. The assessment of environmental damage was carried out by the team of the Ministry of Environmental Protection and Natural Resources, together with partners, according to its own methodology, and currently contains only certain/ fragmentary estimates of the financial costs of environmental damage caused to Ukraine as a result of hostilities.

(4) Current needs assessment does not take into account the general losses of the economy from the war (loss of GDP, investments, labor force, etc.).

SOCIAL SECTOR



Housing and administrative buildings

Massive rocket and artillery shelling led to massive destruction of the housing stock in cities, especially those located near/on the front line. According to preliminary estimates, as of mid-June 2022, more than 50% of the housing stock was damaged or destroyed in 23 cities and towns as a result of hostilities in the Russian Federation. This creates a need not only for the reconstruction of individual buildings, but also for the comprehensive reconstruction of whole cities, the development of new urban planning documentation, etc.

The housing stock of cities such as Mariupol, Kharkiv, Chernihiv, Severodonetsk and Lysychansk suffered the greatest destruction. In some cities, it is as high as 90-95%. The number of damaged residential buildings is increasing due to the continuation of hostilities in Kharkiv, Luhansk, Donetsk, Zaporizhzhya, Kherson, and Mykolaiv regions.

The total number of destroyed or damaged housing stock is about **121 thousand buildings**, of which 107.8 thousand are private houses; 13.1 thousand are multi-apartment buildings; and also about 100 dormitories.

Map 1. Regional distribution of the number of destroyed or damaged objects of the housing stock

The total area of damaged or destroyed objects is 61.0 million square meters[5], which is 6% of the total housing stock of Ukraine. Of them, almost one third is completely destroyed.[6]

Thus, the housing of about 1 million households (about 2.6 million people) is damaged or destroyed.

[5] When calculating the total area of private and apartment buildings, the average area of buildings was used, which was calculated as the mean based on the analysis of object-by-object data on damage and destruction by regions and by types of buildings. In regions where there were no site-specific data, the value of the average building area of neighboring regions was chosen as the basis. These values may change as a result of detailed on-site technical inspections of buildings.

[6] The distribution of data on the damage level was based on the analysis of object-by-object data. In the regions where active hostilities are taking place (Donetsk, Zaporizhia, Luhansk, Kharkiv and Kherson) and there is no detailed information on the degree of destruction, it was assumed: that of the total number of objects 5% with a degree of destruction of the building up to 10%; 55% - with the degree of destruction of the building from 10% to 40%); 40% - with a degree of destruction of the building over 40%.

In moonetary terms, damage to the housing stock is $36.8bln.[7] This is the largest item among asset types. This is more than a third of the total amount of damages.

To restore housing to its previous state, the following should be done:

- new construction;
- capital repair or reconstruction of residential buildings;
- cosmetic repair of residential buildings;
- restoration of the adjacent territory near residential buildings (fences, benches, landscaping, children's and sports grounds, etc.);
- purchase of durable goods (furniture, household appliances, consumer electronics etc.).

In addition, 511 administrative buildings were destroyed, of which: 494 are buildings of state or local administration bodies; 17 are centers for the provision of administrative services. In monetary terms, damages for administrative buildings is $0.9bln.

The risk of shelling, the destruction of housing, and the loss of lives led to the need to evacuate more than 12 million citizens. 5.1 million of them left Ukraine; another 7.2 million citizens became internally displaced persons (ISPs). To support such citizens, the Government assists them in provision of temporary housing, including:

- compensation of expenses for owners of housing temporarily housing internally displaced persons who moved during the period of martial law ("Shelter" program, in accordance with the resolution of the CMU of March 19, 2022 No. 333). As of June 13, 2022, the government has allocated UAH 100 million by the end of 2022, such losses may increase to UAH 1.7bln ($60 million);
- compensation to local budgets for the payment of communal services provided during the placement of temporarily displaced persons during martial law in buildings (premises) institutions, enterprises, institutions and organizations of state and communal ownership, educational institutions of private ownership. By the end of 2022, such losses may increase to UAH 3.0bln ($100 million).

Additionally, losses include the costs of dismantling destroyed or damaged buildings and removal of construction materials amounting to **$2.5bln** (estimated at approximately $80 per sq. m. of a building). For administrative buildings the respective loss is 60 million.

The reconstruction of housing will require significant investments, since the new housing will be built considering the "build back better" principle, which involves compliance with modern standards regarding:

- security (availability of a bomb shelter, fire exits, etc.);
- energy efficiency (compliance with thermal insulation requirements);
- accessibility (availability of a ramp, elevator, etc.).

Finally, a major factor that would affect the cost of reconstruction will be a significant increase in the prices of construction materials, in particular cement, concrete, reinforcement, glass, etc.

According to preliminary estimates, the total cost of repairing and rebuilding damaged and destroyed housing would cost at least UAH 1,614bln ($55.2bln). For administrative buildings, this is UAH 36.7bln ($1.3bln). (See Appendix 1).

[7] When calculating direct losses, the values of the indirect cost of housing construction by regions of Ukraine as of January 1, 2022, approved by the order of the Ministry of Regional Development of February 17, 2022 №53, as well as other components of replacement cost calculated on the basis of market values and expert assumptions.

Health care

Documented damages of healthcare facilities amount to $1.5bln. In total, since the beginning of the war, at least 779 health care facilities have been damaged or destroyed.

The health care facilities whose damage is assessed as part of the project include hospitals, polyclinics, dentistry, consulting and diagnostic centers, medical offices, paramedics and midwives, dispensaries, rehabilitation and health centers, laboratory centers andblnood centers, outbuildings of health care facilities health. Losses from destruction caused to private medical facilities are calculated separately.

Data on the destruction of healthcare facilities was obtained from the Ministry of Health (for public facilities), microdata (for private facilities) and from open sources.

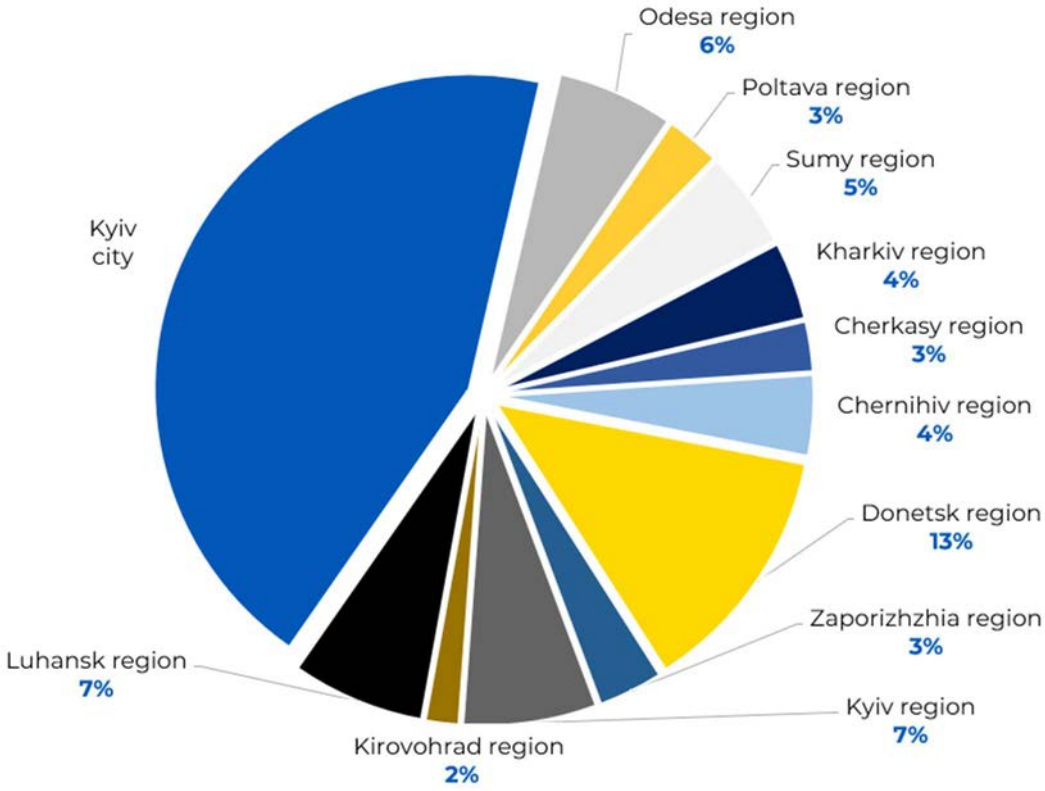
Information on the number and cost of beds, area of the objects, the cost of square meter and cost of similar objects in the Prozorro public procurement system, as well as data from open sources on the degree of damage to objects is used to calculate losses.

Damages to healthcare facilities account for about 1.3% of the total cost of losses in Ukraine. Dispensaries (268) and hospitals (227) are the most destroyed or damaged types of facilities, while hospitals accounted for more than 34% of the cost of all damages in the industry. As of June 13, at least 24 private medical facilities were damaged. However, the documented losses include primarily state institutions.

The next step is also the detailing of other sectoral losses — institutions of medical education, forensic medical examination and others.

Losses to the industry are more than double than the damages. The total losses are estimated at $2.7bln. The absolute majority of this amount — $2.7bln — are losses of private health care facilities revenues due to business interruption, damages, security threats, occupation, as well as due to the decline in consumer spending due to population displacement and decline in disposable income. The rest of the losses are due to the reduction of budget expenditures under individual programs.

In order to assess the loss of revenues of private health care institutions due to the suspension of activities and the decline of consumer demand, statistical data on revenues under section 86 "Health Care" of the Classifier of Economic Activities was taken.



The data on revenues under this section was weighted by coefficients set arbitrarily for regions taking into account information about the degree of damage to the physical infrastructure of the region, the duration and intensity of hostilities, the duration and current status of the occupied/de-occupied territory and the share of residents who moved out and into the region (according to the data of the mobile operator).

Also, taking into account that statistical data on the revenues of companies by type of economic activity is available for 2020 only, an adjustment by the growth of nominal GDP in hryvnia for 2021 was introduced. Given that the statistical data and budget expenditure reductions refer to a calendar year, the data was extrapolated for the assessment period of 21 months from the beginning of the russian invasion.

The assessment of losses of the industry resulting from the reduction of budget spending due to change in spending priorities during martial law was made based on data on budget programs in Resolutions of the CMU dated March 10, 2022 No. 245 and dated April 19, 2022 No. 465.

The key factor for the losses of the economy are decreased revenues of the medical facilities. In addition to the direct impact of hostilities, a significant factor is the decline in consumer demand due to the temporary displacement of the population, the regional distribution of losses is also impacted by the scale of the industry in the region.

Chart 3. Regional distribution of private medical institutions losses

The total recovery needs are about UAH 68.4bln or $2.3bln. Of these, almost UAH 62bln is the cost of rebuilding destroyed and damaged facilities.

The needs consist of an assessed cost of rebuilding the health care infrastructure, taking into account modern requirements for energy conservation and security requirements (installation of bomb shelters), as well as working capital recovery of state, communal and private health care institutions.

Recovery needs were calculated as follows:

The cost of restoring healthcare facilities and other buildings (administrative, dormitories, etc.) is calculated based on the damage assessment, taking into account the "build back better" principle, which involves compliance with modern safety standards (a bomb shelter, fire exits, etc., correction factor 1.125) and energy efficiency (compliance with requirements for thermal insulation, correction factor 1.1).

Also, the cost of restoring destroyed and damaged medical facilities is significant due to the need to use modern medical technologies and standards (Appendix 2).

Educational institutions and objects of scientific infrastructure

One of the biggest victims in terms of the number of destroyed, damaged and lost infrastructure objects are science and education. In total, more than 2,000 educational facilities were damaged as a result of the war. Additionally, the war interrupted the educational process, and the state was forced to reduce budget expenditures in this field to direct part of the "educational" funds to more urgent needs of the state (primarily defense, addressing the consequences of damages and increased need for social protection).

Documented damages from the destruction of educational institutions amount to $3.5bln. In total, as a result of hostilities, at least 196 educational and objects were destroyed and 1865 objects of educational infrastructure and at least 90 scientific were damaged.

The educational institutions whose damages are assessed as part of the project include preschool (kindergartens), secondary (schools), vocational, extra-curricular, pre-higher (colleges and

technical schools), higher (institutes, universities, academies) and specialized education institutions.

The main damages in the field of education concern secondary, pre-higher and technical schools, due to their prevalence and attractiveness to be used during hostilities by the aggressor's manpower. Despite active fighting took place in 11 regions, educational institutions were damaged in 18 regions. There are no losses from the damages and destruction of educational institutions in the Volyn, Zakarpattia, Ivano-Frankivsk, Poltava, Ternopil, and Chernivtsi regions.

The largest number of destroyed educational institutions was recorded in Donetsk, Kharkiv, Luhansk and Kyiv regions. Among the damaged and/or destroyed educational facilities, the largest number belongs to schools and kindergartens.

The total losses of the education sector are estimated at $2.1bln, of which almost $1.6bln are the reduction in expenditures of the general budget fund under educational and scientific programs, and $485 million of losses are attributable to private educational institutions' revenues due to the suspension of operations due to damages, security threats, occupation, as well as due to a decline in consumer demand due to population displacement and a decline in disposable income.

Calculations of losses were made on the basis of the following assumptions:

In order to assess the losses of private educational institutions due to the suspension of activities and the decline of consumer demand, statistical data on the revenues under section 85 "Education" of the Classifier of Economic Activities was taken.

The data on revenues under this section was weighted by coefficients set arbitrarily for regions taking into account information about the degree of damage to the physical infrastructure of the region, the duration and intensity of hostilities, the duration and current status of the occupied/de-occupied territory and the share of residents who moved out and into the region (according to the data of the mobile operator).

Also, taking into account that statistical data on the revenues of companies by type of economic activity is available for 2020 only, an adjustment by the growth of nominal GDP in hryvnia for 2021 was introduced. Given that the statistical data and budget expenditure reductions refer to a calendar year, the data was extrapolated for the assessment period of 21 months from the beginning of the russian invasion.

The assessment of losses of the industry resulting from the reduction of budget spending due to change in spending priorities during martial law was made based on data on budget programs in Resolutions of the CMU dated March 10, 2022 No. 245 and dated April 19, 2022 No. 465.

The main source of losses is a sharp reduction in budget spending due to the need to finance the defense forces, and due to the actual suspension of the educational process, depending on the type of education and region.

Unlike, for example, the healthacare, the revenues of private educational institutions are not that significant, hence the losses due to the suspension of activities and the decline in consumer demand were moderate.

Also an important factor is the long cycle of educational services, which reduced the decline in demand due to hostilities and will lead to faster recovery on controlled territories, which will be limited only by the outflow of consumers of educational services across the border.

The preliminary estimate of the total recovery needs is $4.4bln, of which more than $4bln is the cost of rebuilding destroyed and damaged facilities.

The recovery cost educational facilities and other buildings (administrative, dormitories, etc.) was calculated based on the damage assessment, taking into account the "build back better" principle, which involves compliance with modern safety standards (a bomb shelter, fire exits, etc., correction factor 1.125) and energy efficiency (compliance with requirements for thermal insulation, correction factor 1.1).

At the same time, a key uncertainty that complicates the assessment of recovery needs is the lack of planning for additional needs in educational capacities across regions, taking into account the continuation of changing trends in the movement of citizens within Ukraine and abroad.

Objects of scientific infrastructure

At the time of preparation of this report, there is only limited data on damages to scientific infrastructure facilities, as well as losses of Ukrainian science.

According to preliminary calculations, 117 objects of movable and immovable property of 34 institutes and other institutions of the National Academy of Sciences of Ukraine were destroyed, damaged and seized for the needs of the Armed Forces of Ukraine. The preliminary total estimate of losses ofscientific institutions of the National Academy of Sciences only amounts to UAH 214 million.

In addition to damages, the science suffered losses, in particular due to the reduction of budget expenditures under the relevant budget programs for 2022. Among them, planned expenses for ensuring the activities of the National Research Fund, grants for scientific research and scientific and technical developments were reduced (this reduction is included in the total losses of education and science). Among other factors, essential components of indirect losses of Ukrainian science, for which quantitative data is currently being collected, are:

1) suspension or cancellation of funding of scientific research and institutions under the international scientific cooperation programs;

2) losses of scientific institutions and higher educational institutions as a result of the state granting benefits to tenants of state property, which was introduced by Decree of the CMU No.634 of May 27, 2022 "On the specifics of renting state and communal property during martial law". According to this decree, for the period of martial law and for three months after it ends, the rent is charged at the rate of 50% of the amount of rent established by the lease agreement (taking into account its indexation), and in some territories, tenants are generally exempted from rent for a certain period. In particular, in the territories of Kyiv, Chernihiv, Sumy, Kharkiv, Zaporizhzhia, Mykolaiv regions and the city of Kyiv for the period of martial law (but not longer than September 30, 2022). As a result, only institutions of the National Academy of Sciences, as expected, will lose rent in the amount of UAH 130-140 million.

The recovery and modernization of Ukrainian science is crucial for the recovery of Ukrainian economy and will require prioritization of funding in favor of areas and institutions capable of producing significant scientific results, including long-term, in fundamental research. Such a prioritization can be carried out through the National Research Fund, which during its activities since 2018 managed to gain and demonstrate a certain institutional capacity and credibility (Appendix 4).

Social services

Due to large-scale hostilities in various regions of Ukraine, social facilities, including social protection institutions, geriatric institutions, sanatoriums, children's camps and orphanages, and boarding schools, were damaged.

Damages of social networks amount to $0.2bln. This includes the destruction and damage of social infrastructure facilities under the Ministry of Social Policy. The largest share of damages belongs to social protection and geriatric institutions; in particular in Kyiv, Donetsk, Luhansk, Mykolaiv, Sumy, Zaporizhzhia and Chernihiv regions.

Losses and a preliminary needs for reconstruction significantly outweigh due to unprecedented increase in potential recipients of social services due to military aggression and thus the significant additional social expenditures that the Government is forced to make to support a considerable number of victims of hostilities (internally displaced persons; children who have lost their breadwinners; persons with disabilities, etc.).

The minimum amount of funds needed for social support (under the budget programs of the Ministry of Social Policy) is **$6.4bln**. (Based on the number of additional recipients of social assistance, which arose due to the war as of June 1, 2022).

The total losses needs are at least $6.6bln.

Significant housing losses for family-type orphanages can significantly reduce the pace of implementation of the state care reform for orphans and children deprived of parental care.

If the recovery does not take place in full, the number of people who will need social services will significantly outweigh the number of people who will be able to receive them. It will negatively affect the quality of human capital and reduce the adaptive capacity of the population in the face of prolonged military confrontation, deteriorating economic situation and prolonged recovery (Annex 3, Annex 6).

Culture, sport and tourism

The cultural sphere is a special part of the national identity and therefore the restoration of damaged cultural institutions and objects will play an important role in rebuilding the country in the postwar period.

Due to the high intensity of hostilities in eastern and southern Ukraine, as well as regular rocket fire throughout its territory, most cultural, sports, and religious institutions have ceased operations or significantly reduced them. As a result, 12.5 million residents of at least 6 regions of the country (Donetsk, Zaporizhzhia, Luhansk, Mykolaiv, Kharkiv, and Kherson regions) have lost access to cultural services, and other 13 million people from 7 regions have limited access to them.

Unprecedented increase in security risks and cancellation of civilian flights directly affects the tourist attractiveness of the country, which is currently close to zero. The mining of the coastal zone leads to a full stop for domestic seaside tourism.

As of June 13, damage to culture, sport and tourism is minimum $0.7bln or UAH 21.9bln.

According to micro data, at least 527 cultural facilities, 36 religious buildings, 49 tourism and 95 sports facilities have been damaged or destroyed. In particular, 32 churches/temples, 4 monasteries, 253 houses of culture, 31 sports schools, 36 museums, and 49 tourist facilities, which are mainly located in 14 regions, have been damaged.

Important cultural and religious sites were damaged, including the Holy Dormition Svyatogorsk Lavra, the Donetsk Academic Regional Drama Theater (Mariupol), the National Literary Memorial Museum of Hryhoriy Skovoroda, and many others. In addition, some art collections were lost, including a collection of Scythian gold discovered by archaeologists in the 1950s, which was probably removed by the occupation authorities from the Melitopol Museum of Local Lore.

This assessment is based on the site-by-site list of damaged/destroyed sites provided by witnesses and local administrations, which creates the risk of incomplete data on the list of damaged objects.

An important methodological limitation of this assessment is that the financial value of the objects is calculated without actual cost of their cultural value due to the difficulties in its remote calculation as well as the absence of a single and integral register of cultural buildings, which would contain detailed data on cultural heritage, art objects. Given this limitation, damages to libraries and museum collections, costs for relocation of museum funds, etc are not included into the damages assessment at the current stage. Projects of restoration, conservation, museification of cultural heritage sites are developed individually for each site, taking into account a set of survey data and world best practices, which requires the involvement of international experts. The valuation of such projects takes time and is based primarily on the results of a comprehensive survey and careful documentation.

Another limitation is difficulty with costing the interior decoration of religious and other cultural institutions, art objects, decorations, exhibits, icons, frescoes, etc.. Accordingly, the damages

value will increase at a later stages when the price of their restoration will be additionally calculated.

Damages to cultural and tourist facilities leads to substantial loss of cultural and tourist sectors. **The total losses of culture, sport and tourism are at least $ 4.3bln.** According to experts, about 50 thousand people have lost or may lose their jobs in culture and tourism due to the closure of institutions. The migration of professional communities is also an important factor for losses.

Tourism is badly affected by the war Ukraine. Ukraine has lost its foreign tourists that amounted to 4 million people in 2020. Due to active hostilities, threats of missile strikes, and land mining 13 out of 24 regions faced a full of partial stop of the tourism activities.

The total recovery needs for tourism, sport and culture amount at least to $ 1.6bln. (Annex 5).

A significant factor for recovery is demining of cultural and touristic sites as well as substantial increase in prices for construction materials. The minimum area for demining of the seashore is about 20 thousand sq. km. Until complete demining of most coastal tourist areas, which can take several years, tourism will suffer major losses in the affected regions.

Another factor is a need in relocation of movable cultural objects (e.g. museum collections), part of which have already been transported to safer places.

PRODUCTIVE SECTOR

Industry and business services

The total damage to the assets of enterprises is estimated at $8bln. In total, at least **388** enterprises have been damaged or destroyed since the beginning of the war. Probably, the actial figure is higher, because not all companies have information, especially when it comes to the temporarily occupied territories.

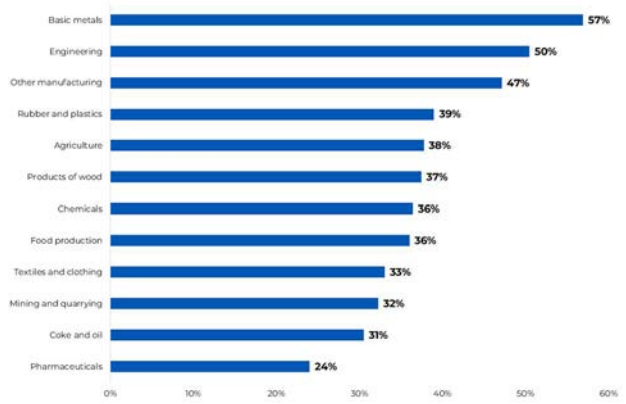
Enterprises can be divided into two groups. The first are destroyed accidentally or as a collateral damage during the shelling of military units and settlements. The second are destroyed deliberately, as part of targeted strategic missile strikes. In addition to the transport and energy infrastructure facilities described in the relevant departments, these are primarily military and dual-production use facilities. Unlike the first group, which is concentrated in the frontline regions, the second is evenly distributed throughout Ukraine.

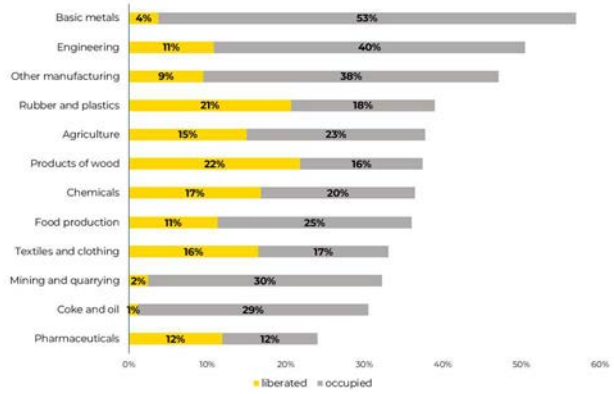
Damages include:

- Damage to property, plant and equipment (initial valuation is taken because it is not possible to acquire an asset at its book value in most cases);
- Damage to unfinished capital investments;
- Damage to inventories of finished goods and intermediate materials (we assume that in most cases the stocks were located near the main production facilities).

Depending on the availability of data, losses are calculated in one of the following ways:

- For private enterprises for which the owner has reported her own estimate of losses, after verification, the following estimate is used;
- For the enterprises of the state sector the estimations provided by the ministries and agencies whom respective enterprises report to.
- For large and medium-sized private enterprises, for which the level of damage is known, the financial statements are taken as of the last available date. We distinguish between destruction (100%) and partial damage (40%).
- For small private enterprises, an indirect calculation basiyв of an expert assessment of the level of damage in the most affected settlements was done.





The main conclusions about the losses of enterprises are as follows:

1. Enterprise assets are the third largest item of damages. It accounts for about 10% of the total losses.
2. In terms of industries, metallurgy suffered the most. In particular, two enterprises were destroyed, which are the largest in the list of damaged / destroyed - Azovstal and MMK. Ilyich (both - Mariupol).
3. In terms of regions, the Donetsk region suffered the most, accounting for almost half of the total direct losses of enterprises. Also significant losses in Kharkiv, Luhansk and Kyiv regions (Annex 7).

The total losses of enterprises are estimated at $28.7bln. Similar to danages, the actual figure is likely to be higher, as the impact on value chains will still need to be investigated in detail.

Currently the economy is recovering from the initial shock. People are returning to their homes from abroad and from other regions, and businesses are gradually resuming work. As of June 3 (100th day of the invasion), according to a survey among members of the European Business Association (EBA), 50% of companies returned to normal operation, while in early May there were only 28%. Therefore, not all indirect long-term effects have manifested themselves.

In total, nine front-line regions accounted for 30% of Ukraine's GDP in 2020. Excluding the three liberated areas in the North, this figure is 21%. And the share is even higher if you look at exports (33% and 26% respectively) or individual industries.

Chart 4. The share of regions in GDP, 2020	Chart 5. The share of affected areas in industrial and agricultural production, 2020.
	

Source: Ukrstat, CES calculations

Indirect losses incurred by owners of industrial enterprises include loss of income. We use the following assumptions:

- Destroyed and damaged enterprises are considered as noe operating, unless proven otherwise (for damaged);
- Enterprises in certain sectors of the economy have stopped or significantly reduced their activities, regardless of physical injuries, due to a significant drop in demand (advertising, employment, exhibitions, rental of cars and recreational goods, etc.);
- As only historical financial statements are available, we assume that hryvnia revenues would grow in proportion to the consumer price index.

The total need for business recovery is estimated at $16.8bln, of which 65% goes to the reconstruction of physical assets, 35% goes for the recovery of activities.

Asset **reconstruction needs** are calculated based on the amount of direct losses indexed to rising construction prices and the need to meet modern requirements for human safety, emissions and energy efficiency...

Activity **recovery needs** means the need to replenish working capital, which is calculated on the basis of indirect losses multiplied by the coefficient (Annex 8)

Commerce

The total damages to the retail are estimated at **$2.1bln**. During the fighting, 2,903 retail outlets with a total area of 1.6 million square meters were severely damaged. It is difficult to calculate the final number of damaged objects at this time due to the continuation of active hostilities in Kharkiv, Luhansk, Donetsk, Zaporizhzhia, Kherson, Mykolaiv regions and the temporary occupation of some territories.

The following establishments and objects were included in the objects of the branch:

- Warehouses (excluding wholesale warehouses),
- Pharmacies,
- Shops.

Information on the destruction of these facilities was obtained from members of the Association of Retailers of Ukraine and the Ukrainian Council of Shopping Centers, the professional community, and from open sources.

Damage assessment was performed according to the expert method of standardized interviews and online surveys of owners and top managers of retail companies, taking into account the area and nature of damage to the building, based on the cost of construction and repair work, equipment and inventory. The survey involved 295 leading network companies that represent about 1,000 brands and have 28.5 thousand outlets with a total area of 15.4 million square meters.

The calculation includes: the cost of restoration of buildings owned by companies, the cost of repairs, utilities, the cost of store equipment and inventory, the cost of warehouses owned by companies, warehouse inventories, and vehicle fleet.

This does not include enterprises with less than three outlets, merchants in the street markets, warehouses of wholesalers and manufacturers, stores that have suffered only minor damages.

The indirect losses of retail are estimated at $22.6bln. All this amount falls on the reduction of retail trade due to emigration, falling purchasing power of the population and the destruction of stores.

The sector needs $3.9bln to reconstruct. Working capital needs were not calculated separately, as they consist in the purchase of goods, while destroyed stocks of goods are already included in the assessment of direct losses.

Damages and losses of **shopping centers**, which are not participants of the retail market themselves, but provide space for such participants, are calculated separately. **Damages to shopping centers amounted to $347 million.**

Shopping center status is granted to commercial real estate objects that are considered shopping centers according to the ICSC European classification of shopping centers. According to this classification, a shopping center is an architectural structure with a lease area of more than 5,000 square meters, which has a professional management company and at least 10 tenants. In total, there are 329 shopping centers in Ukraine, another 19 new ones were to open in 2022.

Estimation of damage was done by an expert method taking into account the area and nature of the damage based on the construction cost of $ 800-1100 per m2, depending on the type. The calculation does not include losses of tenants (equipment and goods), they are taken into account in the previous section.

The total losses incurred by the shopping center industry are estimated at $1.7bln. Losses are calculated by determining the cash flow of domestic shopping malls based on the potential they would have in 2022, given the increase of 15% compared to 2021. This growth was observed in January 2022 and also corresponds to the growth rate of retail trade in Ukraine in early 2022.

The largest losses to the shopping center is attributed to eastern Ukraine, where hostilities continue. Despite the fact that some shopping centers resume operation, income remains at 30% of pre-war levels. On the contrary, the Center and the West show a rapid recovery in April and May. Gradually, from May and June, the North, Kyiv and the South begin to recover, too.

The key factors for estimating losses for retail are the reduction in consumption due to migration and hostilities. The industry is also affected by the difficulties that retailers have now in Ukraine such as logistics, foreign exchange transactions, staffing problems, lack of financing, higher prices due to the depreciation of the hryvnia, and massive damages due to destruction.

The total need to reconstruct the industry is estimated at $347 million. All this amount falls on the reconstruction of shopping centers. Unlike most other areas in this report, the loss on the recovery of physical assets was taken without an increasing factor, as modern shopping centers

are already being built taking into account modern conditions for security, energy efficiency, accessibility, etc. (Annex 9).

Agriculture and farmland resources

The amount of damages to the land fund and agro-industrial complex of Ukraine is $4.3bln.

Assessment of damages in Ukrainian agriculture includes the following main components: damaged farmland; agricultural machinery; elevators and other storage facilities; damages in livestock and beekeeping; damage to perennial crops; damaged and stolen inputs and loss of harvested grain and oilseeds products.

The damages are estimated by an indirect method, using relevant state and regional statistics.

Damage to farmlands includes the costs of land recultivation after the explosions; costs of demining the minefields and unexploded ordnance; the replacement and repair cost of irrigation infrastructure; and damage caused by farmers' inability to harvest winter crops due to occupation or mining pollution.

The estimated amount of damages to owners (land users) of agricultural land, taking into account the actual costs incurred to bring the farmland to a usable condition, is determined in accordance with the Procedure for determining and compensating landowners and land users, approved by the resoluton of Cabinet of Ministers №284 dated 19.04.1993.

The largest portion of damages is caused by the inability to harvest winter crops, resulting in an estimated more than $1.43bln in damages. The second-largest category of damages is destroyed agricultural machinery. The estimated cost of repairing and replacing damaged equipment exceeds $926 million.

About 19% of all irrigated agricultural lands in Ukraine are located in the temporarily occupied Kherson region, and another 10% are in the partially occupied Zaporizhia region. The estimated cost of replacing and repairing damaged irrigation infrastructure is $225 million.

The cost of surveying the lands in areas with a high risk of mining pollution and demining the affected areas is estimated at $436 million.

The total losses of Ukrainian agriculture are estimated at $23.35bln, $11.93bln of which are losses caused by the navalblnockade that caused logistics disruptions and, on average, 33.7% lower domestic prices for key agricultural export-oriented commodities. A decrease in crop production caused losses estimated at $9.85bln. A decrease in livestock production and beekeeping resulted in an estimated $706 million in losses for farmers, and another $859 million in losses were caused by rising prices for key inputs.

We estimated five major sources of losses in Ukrainian agriculture as a result of the Russian invasion. In our analysis, we estimated losses caused by:

- lower crop production (annual crops)
- lower livestock and beekeeping production
- lower perennial crops production
- the navalblnockade and consequent decrease in domestic prices for key export-oriented commodities
- higher cost of production because of an increase in input prices

For the production of the annual crops, we estimated an expected decrease in the upcoming harvest by considering two key components - a decrease in the sowing area (by region) and reduced yields. The expected sowing area reduction coefficients are region-specific and depend on the extent of the hostilities taken (taking) place in the area and whether a portion of the region was (or still is) under the occupation.

The same region-specific coefficients were used to estimate the losses for the livestock and beekeeping sectors. For these sectors, on the other hand, we do not assume a decrease in productivity, and while losses for the beekeeping, similarly to losses in annual crops production,

were estimated for only one year - for the livestock sector, the losses were estimated for two years of lower production. For perennial crops, the losses are estimated at five years of lower yields, as the estimated average time needed for newly planted gardens to start bearing fruits is five years.

To estimate the losses caused by the navalblnockade, we calculated the difference between farm-gate prices before the Russian invasion and post-invasion prices for the main export crops - wheat, sunflower, corn, and barley. The expected volume of these crops' production for 2022 (without Russian invasion) was used to determine the combined losses because of the supply chain disruption caused by the navalblnockade.

To estimate losses due to higher key input prices - fertilizers and fuel - we estimated the expected consumption of these inputs, adjusted for the decrease in the sowing area. The expected consumption estimates were multiplied by the post-invasion price changes for these inputs.

Key sources of losses in Ukrainian agriculture due to the russian federation's invasion:

- Decrease in the annual crop production. Factors that affected the crop production - reduction in sowing areas due to occupation, active hostilities, and mining pollution, as well as - an expected decline in yields because of logistical disruptions in the supply of factors of production (fuel, fertilizers, seeds, and spare parts for agricultural machinery).
- Decrease in farmers' revenues due to the navalblnockade of sea traffic by the russian navy. The maritimeblnockade severely limits Ukrainian export capabilities leading to a surplus of export-oriented commodities on the domestic market and collapsing domestic prices for key agricultural commodities.

The biggest source of losses caused by the russian invasion is a decrease in domestic prices for export-oriented commodities, resulting in more than $11.93bln in losses.

1. The weighted average reduction in domestic prices for the main export-oriented agricultural commodities reaches 34%.
2. The estimated drop in the sowing area is about 21%.

The total estimated reconstruction and recovery needs are $17.52bln.

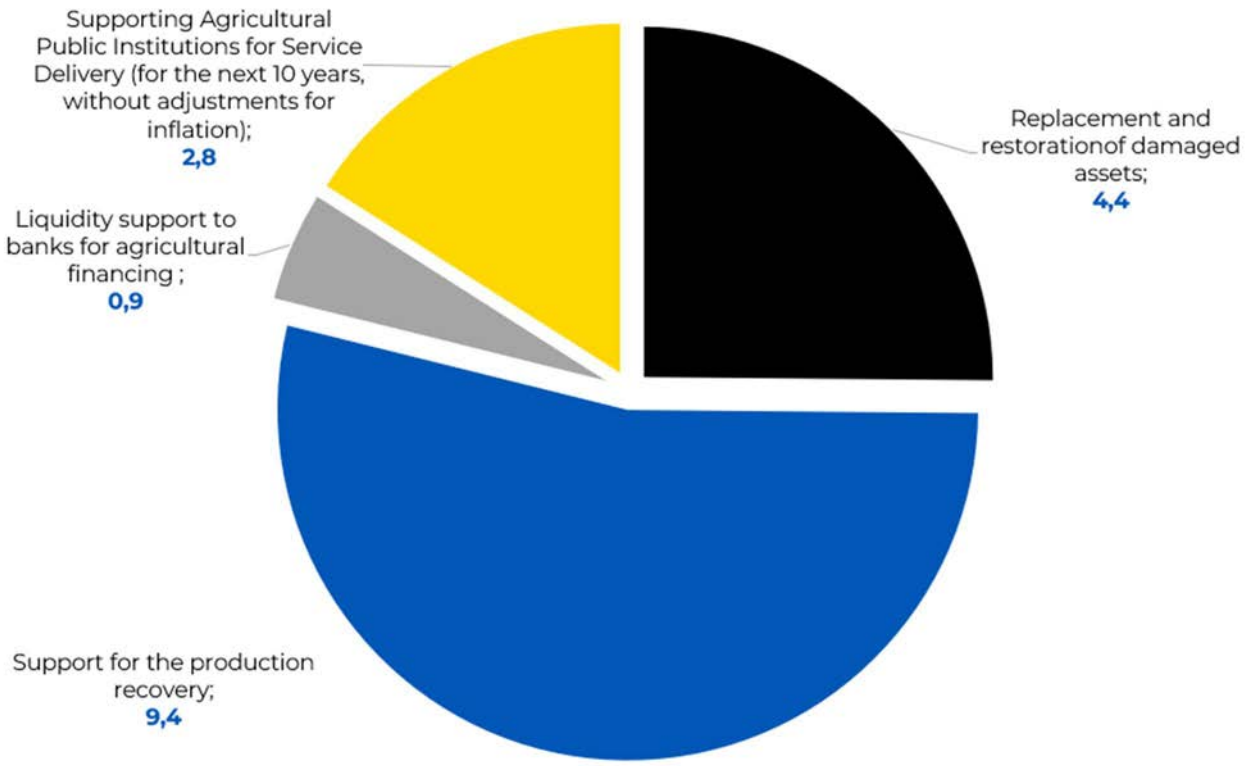
There are four categories of reconstruction and recovery needs:

1. Reconstruction needs - compensation for the damages.
2. Support for the production recovery - compensating a fraction of the losses in the amount required to restore production.
3. Restoring agricultural financing - liquidity support to banks for agricultural financing.
4. Supporting public institutions for service delivery.

In compensating for damages, the principle of “build back better” is applied. Thus, following this principle, the compensations for damaged storage facilities, apiaries, perennials, dead livestock, and bees are 20% higher than the replacement cost of these assets. All other categories of damages are compensated without additional coefficients.

The share of losses caused by the lower production should be compensated so that farmers who have not been able to begin their production cycle due to hostilities, occupation, or mining pollution have the resources to restart their production. This compensation is estimated as a share of revenues corresponding to the cost of production. A provision for compensating for the war-induced increase in input prices is set to 50% of the losses caused by the increase in input prices.

There is also a need to compensate for 10% of losses incurred due to lower domestic prices for export-oriented agricultural commodities. Given the 25% average profitability of crop production and a 34% decrease in domestic prices after the Russian invasion - a 10% compensation of losses will allow farmers to continue their operations and avoid bankruptcy.



The estimated need for additional liquidity in the banking system for a sustainable renewal of financing in agriculture is 30% lending volume to farmers as of January 1, 2022 (according to the National Bank of Ukraine's statistics). The funding of public institutions needed to facilitate the

industry's recovery includes the continuation of current funding with an additional 20% of the budget required to cover the growing administrative workload caused by the Russian aggression.

The main conclusions on the recovery needs:

1) The overall reconstruction and recovery needs are substantially higher than the damages the agricultural sector faced. The most significant component of needs is the partial compensation of losses caused by the decreased production, accounting for $ 9.4bln, or almost 54% of all needs. This compensation is required so that farmers who have not been able to begin their production cycle due to hostilities, occupation, or mining pollution have the resources to restart their production.
2) The time needed for a full recovery of agricultural production and reaching the pre-invasion 2021 level of production depends on the pace of farmlands inspection for mining pollution, unexploded ordnance, and clearing of these hazards.
3) There is a need to develop and strengthen the public infrastructure for the administration of payments and post-war assistance to farmers and communities (including spatial planning). The need to maintain this infrastructure will remain long after the end of active hostilities.
4) The production cycles in agriculture imply a high risk of facing the cash flow gaps. Farmers need working capital to procure inputs and to sow and fertilize crops. The revenue from selling their products appears only at the end of the production cycle, after the harvest. Under these circumstances, the availability of financing instruments is essential for the effective functioning of the industry. Therefore, resuming agricultural financing is vital, which requires additional liquidity for the banking system. The reason is that in short to medium term, the financial institutions would not be able to provide the financing in the volume needed for the industry's recovery. In addition to measures aimed at risk mitigation for lenders (such as the further development of the Partial Credit Guarantee Fund), the sector needs intervention to refinance non-performing loans and finance the working capital for agricultural producers. The need for additional liquidity is estimated at $ 912 million (Annex 10).

Chart 6. Needs for restoration of agro-industrial complex and land resources by articles, $bln

Source: KSE calculations

INFRASTRUCTURE

Transportation infrastructure

Infrastructure facilities were one of the key areas that came under most attack by the aggressor with the deployment of a full-scale war against Ukraine. In particular, in the first weeks of the war, Russian forces carried out massive shelling of aviation infrastructure, primarily airfields not only for military, but also civilian and military-civilian (dual-use) purposes. Subsequently, railway infrastructure, including electrical substations, became the targets of active attacks.

But the greatest destruction of infrastructure, both in absolute terms and in terms of value, was to road infrastructure. Firstly, given that they naturally become targets of shelling during artillery attacks, and secondly, because it is Russian tanks that are actively moving along Ukrainian roads during the entire period of military aggression. In particular, lines of communication between Russian forces in Ukraine and their rear areas in Russia and Belarus are often run by the roads.

Since the war started, 19 airports and civilian airfields, at least 57 railway stations have been damaged. Total damages amount to $31.3bln, losses are $17.7bln. Preliminary reconstruction needs are estimated at $41.8bln.

Road maintenance

A detailed analysis of the condition of damaged roads could be implemented only within a specialized technical survey, which is not possible until active fighting is still going on on a significant part of the territory of Ukraine.

However, comparison of the map of combat operations with the infrastructure network allows to make preliminary calculations as to what approximate length of roads has been damaged, both as a result of rocket fire and tank movements. According to the study ‘Damaging effect of moving tank loads on flexible pavement’, Journal of Engineering, 2010, the destructive effect of a tank can be as much as 2.36 times the destructive effect of a standard axle load from civilian vehicles.

This study took T-72 tanks, which is a good approximation in the case of war in Ukraine, since most tanks are similar in physical characteristics or even heavier. The surface layer of the roads suffers severe damage due to the metal tracks. The destructive effect of tank braking is 2.38 times more than the destructive effect of tank mass on road stretching. Finally, the destructive effect of tank maneuvers is 1.22 times greater than the effect of the destructive effect of the tank mass on the stretching of the road. What is important - the stress effect from the tank is not only horizontal, but also vertical, and the maximum stress, according to the research, is at a depth of up to 3 meters, which affects the degree of destruction of not only the surface layer of the road.

The average cost of damage of one kilometer of road in the city is usually significantly higher (the difference can be by a third or more) compared to the cost of roads outside the city, due to the road construction in cities, which includes communication networks, sidewalks, lighting, etc.

About 23.8 thousand km of roads and 305 bridges and bridge crossings are damaged. According to the Ministry of Infrastructure, a preliminary review of road conditions in the de-occupied regions (Chernihiv, Kyiv, Sumy, Kharkiv regions) confirm preliminary estimates of significant damage to road structure as a result of the passage of tanks and other heavy military equipment, which will require reconstruction of a large part of the damaged roads. Damaged are approximately 40% of roads occupied by Russian troops or where fighting takes place.

According to Ukravtodor, the average weighted cost of reconstruction of roads in 2021 (taking into account different categories of roads) was approximately 29 million UAH per 1 km of road. Thus preliminary estimates of the total damaged roads is $25.4bln.

Additionally the military aggression has led to significant losses in the road construction industry due to the cancellation of state capital investment in the planned roads building since the beginning of a war. Losses are estimated at $5bln.

An important factor for the road reconstruction will be the disruption of supply chains; a decrease in the domestic supply of materials needed for reconstruction; a significant increase in competition for materials given the nationwide reconstruction needs; and risks of devaluation of the national currency.

According to preliminary estimates, the total reconstruction and recovery needs for roads is estimated at $31.2bln. Given the significant amount of damages caused to roads means that reconstruction will take at least 3-5 years.

Railroad Infrastructure

With the outbreak of war, the Ukrainian railroad took the brunt of the free of charge evacuation of millions of Ukrainian citizens (as well as a large number of businesses) caught up in the war zone; as well as the delivery of critical supplies and equipment to those regions. In response, the Ukrainian railroad has become an active target of Russian shelling and attacks.

The total damaged railroad bed is up to 200 km; the number of damaged railway stations and stations is at least 57. As of June 13, about 1200 km of railroad tracks are located in the temporarily occupied (after 24.02.) territory. There is reason to believe that all movable property of “Ukrzaliznytsia” (UZ), which was not removed from such territories in time, can be considered as completely lost (destroyed or stolen by the troops of the aggressor country).

Thus, the total damages of the railroad as of June 13 are estimated at $3.1bln. Losses of the railway infrastructure (without private players) are estimated at least at $4.4bln, primarily due to the shortfall in income from transportation, the cost of (re)evacuation of the population, transporting humanitarian aid, payment of financial aid to the families of the dead, wounded employees, as well as other services provided for the defense of the country.

Given the difficult financial situation in "Ukrzaliznytsia" prior to the war, this means further deterioration of its financial metrics, which means much higher recovery needs.

The total railroads reconstruction and recovery needs is preliminary estimated at $5.3bln. Apart from the reconstruction one of the key needs is investment in the expansion of the railroad export capacity to the EU in order to partially compensate for the loss of export goods (and hence UZ income from freight transportation) through blocked seaports. This estimate does not generally take into account the need for modernization, due to the high degree of depreciation of fixed assets (rolling stock, in particular).

Aviation industry

The aviation industry began to suffer losses from the military aggression even before it had actually started. On February 12, global insurance companies informed Ukrainian carriers that they had stopped insuring aircraft due to the high threat of invasion by Russia. This led to the risk of cancellation of flights of international air carriers to Ukraine. To counter this a working meeting with the leadership of the Office of the President of Ukraine, the State Aviation Service, SE "Ukraerorukh", SE IA "Borispol" and Ukrainian airlines was held and the government expressed its willingness to support air carriers by providing additional financial guarantees to the aviation market.

With the outbreak of the war, the airspace over Ukraine was immediately closed and air traffic ceased. Russian forces began active rocket attacks on all key airfields in Ukraine in an attempt to deprive it of its ability to provide air defense. As a consequence, 19 airfields were damaged out of 35, including 12 civilian and 7 dual-purpose airfields (not including military airfields). Some of the airfields were hit several times each.

Detailed information about the state of damage/capacity to repair airfields at most airports can be made only after detailed technical surveys. However, according to preliminary calculations, **the damage to the aviation industry (airports, airfields, aviation equipment) is about $2.04 bln.**

A comparable amount is also indirect losses of the industry from military operations, as since the war started the work of the entire civil aviation industry has actually been stopped; revenue from passenger traffic has ceased completely.

Losses of the aviation industry are estimated at $5.3bln, of which $0.46bln are losses of the airports, $4.28bln are losses of the airlines, $0.25bln - of the state air traffic service enterprise (Ukraerorukh), $0.29bln - of other subjects of commercial activity on airports.

Chart 7. Losses of Ukrainian airports, $bln

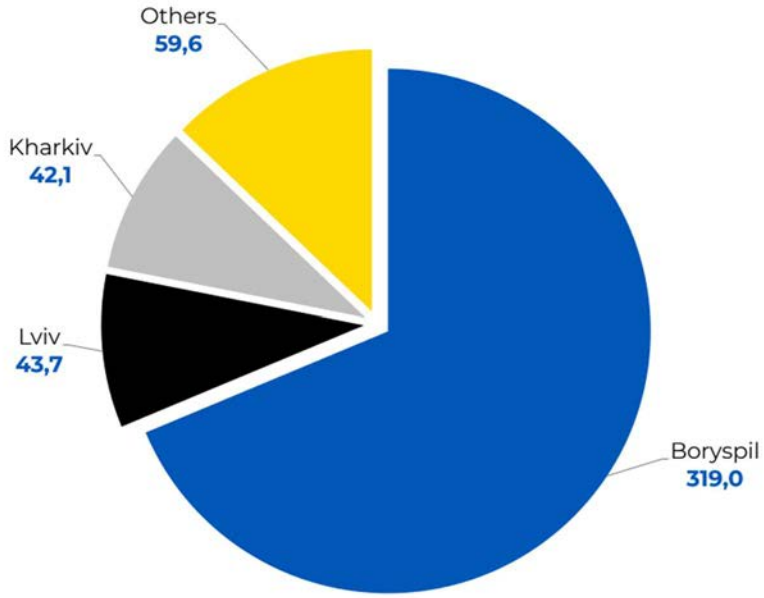


Chart 8. Losses of Ukrainian handlings companies, $bln

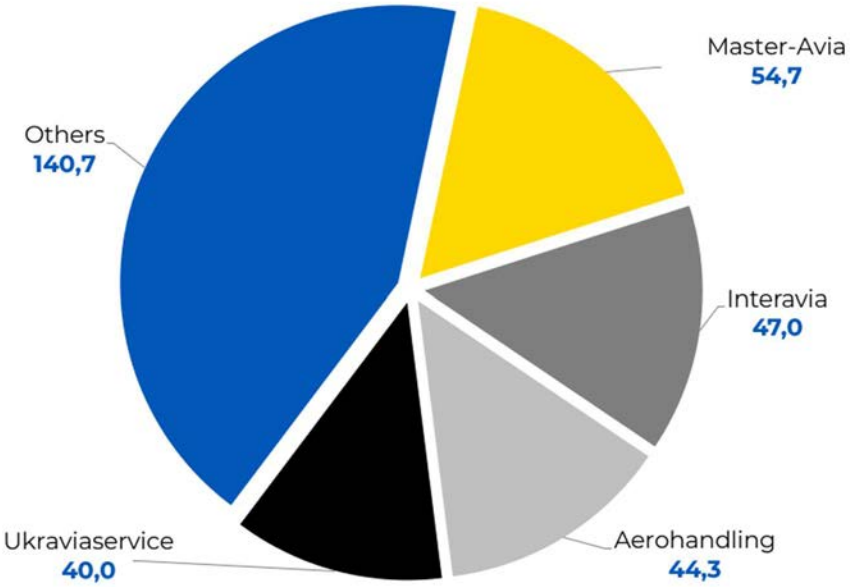

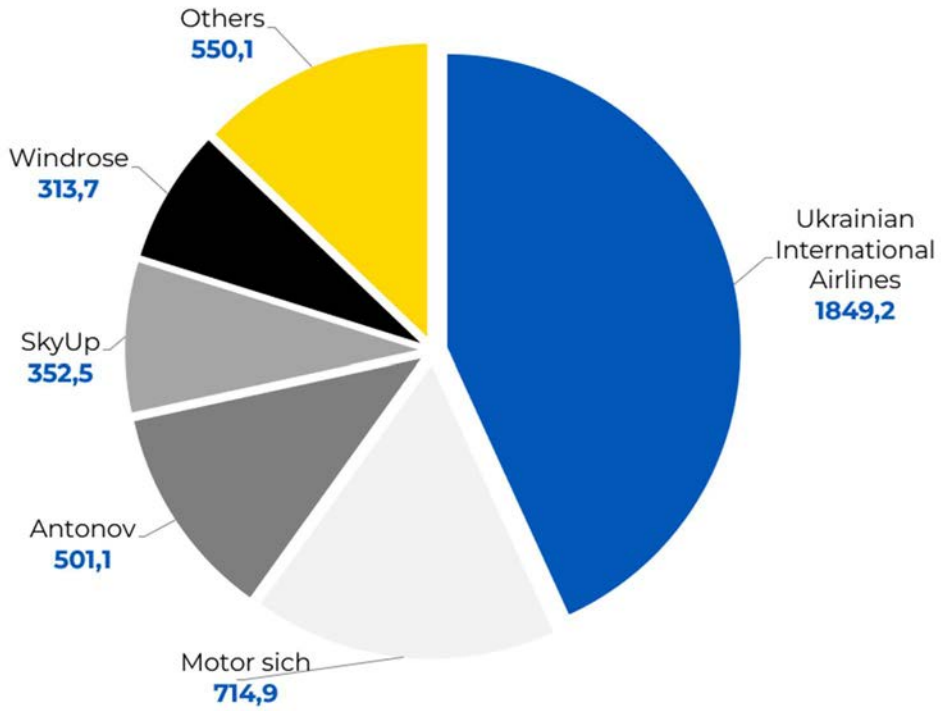

Chart 8. Losses of Ukrainian airlines, $bln

Source: Calculations of the Kyiv School of Economics

The reconstruction of the aviation sector can be conventionally divided into several stages according to the priority of measures for the quick launch of the industry.

The total estimate of priority (short to medium term) needs is $3.0 bln, including $1,41bln to reconstruct in first 5 post war years 5-7 airports that would meet modern standards of ICAO and adapted to receive new types of aircraft (including a family of A320/NEO and B737NG/MAX).

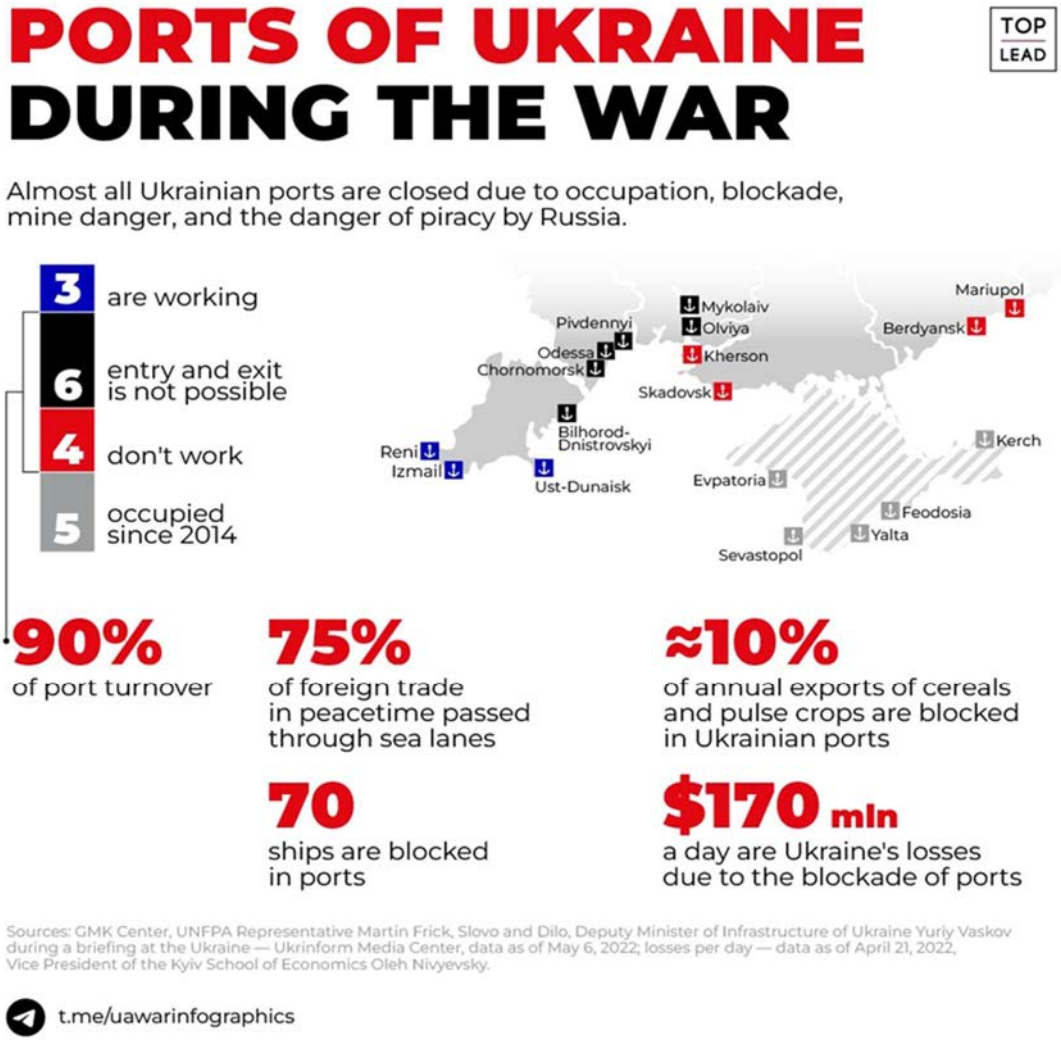
At the next stages of reconstruction, as demand for air transportation will grow, it will be necessary to restore/construct about 5 more airports in new locations to provide sufficient capacity of the airport industry of Ukraine.

Water transport

The total damage to water transport infrastructure is estimated at **$471 million**. This estimate includes both seaport infrastructure and inland water transport facilities destroyed during the war.

At least four ports have had property destroyed or damaged since the war began. For example, the grain terminal at the Nikolaev port of Nika Terra was destroyed.

The moderate destruction of ports is due to two factors. Firstly, the port is quite a complex and spacious facility, consisting of many large parts. So it is impossible to completely destroy such an object with a few precise missile strikes. Second, the aggressor seized or used its own and friendly cargo ships in order to export grain, ferrous metals, etc., for which it needed operating ports.



For example, the Metinvest group reported the enemy's plans to remove 200,000 tons of metal products worth $170 million from the Mariupol plants. In turn, regarding grain, it was reported that 400-500 thousand tons (worth hundreds of millions of dollars) were stolen from the four occupied southern regions, which is more than a third of the local reserves. It is expected that the aggressor will try to sell these stocks through partners in the Middle East, particularly through Syria. (Clarification: stolen stockpiles of goods are not included in the above figure, they are accounted for in the losses of the relevant industries).

Despite moderate damage to the physical infrastructure, losses of the water transport industry are enormous. The total losses of of sea ports and inland water transport is estimated at **$2.7bln**. The aggressor controls Sea water area with the help of the fleet, missile installations in the Crimea and sea mines. Maritime trade traffic is completely stopped.

The ports of Mariupol, Berdyansk, Skadovsk and Kherson are occupied. The ports of Nikolaev, Odesa and other cities are shut down. There is no traffic on the Dnipro due to the blockage of the lower part of the river. Only the ports on the Danube River work, their turnover increased fourfold compared to the pre-war period.

The total need for the reconstruction of the enterprises of water transport is estimated at **$1.021bln**. This amount is roughly evenly divided between the restoration of damaged infrastructure and the funding needs to keep the industry running again.

Map 2. Status of Ukrainian ports

Postal operators

Total damages to postal operators are estimated at **$11 million**. The amount is calculated based on data from Ukrposhta and Nova Poshta, which account for the lion's share of the market. A total of several hundred post offices, dozens of terminals/depots and vehicles, as well as a large number of parcels, for which the operators are financially responsible, have been destroyed or damaged since the beginning of the war.

Total indirect market losses are estimated at **$266 million**. The lion's share of this amount is due to lost revenue. Market players also made additional payments to employees and their families, and also financed evacuations and personnel relocation.

The total recovery needs estimate is **$18 million**. All of this amount is needed to rebuild and repair fixed assets (Appendix 12).

Vehicles

In the territories and towns where heavy fighting took place, both public and private vehicles were severely damaged. The direct damage to both municipal and private carriers is $0.9bln, which is replacement cost for destroyed trolleybuses, streetcars, and buses. Damages to private cars amount to $1bln/ 105 thousand vehicles. 623 firefighting vehicles worth $ 30 million were lost, excluding other specialized equipment, as well as trucks (to be calculated at the later stages). Damages to private cars are calculated based on available data on the officially registered number of cars and does not take into account cars not registered in Ukraine and imported without customs clearance.

Damages to municipal transport vehicles are calculated using both indirect methods and micro data available on damaged/destroyed municipal property provided by military administrations.

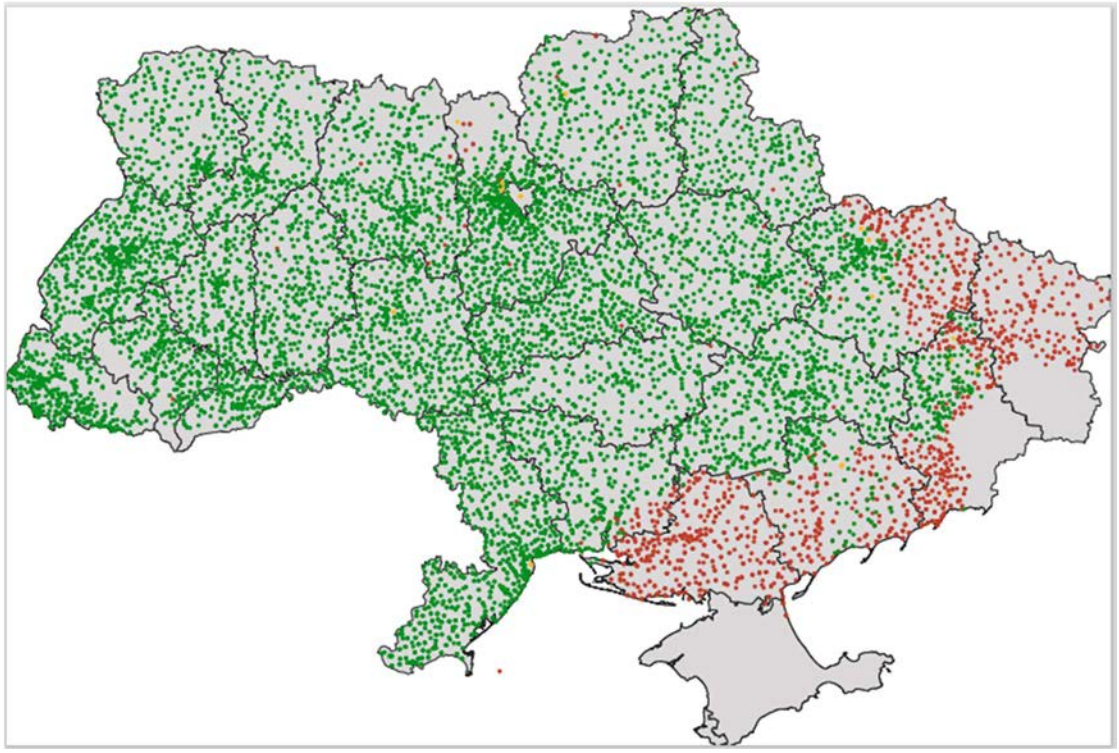
The greatest damage to municipal property, which includes municipal (public) transportation, was inflicted in Luhansk and Donetsk regions, as well as in Kharkiv.

Losses of passenger carriers (except “Ukrzaliznytsia”) amount to approximately UAH 5.9bln or almost $200 million. If in Kyiv, Chernihiv and Sumy regions after de-occupation there is partial resumption of passenger transport work, in some regions as of mid-June, provision of such services was not renewed due to intensive combat operations or occupation - Luhansk, Donetsk, partially Kharkiv, Zaporizhzhia and Mykolaiv regions.

The vehicles damaged include the destroyed “Mriya” aircraft, with the reconstruction value, according to “Ukroboronprom”, is more than $0.5 bln. Although damages to air passenger transport are likely to be higher due to possible destruction of other civilian/cargo aircraft during shelling of Ukrainian airportss; however, in the absence of detailed information on the location of such aircraft at civilian airfields, such assessment will be carried out at later stages.

At least $4.5 bln is needed for rebuild destroyed vehicles, of which biggest shares are the bus fleet and private vehicles (Annex 11).

Digital infrastructure



The total damages to telecom operators are estimated at **$566 million**. The sector of electronic communications includes:

- Internet networks of fixed-line operators;
- Radio networks of mobile operators;
- Backbone/core networks;
- Technical and related means of electronic communication.

At least 726 fixed-line electronic communication operators have suffered damages as a result of hostilities. After the de-occupation of settlements, the destruction of networks reaches 100%. Across the country, the quality of data transmission over fixed-line Internet access networks decreased by an average of 13% (estimated as of May 01, 2022).

In 12.2% of settlements there is no access to mobile communication; in 3.1% it is partially accessible. 3,534 base stations of mobile operators do not work, which is almost 11% of their total number. Over the last month, the total number of non-operating base stations increased by 700. Across the country, the quality of data transmission over mobile Internet access networks decreased by an average of 26% (estimated as of May 01, 2022).

Map 3. Breakdown of non-operating mobile base stations

Determining the cost of losses to owners of electronic communications network infrastructure or its components (including the objects under construction) of various categories differs. The following classification is used:

- National companies, electronic communications operators that provide electronic communication services to citizens of Ukraine throughout its territory;
- Medium-sized companies that provide electronic communication services in several regions;
- Small companies that provide electronic communication services within the region.

For national companies, damages are calculated based on the results of inspections to the destroyed or damaged objects of electronic communications network infrastructure, if they are accessible (even, if possible, in the temporally occupied territories). The amount of damage is set in physical units (km, pieces, etc.), and it is also calculated in money terms based on an approximate estimate of the cost of restoration works.

For medium-sized and small companies, damages are calculated based on the estimated cost of restoration/reconstruction of networks or based on the average subscription fee for 24 months.

The total losses of telecom operators are estimated at **$1.097bln**. This is due to a 22% reduction in service delivery and respective payments.

The need to reconstrust the assets and recover the activities of telecom operators are estimated at **$1.012bln** (Annex 13).

Energy

As of June 13, damage to Ukrainian energy infrastructure is estimated at $1.8bln.

Both direct and indirect methods of calculating the value of destroyed and damaged facilities were used to assess damages in the energy sector. The cost of rehabilitating energy facilities was estimated, as either the initial book value, the cost of current repairs, or the replacement cost.

Basic information is obtained from open sources and from business owners involved in this sector. Some of the larger energy assets (like CHP plants) were estimated individually.

Damages to electric powr plants were assessed based on the cost of kW of installed capacity. Damages to power transmission and distribution companies were assessed using the area of damage (share of the region affected by the active military hostilities).

The assessment of losses in the energy sector is at its "initial stage" due to the lack of accurate data on privately owned facilities, no access to facilities located in the war zone and in the temporarily occupied territories of Ukraine.

According to the Ministry of Energy, distribution system operators suffered losses amounting to about UAH 15.4bln. But this amount is highly likely to increase significantly after assessing losses in the areas with ongoing hostilities and after taking into account the amounts of better repairs. Currently, all distribution system operators have carried out the smallest possible repairs, which allowed to quickly restore power supplies, but the reliability has deteriorated significantly.

About 4% of the generating capacities were destroyed during hostilities; 35% of the capacities is in the occupied territories. The loss of occupied assets is not taken into account when calculating direct damages to the infrastructure, but it affects the amount of indirect losses, including lost revenue.

The transmission system operator *Ukrenergo* estimates its losses at UAH 7.7bln without taking into account the assets located on the occupied territories. Gas distribution system operators suffered losses amounting to about UAH 6.1bln. 3 combined heat and power plants (CHPs) were completely destroyed; 5 CHPs were damaged. In general, about 50% of heat generation has been destroyed or is located in the occupied territories.

Zaporizhzhia Nuclear Power Plant, the largest in Europe, is located in the occupied territories with limited access to its proper maintenance. Despite the fact that it operates in the Ukraine's energy system, it is under constant pressure from the Russian occupiers. Furthermore, Zaporizhzhia Thermal Power Plant and Luhansk TPP are located in the occupied territories; fierce hostilities are around Vuhlehirska TPP.

Kakhovka Hydroelectric Power Plant remains occupied. Ukrhydroenergo estimates previous losses due to equipment damages at UAH 550 million.

About 30% of solar generation and more than 90% of wind generation are located in the occupied territories of Kherson, Zaporizhzhia and Mykolaiv regions. According to preliminary estimates, assets at the amount of about UAH 870 million were destroyed.

Since the beginning of the war the total indirect losses in the electric power sector are estimated at UAH 340.3bln. In the sector of gas production, transit and distribution, losses reach UAH 61bln. Losses account for UAH 64.6bln in the oil production and refining sector.

The methodology for calculating indirect losses in the electric power sector is based on the electricity consumption and production forecast before and after the start of the hostilities. Indirect losses are calculated for different groups of producers taking into account changes in tariffs and production. For regulated businesses like electricity transmission and distribution the indirect losses were calculated using the lost transmission/distribution volumes and average distribution

tariff for distribution companies and dispathcing and transmission tariff for the transmission system operator Ukrenergo.

The balance of production, consumption and imports is calculated for the sector of gas production, transit and distribution. Losses of пфы зкщвгсешщт companies are calculated based on the reduced production volumes. Gas production decreased by 10-12% during the full-scale invasion. For the gas transmission system operator, losses are calculated as reduction of revenues due to lower gas transmission for domestic consumption, revenues from the reduced fee for the entrance into to the GTS due to the reduction in imports imports, and losses of gas for technological needs (due to the leaks from the damaged pipelines, etc.). For a gas distribution company, losses due to reduced distribution volumes and gas losses due to technological needs are taken into account.

For the refining sector, losses of Ukrainian refineries from production shutdowns are taken into account. No oil refinery is operating now (own production provided about 30% of oil products); there are logistical difficulties with the supply of oil products.

Main conclusions about indirect energy losses:

1. In the electric power sector, major losses (70%) are incurred in the generation sector. The main factor of losses in the electric power sector is the reduction in electricity consumption volumes. As a result of hostilities, there is a significant decline in demand (35% drop compared to 2021), which, in turn, is due to a significant decline in industrial production (especially metallurgy), reduced volumes of freight transportation by electric trains, and a general decline in economic activity. In addition, the electricity consumption profile has changed significantly due to the relocation of consumers to the western regions.

2. In the gas segment, the largest losses are due to decreased production in the damaged wells or the wells that ceased production due to military hostilities. The main factors of the indirect losses are the decline in gas consumption and production volumes. Ukrainian production companies lose up to $1,000 for every 1,000 m3 of gas which is not produced. Production volumes tend to decrease due to naturall decline and lower CAPEX in new drilling and workovers. Industrial consumption has fallen by ca. 50% thus forcing domestic gas products to inject gas into the underground gas storages due to the reduction in demand.

3. In the oil refining segment, the main indirect losses were incurred due to the shutdown of production at the Kremenchuk refinery and Shebelinsky gas refinery.

A significant increase in energy and fuel prices makes it difficult to meet demand and/or prepare for the autumn-winter period.

Energy prices and tariffs for heat and energy transportation remain unchanged for a large proportion of consumers, which increases financial imbalances in the energy system. Thus, as of June 1, 2022, the expected deficit of funds in the electricity market is about UAH 35bln.

At present, the assessment of needs in the electric power and gas supply sectors is extremely difficult due to the fact that it is necessary to build a new forecast balance of energy consumption in order to calculate the needs. The country's energy balance is the basis to determine the necessary generating capacities, structure of the transmission and distribution networks. Ukrainian power system uses outdated power generation technologies which significantly limits the system's ability to increase the share of energy from renewable sources and thus we believe that the sector's needs should account for additional provisions to improve the energy system's flexibility.

If we use a simplified calculation procedure based on losses and liquidity needs to resume operational activity, without future energy balance taken into account, **the total needs of the**

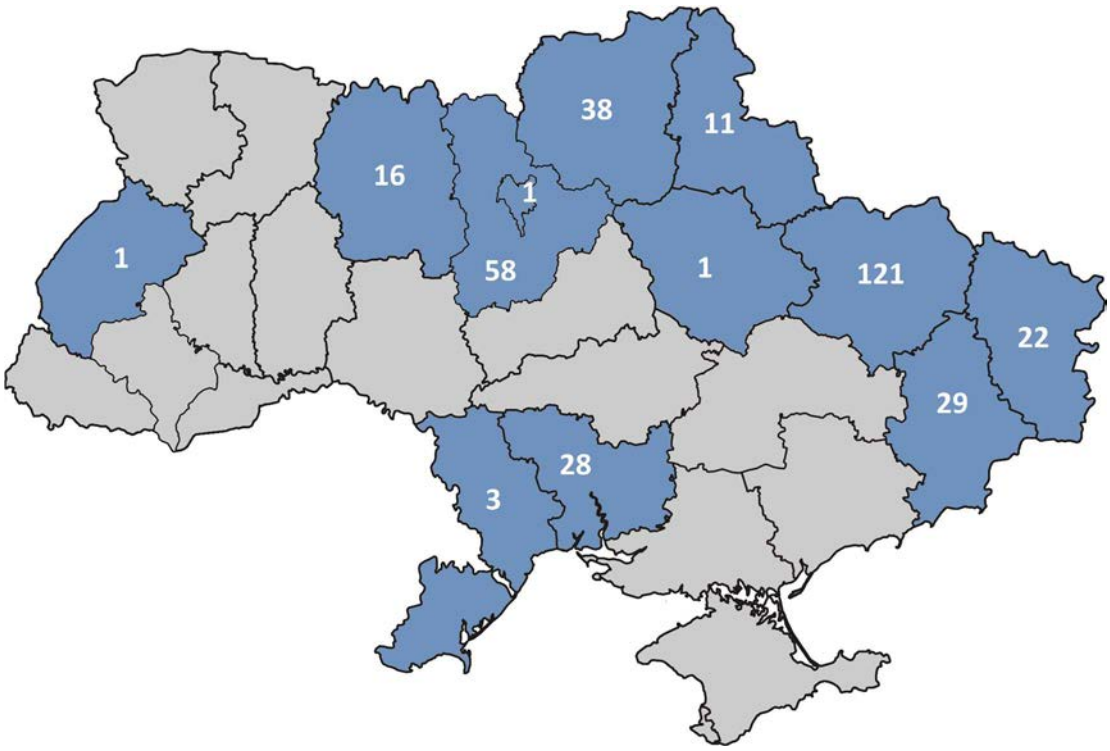
sectors account for about UAH 103bln. In order to take into account the needs of the industry in technological modernization and to calculate the needs of the power system in the recovery, the cost of physical losses of assets was adjusted by a 1.4x multiplier; it was also suggested that in order to resume operations, the financial support should be provided in the form of working capital injection, amounting to about 10% of the lost annual revenue.

The estimate of the energy sector losses can be further adjusted to account for: 1) a decrease in the level of payments for electricity and services in the electricity market as a result of fierce hostilities in some territories; 2) lost revenues and other losses of the energy sector participants related to the decisions of the Energy Ministry, sector regulator or other government bodies as a result of the war (like limiting payemnts to renewable power producers, etc. see Annex 14).

Utilities

The infrastructure of utilities, which is an important part of the life support systems of settlements, has become one of the targets of Russia's missile and artillery strikes. Constant shelling and hostilities made it impossible or significantly difficult to carry out repair works, which led to the disconnection of heat and water supply systems. In some cities, residents do not receive utility services and have no adequate access to drinking water.

For example, because of the damaged water supply system the majority of districts of Mykolaiv have no centralized water supply since April 12. It cannot be repaired because of constant attacks made by the Russian Federation. As of June 13, 2022, only technical water is available in the city, while drinking water is still being delivered from other cities.



The situation with life support systems in Donetsk and Luhansk regions remains difficult. In Severodonetsk, where fierce hostilities are currently taking place, it is impossible to repair the boiler/heating facilities of the municipal enterprise Severodonetskteplokomunenergo, which provides heat supply for 180 apartment buildings. The operation of Severodonetsk CHP (combined heat and power plant) has also been suspended. Moreover, there is no water supply in the cities of Rubizhne and Popasna.

Damages to heat supply facilities (excluding CHP), water supply and sewage, and household waste management facilities is estimated at $1.3bln.

According to preliminary estimates, during the full-scale invasion phase, in the territories with current active hostilities, three thermal power plants were completely destroyed and five more were damaged. For example, the destroyed Kremenchuk CHP (Poltava region) covered about 70% of the city's needs, which is about 180 thousand residents of the community, who may be left without heat and hot water for the next heating season. Cakculation of damages caused by the destruction or damage of CHP is presented in the section "Energy".

In addition, 329 boiler/heating facilities were partially damaged or completely destroyed. Most of them are in Kharkiv, Kyiv, Chernihiv and Mykolaiv regions. 99 centralized heating stations were partially damaged or completely destroyed. About 222 running kilometres of heating networks were completely destroyed.

Map 4. Regional distribution of the number of destroyed or damaged boiler/heating facilities

About 816 running km of water supply networks were destroyed; 10 water treatment facilities were partially damaged or completely destroyed. Furthermore, 38 water pumping stations were also destroyed/damaged. Laboratories that analysed the state of water supply in the region were also destroyed or damaged. Preliminary estimates indicate that five such facilities were destroyed/damaged.

About 242 running km of sewerage networks were destroyed; 51 sewage pumping stations were partially damaged or completely destroyed, most of which are located in Kyiv, Kharkiv and Chernihiv regions (9, each). 14 sewage treatment plants are also considered destroyed/damaged.

As a result of the Russian invasion to Ukraine, 13 landfills for household waste were destroyed/damaged. Also, three waste sorting lines and three biogas facilities were completely destroyed. Vehicles for waste removal were also destroyed, in particular, 172 garbage trucks were ruined.

Total losses related to the objects of heat and water supply, and water disposal are estimated at $2.3bln. These are losses of service providers due to the reduction of payments for services.

The total needs for heat supply facilities (excluding CHP), water supply and sewage, and household waste management facilities are estimated at $1.6bln (Annex 16).

FINANCIAL SECTOR

A full-scale war causes a wide range of operational risk events for banks: disruption of processes, damage and destruction of assets, system failures, etc.

From the first day of the war, banks had to reduce the activities of their branches in the areas where there was a threat to safety of the staff. According to the Financial Stability Report of June 2022, published by the National Bank, in early March only 21% of systemically important bank branches operated in or near the war zone, and 60% – in Ukraine as a whole. As of mid-June, 85% of bank branches are already operating in Ukraine due to the de-occupation of the northern regions.

Hundreds of branches, objects of investment property and other bank assets remain in the war-torn area. At the beginning of May, the residual value of banks' real estate in these territories exceeded UAH 700 million. Banks have already recorded **UAH 154 million** in damages incl. UAH 33 million in the occupied areas or areas that are suffering from hostilities. Financial institutions do not have any information on the destruction or loss of the rest of the property due to limited access, so they do not write it off so far. However, the risks of potential loss of these objects are extremely high. It will be possible to finally estimate the losses only after the end of the war.

One more category of losses is cash stored by banks in the areas where hostilities have taken place or which have been occupied. As of begining of May, the volume of banknotes lost due to robberies or seizures of branches amounted to UAH 470 million, which is only 0.6% of all cash in the banks on the eve of the invasion. Another UAH 60 million of banknotes were destroyed by banks or taken away for further exchange in the NBU.

From the beginning of the full-scale war to May, banks reduced their staff by 3%. About 11% of employees were on unpaid leave or facing downtime. These changes are partly due to a decrease in the number of working branches. Some of the employees went abroad or were drafted to the Armed Forces. At the same time, banks' staff costs increased. On the first days of the war, financial institutions paid their employees in advance, financed the evacuation and the creation of new jobs for the internally displaced personnel. Some banks have even raised wages.

Banks have successfully met the first challenges of the war: they continue operating and providing services where it is possible. The system of electronic payments and transfers works smoothly. This maintains customer confidence in financial institutions and reduces liquidity risks. However, losses incurred by banks will negatively affect their profitability and capital. Losses may increase due to the long-term effect of the implementation of certain operational risks.

According to the National Bank, as of the beginning of May, 51 banks reported losses caused by the war from the implementation of operational risks. The total amount of these losses is about **UAH 6.6bln**, which is more than three times higher than the damage caused by hostilities and crisis of 2014-2015 and more than ten times higher than the losses incurred during the first year of the COVID-19 pandemic. At the same time, the actual volume of losses may be even higher due to ongoing hostilities and the long-term negative effect of operational risk events.

However, the calculations of total damages and losses caused by the war reflect only direct physical losses, as the losses of assets that acted as collateral for loans issued were probably already taken into account in the damages of the relevant sectors of the economy (Annex 15).

ENVIRONMENT

As of June 21, the State Environmental Inspectorate recorded 330 events that pose a threat to the environment in Ukraine. Some damages to natural ecosystems and unique natural objects are already irreparable. The restoration of other damages (soils, forests, natural resources of flora and fauna in some areas) will take decades.

Given the significant number of indirect effects of hostilities on the environment, it is currently not possible to estimate the total amount of damages and losses. Below there are the key areas of impact of hostilities on the environmental situation in Ukraine, and where possible – their financial assessment.

Damage to the nature reserve fund and other protected areas

Damage to the nature reserve fund and other protected areas means the destruction and damage of natural ecosystems and objects due to fires, explosions, movements of equipment and military forces, various types of pollution, deterrence of rare and endangered animals, irreparable loss of old trees, other natural monuments, and especially rare animals and plants, loss of access and reduced attractiveness for tourism and research purposes, and the long-term unpredictable effects of the war on wildlife restoration.

As a result of hostilities, 812 wildlife sanctuaries of Ukraine are in danger. It is about 20% of the area of all protected territories in Ukraine. Hostile actions of the russian federation threatened to destroy 2.5 million hectares of protected areas: 160 objects of the Emerald Network and 17 Ramsar sites with an area of 627.3 thousand hectares. The Emerald Network sites are the areas of plant, animal and natural ecosystems and habitats that are protected at the European level. Ramsar sites are wetlands of international importance.

Territories and sites of the nature reserve fund of Ukraine are protected by law. According to the EcoZagroza website (official site of the Minustry of Ecology and Natural Resources), there are complaints about violations of the nature reserve fund caused by the actions of the occupants on the total area of 1.24 million hectares.

European biodiversity is dying from military equipment and explosions. These are many species of plants that are listed in the Red Book of Ukraine and are protected by law, as well as plants from the lists under the protection of international conventions. Hostilities disturb the peace of wild animals. They either die or try to escape from hotspots, leaving their traditional breeding places. Russia is fighting in protected areas of international and European importance, which destroys part of the European natural heritage and habitat of rare and endemic species.

Damage to forests

Damage to forests means the destruction and damage of stocks of standing timber and lumber, other components of forest ecosystems due to fires, explosions, etc., and as a result of occupation and mining – loss of access to logging, reforestation, other forestry measures, forest use, e.g., picking berries, mushrooms, etc., tourism and recreation. In addition, damage to forest causes complete or partial loss of its useful properties – absorption of greenhouse gases from the atmosphere, air purification, protection against erosion and landslides, water purification and replenishment, ensuring the life and reproduction of animals.

Military actions are destroying Ukraine’s forests, which will also affect the global food security. Hostilities are fierce in the eastern and southern regions of Ukraine now. These regions are known to have low forest coverage. But even that amount of forests perform protective functions. Their destruction and damage will affect the local climate, lead to significant erosion, and threaten

significant crop losses in these regions. In particular, in the south of Ukraine, the aftermath may be wind erosion and desertification, rising extreme summer temperatures and atmospheric drought, and reduced soil moisture reserves. Thus, it will affect agriculture.

Deforestation will lead to difficulties in implementing Ukraine's plans and measures to adapt to climate change.

In total, almost 3 million hectares of forest in Ukraine have been engulfed in war since the start of a full-scale Russian military invasion. It is the size of Belgium. As of June 2022, 567 thousand hectares of forests in Ukraine and 136 forestries remain under occupation.

The number of forest fires caused by hostilities is 487; their area is 7109 hectares. The damage caused to state-owned forestry enterprises as a result of Russian military aggression is estimated at **$433 million**.

Damage to water resources

Russian troops are carrying out targeted strikes on the infrastructure of water intake, treatment and supply, as well as sewage treatment plants. Water supply and sewerage facilities were significantly damaged in Donetsk, Zaporizhzhia, Kharkiv and Mykolayiv region. As a result of the war, more than 4.6 million people in Ukraine have problems with access to drinking water (for more details, please see the section on utilities).

Pollution of rivers, as a result of russian aggression, may also affect neighbouring countries, i.e., it poses a cross-border threat. We share large rivers, such as the Danube, Dniester, Prut, Tisza and Western Bug with Poland, Hungary, Romania and Moldova.

Damage directly caused by hostilities

As a result of hostilities, environmental security problems are becoming more complicated. Hazardous waste is generated due to destruction and military waste.

According to the State Emergency Service of Ukraine (SES), from February 24 to June 22, 2022, 143,287 explosives were neutralized in the territory of Ukraine, including 1,995 aviation bombs. The area of 61,809 hectares was surveyed.

According to the SES, the area of about 270,000 square kilometres needs demining in Ukraine now (including the occupied territories). Complete demining of areas contaminated with explosives will take 5-10 years.

Mine explosions lead to soil contamination with heavy metals – lead, strontium, titanium, cadmium, nickel. This makes the soil dangerous, and in some cases unsuitable for further agricultural use.

Currently there is no comprehensive assessment of demining needs, except estimates for the agricultural sector ($0.5 billion) and tourism ($0.2 billion). According to the World Bank's assessment, demining all territories (including forests and waterways) requires more than $70 billion.

Russia has fired more than 2,500 missiles at Ukraine since February 24. Shells, which hit critical infrastructure and housing in Ukraine on a daily basis, cause significant fires. This leads to significant air pollution with hazardous substances.

During the detonation of missiles and shells, a number of chemical compounds are formed, such as carbon monoxide, brown gas, nitrogen dioxide, formaldehyde, etc. During an explosion, all

substances undergo complete oxidation, and the products of the chemical reaction are released into the atmosphere.

Damage from attacks on infrastructure and industrial facilities

Pollution occurs due to the destruction of transport and industrial infrastructure, which leads to large-scale spills of petroleum products and other hazardous substances.

The war damaged or destroyed at least 388 enterprises, plants and factories, including chemical enterprises. The activity of a number of mining enterprises had stopped, which led to a shortage of salt, coal and other minerals; the status of deposits and the possibility of their further development is questionable now.

There is a significant threat to nuclear and radiation safety due to the damaged nuclear and radiation-hazardous facilities (namely, due to the temporary occupation of the Zaporizhzhia Nuclear Power Plant and the Chornobyl Exclusion Zone). In the Exclusion Zone, the radiation monitoring system was destroyed; eight objects were destroyed and 142 objects were damaged. The aggressor's troops destroyed almost 100 units of valuable analytical equipment, which has no analogues in Europe.

276 real estate objects of the State Forest Agency and 296 objects of the State Water Agency were destroyed or damaged. 194 minerals mining sites were seized. Moreover, 28 of such sites were destroyed or damaged.

Military waste (destroyed equipment, destroyed and used ammunition)

Losses incurred from accumulated military waste consist of 1) costs for their collection and removal, safe recycling and disposal, possibly for the construction of landfills or other facilities for this purpose, 2) loss of access to land and its intended use while these wastes are located on it, 2) costs of measures taken to eliminate (decontaminate) pollution of lands and waters, to restore the quality of lands, water bodies and natural ecosystems.

According to the EcoZagroza website, at least 199,652 tons of military waste have been accumulated as a result of the destruction of the aggressor's equipment. The longer they stay in the environment, the more they pollute soils, groundwater, rivers, water reservoirs, and vegetation. The composition of these wastes, their degree of toxicity, duration and persistence of pollution are not fully estimated and predicted yet.

Emissions of hazardous substances into the atmosphere

As a result of the destruction of military equipment, explosions, burning of oil products and other fires, a huge amount of hazardous substances was released into the atmosphere. Those are 26 thousand tons of destroyed enemy's equipment, 7.25 million tons of forest fires and fires at industrial facilities (according to EcoZagroza). Hazardous substances eventually either settle to the ground or degrade air quality and have a negative effect on global climate change.

Damage from emissions into the atmosphere must be compensated to the extent that would allow taking measures to clean up the environment and to prevent climate change and to adapt to it.

Damage to land resources

Direct damage means the destruction and damage of lands of various categories (not limited to agriculture) due to mine pollution and demining, pollution caused by burning and spilling of petroleum products, pollution from emissions of substances deposited on the ground, pollution by

military waste, other hazardous substances as a result of military actions (for example, chemicals which were stored at industrial facilities), as well as the need for measures to rehabilitate lands damaged by explosions and heavy military equipment, and measures to eliminate (decontaminate) pollution and clean up the land.

Areas of contaminated and disturbed lands have not been determined yet. Furthermore, the amount of hazardous substances that contaminated soils and lands is unknown. At least 5,589 tons of oil products have been spilled into the soil (according to EcoZagroza), but precise assessment can be made only for oil storage facilities, while destroyed military equipment and civilian vehicles damaged by mines and shelling are also the sources of significant pollution of lands with petroleum products.

The number of cars registered in Ukraine https://dostup.pravda.com.ua/request/statistika_kilkosti_zarieiestrov;
Data on losses of municipal transport for four regions (Kharkivska, Donetska, Luhanska, Dnipropetrovska) – information of military-civilian administrations; for other areas – KSE's assumptions
data on the trolleybus and tram fleet http://www.ukrstat.gov.ua/druk/publicat/kat_u/2021/zb/10/zb_Transpot.pdf
data on the bus fleet https://dostup.pravda.com.ua/request/statistika_kilkosti_zarieiestrov
Data on the cost of restoration of the Mriia aircraft – data of Ukroboronprom
**only officially registered private cars are taken into account, excluding cars imported without customs clearance into the territory of Ukraine
***at the current stage, the following are not taken into account: (1) loss of trucks; (2) loss of other transport vehicles, in particular those belonging to authorities; (3) loss of aircrafts (except for the Mriia aircraft, the information on its loss is publicly available)
The assumption for the calculation is that the average cost of replacing one unit of public transport is 1/3 of the replacement cost (the cost of purchasing similar objects on Prozorro tenders in 2021, at the exchange rate valid at the end of 2021). For buses: we take the average between the cost of a bus and a minibus as the exact structure of the bus fleet (distribution between large buses and minibuses) is not known.

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Construction, urban planning, modernization of cities and regions” working group

July 2022

Contents

1. General vision of recovery and development
2. Key principles
3. General analysis of the initial state
4. Directions of recovery and development

I. Reconstruction and sustainable development of the regions

Problem 1.1. Sudden and significant territorially differentiated change in the number and sex and age composition of the population.

Problem 1.2. The accessibility of different types of territories to markets and people to public service infrastructure has deteriorated.

Problem 1.3. Sharp and significant reduction of local, regional and macro-regional economies.

Problem 1.4. Limited capacity of the authorities at all levels, complete or partial loss of control in the territories where hostilities are taking place.

II. Regulation in construction

Problem 2.1. The need to ensure the comprehensive restoration of infrastructure and housing due to destruction.

Problem 2.2. Insufficient transparency and publicity of urban planning documentation and permitting procedures

Problem 2.3. No life-cycle management of public and residential buildings

Problem 2.4. Technical unpreparedness of the construction conformity assessment system in the field of construction

Problem 2.5 No construction waste is disposed

III. Housing, energy efficiency and civil protection

Problem 3.1. Citizens' homes were destroyed and damaged as a result of the Russian armed aggression against Ukraine

Problem 3.2. Some citizens do not have housing and resources to provide it

Problem 3.3. Maintenance and servicing of apartment buildings is inefficient

Problem 3.4. Insufficient number of civil protection structures and shelters for the entire population of the country

Problem 3.5. High energy and climate vulnerability of communities due to irrational use of fuel and energy in settlements

Problem 3.6. High energy intensity of the residential and public buildings sector threatens Ukraine's energy security

IV. Infrastructure of life support systems

Problem 4.1. The existing heating system in Ukraine is not able to guarantee citizens continuous, safe, affordable and quality heating

Problem 4.2. The current state of water supply systems does not provide consumers with safe, affordable and stable drinking water supply

Problem 4.3. The current state of centralised sewerage systems is not able to provide affordable services and environmental safety

Problem 4.4. Inefficient system of household waste management does not allows to realise the economic potential of secondary use of resources.

1. General vision of recovery and development

Ukraine seeks to overcome crises, including those caused by the war. Systematic planning of reconstruction and further development of the country provides a unique opportunity to rethink, redesign and modernize buildings and livelihood systems, to ensure a comprehensive transformation of territorial communities and regions.

The key development goals for the next decade are to accelerate the economic growth of regions and territorial communities based on the effective use of domestic potential, job creation, improved employment, accessibility of public service and services, which creates conditions for repatriation of migrants.

Particular attention will be paid by the state to support potential growth centres that can spread their positive impact on the development of neighbouring territories and affect the development of the region as a whole, as well as support the development of areas with special development problems, which should help to reduce the level of inter- and intra-regional asymmetry in the development of territorial communities and improve the quality of human life regardless of place of residence.

All citizens who lost their homes due to the Russian military aggression must be provided with housing. One of the key tasks is to restore and create quality new housing and living infrastructure with protective, sustainable and inclusive solutions.

The reconstruction of Ukrainian towns and villages after the war is a complex process that must ensure modernization and further development for decades ahead. New challenges related to the war - ensuring a balanced resettlement of migrants, relocation of enterprises and businesses in all regions of the country, creating a socially oriented business environment as a prerequisite for economic development of communities - must be combined with the best, modern world approaches and practices. architecture and the UN Sustainable Development Goals. Human-centeredness, rational spatial planning, ensuring the balance of resettlement and jobs, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness and many other current trends in human settlements should be the signs of our great recovery.

Transition to a circular model of the economy of community life support systems, comprehensive improvement of resource efficiency (including energy on both the consumption and supply side) together with an increase in the share of local renewable energy sources and construction of NZEB buildings level of energy consumption) are one of the key elements of the European Green Course and are a logical continuation of Ukraine's integration into the European Union.

Systematic implementation of this course will be the basis for achieving Ukraine's energy independence from imported fossil fuels, as well as for the green transformation of the infrastructure of settlements.

All these factors will allow displaced Ukrainians to return to their homes and communities and transform them into higher living standards. Such an approach should also ensure the long-term well-being of future generations of Ukrainians throughout Ukraine.

2. Key principles of recovery and development

- **Rebuild better than before** - the restoration and development of settlements will be based on best international practices using modern solutions and "green" technologies, which will make a significant transformational leap for communities and regions of Ukraine.

- **Openness and transparency** - the state will continue to provide free access for all citizens of Ukraine and international partners to the plans and actions of public authorities at all stages of Ukraine's reconstruction and development.

- **European integration** - fulfilling each task of the recovery plan will contribute to Ukraine's rapid rapprochement with fundamental European values and standards, and the eventual acquisition of membership in the European Union.

- **Sustainable development** – the reconstruction and development of Ukraine will be ensured taking into account the global goals of sustainable development of the United Nations.

- **Energy independence** - decarbonisation of buildings and livelihood systems by significantly increasing their energy efficiency and increasing the share of renewable energy sources in communities will allow Ukraine to completely abandon imports of fossil fuels (including natural gas of Russian origin).

- **Inclusiveness -** creating an enabling environment for equal access to opportunities for all citizens, strengthening involvement in the development of all sections of the population, and equitable distribution of material and social benefits.

- **Civil protection** - creation of a space aimed at ensuring maximum security for the population and sustainable functioning of economic entities in emergency situations, including military.

3. General analysis of the initial state

Recovery and sustainable region development

Ukraine is a large European country, and its regions significantly differ among themselves on characteristics as natural nor socio-economic characteristics. In particular, there are considerable differences in the indicator of human development among the regions (the difference in 2020 between the region with the highest indicator and the region with the lowest indicator was 1.4 times).

For the 2019 year, GRP per capita in 13 regions was more than 80% of the average in Ukraine, for the remaining 12 regions this figure was lower, while in several regions the figure was less than 50% of the Ukrainian average.

One of the main factors of regional inequality over the last decade is the intensive growth of Kyiv and agglomerations. Thus, the share of GRP of the city of Kyiv in the total is 24%, while the share of some regions is less than 2%.

The armed aggression of the Russian Federation against Ukraine and the temporary occupation a part of Ukraine territory deepened the gap in the levels of regional development, caused the destruction of infrastructure and mass outflow of working population and capital from the territories adjacent to the temporarily occupied, also increased the migration burden for the regions due to involuntary internal displacement; increased business and investment risks.

Housing, energy efficiency and civil protection

According to the Office of the High Commissioner for Refugees of the United Nations (UNHCR), 11.4 million Ukrainians left their homes only in the first month and a half since the start of the hot phase of the current Russian-Ukrainian war. As of June 7, 2022, 4,816,923 refugees from Ukraine were registered in Europe alone, and a total of 5.5 million people left the country. Most of them went to Poland - more than 3 million people. According to the latest data, more than 817,000 people left for Romania, almost 520,000 for Hungary, more than 443,000 for Moldova, and almost 372,000 for Slovakia.

According to the assessment of the UN International Organization for Migration (IOM), another 7.7 million citizens of Ukraine are considered internally displaced persons (IDPs), that is, they remained in the country, but had to leave their homes.

As of 14.06.22, 12,900 apartment buildings (~ 13,5 million m2) and 107,707 private buildings (~ 1.9 million m2) were destroyed / damaged.

In general, the building sector in Ukraine accounts for about 40% of total energy consumption and the corresponding share of greenhouse gas emissions. The national building stock is rather heterogeneous, outdated and very slow to renew. More than 85% of existing buildings were built before 2002, are currently physically worn out, do not meet modern construction requirements and have low energy efficiency. It should be noted that 80-90% of the buildings that exist today and have not suffered significant damage will be used in 2050. However, the rate of thermal modernization of buildings in Ukraine remains extremely low compared to European countries, where the corresponding figures are 0.4-1.2% per year, while in 2021 the European Commission has set a goal to increase the rate of 3%.

At the same time, for the needs of heating and cooling of premises, water supply accounts for about 70% of the energy supplied to consumers in residential and public buildings.

The vast majority of protective structures built in the 60-70s of the last century, today morally and physically obsolete, many structures are partially or completely destroyed. The fund of protective structures is gradually falling into decay. The number of protective structures built during the years of independence is measured by several dozens.

Infrastructure of life support systems

Most life support systems are characterised by significant technological backwardness, high energy consumption and low efficiency, with about half of the equipment and networks have exhausted their design life and need to be replaced. More than 80% of the energy for the livelihood of settlements is produced from fossil fuels.

Given the high dependence on energy imports, this situation has a negative impact on Ukraine's energy security, people's ability to pay their energy bills and live in healthy and comfortable conditions.

The current state of water supply systems does not provide consumers with stable and affordable services, and is characterised by incomplete compliance with the quality and safety of drinking water to the requirements of suitability for human consumption. Only about 65% of the population has access to drinking water supply systems, of which less than 30% of Ukrainian settlements are provided with centralised water supply. However, less than half of the population has access to sewerage systems. Only 50% of wastewater goes through a full cycle of biological treatment, and a third of wastewater is discharged into water bodies without any treatment at all.

Only a small proportion of household waste (both liquid and solid) is recyclable, although it has significant resource and energy potential. The scale of accumulation of sewage sludge generated at the treatment plants of settlements has become threatening. Also, about 80% of the population is covered by solid waste disposal services, of which more than 92% are disposed of in landfills and landfills, which does not meet the key principles of the hierarchy of waste management.

In addition, as a result of the ongoing armed aggression of the Russian Federation against Ukraine, territorial communities have faced significant challenges. Fighting, temporary occupation and significant internal migration have made the infrastructure of human settlements problematic, and many buildings, facilities and livelihoods have been lost, damaged or destroyed.

Today, there is a double urgency to reduce Ukraine's energy dependence: the country's high import dependence on fossil fuels (including natural gas), which Russia uses as economic and political weapons, and countering the climate crisis, which was severely exacerbated by Russia's aggression against Ukraine. Modernization of the huge urban infrastructure, which combines consumption (building sector) and supply (heat and water sources, networks, water treatment plants, etc.) requires significant financial, human and time resources. In fact, the scale of Ukraine's recovery, taking into account modern approaches, should change the principles of state and local energy and

investment planning, as well as the targets for the next two decades, first of all change the planning horizons. There has been no experience of such changes in Ukraine yet.

Regulation in construction

Significant changes in the legislation adopted over the past two years contributed to the growth of construction activity, which in 2021 amounted to UAH 254 billion. (+5.1%) due to: housing construction (+16.8%); non-residential construction (+3.2%); infrastructure construction (+3.1%). At the same time, urgent issues in the field of urban planning that reduce the investment attractiveness of Ukraine and require a systematic solution include the following: the absence of an electronic urban planning cadastre at the state level, the difficulty of obtaining urban planning conditions and restrictions and technical conditions for joining engineering networks, the duration of permit and registration procedures, the ineffectiveness of the architectural and construction control system, the regulation of the majority of building regulations, the lack of life cycle management of public and residential buildings, the lack of sustainable management of construction waste.

The main obstacles to the creation of an electronic urban planning cadastre at the state level, as a single information system, are the low percentage of urban planning documentation in the digital format of geodatabases, insufficient updating of data, and the lack of quality raw data in digital form for the development of urban planning documentation, the lack of integration of all urban planning information systems and services in a single information system. As of 01.01.2022, all 21 regions are provided with territorial planning schemes, 21 of which have up-to-date planning schemes developed after 2011. At the same time, only 263 (56.3%) of the 464 available district planning schemes can be used as urban planning documentation at the regional level. The main type of urban planning documentation at the local level is the spatial development plan of the territory of the territorial community, which is developed for the entire territory of the territorial community. The decision to develop comprehensive plans was made in 93 out of 1469 territorial communities, which is 6.3%, but none of them were approved in 2021. Among the main reasons inhibiting the development of comprehensive plans is the lack

of the necessary cartographic basis. Out of 1,469 newly formed territorial communities, only 33 (2.2%) of their total number have a conditionally up-to-date cartographic basis in digital form in the USK-2000 state geodetic coordinate system for the development of comprehensive plans. All 397 settlements with the status of cities are provided with valid general plans. At the same time, 168 general plans of cities are recognized as not meeting the requirements of the legislation and potentially cannot be used in the implementation of integrated spatial development activities in the territories of newly formed territorial communities in the future. Therefore, 229 (57.7%) of the existing city master plans are considered relevant. Out of 675 urban-type settlements, 602 or 89.2% have master plans. However, 291 of them, according to the results of the analysis, do not meet the current requirements of the legislation. Thus, 311 (51.7%) master plans of urban-type settlements can be used in the future for planning activities. Out of 26,765 rural settlements, 19,329 have existing master plans, of which 12,012 (62.2%) are recognized as not complying with the updated legislation. Accordingly, the number of actual village master plans is only 37.8%. The total number of available detailed area plans is about 30,000 copies, covering approximately 2.2% of the country's territory. At the same time, a large part of them (about 40%) will not meet the updated legal requirements during the development of comprehensive plans and will lose their validity after their approval. The creation of an electronic urban planning cadastre at the state level will simplify the obtaining of town-planning conditions and restrictions and technical conditions for joining engineering networks and will form the prerequisites for the automation of permit-registration procedures.

The system of state architectural and construction control, which is inefficient because it does not provide effective influence on urban planning entities that do not fulfill the legal requirements of state architectural and construction control bodies and/or interfere with inspections, requires continued reform.

To meet the needs of the construction market and remove obstacles to the introduction of innovative and progressive technologies and modern construction products, the transition to parametric standardisation has been initiated. At the same time, the current building code is mostly still of a

regulatory nature, which does not allow the transparent and quick introduction of new technologies and materials to the market. Among the positive changes, it should be noted the adoption in 2020 of the Law "On the provision of construction products on the market", which implemented into national legislation the provisions of Regulation (EU) No. 305/2011 of the European Parliament and of the Council of 9 March, 2011, laying down harmonised conditions for the marketing of construction products and repealing Council Directive 89/106/EEC. In 2021, the Government completed the implementation of the Regulation on the legislative level, which created the prerequisites for its practical implementation. As part of the implementation at the legislative level, the main requirements for the safety of buildings and structures were established: mechanical resistance and stability, fire safety, hygiene, health and environmental protection, safety and accessibility during operation, protection against noise and vibration, energy-saving and energy efficiency, steel use of natural resources (includes construction waste management). Fulfilment of these requirements is ensured, including, through the use of construction products with appropriate operational characteristics. Evaluation and verification of the stability of operational characteristics are carried out by manufacturers together with the designated bodies for assessing compliance with the requirements of Regulation (EU) No. 305/2011. However, there are currently no designated conformity assessment bodies. The situation is complicated by the absence of understaffing of existing laboratories with the equipment necessary for testing construction products.

Further development of the construction market is impossible without technological development and global penetration of innovations at all stages of construction processes and management of the object's life cycle. In the long term, Ukraine should join global trends: "green" construction and carbon-free production as elements of a circular (closed-loop) economy; development of the "smart cities" concept, etc.

4. Directions of recovery and development

I. Reconstruction and sustainable development of the regions

1. The main problems that need to be addressed in the framework of the Recovery Plan in the area of "Reconstruction and sustainable development of the regions"

1.1. The impact of war on a particular area of analysis:

Demography

The demographic situation in Ukraine has tendency to gradually deteriorating in recent years. The main demographic threats are depopulation and population aging. Since 2013, the number of deceased has begun to exceed the number of born. As of 1 January 2022, according to the State Statistics Service, 41 million 167 thousand people lived in Ukraine. This is 4.2 million less than in 2013. From 2000 to 2021, the average age of the population increased from 37.9 years to 42.1 (39.2 - for men, 44.5 - for women).

The obvious negative result of the involuntary mass migration of the young population of Ukraine to the abovementioned foreign countries will be a significant decrease in the population of our country as a whole and a significant increase in gender and age disparities in regions and communities. The greatest demographic risks of depopulation are for the regions and territorial communities bordering Russia and Belarus. At the same time, a significant increase in the population of the western and central regions will have a significant impact on the infrastructure and service networks, labor market congestion.

Regional economy

As a result of Russia's full-scale military invasion, the Ukrainian economy has faced an unprecedented challenge. The production of the main types of products decreased, the ports were blocked, and thus the main share of foreign trade. The

production, transport and logistics, energy, engineering, and social infrastructure of entire regions have been largely destroyed.

The total loss from the transport blockade, in particular sea trade ports, is approximately 3-5 billion dollars a month.

About 25% of the country's arable land, which is actually concentrated in several regions, is at risk or not available at all for the sowing campaign, which will have negative consequences in the coming periods.

According to the Ministry of Social Policy, as of the beginning of June 2022, about 35% of workers who had a job before the large-scale invasion of Russia lost it, i.e. every third employee. This primarily applies to employees of large industrial enterprises located in the south-eastern and north-eastern regions of Ukraine.

Business activity decreased the most in Sumy, Mykolaiv and Kherson oblasts, significantly in Chernihiv, Zaporizhia, Kharkiv, and Odesa. At the same time, in the western and central regions of Ukraine during May-June there is a resumption and recovery of economic activity (including due to the relocation of enterprises and the influx of new labor).

Social infrastructure

The existing network of preschool and general secondary education institutions has almost 30,000 institutions. So far, more than 1,000 general secondary schools and more than 600 preschools have been damaged and destroyed.

The existing network of healthcare facilities includes 18,940 health care facilities (2,043 specialized health care facilities and 16,897 primary health care facilities). More than 700 health facilities have been damaged and destroyed so far.

The existing network of cultural institutions has 34,025 institutions. So far, 255 cultural facilities have been damaged and 295 destroyed.

The existing network of social protection institutions has 1,815 institutions. So far, 41 social protection institutions have been damaged and destroyed.

The existing network of sports infrastructure has 58,230 facilities. So far, 35 sports facilities have been damaged and 60 completely destroyed. Of the 1,055 existing ASC, 17 ASC were completely destroyed; 117 ASC are damaged, 13 of them are unsuitable for further use.

Local Government

During 2015-2020 in Ukraine had been underwent a system of reform of local self-government and territorial organisation (decentralisation), which culminated in the creation of 1,470 territorial communities and 136 districts, the forming of a new budget system and progressive budget equalisation between communities.

At the same time, the implementation of strategic planning at the local level is not yet complete, management decisions are often made in the absence of quality and up-to-date data, there is a low level of professional skills of local governments and local self-governments. There is a problem with the efficiency and capacity of institutions to support regional and local development. Local self-governments and local governments were not sufficiently prepared to work in a situation of martial law and military invasion.

Key challenges (generalized for a specific area)	• Changes in the demographic/gender and age composition and total population of Ukraine and different regions and territorial communities. • Destruction of critical and social infrastructure, enterprises, housing and public facilities. • Increasing the burden on infrastructure in regions with a significant influx of internal displaced persons. • Significant reduction in production. • Decline in exports and its block. • Suspension of investment activities in a significant number of regions. • Imbalances in the labour market, the need for retraining. • Unpreparedness of institutions to function in crisis situations.
Key features (generalized for a specific area)	• Increasing the population, in particular working age in certain areas. • New quality of social capital (to return people with experience of living in European countries to Ukraine). • Strengthening civil society institutions and horizontal links between people, through mutual assistance and volunteering. • Inflow of investments (grants) for Ukraine recovery. • Restoration of infrastructure with the use of modern design solutions, materials and technologies. • Structural and technological modernization and diversification of the economy of the regions (network of industrial parks, centres of creative economy, etc.). • Development of deconcentrated fuel production based on bioresources. • Access to credit and grant resources.

	• Simplification of access to foreign markets, the possibility of integration into them. • Creation of new jobs in the process of reconstruction of Ukraine. • The transition to a green economy (Green Deal) and the expansion of the use of renewable energy sources. • Creating new and strengthening the capacity of existing institutions aimed at Ukraine and regional development. • New quality of inter-municipal, inter-regional and cross-border cooperation and intersectoral partnership.
Key limitations (generalized for a specific area)	• Irreversible migration of the population, in particular young people. • Declining living standards and solvency of the population. • Housing and social infrastructure shortage for internally displaced persons. • Long duration and high cost of infrastructure restoration and modernization. • Budget cuts at all levels. • Risk of damage, including recurrence. • Loss of transit potential. • Loss of traditional export industries. • Increased risk of doing business activities, lack of insurance for business and investment risks, especially in areas with a high level of security risks. • Insufficient coordination of central, local government and local self-government bodies.

Goals, objectives, stages of the Recovery Plan in the direction of "Recovery and sustainable development of the regions"

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 1.1. Sudden and significant territorially differentiated change in the number and sex and age composition of the population. **Goal 1.1.** Bring people back to Ukraine and home. Create conditions to provide people with jobs, housing, public services and a safe living environment. Stimulate fertility and provide support for families with children. To form a territorially balanced settlement system			
The goal to be achieved to solve the problem at each stage	Return people to Ukraine and places of permanent residence Internally displaced persons are provided with temporary housing and work in temporary accommodation	Return people to Ukraine and places of permanent residence	Improve the demographic situation in different types of territories To form a territorially balanced settlement system
Deadline within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	Continuation of active hostilities and missile strikes (shelling) on the territory of Ukraine Encouraging host countries to keep Ukrainians abroad Absent of coordination of various policies in the field of employment, housing, public services	Annexation of Ukrainian territories by Russia Risks of shelling in border areas Lack of financial resources for reconstruction Incoordination of various policies in the field of employment, housing, public services Failure to return to Ukraine a significant proportion of women of childbearing age who went abroad during the war Lack of financial and other support for the birth rate and support for families with children	Lack of financial and other support for the birth rate and support for families with children Low efficiency of executive and local self-government bodies in responding to challenges of human capital loss Absent of coordination of various policies in the field of employment, housing, public services

Measuring indicator of goal achievement	60% of citizens returned to deoccupied territorial communities 50% of citizens who left after martial law returned to Ukraine 70% of IDPs were employed in the respective region (community) of forced residence	75-80% of those who left after martial law returned to Ukraine 75% of citizens returned to deoccupied territorial communities positive balance of external migration 75% of citizens have access to quality public services (education, medicine, social protection, security, etc.)	annual positive natural population growth all citizens have access to quality public services (education, medicine, social protection, security, etc.) positive balance of external migration the share of the population living in rural areas at the level of 25-30%
The total amount of need for financial resources to achieve the goal	will be determined after making the necessary calculations, approximately UAH 250 million	will be determined by the results of the first stage, approximately UAH 1 800 million	will be determined after making the necessary calculations, approximately UAH 700 million

Linking the goal to other areas	Audit of war losses Digitalization Infrastructure restoration Economic recovery and development Energy security Functioning of the financial system, its reform and development Audit of war losses	Audit of war losses Digitalization Infrastructure restoration Economic recovery and development Energy security Functioning of the financial system, its reform and development	Audit of war losses Digitalization Infrastructure restoration Economic recovery and development Energy security Functioning of the financial system, its reform and development

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Goal. Return people to Ukraine and places of permanent residence. Internally displaced persons are provided with temporary housing and work in temporary accommodation			

Stage 1: June 2022 - end of 2022			
1	Improve the unified national information database (register) of data on the existing needs and opportunities for accommodation, employment, and retraining (if necessary) of internally displaced persons	December 2022	Return of citizens Digitalization
2	Estimate the number, sex, age, professional composition of Ukrainians who have left their places of permanent residence (incl. using the capabilities of "Diia"): - outside Ukraine from each region; - outside the region, but did not leave Ukraine	December 2022	Return of citizens Digitalization
3	Conduct a survey among citizens of Ukraine (abroad) and IDPs to determine return intentions and conditions for return (incl. using the capabilities of "Diia"):	December 2022	Return of citizens Digitalization
4	Ensure the preservation of ties of citizens who went abroad with Ukraine, in particular through the preservation of opportunities for remote (remote) work	December 2022	Return of citizens Governance Digitalization

5	Develop a regional development program "Territorial Cohesion of Ukraine" in the following areas: - creating opportunities for cooperation between regions in the field of education, culture, historical and cultural studies; - formation of an attractive image of regions in Ukraine, integration of regional identities into the all-Ukrainian identity; - integration of IDPs and protection of the interests of IDPs in the temporarily occupied territories	December 2022	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development
6	Develop a regional development program "Human Capital Development" taking into account the characteristics of different types of territories in the following areas: - people (raising the professional level of certain target groups or segments of the population of the region in accordance with the needs of its development and the regional labour market); - institutions and networks (creation of new or strengthening the capacity of existing institutions and their networks, which contribute to improving the quality and professionalism of human resources in the region, create conditions for innovation and	December 2022	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development

	strengthen relationships between key actors in the regional labor market); - research (study of the existing environment in local and regional labor markets, the formation and implementation of proposals to improve the level and quality of employment)		
Goal: To return people to Ukraine and to their places of permanent residence.			
Stage 2: January 2023 - December 2025			
7	Implement the regional development program "Territorial Cohesion of Ukraine"	December 2025	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development
8	Implement the regional development program "Human Capital Development" taking into account the characteristics of different types of territories	December 2025	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development

9	Developing regional and local fertility incentive programs	December 2025	The social protection
Goal. Improve the demographic situation in different types of territories. To form a territorially balanced settlement system			
Stage 3: January 2026 - December 2032			
10	Implement the regional development program "Territorial Cohesion of Ukraine"	December 2032	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development
11	Implement the regional development program "Human Capital Development" taking into account the characteristics of different types of territories	December 2032	Return of citizens Education and science Youth and sports Culture and information policy Governance Economic recovery and development
12	Ensure the implementation of regional and local birth control programs	December 2032	The social protection

Goals, objectives, stages of the Recovery Plan in the direction of "Recovery and sustainable development of the regions"

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 1.2. The accessibility of different types of territories to markets and people to public service infrastructure has deteriorated. **Goal 1.2.** Plan, restore and develop critical, social, economic, transport infrastructure; public facilities and a network of public services according to modern approaches and in accordance with the challenges, opportunities and constraints in different types of territories.			
The goal to be achieved to solve the problem at each stage	Assess the status, identify needs and plan for the rehabilitation and modernization of the infrastructure and public service network in each region. Restore critical infrastructure in the deoccupied territories	Build / rebuild / upgrade public service infrastructure and network in modern approaches and in accordance with challenges, opportunities and constraints in different types of territories	Develop the infrastructure and network of public services in modern approaches and in accordance with the challenges, opportunities and constraints in different types of territories, in accordance with the new needs and requirements of the EU

Deadline within the stage	December 2022	December 2025	December 2032
Risks of achieving the goal	Impossibility to assess losses due to occupation, active hostilities, security risks Insufficient number of specialists to conduct a professional inspection of damaged objects Uncertainty over the return of people who have left their homes Insufficient quality of local statistics Insufficient level of capacity of local authorities to identify and prepare the territory for construction / restoration / modernization of infrastructure facilities	Impossibility to update the assessment of the situation and needs due to security risks, in particular mines Uncertainty over the return of people who have left their homes Impossibility of carrying out restoration and construction works due to security threats Insufficient financial, labor, material (building materials, machinery and equipment for restoration) resources for construction / restoration / modernization Corruption risks	Inconsistency of Ukrainian legislation with EU requirements Insufficient financial, labor, material (building materials, machinery and equipment for restoration) resources for construction / restoration / modernization Corruption risks

	A large number of mined areas remain		
Measured indicator of goal achievement	An assessment of the state of infrastructure and public service delivery network in all territories (except for temporarily occupied territories and areas where hosts are taking place) An assessment of the need for infrastructure in all territories, in accordance with certain norms (except for the temporarily occupied and areas where hostilities are taking place) Plans for the restoration and modernization of infrastructure facilities (schools, clinics, security centers, bomb shelters, ASC, etc.) have been formed,	An assessment of the state of infrastructure and public service delivery networks in the liberated territories has been made. The need for infrastructure in all territories has been updated and appropriate plans for the restoration and modernization of infrastructure facilities have been formed. 75% of citizens have access to quality public services	The entire infrastructure and public service delivery network meet the needs of different functional types of territories and EU requirements. All citizens have access to quality public services (education, medicine, social protection, security, etc.)

	including areas for construction.		
The total amount of need for financial resources to achieve the goal	will be determined after making the necessary calculations, approximately UAH 23 934 million	will be determined by the results of the first stage, approximately UAH 111 581 million	will be determined after making the necessary calculations, approximately UAH 878 348 млн. million
Linking the goal to other areas	Audit of war losses Digitalization Economic recovery and development Creating conditions for the return of people to Ukraine and places of permanent residence Functioning of the financial system, its reform and development	Audit of war losses Digitalization Economic recovery and development Creating conditions for the return of people to Ukraine and places of permanent residence Functioning of the financial system, its reform and development	Economic recovery and development Digitalization Creating conditions for the return of people to Ukraine and places of permanent residence Functioning of the financial system, its reform and development

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
Goal: Assess the status, identify needs and plan for the rehabilitation and modernization of the infrastructure and public service network in each region. Restore critical infrastructure in the deoccupied territories			
Stage 1: June 2022 - end of 2022			
1	Audit existing facilities for the provision of public services and facilities, security facilities for citizens and create a geographic information system for social infrastructure facilities in existing networks for the provision of public services and services, security facilities for citizens	October 2022	Digitalization Education and science Healthcare Youth and sports Culture and information policy Governance

2	Provide the possibility of obtaining basic services in the conditions of destroyed or insufficient infrastructure at the expense of mobile and remote solutions (mobile ASC, mobile outpatient clinics and diagnostic centers, distance learning, etc.)	December 2022	Education and science Youth and sports Culture and information policy Health care The social protection Digitalization
3	Develop and approve standards (norms) of accessibility and quality of service provision for networks of institutions providing services in the field of: - education; - Health Care; - social protection; - administrative services (ASC); - sports; - security of citizens (security centers, bomb shelters, radiation protection shelters, etc.)	November 2022	Digitalization Education and science Healthcare Youth and sports Culture and information policy The social protection Governance

4	Model a new viable network of public services and facilities, public safety facilities, including public and local government buildings, administrative services, taking into account the existing circumstances, in accordance with the challenges, opportunities and constraints in different types of territories	December 2022	Education and science Healthcare Youth and sports Culture and information policy The social protection Digitalization
5	Assess the possibility of repairing damaged facilities in new optimized networks for the provision of public services and facilities, public safety facilities in accordance with the needs of communities and regions	December 2022	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance
6	Identify the need for reconstruction / overhaul or new construction of social infrastructure facilities in optimized networks of public services, public safety facilities, and generate information cards for each facility in need of restoration	December 2022	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance

7	Develop reuse projects (or adapt existing ones) for public service facilities, public safety facilities, by projects: - education; - Health Care; - social protection; - buildings of state and local government bodies, provision of administrative services (ASC); - sports; - provision of services by executive bodies and local self-government bodies; - objects of public safety; - security centers. Prepare a manual that will include guidelines for project development, architectural design solutions, sketches (renderings) of projects, decisions on inclusion, energy efficiency, etc. and developed project documentation for re-use	September 2022	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance Digitalization

8	Develop plans for reconstruction / overhaul or new construction of social infrastructure facilities in optimized networks for the provision of public services, public safety facilities in each region	December 2022	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance
Goal: Build / rebuild / upgrade public service infrastructure and network in modern approaches and in accordance with challenges, opportunities and constraints in different types of territories.			
Stage 2: January 2023 - December 2025			
1	Determine the priority (stages) of reconstruction / overhaul or new construction (until 2025) of social infrastructure facilities in the networks of public services and services, public safety facilities in each region	April 2023	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance

2	Providing all social infrastructure facilities for the provision of public services and facilities, public safety facilities in accordance with optimized networks for the provision of public services and services, in accordance with the identified project documentation priorities (project development in accordance with the approved manual with proposed design solutions) or reuse projects terrain-based use	April 2023	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance
3	Identify mechanisms for funding the reconstruction / overhaul or new construction of social infrastructure facilities in the networks of public services, public safety facilities in each region, including the expansion of mechanisms and forms of public-private partnership in the development of social infrastructure .	April 2023	Functioning of the financial system
4	Identify sources of funding for the reconstruction / overhaul or new construction of social infrastructure facilities in the networks of public services, public safety facilities in each region, in accordance with possible financing mechanisms, including the PPP mechanism.	June 2023	Functioning of the financial system

5	Initiate reconstruction / overhaul or new construction of social infrastructure facilities in public service networks, according to priority and financial capabilities	August 2023	Functioning of the financial system
6	Take measures to create new networks of special regional projects, such as cultural service centers, creative hubs, creative centers, science museums and others	December 2024	Education and science Culture and information policy
7	In accordance with the new administrative-territorial structure to adjust the networks of public services and facilities, security facilities of citizens in each region	December 2025	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance Digitalization
Goal: Develop the infrastructure and network of public services in modern approaches and in accordance with the challenges, opportunities and constraints in different types of territories, in accordance with the new needs and requirements of the EU			
Stage 3: January 2026 - December 2032			

1	In accordance with the needs of citizens to update and adjust plans for construction / restoration / modernization of social infrastructure in the networks of public services and facilities, security of citizens in each region	June 2026	Education and science Healthcare Youth and sports Culture and information policy The social protection Governance Digitalization
2	Complete the process of construction / modernization of social infrastructure facilities in the networks of public services and public safety facilities, taking into account modern approaches and in accordance with the challenges, opportunities and constraints in different types of territories	December 2032	Functioning of the financial system Education and science Healthcare Youth and sports Culture and information policy The social protection Governance Digitalization

Goals, objectives, stages of the Recovery Plan in the direction of "Recovery and sustainable development of the regions"

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 1. 3. Sharp and significant reduction of local, regional and macro-regional economies. **Objective 1. 3.** To stimulate the development of local, regional and macro-regional economies based on the potential of different types of territories and taking into account the principles of "green economy".			
The goal to be achieved to solve the problem at each stage	Restore economic activity in the regions and territorial communities (except for areas of hostilities and temporarily occupied territories)	Ensure the growth of local, regional and macro-regional economies based on the potential of different types of territories, taking into account the principles of "green" economy	Different types of territories fully realize the potential of local, regional and macro-regional economies, taking into account the principles of "green economy"
Deadline within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	Continuation of hostilities Lack of proper interaction between government and business, disregard for business interests Insufficient activity of the entrepreneurial environment in using the possibilities of budgetary support A significant share of the "shadow economy" Outflow of capital and investment Infringement of logistical chains regarding the supply of products Lack of incentives for accelerated economic recovery and economic development Lack of energy resources Critical infrastructure destroyed	Limiting export opportunities Underestimating and disregarding local capacities Lack of proper interaction between government and business, disregard for business interests Limited budget support for entrepreneurship in different types of territories A significant share of the "shadow economy" Excessive regulatory and fiscal pressure on business Lack of energy resources	Insufficient business guarantees in the field of investment protection (insurance) A significant share of the "shadow economy" Failure to achieve set goals in economic and investment policy Lack of energy resources

Measured indicator of goal achievement	30% of the business entity, which suffered as a result of the armed aggression of the Russian Federation, resumed their activities after its termination (except for the territories of hostilities and occupied territories) In 15% of the regions, the index of industrial production increased compared to the corresponding period of the previous year In 10% of the regions, the index of agricultural products increased compared to the corresponding period of the previous year In 15% of regions, the number of SMEs per 10,000 of the existing population	In all regions, more than 80% of the business entity resumed their activities after their termination In 70% of the regions, the index of industrial production increased compared to the corresponding period of the previous year In 50% of the regions, the index of agricultural products increased compared to the corresponding period of the previous year In 50% of regions, the number of SMEs per 10,000 of the existing population increased compared to the corresponding period of the previous year In 30% of regions, the employment level of the	In all regions, the annual growth of the index of industrial production compared to the corresponding period of the previous year In all regions, indices of agricultural products increased compared to the previous year In 20 regions, the number of SME entities per 10,000 existing population, units, increased annually compared to the previous year In 18-20 regions, the employment rate of the population aged 15-70 (according to the ILO methodology) increased in % compared to the previous year

	increased compared to the corresponding period of the previous year In 10% of regions, the employment level of the population aged 15-70 (according to the ILO methodology) increased compared to the corresponding period of the previous year In 10% of regions, the unemployment rate of the population aged 15-70 (according to the ILO methodology) decreased compared to the corresponding period of the previous year At least 4 pilot industrial parks were granted state guarantees on a portfolio basis for bank loans for the	population aged 15-70 (according to the ILO methodology) increased compared to the corresponding period of the previous year In 30% of regions, the unemployment rate of the population aged 15-70 (according to the ILO methodology) decreased compared to the corresponding period of the previous year In 10 regions, the gross regional product per capita increases annually compared to the previous year In 20 regions, capital investment indices increased compared to the previous year	In 20 regions, the unemployment rate of the population aged 15-70 (according to the ILO methodology) decreased compared to the previous year In all regions, the gross regional product per capita increased compared to the previous year In all regions, capital investment indices increased compared to the previous year In 20 regions, real wage rates indices increased compared to the previous year In all regions, the revenues of local budgets (without transfers and own revenues; in comparative terms) per unit of

	construction of industrial real estate	In 20 regions, real wage rates indices by region increased compared to the previous year In 20 regions, the revenues of local budgets (without transfers and own revenues; in comparative terms) per unit of population, in thousand UAH, increased compared to the previous year At least 25 industrial parks are provided with engineering and transport infrastructure	population, in thousand UAH, increased compared to the previous year Regional volumes of goods exports in 20 regions increased compared to the previous year The share of capital investment in GRP in 20 regions is at least 25% At least 60 industrial parks are provided with engineering and transport infrastructure

The total amount of need for financial resources to achieve the goal	Approximately 1,600 million UAH	will be determined by the results of the first stage, approximately 145 100 million UAH	will be determined after making the necessary calculations, approximately 85 700 million UAH
Linking the goal to other areas	Economic recovery and development Digitalization Infrastructure restoration	Economic recovery and development Digitalization Infrastructure restoration	Economic recovery and development Digitalization Infrastructure restoration

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Goal: Restore economic activity in regions and territorial communities (except for areas of hostilities and temporarily occupied territories)			
Stage 1: June 2022 - end of 2022			

1	Move critical enterprises in the risk zone from Russia to safe areas	December 2022	Economic recovery and development
2	Create backup / duplicate production of the most critical products in the rear regions	December 2022	Economic recovery and development New agricultural policy
3	Restore economic activity in the field of food and critical services in the deoccupied territories	December 2022	Economic recovery and development New agricultural policy
4	Improve the current legislation on the peculiarities of business incentives (on business risk insurance, reduction of tax rates, etc.) in certain types of territories	December 2022	Economic recovery and development Functioning of the financial system
5	Encourage the renovation and efficient use of abandoned areas (areas and objects of all forms of ownership that are not used).	December 2022	Economic recovery and development

6	Develop a regional development program **"Stimulating the development of regional growth poles"** (RPZ - agglomerations; regional centers; cities of the second tier that meet certain criteria), providing in particular the following areas and priorities: Direction 1. Competitive economy of RPZ Priority 1.1. Development of infrastructure to support SMEs, promoting the expansion of business and export opportunities of local enterprises (with innovative potential). Priority 1.2. Support of innovative startups in priority sectors of the economy, stimulation of applied research and commercialization of their results on the basis of smart specialization. Priority 1.3. Development of RPZ investment potential, support of infrastructure development projects for industrial investment. Direction 2. Impact on the surrounding areas (Promoting the formation of RPZ partnerships, supporting the implementation of projects that have a positive impact on the surrounding areas) Priority 2.1. Support for "growth points" - joint projects of cities and rural areas.	December 2022	Economic recovery and development

	Priority 2.2. Support for cluster initiatives (and cluster projects) in priority sectors of the economy. Priority 2.3. Improving public-private dialogue, intersectoral and inter-municipal cooperation, supporting IMI initiatives. Direction 3. Infrastructure for the person Priority 3.1. Creating a favorable urban environment, an attractive image of RPZ for residents, investors and tourists. Priority 3.2 Supporting the modernization of local infrastructure that creates better living conditions and promotes increased private investment in RPZs (including migrant workers). Priority 3.3. Human capital development, support of measures to adapt labor resources to market needs.		

7	Develop a regional development program "New Ukrainian Village", providing, in particular, the following areas and priorities: Direction 1. Local capacity development Priority 1.1 Supporting employment and diversifying the local economy Priority 1.2 Human capital development Direction 2. Improving accessibility, infrastructure development Priority 2.1 Improving the accessibility of rural areas to the centers of territorial communities and key cities Priority 2.2 Rural infrastructure development Within the framework of the specified directions and priorities to consider, in particular, the following tasks / measures: - Stimulate the development of small and medium enterprises in rural areas, especially remote and low-density, through the use of financial, methodological and organizational tools, including the provision of affordable entrepreneurship training online, offline and blended learning, as well as expanding the network of business support centers “Action. Business ”and the provision, in	December 2022	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization

	particular by these centers, of specialized professional consultations, educational and consultative events; improving access to finance, partnerships and investment resources; improving communication between rural entrepreneurs and local executive bodies, local self-government bodies: - Improve legislation in the field of state support for the development and promotion of farms - Improve the legal conditions for the development of rural tourism - Provide methodological support for the development of rural tourism for legal entities and individuals who create tourism products and provide rural tourism services, promote their implementation by organizing training for representatives of such legal entities and individuals - Provide favorable conditions for the creation of high-tech enterprises of primary and deep processing of raw materials (fruits and berries); creation of enterprises for energy processing of forestry and agricultural waste; production of biodiesel, bioethanol; restoration of crafts.		

8	Develop a program of regional development "Development of border areas in adverse conditions", providing, in particular, the following areas and priorities: Direction 1. Local capacity development Priority 1.1 Supporting the diversification of the local economy Priority 1.2 Human capital development Direction 2. Improving accessibility, development of communication networks and systems, safety of life Priority 2.1 Improving access to services and developing transport infrastructure Priority 2.2 Development of information and computer technology infrastructure Priority 2.3 Development of community safety infrastructure	December 2022	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization Education and science

9	Develop a regional development program "Development of the macroregion of the Ukrainian Carpathians", providing, in particular, the following areas: 1. Formation of a competitive economy of mountainous areas 2. Elimination of infrastructure restrictions, development of spatially balanced road, production and social infrastructure 3. Development of tourism potential by preserving and maintaining the cultural heritage and traditional crafts of the local population 4. Ensuring environmental safety 5. Placement of high-tech dual-use industries	December 2022	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization

10	To develop the Concept and the State target program of **fair transformation of monofunctional cities of Ukraine** (including coal), having provided, in particular, the following directions: - study of economic and budgetary capacity of monofunctional communities (including coal); - create conditions for the development of human capital, investment development and diversification of the economy of mono-profile cities (including coal); - to ensure the transition to renewable energy sources and increase the level of energy efficiency in the housing and communal sphere of mono-profile cities (including coal).	December 2022	Economic recovery and development Energy security
11	Assess the state and possibilities of using the potential of the **macro-region "Azov - Black Sea"**	December 2022	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Ecological safety

12	Ensure the development of industrial parks in Ukraine, in particular in the following areas: - state funding for the construction of engineering and transport infrastructure of pilot industrial parks; - simplification of the procedure and compensation of the cost of connection of industrial parks to engineering networks, simplification of the procedure of connection to networks and control over abuse of monopoly position of economic entities - operators of such networks; - providing tax and customs benefits to participants in industrial parks (bills 5688, 5689); - lending for the construction of commercial real estate on the territory of pilot industrial parks; - providing insurance of business risks and investments in industrial parks	December 2022	Economic recovery and development Functioning of the financial system

13.	Enhance legislative support and methodological support for the preparation and implementation of public-private partnership projects at the regional and local levels, in particular in the following areas: - carry out a detailed analysis of legal acts on public-private partnership and study the practice of its application at different levels of governance with the purpose of simplifying the procedure (requirements) for the preparation and implementation of certain types of PPP (municipal) projects; - develop typical (pilot) projects at the regional and local levels, in particular in the fields of: education, medicine, energy, sports, social services, culture, communal infrastructure, housing and communal services; - develop standard documents necessary for the initiation of PPPs, examples of additional funding for regional (local) development projects at the expense of sources other than the budget available to executive authorities and local self-government bodies with justifications for their application;	December 2022	Economic recovery and development Education and science Healthcare Youth and sports Culture and information policy

	- - to conduct an analysis of the negative practices of the application of PPP (initiated criminal proceedings) and to prepare a collection of typical mistakes made during the registration of partnerships, as well as to determine legal norms that provide the opportunity to initiate cases without grounds, and to develop proposals for making changes and clarifications to the relevant legislation		

Goal: Ensure the growth of local, regional and macro-regional economies based on the potential of different types of territories, taking into account the principles of "green" economy			
Stage 2: January 2023 - December 2025			
14	Develop and ensure the implementation of the regional development program **"Development of the potential of the Azov-Black Sea macro-region"**, foreseeing, in particular, the following areas: 1. Expansion of transport and logistics accessibility of the macro-region. 2. Preservation and development of human capital. 3. Sustainable economic development (deepening processing of local raw materials, spread of small organic farming, restoration of traditional crafts, ensuring self-employment of the population). 4. Comprehensive development of resort areas, tourist and related communal infrastructure, taking into account inclusion and gender-oriented approach.	December 2025	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Ecological safety

	5. Reduction of the impact on the environment of the results of people's life activities (elimination of territory clogging, elimination of the consequences of flooding, provision of water resources and water purification systems)		
15	Ensure the implementation of the regional development program **"Stimulating the development of regional growth poles"**	December 2025	Economic recovery and development Functioning of the financial system
16	Ensure the implementation of the regional development program **"New Ukrainian Village"**	December 2025	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization
17	Ensure implementation of the regional development program **"Development of border areas in adverse conditions"**	December 2025	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization Education and science

18	Ensure implementation of the regional development program **"Development of the macroregion of the Ukrainian Carpathians"**	December 2025	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization
19	Ensure the implementation of the State Target Program for the **Fair Transformation of Monofunctional Cities of Ukraine**	December 2025	Economic recovery and development Energy security

20	Ensure the development of industrial parks in Ukraine, in particular in the following areas: - state funding for the construction of engineering and transport infrastructure of industrial parks; - providing non-refundable financial assistance for the arrangement and / or implementation of economic activities within industrial parks established in areas with limited development opportunities (in particular, mono-profile cities); - compensation for the cost of connecting industrial parks to engineering networks; - compensation of interest rates on loans (loans) for the arrangement and / or implementation of economic activities within industrial parks; - promotion and promotion of industrial parks in front of potential investors (participants and management companies); - state insurance of business risks and investments on the territory of industrial parks in some regions of the country (conditionally safe)	December 2025	Economic recovery and development Functioning of the financial system
21	Conduct a comprehensive economic assessment of the natural resource potential of the regions	December 2024	Economic recovery and development Energy security Ecological safety

22	Introduce a mechanism of state financial support for regional development projects that provide for the development of priority economic activities identified on the basis of smart specialization, taking into account the principles of "green" economy.	December 2024	Economic recovery and development Functioning of the financial system
23	Ensure the implementation of public-private partnership projects at the regional and local levels, in particular in the following areas: - 5 pilot projects based on health care facilities that provide tertiary (highly specialized) medical services; - at least 10 projects in the field of education, culture and sports (creation of multifunctional sports complexes, leisure centres, "schools of the future", etc.); - at least 10 projects in the field of solid waste management; - at least 10 projects in the field of business support (Centers of creative economy)	December 2025	Economic recovery and development Education and science Healthcare Youth and sports Culture and information policy
Goal: Different types of territories fully realize the potential of local, regional and macro-regional economies, taking into account the principles of "green economy"			

Stage 3: January 2026 - December 2032			
24	Ensure the implementation of the regional development program **"Development of the potential of the Azov-Black Sea macro-region"**	December 2027	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Ecological safety
25	Ensure the implementation of the regional development program **"Stimulating the development of regional growth poles"**	December 2027	Economic recovery and development Functioning of the financial system
26	Ensure the implementation of the regional development program **"New Ukrainian Village"**	December 2027	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization
27	Ensure implementation of the regional development program **"Development of border areas in adverse conditions"**	December 2027	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization Education and science

28	Ensure implementation of the regional development program **"Development of the macroregion of the Ukrainian Carpathians"**	December 2027	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization
29	Ensure the implementation of the State Target Program for the **Fair Transformation of Monofunctional Cities of Ukraine**	December 2032	Economic recovery and development Energy security
30	Develop regional development programs for different types of territories for the relevant period (State Strategy for Regional Development for 2028-2034)	December 2027	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization Education and science Ecological safety Governance

31	Implement regional development programs for different types of territories for the relevant period (State Strategy for Regional Development for 2028-2034)	December 2032	Economic recovery and development New agricultural policy Reconstruction and development of infrastructure Digitization Education and science Ecological safety Governance
32	Ensure the development of industrial parks	December 2032	Economic recovery and development Functioning of the financial system
33	Provide state financial support for regional development projects that provide for the development of priority economic activities identified on the basis of smart specialization, taking into account the principles of "green" economy	December 2032	Economic recovery and development Functioning of the financial system

Goals, objectives, stages of the Recovery Plan in the direction of "Recovery and sustainable development of the regions."

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 1.4. Limited capacity of the authorities at all levels, complete or partial loss of control in the territories where hostilities are taking place. **Goal 1.4.** Create a system of multilevel governance and specialized institutions for territorial development that meets the challenges of wartime and postwar reconstruction and development. Ensure data-driven policy making and management decisions			

The goal to be achieved to solve the problem at each stage	Resume local government activities in the liberated areas in line with security risks and the challenges of post-war reconstruction	Adapt the system of administrative-territorial organization, local self-government, territorial subdivisions of central executive body in accordance with the criteria of capacity and efficiency Develop the capacity of authorities at all levels and ensure their cooperation for post-war reconstruction and development Create a system of territorial development institutions Ensure data-driven policy making and management decisions	Develop a system of multilevel governance and specialized institutions for territorial development
Deadline within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	Lack of trained people and experience to work in crisis conditions Limited resources for the exercise of power by the authorities Corruption risks	Limited resources for the exercise of power by the authorities Lack of experience in crisis management at all levels of government Lack of experience in developing development programs and projects in the regions and TGs (including cross-border cooperation) Unsatisfactory state of information support of decision-making (lack of local statistics, outdated data, unsynchronized data sources)	Institutional and personnel inability to respond to challenges Limited resources for the exercise of power by the authorities Unwillingness of institutions to project activities in relevant areas

Measured indicator of goal achievement	All authorities perform their functions (powers) in 100% of the liberated territories	RDA operates in each regions 90% of government employees who have increased their managerial capacity through training 100% of territorial communities have medium-term budget planning 100% of territorial communities have development strategies (except affected territories) 100% of the territorial communities adopted a comprehensive spatial development plan	All regions and territorial communities have current (updated) regional development strategies and community development strategies

The total amount of need for financial resources to achieve the goal	will be determined after making the necessary calculations, approximately UAH 15 000 million	will be determined by the results of the first stage, approximately UAH 75 520 million	will be determined after making the necessary calculations
Linking the goal to other areas	Public administration	Public administration	Public administration

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Goal: Resume local government activities in the liberated areas in line with security risks and the challenges of post-war reconstruction			
Stage 1: June 2022 - end of 2022			
1	Ensure the functioning of authorities and self-government in the liberated territories (subvention for the exercise of power, provision of premises, furniture, equipment, office equipment, etc.)	December 2022	Public administration Functioning of the financial system

2	Develop a mechanism to stimulate employees of local executive bodies and local governments in the affected areas (including through wage increases)	September 2022	Public administration Functioning of the financial system
3	Update the Law of Ukraine "On the Principles of State Regional Policy", providing for a three-tier system of strategic planning of regional development, mechanisms, tools and features of restoration, promotion and development of different types of territories	September 2022	Economic recovery and development Public administration
4	Make changes to the State Strategy for Regional Development for 2021-2027, providing in particular the actualization of functional types of territories	December 2022	Economic recovery and development Public administration
5	Ensure the implementation of a pilot project to monitor the damage and destruction in the regions of Ukraine due to the armed aggression of the Russian Federation on the basis of geographic information system	December 2022	Audit of war losses Digitization
6	Define the powers of different public authorities (CEB, CEB, MDA, local self-government, control bodies) to implement measures and recovery projects, avoiding duplication	July 2022	Public administration

7	Develop a mechanism for financing the reconstruction of regions and communities	December 2022	Functioning of the financial system
8	Improve the mechanism for financing the development of regions and communities on the basis of transparency, competitiveness, horizontal alignment, solidarity and partnership	December 2022	Functioning of the financial system
Goal: Adapt the system of administrative-territorial organization, local self-government, territorial subdivisions of central executive body in accordance with the criteria of capacity and efficiency Develop the capacity of authorities at all levels and ensure their cooperation for post-war reconstruction and development Create a system of territorial development institutions Ensure data-driven policy making and management decisions			
Stage 2: January 2023 - December 2025			
9	Assess the capacity of local self-government bodies and the effectiveness of MDA, TO CEB in the postwar period in different types of territories and formulate proposals for changes in the system of administrative-territorial organization, local self-government, territorial executive bodies	June 2023	Public administration

10	Reform the system of selection, training and retraining of personnel for local governments, providing for the development of professional standards of service in local governments and mandatory periodic training for officials of local governments	December 2023	Public administration
11	Introduce a three-tier system of strategic planning of regional development, taking into account the functional types of territories, providing: - settling the issue of providing an opinion on the compliance of draft regional development strategies with the established requirements for their preparation and strategic goals and priorities of the State Strategy for Regional Development; - providing methodological assistance for the development and updating of territorial communities of strategic planning documents for their development	January 2023 March 2024	Economic recovery and development Public administration
12	Improve procedural issues related to ensuring the coordination of sectoral and regional development priorities during the development of regulations of the Cabinet of Ministers of Ukraine, legislation	January 2023	Public administration Economic recovery and development

13	Develop and start the implementation of the regional development program "Strengthening institutional capacity for regional development", providing measures to: - strengthening methodological and informational support of regional development agencies on the formation and implementation of state regional policy and development of local self-government; - introduction of educational and training programs for employees of regional development agencies; - financial support of regional development agencies, etc. - promoting the cooperation of Regional development agencies with the Agency for Public-Private Partnership Support, the Office for Attracting and Supporting Investments, the Office for Entrepreneurship and Export Development, including by signing bilateral and/or multilateral memoranda, other documents on cooperation, implementation of joint projects and initiatives, etc.	January 2024	Public administration

14	Develop a system of information and analytical support and development of management skills for decision-making based on objective data: - ensure the establishment and operation of a system for monitoring and evaluation of state regional policy, including on the basis of a single integrated geographic information system for monitoring and evaluation of the restoration and development of regions and communities; - create, ensure accelerated filling and consolidation of the system of state registers; - to create a unified system for conducting statistical observations and collecting and presenting information at the level of territorial communities; - to ensure the development and implementation of training programs for officials of local executive bodies and local governments on the collection and analysis of statistical data	December 2025	Digitization Public administration
15	Introduce regular research on topical issues of regional development at the state, regional and local levels, in particular taking into account the functional types of territories	December 2025	Digitization Public administration

16	Create a legislative basis for the functioning and development of agglomerations	December 2025	Economic recovery and development
17	Create legal and organizational conditions to encourage regions and local communities to cooperate and implement joint projects	December 2023	
Goal: Develop a system of multilevel governance and specialized institutions for territorial development			
Stage 3: January 2026 - December 2032			
18	Ensure the implementation of the regional development program "Strengthening institutional capacity for regional development"	December 2032	Public administration
19	Provide support to regions and local communities in the field of cooperation and implementation of joint projects	December 2032	Functioning of the financial system

II. Regulation in construction

1. The main problems that need to be addressed in the framework of the Recovery Plan in the field of "Regulation in construction".

1.1. The impact of war on a particular area of analysis:

Urban planning

The main problems hindering the creation of a unified information system of urban planning cadastre of the state level are the low percentage of urban planning documentation in digital format of geodatabases, insufficient data updating and absence of quality source data in digital form for urban planning documentation, absence of integration of all urban information systems and services in one unified information system. As a result of the military aggression of the Russian Federation against Ukraine, all work on the development of urban planning documentation at the local level - comprehensive plans for spatial development of the territorial community, which is being developed for the entire territory of the territorial community, were stopped. In 2021, 93 out of 1469 territorial communities, which is 6.3%, decided to develop comprehensive plans. Works on updating the necessary cartographic basis for the development of urban planning documentation has also stopped.

The absence of a single information system of the urban cadastre of the state level reduces the transparency of urban planning activity, hinders the automation of permitting and registration procedures. Creation of the electronic urban planning cadastre will provide the information exchange of administrative-territorial units concerning development of their territories, it will ensure the state and regional interests within planning of territories. It is a tool of the state leadership to monitor the urban policy implementation and support the adoption of operational management decisions that may relate to the territories of the whole state, its individual parts, which may cover the territory of one or more units of administrative-territorial organization.

Systemic problems in the field of urban planning are the absence of electronic urban planning cadastre at the state level, the complexity and duration of obtaining urban conditions and restrictions (UPCR), technical conditions for connection to engineering utilities (TC) and permitting and registration procedures. The system of state architectural and construction control is not effective. Building codes are mostly administrative in its nature and are too regulated. All this significantly complicates procedures, creates corruption risks and reduces Ukraine's investment attractiveness.

Building life cycle management

In the absence of unforeseen destruction, existing buildings can be operated for a relatively long period of time - 100 years or more, and the fund of such buildings is constantly increasing due to the commissioning new objects putted into operation. An increasing share of investments in real estate is directed not to new construction, but to the safe operation of facilities - repair, reconstruction and maintenance. All relevant capital and current investments are investments. Investment planning is related to the design of the building and includes the analysis and selection of a design solution based on the criteria of the functionality of the object and the cost of the life cycle.

Construction design is based on the choice of the best organizational and technical solutions according to the criterion of the building construction costs with the given functional characteristics. Construction management is carried out using methods and tools of project management, which, depending on the objectives of the project, can be applied to the entire life cycle. Maintenance and operation management of the building is carried out through the creation of a tangible asset and the organization of the use of its consumer properties. The basis for the need to manage the life cycle of buildings, established by the laws of Ukraine "On Building Regulations", "On Public Procurement" and the Concept of implementation of building information modelling (BIM-technologies), becomes especially relevant in the context of rapid recovery and the need to consider European approaches to the real estate management.

Technical Regulation in Construction

On January 1, 2023, the Law of Ukraine “On Provision of Construction Products on the Market” will come into force. This Law is a technical regulation within the meaning of the Law of Ukraine “On Technical Regulations and Conformity Assessment” and implements the consolidated version of Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011 laying down harmonised conditions for the marketing of construction products and

repealing Council Directive 89/106/EEC . One of the key requirements of Regulation (EU) No 305/2011 is the assessment and verification of the constancy of construction products performance by designated conformity assessment bodies. At present, there are no designated conformity assessment bodies in Ukraine. As of February 24, 2022, there were 42 potential applicants for appointment in Ukraine, however, the issue of equipping laboratories with facilities for testing of 35 product categories (about 86 groups of construction products) remains relevant. In addition, as a result of the armed aggression of the Russian Federation, at least 10 testing laboratories are currently damaged or are located in the occupied territories.

The inability to assess and verify the constancy of construction products performance will lead to non-compliance with the terms of the Agreement, significant costs of the manufacturer to conduct tests outside Ukraine, and, as a consequence, reduce the competitiveness of the national manufacturer.

Construction Waste

The implementation of Regulation (EU) № 305/2011 requires the implementation of seven basic requirements for buildings and structures. One such requirement is the sustainable use of natural resources. According to this requirement, buildings and structures must be designed, constructed and demolished in such a way that the use of natural resources is rational and provides, in particular: the possibility of reuse or recycling of structures and buildings, their materials and parts after demolition; durability of buildings and structures; the possibility of using environmentally friendly raw materials and secondary use materials in buildings and structures. At the same time, in Ukraine there are no mechanisms for the practical implementation of this requirement, including the infrastructure for construction and demolition waste management. According to various estimates, from 1.4 to 7 million tons of construction and demolition waste were generated in Ukraine before the war. The field of processing, utilization and reuse of such waste is practically undeveloped, partially due to the relatively low cost of natural materials, which makes reuse economically impractical, partially due to the lack of clear requirements for waste generators (developers) for sustainable resource and waste management. Today, there are almost no specialized landfills for construction waste in Ukraine (there is only landfill № 6 in Kyiv and a site in Kharkiv). In other cities, this waste ends up in landfills, or at worst, in unauthorized landfills. According to estimates, about 3.5 million tons

of construction and demolition waste are exported to landfills per year. The share of hazardous waste in construction and demolition waste is about 5% or 350 thousand tons per year. The situation is significantly complicated by the military aggression of the Russian Federation in Ukraine, which has led to significant destruction of residential buildings, infrastructure and industrial facilities, resulting in the formation of significant amounts of destruction waste. Currently, data on the volume of such waste are not available. It should also be expected that after the beginning of the restoration of the damaged regions and new construction, large amounts of construction and demolition waste will be generated in addition to the already accumulated ones.

Key challenges (generalized for a specific area)	• A significant part of the relevant initial data necessary for decision-making is missing. • The low relevance of urban planning documentation at the local, regional and state levels, there are no comprehensive plans for the spatial development of the territories of territorial communities. • Insufficient level of provision of territories with digital topographic bases, restriction of access to the cartographic base under martial law conditions. • Low level of digitization of urban planning documentation. • The need for coordination of comprehensive recovery programs with a large number of existing strategic and planning documents. • The complicated process of obtaining public services • Ineffective system of architectural and construction control • Overregulated building norms • There is no prioritization of restoration (recovery) of damaged infrastructure and housing. • There is no urban planning cadastre at the state level. • There is a lack of quality initial data in digital form for the development of urban planning documentation. • There is no data with operational and energy characteristics for most buildings and structures. • Existing data are on paper. • Holders of existing data are various subjects. • Irrelevant urban planning documentation and a low percentage of it in the format of geodatabases.

	• Insufficient development of the national geospatial data infrastructure, which should ensure interaction between digital registers and geospatial databases of different data holders. • Lack of address register and register of buildings and structures. • Obtaining technical conditions for connecting to engineering utilities is long and expensive. • Deregulation and automation of the provision of permit and registration services in construction and commissioning of facilities are needed. • Damage/loss of testing laboratories as a result of the military aggression of the Russian Federation. • There is not enough available equipment for assessing and verifying tests for the constancy of construction products performance. • Large amounts of demolition and construction waste generated and accumulated in Ukraine. • Absence of a procedure guideline for handling destruction, construction and demolition waste. • Lack of infrastructure and technologies for collecting, processing and recycling such waste.

Key capabilities (generalized for a specific area)	• Implementation of modern approaches and practices for the development of regions/territorial communities/settlements in accordance with the principles of sustainable development, in particular: people-centeredness, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creating a «life-work balance» environment • Update and coordination of strategic and planning documents, urban planning documentation at different levels. • Unified system of initial data for the development of urban planning documentation. • High-quality unified geospatial data • Transparency of urban planning activities and spatial planning of the territory • Automation of the processes of obtaining permit and registration services • Provision of urban planning monitoring. • Efficiency of administrative decision-making concerning the territory of the entire state and its individual parts. • Removal of corruption risks • Increasing the resource efficiency of the construction industry, reducing costs and rising the efficiency of the construction process by escalating the level of automation of design and construction works, prompt adjustment of construction cost indicators and ensuring effective monitoring of construction progress. • Organization of reliable storage and use of relevant and reliable information, which will make it possible to reduce the probability of technical, planning and financial risks at all stages of the life cycle of the construction object.

	• Ensuring the actualization of normative provision in construction, in particular, taking into account the peculiarities of the application of BIM technologies. • Reducing the level of energy consumption of buildings due to taking into account optimal solutions of energy efficiency indicators of buildings at the design stage. • Increasing the safety and reliability of buildings and structures, reducing costs for their operation. • Providing uniform approaches to assessing the conformity of construction products performance in Ukraine and EU member states • Expansion of sales markets for construction products, works and services in the field of construction • Increasing the competitiveness of the national producer • Ensuring the safety and quality of construction products • Reducing the harmful impact of construction on the natural environment and increasing the level of efficiency of resource use • Ensure the collection and processing of destruction waste generated as a result of military actions. • Reducing the negative impact of waste on the natural environment and public health. • Stimulation of reuse of demolition, construction and demolition waste in new construction, land reclamation, backfilling, etc.

Key limits (generalized for a specific area)	• Lack of sufficient human resources. • Insufficient institutional capacity of authorized bodies of urban • planning and architecture • Complexity of organization of search, collection and entry of initial data • Complexity of data verification • Short deadlines for updating and digitizing of urban planning documentation • Absence of accredited laboratories and designated conformity assessment bodies (according to the requirements of Regulation (EU) No. 305/2011) • Absence/imperfectness of regulatory and legal regulation of destruction, construction and demolition waste. • Lack of infrastructure, technologies and equipment for processing destruction, construction and demolition waste. • A significant volume of destruction waste • Presence of security risks due to the military aggression of the Russian Federation • Limited financial resources

Goals, objectives, stages of the Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

		Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 2.1. The need to ensure the comprehensive restoration of infrastructure and housing due to destruction. **Goal 2.1.** Comprehensive restoration of infrastructure and housing stock due to destruction using modern approaches and practices of development of regions / territorial communities / settlements in accordance with the principles of sustainable development, in particular: human center, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creation Life-work balance environment				

The goal that must be achieved to solve the problem at each stage	The collection of initial data was ensured, in particular: an inventory of damaged objects was carried out, a list of priority restoration objects was created, information was collected on the needs for the development of social infrastructure (schools, kindergartens, hospitals, etc.) taking into account migration processes. A comprehensive recovery planning methodology based on the goals of sustainable development has been developed: people - centeredness, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creation of «life-work balance» environments, etc.	The development of 100% of programs for the comprehensive restoration of regions/territorial communities/settlements in accordance with the goals of sustainable development has been provided. 40% of urban planning documentation at all levels has been updated in accordance with programs of comprehensive recovery and other strategic documents of the national level regarding state interests.	100% of strategic and program documents are updated at all levels. Update of 100% of urban planning documentation at all levels in accordance with comprehensive recovery programs and other strategic documents of the national level regarding state interests has been ensured

The deadline is within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	The incompleteness of the military conflict: the continuation of hostilities, the presence of part of the territory of Ukraine under occupation, the high probability of repeated destruction in the unoccupied territories, the uncertainty of the level of security risks in the medium term. Absence of a significant part of actual initial data. Low institutional capacity of territorial communities to develop and implement complex management solutions. Shortage of qualified personnel for the development of urban planning documentation in large volumes and at a fast pace Limited financial resources.	Low institutional capacity at the level of territorial communities in matters of ensuring consideration of modern development approaches and practices based on the goals of sustainable development in the development and implementation of comprehensive recovery programs Limited financial resources	

Measured indicator of goal achievement	The percentage of developed comprehensive recovery programs of regions/territorial communities/settlements. The approved methodology for planning comprehensive recovery, based on the goals of sustainable development: people -centeredness, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creation of «life-work balance» environments, etc	The percentage of implemented programs for the comprehensive restoration of regions/territorial communities/settlements. Percentage of updated urban planning documentation at all levels.	Percentage of updated strategic and program documents at all levels. Percentage of updated urban planning documentation at all levels.
The total size of the need for financial resources to achieve the goal	It is being clarified	It is being clarified	It is being clarified

Connection of the goal with other directions	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

2.2. Definition of tasks to achieve goals from subsection 2.1

#	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems

Goal 1.1. The collection of initial data was ensured, in particular: an inventory of damaged objects was carried out, a list of priority restoration objects was created, information was collected on the needs for the development of social infrastructure (schools, kindergartens, hospitals, etc.) taking into account migration processes. **Goal 1.2.** A comprehensive restoration planning methodology based on the goals of sustainable development has been developed: people-centeredness, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creation of «life-work balance» environments, etc.			
Stage 1: June 2022 - end of 2022			
1.1.1.	Carrying out works on inspection of damaged objects	November 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
1.1.2.	Carrying out work on the inventory of damaged objects	November 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

1.1.3.	Determination of the relevant demographic situation from the point of view of resettlement, labour resources, needs in social infrastructure	December 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
1.1.4.	Prioritization of recovery of infrastructure and housing	December 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
1.2.1.	Preparation and adoption of normative legal acts on determining the procedure for developing programs for the comprehensive recovery of regions, territorial communities (parts thereof)	December 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

1.2.2.	Methodological support for the development of programs for the comprehensive recovery of regions, territorial communities (parts of them), appropriate information and training of specialists in regions and territorial communities.	December 2022	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
Goal 2.1. The development of 100% of programs for the comprehensive recovery of regions/territorial communities/settlements in accordance with the goals of sustainable development has been ensured. **Goal 2.2.** 40% of urban planning documentation at all levels has been updated in accordance with programs of comprehensive recovery and other strategic documents of the national level regarding state interests.			
Stage 2: January 2023 - December 2025			

2.1.1.	Provision of conditions for methodological support and monitoring of the development and implementation of programs for the comprehensive recovery of regions, territorial communities (parts thereof) in accordance with the goals of sustainable development: people - centeredness, rational spatial planning, sustainable urban mobility, inclusiveness, energy efficiency, environmental friendliness, creation of «life-work balance» environments, etc.	June 2023	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

2.1.2.	Development of comprehensive recovery programs for regions/territorial communities/settlements	December 2025	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
2.1.3.	Determination of the need to create/correct urban planning documentation at the state and regional levels (planning schemes of parts of Ukraine, planning schemes of Crimea Republic and regions, districts) on the basis of comprehensive regional recovery programs	December 2023	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
2.1.4.	Determination of the need to create/correct urban planning documentation at the local level (complex plans for the spatial development of territories of territorial communities, general plans of settlements, detailed plans of territories).	December 2025	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy

			Digitization
2.2.1.	Ensuring the creation/correction of urban planning documentation at the state and regional levels (planning schemes of individual parts of Ukraine, planning schemes of Crimea Republic and regions, districts) on the basis of programs of comprehensive recovery of regions (100%)	December 2025	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization
2.2.2.	Ensuring the creation/correction of urban planning documentation at the local level (complex plans for the spatial development of territorial communities' territories, general plans of settlements, detailed plans of territories).	December 2025	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

Goal 3.1 Update of 100% of strategic and program documents at all levels is ensured. **Goal 3.2.** Update of 100% of urban planning documentation at all levels in accordance with comprehensive recovery programs and other strategic documents of the national level regarding state interests has been ensured			
Stage 3: January 2026 - December 2032			
3.1.2.	Ensuring coordination of strategic and program documents at all levels with updated urban planning documentation	December 2032	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

3.2.1.	Ensuring the creation/correction of urban planning documentation at the local level (complex plans for the spatial development of territories of territorial communities, general plans of settlements, detailed plans of territories).	December 2032	Restoration and modernization of life support systems Restoration and stimulation of the development of regions Housing policy Digitization

Goals, tasks, stages of the Recovery Plan in the direction of "Regulation in construction".

2.1. The goals are aimed at solving a specific problem:

	Stage 1: June 2022 to the end of 2022	**Stage: January 2023 to December 2025**	**Stage: January 2026 to December 2032**

Problem 2.2. Insufficient transparency and publicity of urban planning activities

Objective 2.2. Ensuring publicity and transparency of urban planning documentation and implementation of permit and registration procedures

The goal that must be achieved to solve the problem at each stage	Regulatory and technical prerequisites for the implementation of the urban cadastre at the state level have been created Construction regulations are being revised with the aim of applying the parametric method of standardization	The information system of the urban planning cadastre was implemented at the state level, and its integration with other cadastres and registers was carried out. Urban planning conditions and restrictions are formed automatically by the software of the urban planning cadastre in the form of an extract. Automation of registration of the right to perform construction works and acceptance of completed construction facilities into operation with the help of the Unified State Electronic System in the field of construction software tools. Effective state urban planning control and supervision was built with	100% of urban planning documentation and permit procedures in a single system

		the involvement of legal entities of the private sector in the implementation of urban planning control.	

Lead time within the stage	December 2022	December 2025 _	December 2027
Risks of achieving the goal	Limited financial resources	Limited financial resources, insufficient personnel potential at the level of territorial communities	Limited financial resources, insufficient personnel potential at the level of territorial communities, lack of high-quality initial data for the development of urban planning documentation

Measurable indicator of achievement	The legal framework has been updated (100%) A plan for revising building regulations with the aim of applying the parametric method of standardization was adopted	There is an integrated system of urban planning cadastre at the state level. Obtaining urban planning conditions and restrictions in the form of an extract. Automatic registration of the right to perform construction works and acceptance of the completed construction facility into operation with the help of the Unified State Electronic System in the field of construction software tools The reform of state urban planning control and supervision has been carried out	Share of urban planning documentation (100%), share of permit procedures (100%).

The total amount of financial resources needed to achieve the objective	It is being clarified	It is being clarified	It is being clarified
Linking the goal to other areas	Spatial planning, digitalization	Spatial planning, digitalization	Spatial planning, digitalization

2.2. Defining objectives to achieve the goals of sub-paragraph 2.1

n/a	**Description of the objective to achieve the goal**	**Lead time for completing the task**	**Dependence of the task on the tasks of other areas, fields, problems**
Goal 1.1. Regulatory and technical prerequisites for the implementation of the urban cadastre at the state level have been created Goal 1.2. Construction regulations are being revised with the aim of applying the parametric method of standardization			
Stage 1: June 2022 to the end of 2022			

1.1.1.	Update of the regulatory framework regarding the functioning of the urban cadastre at the state level and the Unified State Electronic System in the Field of Construction	November 2022	
1.1.2	Purchase of equipment for technical support of the urban cadastre at the state level	December 2023	
1.2.1	A plan for revising building regulations with the aim of applying the parametric method of standardization was adopted	August 2022	
Goal 2.1. The information system of the urban cadastre at the state level was implemented, its integration with other cadastres and registers was carried out Goal 2.2. Urban planning conditions and restrictions are formed automatically by the software of the urban planning cadastre in the form of an extract. Creation of effective state urban planning control and supervision with the involvement of legal entities of the private sector in the implementation of urban planning control. Automation of registration of the right to perform construction works and acceptance of the finishing construction works and acceptance of the object into operation with the help of software tools of the Unified State Electronic System in the field of construction.			

Stage 2: January 2023 to December 2025			
2.1.1.	Implementation of the urban cadastre information system	December 2023	
2.1.2	Implementation of the address register and the register of buildings and structures	December 2023	
2.1.3	Automation of the process of providing permit and registration services in construction on the basis of the Unified State Electronic System in the field of construction	December 2023	
2.1.4	Integration with other cadastres and registers	December 2023	
2.2.1	Reforming the sphere of urban development	January 2023	

2.2.2	Transition from the granting of a permit to perform construction works to the registration of the right to perform construction works	January 2023	
2.2.3	Automation of acceptance of completed construction objects into operation	January 2023	
Goal 3.1. 100% of urban planning documentation and permit procedures in a single system			
Stage 3: January 2026 to December 2032			
	Task 3.1.1. Updating urban planning documentation in digital form and providing open access to it	December 2023	

Goals, tasks, stages of the Recovery Plan in the direction of "Regulation in construction".

2.1. The goals are aimed at solving a specific problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 2.3. There is no management of the building's life cycle **Purpose 2.3.** Effective management of buildings during their life cycle			

The goal that must be achieved to solve the problem at each stage	Regulatory and methodological prerequisites for the implementation of life cycle management of buildings have been created Organizational and methodical approaches for information modelling of life cycle cost analysis have been created.	Databases have been created regarding: estimated prices for construction products, works and services; operational characteristics of buildings and structures. Organizational and methodical approaches for managing buildings during operation, developed at the design and construction stages of BIM-models, have been created	A mechanism for effective management of the building's life cycle has been introduced
The deadline is within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	rejection of relevant legislative acts and normative documents; security risks affecting the possibility of activity within the framework of current legislation without the need to change approaches; limited financial resources	limited financial resources	limited financial resources
Measured indicator of goal achievement	Adopted legislative acts adopted regulatory documents	availability of public databases	management of buildings and structures, in particular residential and public purpose during their life cycle
The total size of the need for financial resources to achieve the goal	-	-	-
Connection of the goal with other directions	Digitization; Housing and civil protection	Digitization; Housing and civil protection	Digitization; Housing and civil protection

2.2. Definition of tasks to achieve goals from subsection 2.1

n/p	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
Goal 1.1. Regulatory and methodological prerequisites for the implementation of buildings' life cycle management have been created **Goal 1.2.** Organizational and methodical approaches for information modelling of life cycle cost analysis of buildings have been created			
Stage 1: June 2022 - end of 2022			
1.1.1.	Updating of the legal framework regarding life cycle management of buildings	December 2022	Digitization
1.1.2.	Establishing a methodology for determining and estimating the cost of the life cycle of buildings	December 2022	Digitization
1.2.1.	Development of a classifier of construction products	December 2022	Digitization

1.2.2.	Establishing methodological approaches to setting out requirements in building regulations for maintaining the operational suitability of buildings	December 2022	Digitization
Goal 2.1. Databases have been created regarding: estimated prices for construction products, works and services; operational characteristics of buildings Goal 2.2. Organizational and methodical approaches for managing buildings during operation, developed at the design and construction stages of BIM models, have been created			
Stage 2: January 2023 - December 2025			
2.1.1.	Development of an organizational mechanism for the formation of databases on estimated prices for construction products, works and services by market participants on a voluntary basis	December 2025	Digitization
2.1.2.	Development of an organizational mechanism for the formation of databases on operational characteristics of buildings by market participants	December 2025	Digitization

2.2.1.	Establishment of methodological approaches to the formation of operating regulations of buildings	December 2025	Digitization
2.2.2.	Formation of a database of analogy objects	December 2025	Digitization
2.2.3.	Creation and filling of the state electronic system that can accumulate, store and process information about the operational characteristics of buildings.	December 2025	Digitization
Goal 3.1. A mechanism for effective management of the buildings' life cycle has been introduced			
Stage 3: January 2026 - December 2032			
3.1.1	Implementation of pilot construction projects using BIM technologies	December 2032	Digitization
3.1.2.	Implementation of pilot projects for the operation of buildings, in particular residential and public, using BIM technologies	December 2032	Digitization

Goals, tasks, stages of the Recovery Plan in the direction of "Regulation in construction".

2.1. The goals are aimed at solving a specific problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 2.4. The technical unreadiness of the system for assessing conformity with EU requirements in the field of construction. **Purpose 2.4.** Implementation of European rules for assessment and verification of the stability of indicators of construction products, which are carried out by designated conformity assessment bodies. Practical implementation of Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011 laying down harmonised conditions for the marketing of construction products and repealing Council Directive 89/106/EEC			
The goal that must be achieved to solve the problem at each stage	An infrastructure of construction products conformity assessment has been created with the requirements of Regulation (EU) 305/2011	The conformity assessment system in the field of construction in Ukraine is 100% compliant with EU requirements	-
The deadline is within the stage	December 2022	December 2025	-

Risks of achieving the goal	Lack of staff Inadequacy of available equipment for conducting tests to assess and verify the stability of indicators of construction products The incompleteness of the military conflict Limited financial resources	Lack of qualified personnel Inadequacy of available equipment for conducting tests to assess and verify the stability of indicators of construction products	-
Measured indicator of goal achievement	The number of categories of construction products for which it is possible to conduct tests to assess and verify the stability of indicators of construction products	Mutual recognition of the results of assessment and verification of the stability of construction products indicators by Ukraine and EU member states	-
The total size of the need for financial resources to achieve the goal	-	-	-

Connection of the goal with other directions	-	-	-

2.2. Definition of tasks to achieve goals from sub-clause 2.1

n/p	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
Goal 1. An infrastructure has been created to assess the conformity of construction products performance with the requirements of Regulation (EU) No. 305/2011			
Stage 1: June 2022 - end of 2022			
1.1.	Formation of the expert environment necessary for accreditation of new and re-accreditation of existing conformity assessment bodies and verification of the stability of indicators of construction products: appointment of experts and auditors for accreditation of conformity assessment bodies	August 2022	-

1.2.	Accreditation of conformity assessment bodies for performance as a third party of tasks in the process of assessment and verification of the stability of indicators of construction products	December 2022	-

Goal 2. The conformity assessment system in the field of construction in Ukraine is 100% compliant with EU requirements

Stage 2: January 2023 - December 2025			
2.1.	Designation of conformity assessment bodies to perform as a third-party task in the process of assessment and verification of the stability of indicators of construction products	February 2023	-

Goal 1. An infrastructure has been created to assess the conformity of construction products performance with the requirements of Regulation (EU) No. 305/2011

Stage 1: June 2022 - end of 2022			
1.1.	Formation of the expert environment necessary for accreditation of new and re-accreditation of existing conformity assessment bodies and	August 2022	-

	verification of the stability of indicators of construction products: appointment of experts and auditors for accreditation of conformity assessment bodies		
1.2.	Accreditation of conformity assessment bodies for performance as a third party of tasks in the process of assessment and verification of the stability of indicators of construction products	December 2022	-
1.3.	Creation of conditions for concessional lending to business entities for equipping testing laboratories with the necessary machinery and equipment	May 2024	-

2. Goals, tasks, stages of the Recovery Plan in the direction of "Infrastructure of life support systems".

2.1. The goals are aimed at solving a specific problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 2.5. There is no construction and demolition waste management system **Goal 2.5.** Implementation of a system of sustainable management of construction and demolition waste			

The goal that must be achieved to solve the problem at each stage	Collect data on the volume of construction and demolition waste generation in 2022 by region.	Processing and disposal of 20% of the total volume of generated construction and demolition waste.	Processing and disposal of 60% of construction and demolition waste.
The deadline is within the stage	December 2022	December 2025	December 2032
Risks of achieving the goal	Continuation of military actions, limited access to affected areas.	Limited financial and technical resources, imperfect regulatory framework, security restrictions.	Limited financial and technical resources, imperfect regulatory framework.
Measured indicator of goal achievement	Resolution of the CMU. Database on the volume of construction and demolition waste generation by region.	Amount of processed and utilized construction and demolition waste. The number of built infrastructure objects.	The amount of recycled and disposed waste. Number of built infrastructure objects.
The total size of the need for financial resources to achieve the goal	Requires additional calculations	Requires additional calculations	Requires additional calculations

Connection of the goal with other directions	Ecological safety Restoration and stimulation of the development of regions	Ecological safety Restoration and stimulation of the development of regions	Ecological safety Restoration and stimulation of the development of regions

2.2. Definition of tasks to achieve goals from subsection 2.1

n/p	**Description of the task to achieve the goal**	**Deadline for completing the task**	**Dependence of the task on the tasks of other directions, areas, problems**
Stage 1: June 2022 - end of 2022			
Goal 1. Collect data on the volume of construction and demolition waste generation in 2022 by region.			
1.1.	Develop a procedure for handling waste generated in connection with damage to buildings and structures as a result of military operations,	August 2022	-

	terrorist acts, sabotage, or the performance of work to eliminate their consequences		
1.2.	Develop a reporting form on the scope of construction and demolition.	December 2022	
Goal 2. Processing and disposal of 20% of the total volume of generated construction and demolition waste.			
Stage 2: January 2023 - December 2025			
2.1.	Purchase means of handling construction and demolition waste (containers, loaders, excavators, garbage trucks).	December 2025	Ecological safety Restoration and development of infrastructure
2.2.	Build construction and demolition waste management facilities (temporary storage facilities, crushing and sorting facilities/lines, landfills).	December 2025	Ecological safety Restoration and development of infrastructure
2.3.	Develop guidelines for the reuse of construction and demolition waste and a quality assurance system.	December 2023	Ecological safety Restoration and development of infrastructure

2.4.	Develop guidelines on waste management for buildings and structures that are being built, repaired, reconstructed, restored, dismantled, demolished at the stage of preparation of project documentation.	December 2024	Ecological safety Restoration and development of infrastructure
2.5.	Develop guidelines for conducting waste audits before demolition and reconstruction of buildings	December 2023	Ecological safety Restoration and development of infrastructure
Goal 3. Processing and disposal of 60% of construction and demolition waste.			
Stage 3: January 2026 - December 2032			
3.1.	Build construction and demolition waste management facilities (temporary storage facilities, crushing and sorting facilities/lines, landfills).	December 2032	Ecological safety Restoration and development of infrastructure
3.2.	Implement construction and demolition waste management plans for construction sites.	December 2032	Ecological safety Restoration and development of infrastructure

III. Housing, energy efficiency, civil protection

1. Main problems that need to be addressed in the framework of the Recovery Plan in the area of "Housing, Energy Efficiency, Civil Protection".

1.1. The impact of war on a particular area of analysis:

Housing

According to the Office of the High Commissioner for Refugees of the United Nations (UNHCR), 11.4 million Ukrainians left their homes only in the first month and a half since the start of the hot phase of the current Russian-Ukrainian war. As of June 7, 2022, 4,816,923 refugees from Ukraine were registered in Europe alone, and a total of 5.5 million people left the country. Most of them went to Poland - more than 3 million people. According to the latest data, more than 817,000 people left for Romania, almost 520,000 for Hungary, more than 443,000 for Moldova, and almost 372,000 for Slovakia.

According to the assessment of the UN International Organization for Migration (IOM), another 7.7 million citizens of Ukraine are considered internally displaced persons (IDPs), that is, they remained in the country, but had to leave their homes.

As of 14.06.22, 12,900 apartment buildings (~ 13,5 million m2) and 107,707 private buildings (~ 1.9 million m2) were destroyed / damaged.

Management of apartment buildings

There are 180,000 apartment buildings in Ukraine, including destroyed/damaged 12,900 apartment buildings (~13.5 million square meters). They have created more than 36,000 HOAs (20%). According to draft law 7198, HOAs, managers of apartment buildings, housing and construction (housing) cooperatives are defined as subjects receiving compensation for restoring the technical condition of the common property of apartment buildings. In this case, multi-apartment buildings, the co-owners of which have not decided on the form of management or the manager of which the local government has not been appointed, are outside the scope of the legislation, including in terms of recovery.

Civil Protection

The first months of large-scale warfare have shown that the capacity of the existing civil protection system in Ukraine is extremely limited. The vast majority of shelters located in populated areas can be classified as simple shelters. A significant part of such shelters are not equipped with evacuation exits, do not have access to water supply and drainage systems, and are not adapted for food storage. This means that the existing system of civil protection cannot fully ensure the safety of the civilian population from the risks associated with hostilities. Given this, there is a need for the urgent deployment in Ukraine of a network of civil protection facilities capable of providing, or at least significantly increasing, the level of safety of citizens from war crimes.

Energy efficiency

Excessive and irrational use of fuel and energy is one of the key challenges for Ukraine. This is due to the direct impact of the war on the macroeconomic situation, as well as energy threats due to the country's high import dependence, largely on fossil fuels of Russian origin. According to the national operator of the gas transmission system, the import of natural gas in different periods amounted to 30-40% of Ukraine's needs. In addition, there is a high level of threat of destruction of system-forming facilities to provide settlements with fuel and energy. At the same time, significant use of fossil fuels is a

major factor in the emergence of climate threats (soil and water degradation, landscape fires and other extreme natural phenomena) for people directly and for the economy of Ukraine as a whole.

Thus, the reduction of energy consumption and the corresponding long-term planning of sustainable energy development at the state and local levels is one of the priorities for the implementation of structural energy transformation of communities, regions and the country as a whole.

The Energy Security Strategy stipulates that the high level of Ukraine's dependence on the external supply of certain types of energy resources creates risks of disrupting not only the sustainable functioning of certain entities and energy supply systems of the country, but also threatens national security. Natural gas remains the main source of thermal energy to meet the heating needs of residential and public buildings. In 2019, 5.8 billion m3 of gas was used for district heating, providing heating to about 43% of households and public buildings. Another 8.5 billion m3 of gas was consumed by the population directly in individual and apartment buildings. In general, in Ukraine, energy consumption in buildings accounts for about 40% of final energy, in particular 31.7% for the residential sector. More than 80% of buildings were built in Ukraine before 1991 and do not meet modern energy efficiency requirements. The average specific energy consumption of buildings is about 194 kWh / m2, exceeding the corresponding figures of European countries by 30-50%. Most of the heat in buildings is lost due to enclosing structures that have low thermal insulation properties, as well as due to obsolescence, wear and tear of engineering systems and inefficiency of their use.
In the period 2008-2016 in the EU countries, the volume of energy consumption in buildings was constantly decreasing, in particular due to increased energy efficiency. In 2021, the European Commission has set a goal of increasing the rate of renovation of buildings by at least 2 times or up to 3% annually. The pace of thermal modernization of buildings in Ukraine is much lower than the current figure in the EU. In the vast majority of cases, energy efficiency measures are fragmented and do not ensure that buildings comply with the current minimum energy efficiency requirements. At the same time, there is a mismatch between national requirements and new challenges to energy security and the general macroeconomic situation as a result of Russian aggression (armed and hybrid), as well as to European trends. Given the scale of the destruction, the recovery of damaged buildings and the subsequent construction of new buildings should be carried out at least in accordance with the new European standards of energy efficient construction.

Key challenges (generalized for a specific area)	• Destruction/damage of housing as a result of the armed aggression of the Russian Federation against Ukraine • A large number of IDPs who need temporary housing • Lack of available and free housing for temporary housing • Physical wear and tear of the housing • Insufficient number of civil protection protective structures to shelter the maximum population • Insufficient quantity of special equipment, necessary for the equipment of protective structures of civil protection. • Lack of updated urban planning documentation, which takes into account the requirements for civil protection structures. • Low energy security and sustainability of settlements, high level of vulnerability of life support systems; • Lack of reliable and comprehensive baseline data for urban development planning and effective planning of budget expenditures; • High level of energy poverty. • Significant dependence of heating on natural gas; • The increase in the cost of energy while reducing the level of prosperity as a result of aggression against Ukraine. Sensitivity of the population to changes in the cost of energy. • Threat of interruptions in the supply of fuel and energy resources for heating needs; • A large number of buildings that need a significant increase in energy efficiency

Key features (generalized for a specific area)	• Modernization of outdated housing • Construction of modern housing • Filling the social and temporary housing • Maintenance of apartment buildings in proper condition • Establishing new approaches to the civil protection system • Sustainable energy development of communities and decarbonisation of local infrastructure; • Improving security and quality of life, overcoming energy poverty; • Reduction of energy costs; • Improving the investment attractiveness of communities. • Reducing the state's energy dependence on imported natural gas (the building sector accounts for up to 40% of final energy consumption), decarbonisation of the building sector; • Improving the technical condition of buildings, extending their service life by 25-50 years, improving the appearance of buildings; • Improving the living / staying conditions of people in buildings (thermal comfort and air quality), improving the health of the population; • Introduction of modern technologies of thermal modernization of buildings
Key limitations (generalized for a specific area)	• The incompleteness of the military conflict: the continuation of hostilities, the presence of part of the territory of Ukraine under occupation, the high probability of repeated destruction in the unoccupied territories, the uncertainty of the level of security risks in the medium term. • Insufficient level of relevance and consolidation of source data. • Limited financial resources.

	● The need to implement measures to restore the infrastructure and housing as soon as possible. ● There is no prioritization of the restoration of damaged infrastructure and housing ● Low capacity of citizens and local government in housing managing ● The compulsory expertise of construction projects in terms of compliance with the norms on civil protection engineering measures will come into force in April 2023; ● Large volume of urban planning documentation requiring changes in terms of engineering and technical measures of civil protection; ● Insufficient number of qualified personnel for the development of urban planning documentation in significant volumes and at a rapid pace; ● Limited amount of equipment (filter-ventilation, anti-explosive devices, protective hermetic doors, gates) ● High cost of energy-efficient materials and equipment ● Low capacity of the domestic energy-efficient equipment industry

Goals, objectives, stages of the Recovery Plan in the direction of "Housing, energy efficiency, civil protection".
2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**

Problem 3.1. Citizens' homes were destroyed and damaged as a result of the Russian armed aggression against Ukraine **Goal 3.1**. Restore the living condition of damaged housing and provide compensation in case of inexpediency of housing restoration (significant damage, destruction, etc.)			
The goal to be achieved to solve the problem at each stage	10% of the damaged housing stock has been restored	50% of citizens are provided with compensation for damaged/destroyed housing	100% of citizens are provided with compensation for damaged/destroyed housing
Deadline within the stage	31.12.2022	31.12.2025	31.12.2032

Risks of achieving the goal	the continuation of hostilities and other security risks and the impossibility of assessing damaged or destroyed housing; lack of financial mechanisms and resources; shortage of building materials lack of the necessary number and staff; lack of access to apartments (lack of apartments buildings co-owners); lack of electricity, water, gas, heat, sewerage, ventilation systems;	continuation of hostilities and other security risks; lack of financial mechanisms and resources; shortage of building materials lack of the required number of employees; (lack of apartments buildings co-owners); lack of electricity, water, gas, heat, sewerage, ventilation systems;	lack of financial resources

Measured indicator of goal achievement	the number of people who have returned to their place of residence; the amount of housing that has been repaired; the percentage of damaged housing that has been repaired; the percentage of restored housing from the identified need at the beginning of the implementation of the Recovery Plan and / or the pace of construction, repair work; equipping non-residential premises with electricity, water, gas, heat supply, sewerage and ventilation systems to transfer them to the housing;	% of damaged housing that is completely restored and habitable (in units); the area of the housing, which appeared as a result of reconstruction, modernization, construction of housing, re-equipment of non-residential premises into residential (sq.m); % of the number of owners who received compensation for damage / destruction as a result of armed aggression (persons).	the area of the housing stock, which appeared as a result of reconstruction, modernization, construction of housing, re-equipment of non-residential premises into residential (sq.m); % of the number of owners who received compensation for damage / destruction as a result of armed aggression (persons).

The total amount of need for financial resources to achieve the goal	2 UAH billion	573.27 UAH billion	752.08 UAH billion
Linking the goal to other areas	(cross-sectoral task of the WG Audit of Losses: creation of a database of destroyed and damaged property) WG infrastructure restoration WG Economic Recovery and Development	(cross-sectoral task of the WG Audit of Losses: creation of a database of destroyed and damaged property) WG infrastructure restoration WG Economic Recovery and Development	(cross-sectoral task of the WG Audit of Losses: creation of a database of destroyed and damaged property) WG infrastructure restoration WG Economic Recovery and Development

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**

Target. 10% of the damaged housing stock was restored			
Stage 1: June 2022 - end of 2022			
1	Conducting an inspection of the damaged housing stock (outside and inside) and assessing the damage	September 30, 2022	security factor - the continuation of hostilities; availability of funding sources for surveys and evaluation; lack of access to the premises (demining, the presence of blockages, lack of owners, etc.); cross-sectoral issues: audit of losses

2	Carrying out repair work on houses that have suffered minor damage (roof, windows, connection to communications).	December 31, 2022	security factor - the continuation of hostilities; the need to determine the source of funding for surveys and evaluation; lack of access to the premises (demining, the presence of blockages, lack of owners, etc.); depends on the restoration and modernization of life support systems; lack of housing documents (to confirm ownership); insufficient number of workers and materials;
Target. 50% of citizens are provided with compensation for damaged/destroyed housing			
Stage 2: January 2023 - December 2025			

1	Approval of a comprehensive compensation mechanism for damaged / destroyed housing	January 2023	depends on 1) the type of property; 2) the level of damage; 3) intentions of the victims; 4) available financial resources 5) availability of a national register of violated property rights, damaged property (amount of losses)
2	An inspection of 100% of the damaged housing stock (outside and inside) and assessment of losses	31.12.2025	depends on the method of estimating losses; regulatory documents on the survey; lack of housing documents (to confirm ownership); lack of access to the premises (demining, the presence of blockages, lack of owners, etc.); insufficient number of experts conducting surveys; source of funding for surveys and evaluation security factor - the continuation of hostilities

3	The list of dwellings to be restored with simultaneous determination of housing needs and the order of their restoration is determined	31.12.2025	depends on the survey lack of housing documents (to confirm ownership); security factor - the continuation of hostilities

4	Providing compensation in the form of: - restoration of housing condition of buildings by carrying out capital repairs, reconstruction; - housing construction; - purchase of apartments / houses, including redemption from developers in already commissioned facilities and their transfer to ownership;	31.12.2025	mechanism and sources of funding for restoration work restoration and modernization of life support systems; insufficient number of workers and materials; security factor - the continuation of hostilities the ratio of demand and supply (including depending on the territory) availability of sufficient financial resources in the state availability of legal documents for housing for victims the ability of public authorities and local governments to implement compensatory mechanisms availability of the developed and accepted package of normative-legal acts necessary for implementation of compensatory mechanisms

Target. 100% of citizens are provided with compensation for damaged/destroyed housing
Stage 3: January 2026 - December 2032

	Providing compensation in the form of: - restoration of housing condition of buildings by carrying out capital repairs, reconstruction; - housing construction; - purchase of apartments / houses, including redemption from developers from those already put into operation facilities and their transfer to ownership;		restoration and modernization of life support systems; insufficient number of workers and materials; security factor - the continuation of hostilities the ratio of demand and supply (including depending on the territory) availability of sufficient financial resources in the state availability of legal documents for housing for victims the ability of public authorities and local governments to implement compensatory mechanisms availability of the developed and accepted package of normative-legal acts necessary for implementation of compensatory mechanisms

2. Goals, objectives, stages of the Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 3.2 Some citizens do not have housing and resources to provide it. **Goal 3.2.** Provide housing for IDPs and people whose homes have been damaged / destroyed as a result of the Russian armed aggression against Ukraine			
The goal to be achieved to solve the problem at each stage	100% of citizens in need of temporary housing are accommodated in places for temporary residence	50% of citizens are provided with housing (rent compensation, cooperative housing, municipal non-profit housing funds, increase in housing funds for temporary residence and social purposes and other instruments of temporary use)	100% of citizens are provided with housing (developed market and various tools for housing)
Deadline within the stage	31.12.2022	31.12.2025	31.12.2032

Risks of achieving the goal	continuation of combat and other security risks; increasing the number of people in need of temporary housing; lack of construction materials and workers; lack of financial resources; inefficient organization of MHI work;	continuation of combat and other security risks; increasing the number of people in need of temporary housing; lack of construction materials and workers; lack of financial resources; inefficient organization of MHI work;	lack of financial resources; inefficient organization of MHI work; low solvency of citizens to purchase housing through financial leasing, rental with redemption, participation in housing programs (mortgage lending, etc.);

Measured indicator of goal achievement	number of IDPs and persons with destroyed / damaged housing, temporary residence and housing in use	the number of citizens who are provided with housing from the housing stock for temporary residence and social purposes the number of dwellings in the housing stock in the housing stock for temporary use the number of municipal housing units in planning and realization the number of units in the social housing stock	the number of citizens who attained housing in the property the number of dwellings in the housing stock in the housing stock for temporary use the number of units in the social housing stock on the municipal, oblast and state level the number of municipal housing units in planning and realization the number of citizens who rent housing officially from the municipality or non-profit associations the number of units in the fund of social housing

Measured indicator of goal achievement The total amount of need for financial resources to achieve the goal	895 UAH million	30.18 UAH billion	547.7 UAH billion
Linking the goal to other areas	WG audit of war losses WG Economic Recovery and Development WG of construction, urban planning, modernization of cities and regions WG restoration and development of infrastructure;	WG audit of war losses WG Economic Recovery and Development WG of construction, urban planning, modernization of cities and regions WG restoration and development of infrastructure;	WG audit of war losses WG Economic Recovery and Development WG of construction, urban planning, modernization of cities and regions WG restoration and development of infrastructure;

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
Target. 100% of citizens in need of temporary housing are accommodated in places for temporary residence			
Stage 1: June 2022 - end of 2022			
1	The need for housing for temporary residence / stay of IDPs and persons whose housing is damaged / destroyed has been determined	December 31, 2022	improving the IDP information database; continuation of combat and other security risks;

2	Arranged premises for temporary residence / stay (cultural, social and administrative buildings, modular buildings and other prefabricated or mobile structures).	December 31, 2022	continuation of combat and other security risks; increasing the number of people in need of temporary housing; availability of buildings and suitability of premises for arrangement; the need to change the purpose of buildings (transfer to housing) sources of financing for installation, purchase of modules, payment for consumed energy resources; establishment and arrangement of places of temporary residence taking into account the criteria (social infrastructure, jobs, transport links, etc.) ensuring connection to life support systems;
3	Financial mechanisms have been introduced to support rent to vulnerable groups of IDPs and people whose homes have been damaged / destroyed	December 31, 2022	increasing the number of people in need of temporary housing; availability of funding sources

4	New tools have been introduced to inform about available premises for temporary residence (through web resources, telegram channels and other communication channels, information)	July 1, 2022	availability of mobile communication (coverage, quality of communication); improving and creating applications;
5	New tools have been introduced to encourage the use of vacant housing for use, in particular through renting (by improving real estate taxation)	December 31, 2022	change in tax legislation is needed
6	Capacity-building program for the development of the municipal capacity to receive and process international loans for non-profit housing development.	December 31, 2022	Institutional partnerships and dedicated managerial resources
Target. 50% of citizens are provided with housing (rent compensation, increase in housing funds for temporary residence and social purposes and other instruments of temporary use)			
Stage 2: January 2023 - December 2025			

1	An inventory of residential premises was conducted and their list for filling the funds of housing for temporary residence and social purposes was determined. Halt of the processes of privatization of state housing.	January 30, 2023	continuation of combat and other security risks; increasing the number of people in need of temporary housing;
2	The need for housing for the formation of housing funds for temporary residence and social purposes has been identified	December 31, 2023	improving the IDP information database; continuation of combat and other security risks; taking into account the introduction of methods for estimating the housing affordability index;

3	New (improved existing) mechanisms for filling the relevant funds and mechanisms for their use, in particular, filling the housing stock by: - purchase of housing; - re-equipment of non-residential premises into residential ones; - ownerless premises and escheat; dead legacy; - increase of stimuli to put the existing real estate on paper and rent it out - change of purpose; - non-profit rent, etc.	December 31, 2023	lack of financial resources; insufficient supply
4	The mechanism for allocating land plots and obtaining building permits for the construction of social and cooperative housing, temporary housing, IDP accommodation and non-profit rental housing has been simplified.	June 2024	combat and other security risks; lack of financial resources; organizational factors; crisis factors in the field of construction

5	Changed the approach to the state housing queue towards more specific social and housing needs lists, diversification of housing needs assessment and evaluation by the municipalities.	June 2024	organizational factors; institutional capacity;
Target. 100% of citizens are provided with housing (developed market and many tools for housing)			
Stage 3: January 2026 - December 2032			
1	Departure from the established principles and logic of the Soviet times approaches to the realization of the right of citizens to housing, in particular by reverting privatization	January 30, 2025	social tension; inefficient organization of migration department work;
2	New local and regional programs for the realization of citizens' housing rights have been adopted, state funding redirected towards housing associations, municipal housing companies rather than individuals	December 2026	combat and other security risks; lack of financial resources; inefficient organization of migration work;

3	Mechanisms for providing housing for some categories of citizens entitled to state support have been improved, including municipal housing programs supported by the state	December 2026	limited financial resources for the formation of government programs; dependence on migration policy; income level of citizens.
4	Integration of housing diversity, social inclusion parameter into the spatial zoning regulations and spatial planning regulatory framework	December 2028	organizational factors; institutional capacity; lack of financial resources;
5	Creation of a stable and viable non-profit municipal housing funds and/or municipal housing enterprises in urban hromadas of Ukraine with efficient and resilient economic budgets	December 2026	limited financial resources for the formation of government programs; organizational factors;
6	New tools have been introduced to encourage the use of vacant land for housing development, in particular through renting (by improving land assessment and taxation)	December 2032	limited financial resources for the formation of government programs; organizational factors;
7	Tools and mechanisms for protecting the rights of housing investors (or in the primary real estate market) have been introduced	January 2023	organizational factors;

2. Goals, objectives, stages of the Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 3.3. Maintenance and service of apartment buildings is not efficient **Goal 3.3.** Maintenance and service of residential buildings is carried out in full			
The goal to be achieved to solve the problem at each stage	Co-owners of apartment buildings have access to apartment building management, in particular through the use of electronic tools	In 70% of apartment buildings, effective management and maintenance of buildings is carried out, which ensures proper technical condition of buildings, in accordance with basic safety requirements	100% of apartment building co-owners have access to effective management tools (organizational, financial, informational, methodological, etc.), 50% of apartment buildings have undergone major repairs

Deadline within the stage	31.12.2022	31.12.2025	31.12.2032
Risks of achieving the goal	non-adoption of relevant legislative acts; security risks that affect the possibility of operating under current legislation without the need to change approaches;	non-adoption of relevant legislative acts; low ability of communities to appoint a manager; disinterest of co-owners in participating in the management of apartment buildings	lack of financial resources non-adoption of relevant regulations disinterest of co-owners in participating in the management of apartment buildings
Measured indicator of goal achievement	use of electronic tools in the management of apartment buildings;	the number of apartment buildings s where HOAs are established the number of apartment buildings where the manager is elected	the number of apartment buildings, where major repairs were carried out, reconstruction number of apartment buildings with available technical documentation
The total amount of need for financial resources to achieve the goal	To be specified	6 UAH billion	UAH 600 billion

Linking the goal to other areas	WG digitalization; WG return of citizens who are temporarily displaced, in particular abroad and their integration into the socio-economic life of the state;	WG return of citizens who are temporarily displaced, in particular abroad and their integration into the socio-economic life of the state;	WG restoration and development of infrastructure;

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Target. Co-owners of apartment buildings have access to apartment building management, in particular through the use of electronic tools			
Stage 1: June 2022 - end of 2022			
1	Mechanisms have been introduced to simplify the management of apartment buildings, in particular the digitalization of apartment buildings management processes	31.10.2022	ability of a political subject to consistently achieve the set goals (political will)

2	introduced electronic services for decision-making in apartment buildings, including HOAs	31.12.2022	development financing; technical support of electronic services;
Target. In 70% of apartment buildings, effective management and maintenance of buildings is carried out, which ensures proper technical condition of buildings, in accordance with basic safety requirements			
Stage 2: January 2023 - December 2025			
1	the State Register of Real Property Rights is filled with information on property rights to apartments and non-residential premises in apartment buildings, issued before 2013	31.12.2025	combat and other security risks; availability (preservation) of "BTI archives" and access to them; technical support of electronic services;
2	Persons who manage the apartment buildings have undergone training and professional certification in the profession of "manager (manager) of a residential building (group of buildings)"	31.12.2025	combat and other security risks; the possibility of continuing the activities of certification bodies;
Target. 100% of apartment building co-owners have access to effective management tools (organizational, financial, informational, methodological, etc.), 50% of apartment buildings have undergone major repairs			

Stage 3: January 2026 - December 2032			
1	Uniform requirements for maintenance, service, and current repairs of apartment buildings have been established	31.12.2026	
2	Tools for capital repairs, modernization of the existing housing, including energy efficiency measures have been introduced	31.12.2026	

2. Goals, objectives, stages of the Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032y**
Problem 3.4. Insufficient number of protective structures of civil protection and shelters for the entire population of the country Goal 3.4. Providing the maximum population with protection from dangerous injuries because of hostilities			
The goal to be achieved to solve the problem at each stagei	The fund of protective structures of civil protection has been expanded due to existing buildings and	100% of existing protective structures are ready for use.	The maximum number of civilians have access to civil protection structures

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032y
	structures that can be used as dual-purpose structures. 90% of the existing fund of civil protection protective structures are ready for use. Creation of a new approach to territorial planning and the construction of buildings and structures, aimed at ensuring the protection of the maximum number of civilians	The fund of protective structures of civil protection has been expanded by applying a new approach to territory planning and the construction of buildings and structures	
Deadline within the stage	December 2022	December 2025	December 2030
Risks of achieving the goal	Lack of a sufficient number of buildings and structures for the protection of the population that can be used as dual-purpose structures.	Low percentage of urban planning documentation containing the section of engineering and technical measures of civil protection (ETM CP)	Limited financial resources

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032y
	No mandatory equipment requirements for civil protection structures. Insufficient amount of special equipment necessary for the arrangement of protective structures of civil protection (filter ventilation, explosion-proof devices, protective and airtight doors, gates, and shutters, etc.) Limited financial resources	Lack of equipment (filter-ventilation, explosion-proof devices, protective and airtight doors, gates and shutters, etc.) Lack of qualified staff for the design and examination of the section of the ETM CP in construction projects and urban planning documentation. Time limit: implementation of measures in a limited time. Limited financial resources	
Measured indicator of goal achievement	Percentage of existing protective structures ready for use as intended. Percentage of new protective structures obtained at the expense of existing structures that can	Percentage of ready-to-use protective structures from the general need for civil protection structures Number of civil protection structures built	Percentage of the population provided with shelter in ready-made protective structures of civil protection

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032y
	be used as dual-purpose structures. At the legislative and regulatory levels, a new approach to territorial planning and the construction of buildings and structures has been established, aimed at ensuring the protection of the maximum number of civilians	Percentage of the population provided with shelter in ready-made protective structures of civil protection	
The total amount of need for financial resources to achieve the goal	To be specified	To be specified	To be specified
Linking the goal to other areas	Spatial planning and construction. Restoration and modernization of life support systems	Spatial planning and construction. Restoration and modernization of life support systems	Spatial planning and construction. Restoration and modernization of life support systems

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032y
	Restoration and stimulation of regional development	Restoration and stimulation of regional development	Restoration and stimulation of regional development

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
Goal 1.1. Expansion of the fund of protective structures of civil defense at the expense of existing buildings and structures that can be used as dual-purpose structures. Goal 1.2. 90% of existing protective structures are ready for use Goal 1.3. Creating a new approach to civil protection, aimed at ensuring the protection of the maximum number of civilians			
Stage 1: June 2022 - end of 2022			

1.1.1	Amendments to the legislation to ensure the creation of civil protection or dual-use structures during the design and construction of any purpose, regardless of the class of consequences and form of ownership.	August 2022	
1.2.1	Conducting an inventory and audit of existing civil protection structures	August 2022	
1.2.2.	Amendments to the order of the Ministry of Internal Affairs of Ukraine dated 09.07.2018 № 579 “On approval of requirements for the use and accounting of the fund of protective structures of civil protection”	September 2022	
1.3.1	Development of a new version of the state building codes "Protective Civil Protection Facilities"	July 2022	

1.3.2	Development of a new version of the state building codes "Composition and content of the section of engineering and technical measures of civil protection in urban - planning documentation"	September 2022	
1.3.3	Expansion of qualification characteristics for the profession "expert on fire and man-made safety" in the field of civil protection	September 2022	
Goal 2.1. 100% of existing protective structures are ready for use. Goal 2.2. Spatial planning and construction of buildings and structures is carried out considering the new requirements for civil protection			
Stage 2: January 2023 - December 2025			
2.2.1	Creating a register of existing civil protection structures	May 2023	

2.2.2.	Determination of responsibility for non-compliance with the requirements of civil protection by subjects of authority during design, construction, and implementation of control during commissioning of construction objects.	February 2023	
2.2.3.	Amendments to DSTU 8773: 2018 "Composition and content of the section of engineering and technical measures of civil protection in the project documentation for the construction of facilities."	March 2023	
2.2.4	Ensuring proper use of the existing fund of protective structures	December 2023	
Goal 3. 100% of citizens have access to protective structures			
Stage 3: January 2026 - December 2032			

3.1	Adjustment or development of sections of the ETM CP of urban-planning documentation of lower and higher levels(concerning complex plans of spatial development of the territory of territorial communities)	December 2028	

2. Goals, objectives, stages of Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 3.5. High energy and climate vulnerability of communities due to irrational use of fuel and energy in settlements. **Goal 3.5.** Creating conditions for sustainable energy development of communities and regions of Ukraine			
The goal to be achieved to solve the problem at each stage	100% of local governments are provided with a methodology for long-term energy planning	100% of local governments have implemented planning and effective management of fuel and energy use	30% reduction in energy consumption and greenhouse gas emissions / decarbonisation of energy use in communities
Deadline within the stage	December 2022	November 2024	December 2032

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
Risks of achieving the goal	Imperfect methodology. Lack of time resources and organizational constraints	Lack of financial, human and time resources	Lack of financial and human resources
Measured indicator of goal achievement	A framework methodology for local energy planning has been approved	Percentage of local self-governments that approved local energy plans Percentage of local self-governments that have implemented energy management and energy monitoring systems.	Percentage reduction in specific energy consumption in sectors, on which local governments have significant influence (buildings, life support systems, etc.) Percentage reduction of greenhouse gas emissions in sectors, on which local governments have significant influence
The total amount of need for financial resources to achieve the goal	0.9 million UAH (30 thousand EUR)	1,815 million UAH (60.5 million EUR)	*determined in other areas of analysis* 630 million UAH (21 million EUR) is a nationwide public awareness campaign

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
Linking the goal to other areas	Economic recovery and development Energy security Ecological safety Recovery and development of infrastructure	Economic recovery and development Energy security Ecological safety Recovery and development of infrastructure	Economic recovery and development Energy security Ecological safety Recovery and development of infrastructure

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

#	Description of task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
Goal 1. 100% of local governments are provided with a methodology for long-term energy planning			
Stage 1: June 2022 - end of 2022			
1.1	Develop the framework methodology for long-term planning for sustainable energy development of communities and regions	September 2022	-

#	Description of task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
1.2	Carry out a preliminary estimate of fuel and energy use in communities	December 2022	Energy security Recovery and development of infrastructure
Goal 2. 100% of local governments have implemented planning and effective management of fuel and energy			
Stage 2: January 2023 - December 2025			
2.1	Introduce energy management systems in 100% of communities for effective management of fuel and energy resources	May 2023	Energy security European integration
2.2	Identify goals and directions of long-term sustainable energy development in 100% of communities and 100% of regions through the development of local energy plans	November 2023	Energy security European integration
2.3	Implement a nationwide system of monitoring the state of the life support systems of settlements	October 2023	Recovery and development of infrastructure
2.4	Introduce mechanisms to financially support the development of LEPs, preparation and implementation of sustainable energy development projects for communities and regions	November 2023	Functioning of the financial system, its reform and development European integration

#	Description of task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
2.5.	Develop bankable priority investment plans and feasibility studies for sustainable energy projects of communities and regions	December 2023	Energy security Economic recovery and development Recovery and development of infrastructure
2.6.	Introduce Subsidies-to-Investments mechanisms to stimulate energy efficiency in the housing sector and overcome energy poverty	December 2024	Economic recovery and development Energy security Recovery and development of infrastructure
2.7.	Introduce mechanisms of tax incentives to increase energy efficiency in the field of providing housing and communal services	December 2024	Economic recovery and development Energy security Recovery and development of infrastructure
2.8.	Introduce mechanisms for stimulating the development of domestic production of energy-efficient equipment and energy-saving building materials	December 2024	Economic recovery and development Energy security

#	Description of task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
			Recovery and development of infrastructure
2.9.	Raise public awareness of sustainable energy development of communities and regions	December 2025 December 2032	Economic recovery and development Energy security
Goal 3. 30% reduction in energy consumption and greenhouse gas emissions / decarbonisation of energy use in communities			
Stage 3: January 2026 - December 2032			
3.1	Reduce by 35% the specific consumption of fuel and energy in the building sector	December 2032	Economic recovery and development Energy security
3.2	Increase fuel use and energy efficiency in life support systems by 30%	December 2032	Economic recovery and development Energy security Ecological safety

#	Description of task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
3.3	Increase the share of local renewable energy sources to 27%	December 2032	Economic recovery and development Energy security Ecological safety Recovery and development of infrastructure

2. Goals, objectives, stages of Recovery Plan in the direction of "Housing, energy efficiency, civil protection".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
Problem 3.6. High energy intensity of the residential and public buildings sector threatens Ukraine's energy security. Goal 3.6. Strengthening Ukraine's energy security by reducing the energy intensity of the residential and public buildings sector in an energy efficient way			
The goal to be achieved to solve the problem at each stagei	5% increase in energy efficiency in the building sector *(by implementing low-cost*	13% increase in energy efficiency in the building sector *(by rebuilding destroyed*	35% increase in energy efficiency in the building sector *(through large-scale thermal*

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
	measures in existing buildings and rebuilding destroyed buildings to a high class of energy efficiency)	*buildings to the level of NZEB and thermal modernization of the most energy-intensive buildings)*	*modernization of buildings and construction of buildings with near zero energy consumption - NZEB)*
Deadline within the stage	December 2022	October 2025	October 2032
Risks of achieving the goal	Lack of financial, logistical, labor and time resources.	Lack of material, technical and labor resources; High cost of attracting financial resources; Non-compliance with construction technologies and the use of low-quality construction products; Lack of motivation of owners (co-owners) of residential buildings due to low energy tariffs for the population and low financial capacity of the population; Non-compliance with current regulatory	Lack of material, technical and labor resources; High cost of attracting financial resources; Non-compliance with construction technologies and the use of low-quality construction products; Lack of motivation of owners (co-owners) of residential buildings due to low energy tariffs for the population

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
		parameters of the microclimate of buildings.	
Measured indicator of goal achievement	Percentage reduction in specific energy consumption in the residential building sector (based on 2020). Percentage reduction in specific energy consumption in the public buildings sector (based on 2020)	Percentage reduction in specific energy consumption in the residential building sector (based on 2020). Percentage reduction in specific energy consumption in the public buildings sector (based on 2020)	Percentage reduction in specific energy consumption in the residential building sector (based on 2020). Percentage reduction in specific energy consumption in the public buildings sector (based on 2020)
The total amount of need for financial resources to achieve the goal	17.8 billion UAH (592 million EUR)	539.8 million UAH (17.992 million EUR)	2,997.5 million UAH (99.915 million EUR)
Linking the goal to other areas	Economic recovery and development Energy security Ecological safety Audit of war losses The social protection	Audit of war losses Economic recovery and development Energy security Ecological safety	Economic recovery and development Energy security Ecological safety

	Stage 1: June 2022 - end of 2022	Stage 2: January 2023 - December 2025	Stage 3: January 2026 - December 2032
		Functioning of the financial system, its reform and development The social protection	Functioning of the financial system, its reform and development The social protection

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
Goal 1. Increase energy efficiency in the building sector by 5%			
Stage 1: June 2022 - end of 2022			
1.1	Identify goals and optimal ways to ensure thermal modernization of the fund of residential and public buildings	July 2022	Energy security Economic recovery and development European integration
1.2	Introduce long-term programs at the state and local levels to support thermal modernization of buildings and construction NZEB	August 2022	Energy security Economic recovery and development

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
1.3	Increase requirements for indicators of energy performance of buildings (fencing structures, engineering systems of buildings, requirements for construction, etc.)	October 2022	Energy security European integration
1.4	Define requirements for nearly zero-energy buildings (NZEB)	October 2022	European integration Energy security Economic recovery and development
1.5	Reduce up to 5% of unused heat loss in indoor heating pipelines in residential and public buildings	December 2022	Energy security Economic recovery and development
1.6	Increase energy efficiency (including natural gas) by up to 90% in heating sources of residential and public buildings	December 2022	Energy security Economic recovery and development
1.7	Ensure the recovery of destroyed buildings to the energy efficiency class not lower than B	December 2022	Energy security Economic recovery and development
Goal 2. Increase energy efficiency in the building sector by 13%			
Stage 2: January 2023 - December 2025			

#	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
2.1	Identify the most energy-intensive buildings in each region, make a list of buildings in need of thermal modernization in the first place	February 2023	Energy security Economic recovery and development
2.2	Reduce at least 2 times the heat loss in the most energy-intensive residential and public buildings	October 2025	European integration Energy security Economic recovery and development
2.3	Ensure replacement of 22% of natural gas with renewable energy sources in individual and autonomous heating systems of buildings	October 2025	European integration Energy security Economic recovery and development
2.4	Develop competencies and qualifications of construction professionals in the implementation of NZEB construction	February 2023	European integration Energy security Economic recovery and development
2.5	Work out pilot projects for the construction of buildings with close to zero energy consumption (NZEB), including the recovery of destroyed buildings	October 2023	Energy security Economic recovery and development European integration

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
2.6	Establish mandatory compliance with NZEB requirements for new construction of all public buildings	December 2025	European integration Energy security Ecological safety
Goal 3. Increase energy efficiency in the building sector by 35%			
Stage 3: January 2026 - December 2032			
3.1	Make NZEB requirements mandatory for all new buildings	December 2027	European integration Energy security Ecological safety
3.2	Reduce heat losses by at least 2 times in 35% of public buildings that belong to social infrastructure	December 2032	Energy security Economic recovery and development
3.3	Reduce heat losses in 35% of residential buildings by at least 2 times	October 2032	Energy security Economic recovery and development
3.4	Ensure replacement of 35% of natural gas by renewable energy sources in individual and autonomous heating systems of buildings	December 2032	Energy security Economic recovery and development
3.5	Increase the number of nearly zero-energy buildings (NZEB)	December 2030	European integration Energy security

#	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
			Economic recovery and development
3.6	Determine the requirements for zero-emission building (ZEB)	December 2028	European integration Energy security Economic recovery and development
3.7	Work out pilot projects for ZEB construction in each region of Ukraine	October 2030	Energy security Economic recovery and development European integration
3.8	Make it compulsory to comply with ZEB requirements for the new construction of all public buildings	December 2030	European integration Economic recovery and development Energy security Ecological safety
3.9	Establish mandatory compliance with ZEB requirements for new construction of all buildings	December 2032	European integration Economic recovery and development Energy security Ecological safety

IV. Infrastructure of life support systems

1. The main problems that need to be addressed in the framework of the Recovery Plan in the direction of "Infrastructure of life support systems".

1.1. The impact of war on a particular area of analysis:

Heat supplying

The state of the heat supply sector was critical even before the escalation of the armed aggression against Ukraine. Debts were a key problem in the field of district heating. The level of settlements rarely exceeded 85% and according to the State Statistics Service of Ukraine, the debt of the population for consumed services for heat supply and hot water supply amounted to UAH 26.6 million as of January 1, 2022.

Unearned income did not allow heat supply companies to meet their obligations. Accordingly, enterprises could not provide the population with services of the appropriate level of quality, carry out modernization and energy saving measures. Difficult financial situation makes the heat supply sector unattractive for investment. Which only deepens the problems of modernization of systems.

The technical condition of district heating, especially heating networks, is unsatisfactory. About 40% of networks need to be replaced. Heat losses in the networks reach 20%. Destruction of objects due to armed aggression requires detailed research. Damage to dozens of thermal energy sources has already been recorded. At least in Okhtyrka and Kremenchuk, this affects the entire district heating system.

Heat supply significantly affects the energy security and environmental condition of the country. The population and enterprises of the heat supply sector use at least 50% of all gas consumed in Ukraine. At the same time, only a third of households are connected to district heating systems. All this means the vulnerability of the population to the threat of energy supplying outages.

Low efficiency of district heating and chaotic transition to individual heating, crises that are deepening due to military aggression, in addition to weakening energy security have a negative impact on the environment. Already, the heat supply sector is causing about 42 million tons of greenhouse gas emissions.

Drinking water supply

The current state of drinking water supply systems does not provide consumers with a safe, accessible and sustainable water supply and is characterized by

- Destruction of drinking water supply systems in settlements:

According to monitoring results, 60 facilities of centralized water supply system are destroyed in different degrees of complexity. Destroyed/damaged water supply networks with a total length of 2097 m. The number of subscribers not receiving centralized water supply services is about 508782, or 1.3 million citizens. The information is constantly being updated.

- Overloaded drinking water supply systems in the western regions;

In regions where businesses and population are relocating, the capacity of drinking water supply systems should be increased by 1.5 times (at present about 600 businesses are relocating, more than 1.5 thousand more are waiting for the opportunity to move to safer regions, according to preliminary estimates 8 million people have evacuated to western regions, about 30% of them are not planning to return).

- The quality and safety of drinking water does not meet the requirements for human consumption;

The reasons for the inadequate quality of drinking water are imperfect means and methods of purification and disinfection of drinking water and the unsatisfactory technical condition of water supply networks, in particular in-house networks, which are worn out by about 80 per cent. The overall level of wear in drinking water supply systems is 60.5 per cent. 33 per cent of the main and distributional water supply networks are obsolete.

- Insufficient coverage of the population with centralised water supply services;

According to the National Report on Drinking Water Quality and the State of Drinking Water Supply in Ukraine in 2021, only 64.5 per cent of the population has access to drinking water supply systems. At the same time, only 29.5 per cent of settlements in Ukraine have a centralised water supply.

- high energy intensity of drinking water supply systems.

Electricity costs account for about 40 per cent of the cost of centralised water supply services. According to statistical data, despite the annual decrease of drinking water supply during the last twenty-five years (from 1996 to 2021, the indicator decreased by 36.8 percent), the specific energy consumption of this sphere, on the contrary, has only increased. Thus, the specific energy consumption level in 2021 for centralized drinking water supply was 0.93 kWh/m3 of raised water (for comparison, in 1996 this indicator was 0.80 kWh/m3).

The main systemic problem that needs to be addressed is that there are currently no mechanisms for introducing modern technologies in the sphere of drinking water and drinking water supply, which leads to a further increase in unit costs for enterprises and in accordance with the growth of tariffs. This, in turn, leads not only to an increase in social tension in society, but also to a decrease in the competitiveness of domestic economic sectors' products on foreign and domestic markets.

Drainage

The existing state of centralised drainage systems is incapable of providing accessible drainage services and environmental safety and is characterised by:

- Destruction of drainage systems in settlements.

According to the results of demolition monitoring, 124 centralised drainage facilities of various degrees of complexity. Fractured/damaged centralised drainage networks with a total length of 10545 m. Number of subscribers, for whom the provision of centralised drainage services has been disrupted, is around 308452 or 0,7 million citizens. The information is continually being updated.

- Congestion of drainage systems in the western regions

In regions where businesses and people have been relocated, the drainage systems need to be increased by a factor of 1.5 (currently about 600 businesses have been relocated, with over 1,500 more waiting to be relocated to safer areas; according to preliminary estimates 8 million people have evacuated to western regions, some 30 per cent of them are not planning to return).

- Insufficient coverage of the population with centralised wastewater services;

According to the National Report on Drinking Water Quality and the State of Drinking Water Supply in Ukraine in 2021, only 48.6 per cent of the population has access to wastewater disposal systems. At the same time, only 14.6 per cent of settlements in Ukraine have centralised drainage systems. ;

- Low degree of wastewater treatment.

Only 50 percent of wastewater undergoes full biological treatment cycle and one third of wastewater is discharged into water without any treatment at all;

- High energy intensity of wastewater treatment systems:

Electricity costs account for around 50% of the cost of centralised drainage services. Thus, the specific energy consumption in 2021 for centralised drainage was 0.63 kWh/m³ of lifted water (in comparison, in 1996 the figure was 0.48 kWh/m³).

- The lack of reuse processes for treated wastewater and sewage sludge:

Untreated sewage sludge is discharged into overloaded sludge ponds, dumps, reservoirs and quarries. On the territory of Ukraine the amount of accumulated sludge exceeds 150 million tonnes, to which another 5 million tonnes of new sludge is added annually.

The main systemic problem that needs to be solved is that there are currently no mechanisms for introducing modern technologies in the wastewater sector, which leads to a further increase in unit costs for enterprises and in accordance with

tariff increases. This, in turn, leads not only to an increase in social tension in society, but also to a decrease in the competitiveness of domestic economic sectors' products on foreign and domestic markets.

Municipal waste management

As a result of the armed aggression of the Russian Federation against Ukraine, the sphere of household waste management has undergone significant changes. The war actions and the temporary occupation have made it impossible to provide household waste management services in certain areas, and many waste management means and facilities have been lost, damaged or destroyed. The volume of service provision was also affected by the mass exodus of the population to safer regions or abroad, as a result, the increase in receivables for the service, as well as the reduction of the staff due to mobilization. The critical situation with the accumulation, reduction of recycling, tratment and proper disposal of household waste poses a serious threat to human health and the environment and is one of the most acute environmental problems.

In 2021, more than 10 million tons (51 million m3) of household waste were generated in Ukraine. 79% of the population is covered by household waste management services. Due to the establishment of separate collection in 1725 settlements, 34 waste sorting lines, 1 incinerator and 3 incineration installations 7,64% has been recycled, of which: 1.14% incinerated and 6.5% of household waste was treated and recycled. . 92.36% were landfilled in 6,000 landfills and dumpsites taking a total area almost 9 thousand hectares. The number of overloaded landfills is 230 units. (3.8%), and 824 units. (13.8%) do not meet environmental safety standards. The need for construction of new landfills is 288 units. In 2021, 26.8 thousand unauthorized landfills (with an area of 0.6 thousand hectares) were discovered, of which 25.5 thousand were liquidated.

Biogas extraction systems have been installed at 26 landfills and electricity generation facilities with a capacity of 30 MW are in operation. The amount of utilized biogas in 2020 amounted to 64.0 million m^3 (50% methane), the amount of electricity produced - 112.3 GWh.

The total number of specially equipped vehicles for household waste management is almost 3.7 thousand units.

Key challenges (generalized for a specific area)	• Heat supplying area critical dependence on natural gas. • Rising energy costs while reducing incomes as a result of aggression against Ukraine. Society's sensitivity to changes in energy costs and utility tariffs. • Technological backwardness and physical wear and tear of heat supplying systems. • Lack of equal conditions for heat supply companies and household consumers in the energy markets. • Lack of effective business models for district heating companies and their low creditworthiness. • Significant destruction of water supply systems in the affected regions; increased pressure on systems in regions of displacement and enterprise relocation; • Only 69% of the population has access to centralised drinking water supply; • Technological backwardness and physical deterioration of systems, equipment; • High energy intensity of drinking water supply and dependence on energy supply. • Significant damage to centralised wastewater systems in the affected regions, increased pressure on systems in regions of population displacement and enterprise relocation; • Only 48% of the population has access to centralised wastewater disposal. Inadequate wastewater treatment (only half) undergoes full biological treatment; • Technological delays and deterioration of systems; • High energy intensity of wastewater treatment and dependence on energy supply. • Inefficient system of household waste management; • More than 90% of household waste is not recycled, but disposed of in landfills and dumpsites; • Low level of technical equipment of the industry;

	• Damaged or destroyed infrastructure for household waste management (landfills, dumpsites, waste sorting plants, garbage trucks, containers, containers sites) in areas where hostilities took place.
Key opportunities (generalized for a specific area)	• Construction of stable, reliable and safe heat supplying systems. • Strengthening the state's energy security. • Increasing the level of availability of thermal energy / utilities for citizens, prevention of significant growth of poverty. • Decarbonisation and development of efficient district heating and individual heating and cooling systems. • Economic development of heat supplying industry. • Increasing the level of citizens' access to centralised drinking water supply; • Improving the safety and quality of drinking water; • Construction of sustainable, reliable and safe centralised drinking and technical water supply systems, introduction of modern technologies; • Optimisation of drinking water supply systems in settlements; • Stabilisation of the economic status of enterprises in the sector. • Increase the level of citizens' access to centralised wastewater disposal; • Improved safety of wastewater for the environment; • Construction of sustainable, reliable and safe centralised drinking and technical water supply systems, introduction of modern technologies; • Optimisation of water disposal in settlements. • Establishment of a modern system of household waste management in accordance with European standards; • Technical re-equipment and modernization of household waste management infrastructure;

	• Increasing the coverage of the population with services for separate collection of household waste; • Use of waste as a secondary raw material and energy resource. Waste can serve as a raw material for various industries and electricity and heat generation
Key limitations (generalized for a specific area)	• Limit of time: implementation of measures in the shortest possible time. • Security restrictions: high probability of repeated destruction. • Seasonal restrictions: construction works can be provided within the interheating period. • Resources limit: lack of finances, qualified personnel, equipment to implement the necessary measures. • Social significance of the cost of utility for citizens • Lack of financial and human resources; • Damaged and destroyed material and technical resources, facilities for treatment and recycling of valuable secondary materials (cardboard and paper, metallurgical, glass processing, chemical and polymer processing plants, etc.); • Limited opportunities for production and supply of machinery and equipment for household waste management in Ukraine; • Security restrictions (continuation of hostilities)..

2. Goals, objectives, stages of Recovery Plan in the direction of "Infrastructure of life support systems".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**

Problem 4.1. The existing heat supply system in Ukraine is not able to guarantee citizens continuous, safe, affordable and high-quality heating. **Purpose 4.1.** To guarantee consumers continuous, safe, affordable and high-quality heating			
The goal to be achieved to solve the problem at each stage	100% of Ukrainian citizens are provided with heating	20% reduction in the use of natural gas for heat supply needs	50% of thermal energy in heating systems is obtained from renewable energy sources, waste heat sources and cogeneration units
Deadline within the stage	October 2022	October 2025	October 2032
Risks of achieving the goal	Risk of re-destruction or destruction of heat supply systems Risk of lack of energy, financial, human and time resources	Risk of lack of financial, human and time resources	Risk of lack of financial and time resources
Measured indicator of goal achievement	The share of citizens provided with heating	The share of natural gas use for heating needs	Proportion of renewable energy sources, sources of waste heat and cogeneration units in heating systems
The total amount of need for financial resources to achieve the goal	60 billion UAH (2 billion euros)	210 billion UAH (7 billion euros)	210 billion UAH (7 billion euros)
Linking the goal to other areas	Economic recovery and development	Economic recovery and development	Economic recovery and development

	Energy security Functioning of the financial system, its reform and development Audit of war losses and damages	Energy security Ecological safety Functioning of the financial system, its reform and development	Energy security Ecological safety Functioning of the financial system, its reform and development

2.2. Definition of tasks to achieve the objectives of subparagraph 2.1

#	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Goal. 100% of Ukrainian citizens are provided with heating			
Stage 1: June 2022 - end of 2022			
1.1	Identify ways to provide heating in settlements affected by hostilities	July 2022	-
1.2	Restore damaged or destroyed district heating facilities	October 2022	Economic recovery and development Energy security
1.3	Identify ways to provide heating in case of interruptions in the gas and electricity supply	October 2022	Energy security

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
1.4	Provide opportunities for heat supply companies for a stable work during the heating season 2022-2023	October 2022	Functioning of the financial system, its reform and development
Goal. 20% reduction in the use of natural gas for heat supply needs			
Stage 2: January 2023 - December 2025			
2.1	To determine the goals and directions of settlements heat supply systems development	May 2023	Economic recovery and development Energy security
2.2	Create a mechanism for financing the sustainable development of heat supplying systems	May 2023	Functioning of the financial system, its reform and development
2.3	Ensure stable financial capacity of district heating companies to carry out their economic activities	October 2023	Functioning of the financial system, its reform and development
2.4	Implement management systems for the use of fuel and energy resources at district heating companies	October 2024	Energy security
2.5	Reduce heat losses in heating networks by at least 12%	October 2025	Energy security
2.6	Increase use of fuel efficiency in heat sources by at least 92%	October 2025	Energy security

#	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
2.7	Ensure the substitution of 10% of natural gas in heat supplying systems	October 2025	Energy security
2.8	Implement the principles of smart grids and intelligent metering in district heating systems that cover at least 5% of heat energy consumers	October 2025	Energy security European integration
Goal. 50% of thermal energy in heating systems is obtained from renewable energy sources, waste heat sources and cogeneration units			
Stage 3: January 2026 - December 2032			
3.1	Introduce market mechanisms in the sphere of district heating	October 2028	Economic recovery and development Functioning of the financial system, its reform and development
3.2	Ensure equal conditions in the energy markets for district heating companies and household consumers	October 2028	Economic recovery and development Energy security
3.3	Increase the share of efficient district heating systems to 90%	October 2032	Economic recovery and development Energy security

#	Description of the task to achieve the goal	Deadline for the task	Dependence of the task on the tasks of other areas, spheres, problems
3.4	Increase the share of efficient individual heating systems to 30%	October 2032	Economic recovery and development Energy security
3.5	Introduce efficient district cooling systems	December 2032	Energy security

Goals, objectives, milestones of the Renovation Plan for the Livelihoods Infrastructure system.

2.1 Objectives are aimed at solving a specific problem:

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Problem 4.2. The current state of water supply systems does not provide consumers with safe, affordable and stable drinking water supply **Goal 4.2.** Ensuring the stable functioning of centralized drinking water supply systems			
The goal that needs to be achieved to solve the problem at each stage	Ensuring the stable functioning of centralized drinking water supply systems	Modernization of 10% of centralized drinking water supply systems	Modernization of 30% of centralized drinking water supply systems
Deadline within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	underfunding is high probability of repeated destruction	underfunding is high probability of repeated destruction	underfunding is high probability of repeated destruction
Measurable goal achievement indicator	The share of the population provided with centralized drinking water supply is 70% of the basic level of 69% Reduction of electricity consumption in the drinking water supply sector by 5% from the basic level of 2021 The share of drinking water that is responsible gives state quality standards 65% of the basic level of 60%	The share of the population provided with centralized drinking water supply is 80% of the basic level of 69% Reduction of electricity consumption in the drinking water supply sector by 10% from the level of 2021 The share of drinking water that meets state quality standards is 90% of the basic level of 60%	The share of the population provided with centralized drinking water supply is 95% of the basic level of 69% Reduction of electricity consumption in the drinking water supply sector by 30% from the basic level of 2021 The share of drinking water that meets state quality standards is 100% of the basic level of 60%
The total amount of need for financial resources to achieve the goal	UAH 25 billion	UAH 175.8 billion	UAH 340 billion

Linking a goal to other directions	Economic Recovery and Development Environmental Safety Energy Security European integration Health Audit of losses incurred as a result of the war	Economic Recovery and Development Environmental Safety Energy Security European integration Health Audit of losses incurred as a result of the war	Economic Recovery and Development Environmental Safety Energy Security European integration Health

2.2. Defining tasks for achieving goals from subparagraph 2.1

p/p	**Description of the task to achieve the goal**	**Task Deadline**	**Dependence of the task on tasks of other directions, areas, problems**
Target. 3.2.1 Ensuring the stable functioning of centralized drinking water supply systems			
Stage 1: June 2022 – end of 2022			

3.2.1.1.	Restore damaged and destroyed systems of centralized drinking water supply	December 2022	Economic recovery and development Health
3.2.1.2.	Restore the supply of reagents for purification and disinfection of drinking water	December 2022	Economic recovery and development Health
3.2.1.3.	Simplify the procedures for connecting to centralized drinking water supply systems relocated to safe regionsand enterprises	December 2022	Economic recovery and development Health
Goal.3.2.2 Modernization of 10% of centralized drinking water supply systems			
Stage 2: January 2023 – December 2025			
3.2.2.1.	Increase the level of provision of the population with centralized drinking water supply services up to 80% (basic level - 69%)	December 2025	Economic recovery and development European integration Health
3.2.2.2	Reduce specific electricity consumption of drinking water supply systems by 10% from the base year 2021	December 2025	Economic recovery and development Energy security European integration

3.2.2.3.	Increase to 90% the share of drinking water that meets de-rusting quality standards in centralized drinking water supply systems (base level - 60%)	December 2025	European integration Health
3.2.2.4	Ensuring stable operation of centralized drinking water supply systems	December 2025	Economic recovery and development Energy security European integration
3.2.2.5	Ensuring remote control of centralized drinking water supply systems	December 2025	Economic recovery and development Energy security European integration
Goal.3.2.3 Modernization of 30% of centralized drinking water supply systems			
Stage 3: January 2026 – December 2032			
3.2.3.1.	Increase the level of provision of the population with centralized drinking water supply services up to 95% (basic level - 69%)	December 2032	Economic recovery and development European integration Healthcare

3.2.3.2.	Reduce specific electricity consumption of drinking water supply systems by 30% from the base year 2021	December 2032	Economic recovery and development Energy security European integration
3.2.3.3.	Ensure compliance with quality standards of 100% drinking water	December 2032	European integration Health
3.2.3.4.	Ensuring stable operation of centralized drinking water supply systems	December 2032	Economic recovery and development Energy security European integration
3.2.3.5	Ensuring remote control of centralized drinking water supply systems	December 2032	Economic recovery and development Energy security European integration

2. Goals, objectives, stages of the Recovery Plan in the direction of "Infrastructure of life support systems".

2.1. The objectives are aimed at solving a certain problem:

	Stage 1: June 2022 – end of 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
Problem 4.3. The current state of centralized sewerage systems is not able to provide affordable services and environmental safety **Goal 4.3.** Ensuring stable functioning of centralized sewage systems			
The goal that needs to be achieved to solve the problem at each stage	ensuring the stable functioning of centralized sewage systems	modernization of 10% of centralized sewage systems	modernization of 30% of centralized sewage systems
Deadline within the stage	End of 2022	December 2025	December 2032
Risks of achieving the goal	underfunding, high probability of repeated destruction	underfunding	underfunding

Measurable goal achievement indicator	The share of the population provided with access to centralized sewage is 50% of the basic level of 48% Reduce electricity consumption in the field of sewage by 5% from the basic level of 2021 Increase the share of wastewater undergoing complete biology treatment to 60% of the basic level of 50%	The share of the population provided with access to centralized sewage is 60% of the basic level of 48% Reduce electricity consumption in the field of sewage by 10% from the basic level of 2021 Increase The flow time of wastewater undergoing complete biological treatment to 70% of the basic level of 50% Share of disposed wastewater sludge 5% Share of reused treated wastewater 1%	The share of the population provided with access to centralized sewage daytime is 80% of the basic level of 48% Reduce electricity consumption in the field of sewage by 20% from the basic level of 2021 Increase the share of wastewater undergoing complete biological treatment to 80% of the baseline level of 50% Share of disposed wastewater sludge 15% Share of reused treated wastewater 1%
Total need for financial resources to achieve the goal (billion UAH)	UAH 50 billion	UAH 226,3 billion	UAH 460 billion

Linking a goal to other directions	Economic recovery and development Energy security Environmental safety European integration Health	Economic recovery and development Energy security Environmental safety European integration Health	Economic recovery and development Energy security Environmental safety European integration Health

2.2. Defining tasks for achieving goals from subparagraph

p/p	**Description of the task to achieve the goal**	**Task Deadline**	**Dependence of the task on tasks of other directions, areas, problems**
Target. 3.3.1 Ensuring the stable functioning of centralized sewage systems			
Stage 1: June 2022 – end of 2022			

3.3.1.1	Restore damaged and destroyed centralized sewage systems	December 2022	Economic recovery and development Environmental safety Health
3.3.1.2	Restore the supply of reagents for wastewater treatment and disinfection	December 2022	Economic recovery and development Environmental safety Health
3.3.1.3	Simplify the procedures for connecting to centralized sewage systems of enterprises relocated to safe regions	December 2022	Economic recovery and development Environmental safety Health
Goal 3.3.2 Modernization of 10% of centralized sewage systems			
Stage 2: January 2023 – December 2025			
3.3.2.1.	Increase the level of provision of the population with sewerage services up to 60% (basic level 48%)	December 2025	Recovery and development of economy Environmental safety European integration Health

3.3.2.2.	Provide 10% of the population with uncentralized sewage and safe operation of these systems.	December 2025	Economic recovery and development Environmental safety European integration Health
3.3.2.3.	Reduce specific electricity consumption of centralized sewage systems by 10% from the base year 2021	December 2025	Economic recovery and development Energy security European integration
3.3.2.4.	Increase the share of wastewater undergoing complete biological treatment to 70% (at a base level of 50%)	December 2025	Economic recovery and development Environmental safety European integration Health
3.3.2.5.	Ensure the disposal of 5% of wastewater sediment .	December 2025	Economic recovery and development Energy security Environmental safety European integration Health

3.3.2.6.	Ensure the reuse of treated 1% of treated wastewater	December 2025	Economic recovery and development Energy security Environmental safety European integration Health
3.3.2.7.	Ensuring stable operation of centralized sewage systems	December 2025	Economic recovery and development Energy security European integration
3.3.2.8	Providing remote control of centralized sewage systems	December 2025	Economic recovery and development Energy security European integration
Goal.3.3.3 Modernization of 30% of centralized sewage systems			
Stage 3: January 2026 – December 2032			

3.3.1.1	Increase the level of provision of the population with sewage services up to 80% (base level 48%)	December 2032	Economic recovery and development Environmental safety European integration Health
3.3.3.2	Provide uncentralized sewage services to 20% of the population and safe operation of these systems.	December 2032	Economic recovery and development Environmental safety European integration Health
3.3.3.3	Reduce the specific consumption of electricity from centralized sewage systems by 20% from the base year 2021	December 2032	Economic recovery and development Energy security European integration
3.3.3.4	Increase the share of wastewater undergoing complete biological treatment to 80% (at a base level of 50%)	December 2032	Economic recovery and development Environmental safety European integration Health

3.3.3.5	Ensure the disposal of 5% of wastewater sediment.	December 2032	Economic recovery and development Energy security Environmental safety European integration Health
3.3.3.6	Ensure the reuse of treated 10% of treated wastewater	December 2032	Economic recovery and development Energy security Environmental safety European integration Health
3.3.3.7	Ensuring stable operation of centralized sewage systems	December 2032	Economic recovery and development Energy security European integration
3.3.3.8	Providing remote control of centralized sewage systems	December 2032	Economic recovery and development Energy security European integration

2. Goals, objectives, stages of the Recovery Plan in the direction of "Infrastructure of life support systems".

2.1. The goals are aimed at solving a certain problem:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Problem 4.4. Inefficient system of household waste management does not allow to realize the economic potential of secondary use of resources.			
Objective 4.4 Structural modernization of the household waste management system and bringing it in line with European standards.			
The goal that must be achieved to solve the problem at each stage	Restoration of damaged means of household waste management.	Restoration of damaged and / or destroyed objects and means of household waste management. Treatment and recyclyng of 10% of the total amount of household waste generated.	Treatment and recycling of 15% of the total amount of household waste generated.
Deadline within the stage	December 2022	December 2025	December 2032

Risks of achieving the goal	Limited financial and technical resources, security restrictions.	Limited financial and technical resources, gaps in the regulatory framework, insufficient institutional capacity of local self-government authorites, security restrictions.	Limited financial and technical resources, gaps in the regulatory framework, insufficient institutional capacity of local self-government authorities.
Measured indicator of goal achievement	1. The number of recovered means of household waste management: - garbage trucks, units; - containers, units; - container sites, units.	1. The number of restored and installed new means of household waste management: - garbage trucks, units; - containers, units; - container sites, units. 2. The number of recovered and constructed objects of household waste management (waste sorting lines, waste transfer stations, waste processing and incineration plants and landfills), units	1. The number of installed new means of household waste management: - garbage trucks, units; - containers, units; - container sites, units. 2. Number of constructed objects of household waste management (waste sorting lines, waste transfer stations, waste processing and incineration plants and landfills), units.

The total amount for financial resources needed to achieve the goal	UAH 75 million (2.5 million euros)	UAH 12.5 billion (416, 6 million euros)	UAH 36 billion (1.2 billion euros)
Linking the goal to other areas	Ecological safety Economic recovery and development Energy security Audit of war losses	Ecological safety Economic recovery and development Energy security	Ecological safety Economic recovery and development Energy security

2.2. Definition of tasks on achievement of the purposes from subparagraph 2.1

п/п	**Description of the task to achieve the goal**	**Deadline for the task**	**Dependence of the task on the tasks of other areas, spheres, problems**
Goal 1. Restoration of means and facilities for household waste management			
Stage 1: June 2022 - end of 2022			

1.1.	Restore means of household waste management (containers, container sites, garbage trucks)	December 2022	-
1.2.	Restore objects of household waste management (waste sorting lines, waste transfer stations, waste processing and incineration plants, landfills)	December 2022	-
Goal 2.1. Restoration of means and facilities for household waste management.			
Stage 2: January 2023 - December 2025			
2.1.1.	Restore means of household waste management (containers, container sites, garbage trucks)	December 2025	-
2.1.2.	Restore objects of household waste management (waste sorting lines, waste waste transfer stations, waste processing and incineration plants, landfills)	December 2025	-
Goal 2.2. Treatment and recycling of 10% of the total amount of household waste generated			
2.2.1.	Purchase household waste management equipment (containers, garbage trucks)	December 2025	-

2.2.2.	Establish container sites for the collection (including separate collection) of household waste	December 2025	-
2.2.3.	Build household waste management facilities (waste sorting, transfer stations, waste processing, incinerators and landfills)	December 2025	-
Goal 3. Recycling and utilization of 15% of the total amount of household waste.			
Stage 3: January 2026 - December 2032			
3.1.	Purchase household waste management equipment (containers, garbage trucks)	December 2032	-
3.2.	Establish container sites for the collection (including separate collection) of household waste	December 2032	-
3.3.	Build household waste management facilities (waste sorting, transfer stations, waste processing, incinerators and landfills)	December 2032	-

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Culture and information policy” working group

July 2022

2. Creative Industries 39
3. Book publishing and libraries 57
4. Ethnic affairs and religion 111
5. The Field of Information Policy and Security 192
6. Cultural heritage 215
7. National Memory 234

1. Culture sphere

1. The main problems to be solved as part of the recovery plan for the "Culture"

The impact of the war on a particular area of analysis:
The main challenges of the current state of culture in Ukraine: the need to liberalize the conditions of cultural organizations of state and communal form of ownership and provide sources of stable functioning of cultural institutions of independent sector; the need to continue reforms in arts education, in particular, to review and update the content of education in arts education institutions, as well as to harmonize the curricula of specialized arts education and general schools;

Shortage and instability of funding for the cultural sphere; outflow of employees of organizations of the sphere and purchasers of art education institutions of all forms of ownership; lack of digital skills in the sphere; necessity to strengthen social protection of self-employed creative units; geographical redistribution of demand on cultural and educational services for population as a result of mass migration; necessity to build digital aspect of cultural institutes (from managerial processes to preservation of cultural heritage)

At present, the artistic activity of cultural organizations is undergoing a significant transformation due to Russia's aggression against Ukraine. There are urgent requests of the society concerning the change of the direction of repertoire policy of cultural institutions, so there is a need to develop and create a new range of works and projects, which, in turn, requires separate funding or full preservation of creative teams. In particular, we are talking about the need to create a Ukrainian-language national cultural product under conditions of limited resource potential, to refocus the repertoire on the social and psychological support of the country, the promotion of Ukrainian voices and the Ukrainian agenda abroad.

At present, there is a lack of complete and comprehensive information about the numerous damages and destructions of monuments and cultural institutions and educational institutions in the cultural sphere, particularly because of the lack of opportunity for citizens, local and public authorities to promptly record the damages in the context of each city and locality. However, it is already known that during the hostilities in some regions a significant part of the infrastructure of cultural institutions and educational establishments in the cultural sphere was partially or completely destroyed. Besides, the problem of barrier-free access to cultural institutions for consumers of cultural services (physical accessibility), as well as educational institutions of the cultural sphere for applicants of artistic education with special educational needs remains actual. As of May 2022, more than 400 cultural and educational institutions of culture were damaged in the regions of Ukraine. According to preliminary data, the following regions suffered the most damage: Kyiv region (112), Donetsk region (100), Luhansk region (55), Sumy region (40), Zhytomyr region (22), Chernihiv region (17), Kharkiv region (12) (information is being constantly updated and clarified). Due to active military operations, as well as temporary occupation of the territories, it is impossible to identify all the damage and destruction of cultural institutions and educational establishments in the cultural sphere.

As a result of the war, the cultural sphere has lost a highly professional human resource due to the outflow of personnel. At present, there is a threat that a considerable part of cultural workers and individual artists, teaching staff of educational institutions of the cultural sphere, who are located in zones where active hostilities continued, as well as the contingent of applicants for art education of all levels who left Ukraine, will not return. A number of institutions of primary art education cannot continue the educational process, including due to the lack of budget revenues, which should have been used to finance them.

At the moment there is also no up-to-date information about the state of the contingent of applicants and teachers of art education in the temporarily occupied territories of Ukraine.

Moreover, art collectives and individual artists, due to the actual restrictions of the conditions of economic activity, face shortage of their own income, the formation of arrears of wages and as a consequence, the loss of professional artistic and artistic human resources. Currently, there is no data on the loss of human resources in the cultural sphere in quantitative terms, who left Ukraine because of the lack of security, which prevents the development of necessary measures to restore the full-fledged work of the institutions.

The content and methods of teaching elementary art education do not meet the requirements of the present, since most of the repertoire, methodological publications were introduced in the educational process during the Soviet era and contain ideological and propaganda material and are morally obsolete at present. The influence of the Russian teaching school for many years has resulted in the lack of national repertoire of art education at all levels. Art education is one of the main tools that shapes the child's aesthetic taste, worldview and develops a conscious belonging to the country, its citizenship, language, culture and traditions of Ukraine. Thus, its content must meet the requirements of the time and the needs of Ukrainians.

The management system of cultural institutions is not effective, does not stimulate the managerial staff of institutions to create a new competitive cultural product, search for new sources and ways of cultural development. The competitive and contractual system of formation of the managerial and artistic and artistic staff of cultural institutions needs to be updated. Low managerial and institutional capacity of cultural institutions is noted, especially in the conditions of war, which requires development of nationwide approaches to reform the existing system of management of cultural institutions, in particular, aimed at revision of powers of management bodies regarding institutions and providing more autonomy of institutions in matters of personnel policy and other prerequisites for their organizational flexibility. It should be noted that under the conditions of Russian armed aggression and limited financial resources, the problem of weak cooperation and partnership of Ukrainian art institutions, subjects of

activities in the cultural sphere, individual artists with international partners, donors, patrons and sponsors, which prevents quick reorientation of institutions to new realities, attracting new sources of funding to restore institutional capacity is brightly highlighted.

As a result of the war started by Russian Federation in Ukraine, the sphere of culture has largely lost its financial revenues. According to Resolution № 245 of the Cabinet of Ministers of Ukraine dated March 10, 2022, most expenditures for the sphere were directed to the reserve fund of the state budget, and expenditures for culture and art from local budgets were also reduced to a considerable extent. The complexity of the situation is exacerbated by the fact that for the past few decades the sphere of culture has been financed on the leftover basis. At the same time, since 2019, there has been a positive trend towards an increase in cultural expenditures from local budgets, so in particular the share of cultural expenditures in the total amount of expenditures from local budgets in 2021 has increased compared to 2019 by 0.26% and amounted to 2.79%. Expenditures per person of permanent population increased in 2021 as compared to 2020, in 2021 the amount of spending per person of permanent population per month in the regions of Ukraine averaged $ 1.23. In 2021 the amount of expenses per person of permanent population per month in the regions of Ukraine was on average 1,23 USD (in 2020 this indicator was - 1,05 USD). Also in 2021 compared to 2020, the number of regions in which the % of implementation of expenditures on culture exceeded 3% has increased. In general, over the past 3 years, a positive dynamics in the financing of the sphere of culture has been gradually formed. However, given the consequences of the war (economic and infrastructural damage), the sphere of culture will require additional support in terms of funding in the post-war period, at least at the stage of reaching the pre-war level of funding.

Under the conditions of martial law, cultural institutions, subjects of activity in the cultural sphere, and individual artists were forced to change the format and conditions of work, stop the rehearsal process, and postpone concerts and performances. This, in turn, leads to a loss of income and the threat of arrears in wages, utilities and energy, fulfillment of obligations under signed contracts, etc. New knowledge, time and skills are needed to partially restore creative activity and profit in the current situation.

There is a shortage of funding directed to the sphere of culture and in particular art education, budget deficit, unawareness of the possibilities of raising funds from other sources of funding, reduction of already low salaries in the sphere, which results in the outflow of the available human resource abroad or other spheres of economy, bankruptcy of subjects of activity in the cultural sphere, deep crisis in the cultural sphere. For the direction of digitalization there are outdated approaches including the document flow and archival storage in the cultural institutions and educational institutions of the cultural sphere.

In 2020, the European Commission approved the Action Plan for Digital Education for 2021-2027, which provides two priorities, such as accelerating the development of effective digital educational ecosystems, which requires a developed infrastructure, communications and digital equipment, effective planning and development of digital. capacity, including modern organizational capabilities, trained scientists, teachers and educators with digital competencies, high-quality educational content, tools and safe platforms that meet privacy and ethical standards and are user-friendly, the use of assistive technologies for persons with disabilities ; development of digital skills and competencies for digital transformation, including basic digital skills and competencies from preschool age, advanced digital skills.

At the same time, at the present stage of development of the country, Ukrainian art is undergoing technological modernization. These profound transformation processes are primarily due to the digital transformation of various branches (spheres) of social life and other needs of society. These factors should reorient the cultural product, modernize both the processes of industry administration and cultural and artistic spaces in order to increase the level of consumption of the national cultural product. Digitalization should enable access to cultural services and cultural products for a wide range of people, simplify the search and promote the wide use and demand for such products and services.

In addition, in view of the European strategy of Ukraine and the need to integrate into the European educational space, the important steps to modernize the structure of art education in Ukraine is its integration into the world educational and scientific space, which is confirmed by the new list of branches of knowledge and specialties approved in 2015 and its harmonization in 2021 with the International Standard Classification of Education. Harmonization in 2020. National Qualifications Framework with the European Qualifications Framework for Lifelong Learning contributed to the creation of conditions for the recognition of national educational qualifications in the international environment.	
1) Key challenges (generalized for a certain area)	1) Low adaptability and ability of cultural institutions to respond to the challenges of wartime. 2) Damaged or completely destroyed infrastructure of cultural institutions and educational institutions of the cultural sphere in the communities where active hostilities were (are) taking place. Destroyed (as a result of military actions, rocket attacks and looting by the occupants) material and technical supply of cultural institutions and educational institutions of the cultural sphere, necessary for providing the population with high-quality and accessible cultural services. 3) Expenses on the cultural sphere on the level of the state and local budgets are maximally reduced, the ability of the sphere to attract donor funds is limited. 4) Significant outflow of qualified personnel in the cultural sphere abroad and in other spheres due to Russia's aggression against Ukraine. 5) Rapid change of regional population concentration in Ukraine due to internal migration and outflow of Ukrainian citizens abroad, which led to imbalance of supply and demand for cultural products and cultural and educational services. 6) Limited access of temporarily displaced people outside of Ukraine to the cultural product in their native language together with underrepresentation of Ukrainian cultural product on the world arena.
2) Key opportunities (generalized for a certain area)	1) Construction of a new cultural infrastructure that meets the number of population, modern requirements for barrier-free and safe for all categories of the population. 2) Introduction of the newest models of the cultural services financing, realization of the projects of the state-private partnership for the cultural sphere, introduction of the cultural services markets. 3) Formation of the sufficient provision of the basic set of cultural services of the material and technical support of the cultural institutions. 4) Raising of the public demand for the national (Ukrainian patriotic) cultural product. 5) Increasing the prestige and attractiveness of professions in the field of culture, understanding the importance of culture for the development of society and society as a whole. 6) Re-qualification of workers in the cultural sphere, learning the latest skills and technologies to implement them in the process of providing quality and affordable cultural services to the population.

	7) Introduction of decolonizing studios in educational institutions of the cultural sphere.
3. Key restrictions (generalized for a certain area)	1) The constant threat of escalation of armed aggression makes it impossible for cultural and educational institutions to fully operate and for the population to return to the de-occupied territories. 2) High degree of regulation of the cultural sphere. 3) Limited finantial resources (means of the state and local budgets) and human resources. 4) Impossibility within the current legislation of program financing of independent (non-state/non-community) sector of culture, and also impossibility of co-financing from the budgets of different levels of communal and state cultural institutions and education of the cultural sphere. 5) Inconsistency of normative requirements to qualifications of workers of the sphere and their competences to challenges and tasks facing them (strategic planning, project management, fanrising, etc.). 6) The permanent status of the residual principle of financing of the cultural sphere among the first-priority priorities of renovation.

2. Goals, tasks, and stages of the Recovery Plan within the direction " Culture" of the defined area:

2.1. Goals aimed at solving a defined pressing issue

	Stage 1: June 2022 – end of 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
Defined pressing issue to be solved under the defined analysis area (description): ***1. The low ability of cultural institutions to ensure sustainable development, development of quality cultural products and the provision of cultural and educational services.***			
Goal to be achieved to solve the issue at each stage	Provided support for the activities of cultural institutions and cultural education, created incentives for the return of cultural workers to Ukraine	Conditions and incentives for the gradual restoration of the institutional capacity of cultural institutions and education of the cultural sphere are created	The ability of cultural institutions to provide modern high-quality cultural and educational services is fully restored
Timeframe under the stage	June 2022 – end of 2022	January 2023 – December 2025	January 2026 – December 2032

Risks related to the goal achievement	The prolongation of hostilities and the uncertainty of the term of their completion, the impossibility to carry out a record of damaged/destroyed cultural and educational institutions and the number of workers in the cultural sphere. Lack of financial resources. Low level of digital competence of the personnel of cultural institutions and educational institutions of the sphere of culture	The prolongation of hostilities or the threat of their renewal in some territories. Lack of funding for the restoration / creation of new infrastructure. Shortage of human resources. Low financial ability of the communities, local authorities to effectively organize the work and cooperation with the institutions, including the transportation of students/recipients of cultural services (possible lack of buses, fuel, etc.). Institutional incapacity of some institutions of culture and education in the sphere of culture to provide cultural and educational services. Difficulty in monitoring and evaluation of digitalization of the management processes	Insufficient financing of the sphere of culture. Mismatch between the needs of the institutions of the cultural sphere in the highly qualified specialists of the management level and the volume of output of the educational system Low motivation of the staff and fear of change
Goal Achievement indicator	The activities of 70% of cultural and educational institutions of culture in the controlled territories were recovered. A digital register of material damage to cultural and educational institutions has been created	The level of attendance of cultural institutions and the contingent of art education is recovered by 80% (base - 2019)	At least 80% of visitors of cultural institutions / applicants of art education are satisfied with the quality of cultural product, cultural / educational services provided by wealthy cultural institutions

General need of funds for the goal achievement	21 749,5 millions UAH	64 292 millions UAH	86 043,5 millions UAH
Goal connections with other areas/directions	Regional Policy Policies on the return of temporarily displaced persons Direction of education	Regional Policy Direction of education	Regional Policy Direction of education
Defined pressing issue to be solved under the defined analysis area (description): ***2. Low level of population involvement in the consumption of accessible cultural services and art education services***			
Goal to be achieved to solve the issue at each stage	Revision of the narratives of the content of art education, repertoire policy, formats and concepts of activities of cultural institutions was carried out	The conditions for increasing the level of public involvement in the consumption of cultural and educational services through the promotion of culture, the formation of a comfortable environment in cultural institutions, the expansion of the accessible set of cultural services for all were created. The conditions for barrier-free educational space in art education have been created.	The network of cultural and educational institutions of the cultural sphere is accessible (safe, barrier-free), meets the demand of the population and provides provision of quality cultural and educational services in accordance with this demand
Timeframe under the stage	June 2022 – end of 2022	January 2023 – December 2025	January 2026 – December 2032
Risks related to the goal achievement	The prolongation of hostilities or the uncertainty of their end.	The tendency of emigration of potential contingent of applicants for art education	Decrease of financing for art education and culture, foreign investments against the

	Relative resistance and high inertia of the scientific/academic community and cultural workers. Lack of funds to encourage the developers of new content and training of teaching staff. Lack of financial resources to update the repertoire of art institutions. Resistance of the conservative cultural community to the completion of the stage of decommunization in the public sphere	and the most qualified personnel abroad. The lack of sufficient funding for the restoration of the full-fledged functioning of the cultural institutions, cultural education and their renovation	background of loss of interest to Ukrainian issues. A small number of highly qualified personnel capable of creating a high-quality competitive cultural product. Inadequate funding of cultural institutions and educational establishments in the cultural sphere does not allow for competitiveness on the labour market
Goal Achievement indicator	The content of art education and the repertoire of cultural institutions lacks Russian narratives. At least 60% of cultural workers remained to work in the system	400 Cultural Service Centers (CSCs) have been established in the territorial communities >1,5% of pupils of art schools are children with special educational needs	1,000 Cultural Service Centers (CSCs) established in territorial communities 95% of the population has access to basic cultural services >70% of the population is involved in cultural practices 80% of consumers are satisfied with the quality of cultural and educational services 70% of the territorial communities meet the minimum standards
General need of funds for the goal achievement	Funds from the state budget, local budgets and international technical assistance (ITA), as well as other sources not prohibited by applicable law. There is a need for detailed calculations	Subsidy for construction of the CSC: 3,825 millions UAH. Cultural subvention: 7,980 millions UAH.	Subsidy for construction of CSC: 17,850 millions UAH. Cultural subvention: 18,620 millions UAH.

		Other measures and tasks: Funds from the state budget, local budgets and international technical assistance (ITA), as well as other sources not prohibited by current legislation. There is a need for detailed calculations	Other measures and tasks: Funds from the state budget, local budgets and international technical assistance (ITA), as well as other sources not prohibited by current legislation. There is a need for detailed calculations
Goal connections with other areas/directions	Regional Policy Direction of education	Direction of financial support	Direction of education Direction of financial support
Defined pressing issue to be solved under the defined analysis area (description): ***3. Lack of flexibility and adaptability of funding mechanisms in culture***			
Goal to be achieved to solve the issue at each stage	The preconditions for updating the system of financing culture in the post-war period and supporting the activities of cultural and educational institutions in the war period were provided	The system of remuneration of labor in the sphere of culture was renewed and prerequisites for the introduction of fundamentally new mechanisms of financing in the cultural sphere were provided	A modern system for financing cultural services has been created, which enables cultural institutions to verify the services provided, to attract extra-budgetary funds and to develop effectively
Timeframe under the stage	June 2022 – end of 2022	January 2023 – December 2025	January 2026 – December 2032
Risks related to the goal achievement	Inability to fully restore the provision of cultural and educational services by institutions due to the prolongation of hostilities and the uncertainty of their end. Lack of financial resources.	Limited financial resources in the state and local budgets Limited human resources for the qualitative implementation of changes	Insufficient economic capacity of the population to consume paid cultural and educational services Limited financial resources in the state and local budgets

			Limited human resource for qualitative implementation of changes
Goal Achievement indicator	The level of attendance of working cultural institutions is not less than 80% of the volumes allowed by the security situation. 90% of the contingent of applicants for art education has been preserved.	At least 2% is the share of expenditures for the sphere of culture in the total amount of the expenditures made from the local budgets. At least $5 of the expenditures on culture from the local budgets per 1 person	At least 3% is the share of expenditures on culture in the total amount of spending from local budgets. Not less than $25 per 1 person of permanent population is expenditures on culture from local budgets Salaries in the sphere of culture are not lower than the average wage in the economy of Ukraine
General need of funds for the goal achievement	Money from the state budget, local budgets and international technical assistance (ITA), as well as other sources not prohibited by applicable law. There is a need for detailed calculations	Monetary resources from the state budget, local budgets and international technical assistance (ITA), as well as from other sources not prohibited by the legislation in force. Defined pressing issue to be solved under the defined analysis area (description): ***4. Insufficient representation of Ukrainian cultural products in the world arena***			
Goal to be achieved to solve the issue at each stage	Representation of Ukrainian cultural products abroad increased	The volume of export of creative and artistic productions has increased	The volume of foreign students in the contingent of Ukrainian art institutions is increased
Timeframe under the stage	June 2022 – end of 2022	January 2023 – December 2025	January 2026 – December 2032
Risks related to the goal achievement	Extension of hostilities or uncertainty of their end date. Limited financial resources	The tendency of emigration of potential contingent of applicants for art education and the most qualified personnel abroad. Lack of financial resources to renew the repertoire of art institutions. The lack of the sufficient funding for rehabilitation of the cultural institutions and art education	Lack of subvention from the state budget to local budgets for creation of the centers of cultural services (was included in the state budgets of Ukraine for 2021 and 2022; in 2022 redirected to the reserve fund of the state budget)
Goal Achievement indicator	The number of Ukrainian cultural and artistic events abroad is not lower than 70% of the pre-war level	20% increase in the number of Ukrainian cultural and artistic events abroad	10% increase in the number of foreign students at arts and culture institutions
General need of funds for the goal achievement	Monetary resources from the state budget, local budgets and international technical assistance (ITA), as well as other sources not prohibited by applicable law. There is a need for detailed calculations	Monetary resources from the state budget, local budgets and international technical assistance (ITA), as well as from other sources not	Monetary resources from the state budget, local budgets and international technical assistance (ITA) and other sources not prohibited by the legislation in

2. The current state of implementation of program documents within the defined analysis area on the defined pressing issue:

	Title of the program document	**Current state**
	Decree of the President of Ukraine "On measures to support the sphere of culture, protection of cultural heritage, development of creative industries and tourism" of August 18, 2020 № 329/2020	In 2021 - 2022 the project "Cultural Services Centers as a Tool for Society Cohesion" was implemented in seven communities of Donetskyi, Zakarpatskyi, Zaporizhskyi, Luganskyi, Khersonskyi, Chernivetskyi and Chernihivskyi regions. Under the project: field sociological research on the current state of culture in the pilot territorial communities were conducted, during which the main problems were identified and recommendations to overcome them were developed; through focus groups and interviews with experts in the communities participating in the CCC project, information was collected on the cultural resources of the community, features of the financing of culture, cultural management system in society, problems and other circumstances affecting the development of culture in society. As of June 2022, ICIP is finalizing a practical manual on the operation of cultural service centers. Law of Ukraine No. 2042-IX of February 15, 2022 amended the Budget Code of Ukraine, in particular on the possibility of financing the CSCs at the expense of the budgets of rural, township, city territorial communities.
	State Strategy of Regional Development for 2021-2027, approved by the Cabinet of Ministers of Ukraine, August 05, 2020, No. 695	

	The concept of reforming the system of providing the population with cultural services approved by the Cabinet of Ministers of Ukraine on January 23, 2019 № 27	As of April 2022, 41% of the tasks and activities are fully implemented, 53% are in progress and 6% are not implemented.
	The concept of reforming the system of providing cultural services to the population approved by the order of the Cabinet of Ministers of Ukraine from August 19, 2020 № 1035	In 2021, studies were conducted on improving the effectiveness and efficiency of the use of budgetary funds allocated for the financial support of cultural institutions, and an analytical report with a list of key performance indicators for cultural institutions was prepared. At present the system of verification of provision of cultural services is being developed. These activities (together with others) are carried out for the purpose of development and introduction of new models of financing the cultural services provided by the state and communal cultural institutions
	Decree of the President of Ukraine "On the Decision of the National Security and Defense Council of Ukraine of May 14, 2021 "On the Human Development Strategy" of June 02, 2021 № 225	The MCIP has developed a draft Resolution of the Cabinet of Ministers of Ukraine "On Approval of Minimum State Social Standards for Provision of Citizens with Cultural Services", which has been coordinated with all interested parties. After receiving the conclusion of the Ministry of Finance of Ukraine, the draft act will be submitted to the Government. In the framework of the project "Cultural Services Centers as a Tool for Society Cohesion" three architectural models of cultural services centers were developed and distributed among the regional state administrations via the MCIP letter.
	Strategy for Integration of Internally Displaced Persons and Implementation of Mid-Term Solutions on Internal Displacement for the Period until 2024, approved by the Decree of the Cabinet of Ministers of Ukraine of October 28, 2021, No. 1364	In the framework of the project "Cultural Services Centers as a Tool for Community Cohesion" MCIP continues to work on the preparation of a practical manual on the functioning of cultural services centers in territorial communities, the publication of which is planned in the second quarter of 2022, which will provide, in particular, information on the organization of functioning of cultural services centers taking into account the needs of integration within displaced persons and enhancing social cohesion in communities.

		After publication, the relevant guide will be sent to the military state administrations for distribution to local self-governments.
3.2	National strategy on creation of barrier-free space in Ukraine for the period until 2030 approved by the Decree of the Cabinet of Ministers of Ukraine on April 14, 2021, № 366-p	The Strategy regulates the general approach to the formation and implementation of public policies to ensure unhindered access of all groups of population to different spheres of life, including culture and education.
3.3	The Cabinet of Ministers of Ukraine Decree No. 1341 dated November 23, 2011 "On approval of the National Qualifications Framework"	The National Qualifications Framework is based on European and national standards and principles of education quality assurance, takes into account labour market requirements for workers' competences and was introduced to harmonize legislative norms in the areas of education (including education in culture), promote national and international recognition of qualifications obtained in Ukraine, establish effective interaction between the education sector and labour market
	The Law of Ukraine "On Ensuring the Functioning of the Ukrainian Language as the State Language" No. 2704-VIII dated April 25, 2019	The national theaters are completing the titling and translation of performances that were held in foreign languages. Announcements, posters and other information materials on cultural and artistic and entertainment events and admission tickets are produced in the State language

3. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

п/п	**Description of the task to achieve the goal**	**Deadline for the task fulfilment**	**Dependence of the task on the tasks of other directions, areas, pressing issues**
Direction «Culture»			

Objective 1.1 Support for the activities of cultural institutions and education of the cultural sphere is provided, incentives for the return of workers of the sphere to Ukraine are created Stage 1: June 2022 - end of 2022			
1.	**Task 1.** Engaging donor funds to maintain the number of employees in cultural institutions and educational institutions of the cultural sphere, as well as to support the independent sector and artists	December 2022	Limited financial resources Not regulated by law
2.	**Task 2.** Developing recommendations for the work of cultural institutions in controlled territories, taking into account the safety of visitors	December 2022	Not regulated by the regulatory framework
3.	**Task 3:** Withdrawal of state awards of Ukraine, honorary titles (including those awarded by educational institutions) awarded to citizens who support military aggression of Russia against Ukraine	December 2022	Element of the state sanctions policy against Russia Legislatively unregulated
Objective 1.2. Conditions and incentives are created for the gradual restoration of the institutional capacity of cultural institutions and cultural education Stage 2: January 2023 - December 2025			
1.	**Task 1.** Development of legal and financial mechanisms to stimulate the return to Ukraine of cultural workers, applicants for education in the field of culture (in the form of preferential loans to pay for training)	December 2023	The limitation of financial resources
2.	**Task 2.** Development of the Procedure and methods of monitoring of provision of quality and affordable cultural services to the population	May 2025	
3.	**Task 3.** Return of full-fledged activity of educational institutions in the sphere of culture (including the use of mixed/distance forms of education; a relevant and flexible mechanism of internal and external academic mobility programs was developed) in order to provide continuous access to educational services regardless of the place of residence.	December 2025	The limitation of financial resources
4.	**Task 4.** Return of cultural institutions to full operation, secured conditions for mobility of artistic and artistic staff	December 2025	The limitation of financial resources

5.	**Task 5.** Development and implementation of trainings, professional development programs for employees of cultural institutions and educational institutions in the sphere of culture on development of competences of strategic planning, project management, fundraising, etc.	December 2025	The limitation of financial resources
6.	**Task 6.** Development and implementation of the updated management system in the cultural sphere at the local level	December 2025	Element of the general regional policy in terms of the distribution of powers among the levels of government
7.	**Task 7.** Development and implementation of training for cultural managers of territorial communities	December 2025	The limitation of financial resources
8.	**Task 8.** Develop and approve changes to the national classifier DK 003:2010 "Classifier of Occupations" approved by the Order of the State Committee of Ukraine for Technical Regulation and Consumer Policy No. 327 of July 28, 2010	December 2025	Element of general staff policy
Objective 1.3. The ability of cultural institutions to provide modern, quality cultural and educational services is fully recovered Stage 3: January 2026 - December 2032			
1.	**Task 1:** Analyzing the needs for streamlining performance evaluation of cultural workers and cultural education	December 2026	Element of general staff policy
2.	**Task 2.** Development of the legal and regulatory framework for streamlining the system of performance evaluation of cultural workers and education	December 2028	Element of general staff policy
3.	**Task 3.** Creating Conditions for Employment in the Sphere of Culture of Persons with Disabilities	December 2032	The limitation of financial resources
4.	Task 4. Updating training / qualifications upgrading courses for cultural workers	December 2032	The limitation of financial resources
Objective 2.1. The revision of narratives of the content of art education, repertoire policy, formats and concepts of activities of cultural institutions took place Stage 1: June 2022 - end of 2022			

1.	**Task 1.** Making an inventory and assessment of losses of the material and technical base of institutions of culture and education in the sphere of culture, including the availability of information and communication infrastructure**.**	December 2022	Continued combat operations Prolonged demining of de-occupied territories
2.	**Task 2.** Analysis of the existing number of cultural workers and educational institutions of the cultural sphere (in relation to the pre-war period**)**	December 2022	Continued combat operations
3.	**Task 3.** Conceptualization of the model of infrastructure of cultural and educational institutions in the sphere of culture, including its transition/new formats - educational and artistic hubs, educational centers, centers of modern culture, centers of cultural services, theatrical co-working centers, etc.	December 2022	Not regulated by law Limited financial resources Outflow of qualified personnel from the cultural sphere
4.	**Task 4.** Development and dissemination of the practical manual "Cultural services centers in territorial communities**".**	December 2022	
5.	**Task 5.** Identification of the need and a system of incentives for changes in educational and training programs, repertoires of concert organizations, theaters to remove Soviet and Russian narratives from them. Continued work to decommunize and derussify works of art in public spaces, creating a model for museumification of Soviet artistic heritage.	December 2022	Not regulated by the law. Outflow of qualified personnel from the cultural sphere
Objective 2.2. The conditions for increasing the level of involvement of the population in the consumption of cultural and educational services through the promotion of culture, the formation of a comfortable environment in cultural institutions, the expansion of the accessible set of cultural services for all are created. **Development of conditions for barrier-free educational space in art education is provided.** Stage 2: January 2023 - December 2025			
1.	**Task 1.** Reinstatement of subventions from the state budget to local budgets for the creation of Cultural Service Centers	September 2023	Continued combat operations. The limitation of financial resources
2.	**Task 2.** Development of the draft order of the Ministry of Culture and Information Policy of Ukraine on the approval of the Model staff schedule for cultural services centers	December 2023	

3.	**Task 3.** Endorsement of the Minimum Standards for provision of the population with cultural services	December 2023	The limitation of financial resources
4.	**Task 4.** Amendments to the Budget Code of Ukraine in the part of introduction of cultural subventions from the state budget to finance provision of the basic range of cultural services.	July 2024	The limitation of financial resources
5.	**Task 5.** Approval of the Procedure and Conditions for providing cultural subventions from the state budget to local budgets to finance provision of a basic range of cultural services.	December 2024	Dependent on the adoption of amendments to the Budget Code of Ukraine and the Minimum Standards
6.	**Task 6.** Creation of cultural service centers and conditions for functioning of new formats of providing complex educational services in the form of educational and cultural hubs, revitalized spaces, cultural service centers, theater co-working centers, etc.	December 2025	The limitation of financial resources
7.	**Task 7.** Development and launch of the pilot phase of a nationwide demand stimulation program for children/adolescents	December 2025	The limitation of financial resources
8.	**Task 8.** Quoting in TV and radio programs for promotion of Ukrainian culture	December 2025	The limitation of financial resources
9.	**Task 9.** Raising the share of Ukrainian cultural products in the repertoire of cultural institutions	December 2025	The limitation of financial resources
10.	**Task 10.** To extend the experience in introduction of inclusive art education to the whole Ukraine, to increase the share of children and adults from OOP in the total contingent of applicants for art education	December 2025	The limitation of financial resources
Objective 2.3. The network of cultural and educational institutions of the cultural sphere is accessible (safe, barrier-free), meets the demand of the population and ensures the provision of quality cultural and educational services in accordance with this demand. Stage 3: January 2026 - December 2032			

1.	**Task 1.** Development of Cultural Services Centers in Territorial Communities	December 2032	The limitation of financial resources
2.	**Task 2.** Introducing in communities the minimal standards of citizens' provision with cultural services	December 2032	Dependent upon adoption of amendments to the Budget Code of Ukraine, Minimum Standards and Subventions Procedures and Conditions
3.	**Task 3.** Establishment of an optimum network of educational and contemporary cultural institutions/centers in Ukraine and abroad, taking into account the safety and standards and barrier-free principles	December 2032	Not regulated by law The limitation of financial resources
4.	**Task 4.** Fully operating nationwide demand stimulation program for children/adolescents	December 2032	The limitation of financial resources
5.	**Task 5.** Promotion of consumption of the cultural product and cultural/educational services, raising the prestige of the profession in the cultural sphere	December 2032	The limitation of financial resources
Objective 3.1. The prerequisites for updating the system of financing the sphere of culture in the postwar period and supporting the activities of cultural and educational institutions during the war period are provided Stage 1: June 2022 to the end of 2022			

1.	**Task 1.** Development of amendments to the order of the Ministry of Finance of Ukraine No. 11 of January 14, 2011 "On Budgetary Classification".	October 2022	Not regulated by law
2.	**Task 2.** Development of amendments to the order of the Ministry of Finance of Ukraine No. 7931 of September 20, 2017 "On approval of the components of the Program Classification of Expenditures and Local Budget Crediting"	October 2022	Not regulated by law

3.	**Task 3.** Providing funding for the cultural sector in order to resume the activities of institutions of the state/municipal/independent sectors and support for individual artists by attracting donor funds	December 2022	Mechanisms of raising funds from sponsors have not been regulated by law The limitation of financial resources Outflow of qualified personnel from the cultural sphere
Objective 3.2. The system of remuneration of labor in the cultural sphere is updated and the prerequisites for the introduction of fundamentally new mechanisms of financing of the sphere of culture are provided Phase 2: January 2023 - December 2025			
1.	**Task 1:** Analysis and evaluation of the remuneration level of cultural workers at the local level	December 2023	Limited human resources
2.	**Task 2.** Analysis of the condition of financing of the cultural sphere at the regional and local levels, based on the results of 2022	August 2023	Limited human resources
3.	**Task 3.** Analysis of financing of cultural sphere on the regional and local levels according to the results of 2023, identifying peculiarities of dynamics in comparison with 2021 (pre-war) and 2022	August 2024	Limited human resources
4.	**Task 4.** Development of a legal framework for implementation of a fundamentally different system of financing culture in Ukraine (program financing based on performance results, regardless of the form of ownership of a cultural institution**).**	April 2025	Not regulated by law The limitation of financial resources
5.	**Task 5.** Implementation of a pilot project to introduce a new system of financing for culture (in several regions).	December 2025	Not regulated by law The limitation of financial resources
6.	**Task 6.** Development of amendments to a number of normative legal acts on regulation of conditions for remuneration of workers of state/municipal sectors of culture and culture education (including wage scales, system of additional payments for titles and state awards) and increasing autonomy of institutions in terms of remuneration	December 2025	Based on the results of the preliminary analysis

7.	**Task 7.** Development and adoption of the Law of Ukraine on patronage in the cultural sphere	December 2025	Budgetary law Tax Policy
8.	**Task 8:** Stimulation and support of local initiatives for preparation of investment projects aimed at development of cultural infrastructure, in particular those submitted for competitive selection at the expense of the State Regional Development Fund	December 2025	The limitation of financial resources
Objective 3.3. A modern system of financing of cultural services is created, which allows institutions to verify the services provided, to attract extra budgetary funds and to develop effectively Phase 3: January 2026 - December 2032			
1.	**Task 1:** Analysis of the status of financing in the cultural sector for the period from 2021 to 2025, identifying the main problems and solutions	August 2026	Limited human resources
2.	**Task 2:** Updating the list of paid services that may be offered by cultural institutions.	December 2026	Depending on the results of the analysis of the state financing of the cultural sphere
3.	**Task 3.** Analysis of international experience in using public-private partnerships for financing the cultural sector	December 2026	Limited human resources
4.	**Task 4.** Research international experience in developing and implementing a system of verification for cultural services provision, and prepare recommendations for introducing such a system in Ukraine.	December 2027	Limited human resources
5.	**Task 5.** Initiate public-private partnership projects for culture	December 2028	Not regulated by law The limitation of financial resources
6.	**Task 6.** Development of the legal framework for implementation in Ukraine of the system of verification of cultural services provision	December 2030	Limited human resources

7.	**Task 7.** Development and introduction on the whole territory of Ukraine of the system of financing cultural institutions on the basis of their performance indicators regardless of their form of ownership.	December 2032	The limitation of financial resources Not regulated by law
8.	**Task 8.** Stimulation and support of local initiatives for preparation of investment projects, aimed at development of cultural infrastructure, in particular those submitted for competitive selection at the expense of the state fund of regional development	December 2032	The limitation of financial resources
Objective 4.1. Increased representation of Ukrainian cultural product abroad Stage 1: June 2022 - end of 2022			
	Task 1. Ensuring the presence of Ukraine at the key world art events (festivals, fairs, exhibitions, biennales, etc.)	December 2022	The limitation of financial resources
Objective 4.2. Increased export of creative and artistic product Stage 2: January 2023 - December 2025			
	Task 1. Development of modern cultural product by cultural institutions for promotion of Ukraine abroad	December 2025	The limitation of financial resources
Objective 4.3. The volume of foreign students in the contingent of Ukrainian art institutions is increased Stage 3: January 2026 - December 2032			
	Task 1. Development of conditions for the integration of artistic education into the European educational space, which allowed to attract more foreign students.	December 2032	The limitation of financial resources

4. List of national projects on the fulfilment of the task stated in Subsection 4 (for the corresponding task)

Description of the project to the task N from the Subsec. 4	**Project justification**	**Qualitative indicators of the project implementation**	**Economic effect (Influence on GDP, budget, employment, etc.)**	**Responsible public authority**	**Approximate need of funds (million, UAH)**	**Suggested funding sources**	**Required regulatory framework**	**Related areas of the EU legislation (general comment)**

Goal 2, Assignment 3, Step 1 **Professional Institute for the Study and Museography of Contemporary Art**	The Museum of Modern Art has not been established in Ukraine since 1991, as a result of which a large volume of artifacts from the period of independence have not been archived, museified or purchased into the state museum fund. The need to archive and museify contemporary art and to create a specialized institution for it is urgent, especially in the times of threat to the national identity. A new type of institution should unite representatives of the art and expert community for development of a full-fledged art system and a platform for professional dialog.	Number of citizens involved in interaction with contemporary art Number of contemporary artists represented in the collection of the Institute Number of international projects implemented at the Institute	Generation of jobs in the field of contemporary art (+100 jobs) Increase of demand for contemporary art works, revival of the art market	MCIP State Agency of Ukraine for Art and Art Education	500,00 (2023-25: 150,0 2026-32: 350,0)	Funds of the Reconstruction Fund State budget (if any)	regulatory instruments	

Goal 2, Task 6, Stage 2. **Cultural conference.**	The annual meeting of representatives of the cultural and creative industries at a large-scale conference, which will serve as an all-Ukrainian platform for communication, internal communication, accountability and articulation of cultural policy. The main event for the specialists of the branch. Through the Cultural Conference will achieve the main goal of uniting around the culture of the whole country and the understanding of the activity and effectiveness of the industry. An effective method of communication of cultural policies and innovations.	Maximum number of representatives of cultural sector from all over Ukraine Attraction of the most prominent representatives of the branch setting world standards for demarginalization of culture Number of joint, exchange projects, professional trips and subprojects under the brand of the Cultural Conference the place of the event will be determined annually	Growth of at least 5% of foreign investments (donor funds) for the implementation of joint, exchange projects, professional trips and sub-projects under the brand of the Cultural Conference, which will improve the exchange of knowledge and expertise within the country and with foreign countries the emergence of incentives for the professional workforce to return to Ukraine, creating an additional 100 jobs per year	MCIP	50,0 millions UAH 2022: 2 millions UAH 2023 - 2025: 16 millions UAH 2026 - 2032: 32 millions UAH	Funds of the Recovery Fund State budget; Local budgets; International technical assistance (ITA) funds	regulatory instruments	
Goal 4 **task 1** **Stage 2**	The increasing number of international exhibition projects,	will increase the prestige of Ukrainian culture abroad	annual growth in the number of events within the framework of	MCIP MFA,	1 000,00 millions UAH per year	Funds from the Reconstruction Fund	regulatory instruments	

Cultural export	touring events abroad is an important tool for integration of Ukrainian art into European and world cultural space. Through the active promotion, regular artistic events and constant participation of Ukraine and the key artistic events (festivals, exhibitions, competitions, fairs, etc.) Ukrainian culture will become a lever of influence and acquiring the subjectivity of the country on the world stage. In addition, it will create a competitive environment among Ukrainian artists and institutions of culture, which, in turn, will increase the professional level of national culture. Necessary steps: - Increasing the capacity and expertise within the country to establish international partnerships (project	will help to attract additional funds from touring events will contribute to the attraction of business representatives to the creation of a cultural product	foreign tours and international exhibition projects by not less than 20% annual growth of income from conducting touring events abroad by not less than 5%.	State Agency of Ukraine for Art and Art Education		state budget; local budgets; International technical assistance (ITA) funds		

	management, fund-raising in the EU, English language) - Visits to Ukraine of international agents, publishers, promoters, festival producers to build horizontal productive relationships - support of participation of groups and artists in major festivals and events, support of touring activities - Development of centers of Ukrainian culture abroad in collaboration with mayor's offices of European cities							
Goal 2, objective 3 Steps 1, 3 **National network of centers of contemporary culture**	The centers should become one of the accessible formats for meetings with Ukrainian culture for a wide audience. Technologically, fashionably, available with all the necessary services (café, book and art store, etc.). Centers must be	number of centers, involved personnel, partners number of visitors international activity number and quality of projects	the number of innovative projects created and implemented in the sphere of cultural and creative industries is growing which will influence the GDP growth (multiplier is 2-2,5 UAH till 2026);	MCIP	20 000,00 millions UAH 2023 - 2025: 6 000,00 millions UAH 2026 - 2032:	Funds from the Reconstruction Fund state budget; local budgets; International technical assistance (ITA) funds	legal acts	

	designed for constant renewal and expansion of activities. The approach to the projects is national, the program council, which includes the most influential managers of the Ukrainian culture, manages the projects. Ukraine still does not have a state museum of contemporary art, but as experience shows, it is a complicated and long-term process. The proposal is to quickly create a unified network of cultural centers, where the main activity would be the representation of modern trends in culture, not excluding the work with the heritage. In order to understand the geography, research is conducted and	professional activity educational programs, activity in web space, innovations increase in the number of visitors of cultural institutions and education increase in demand for Ukrainian cultural products increase in the number of interested communities to create centers the ability to launch the network quickly in 1.5-2 years	the number of visitors (consumers) of the cultural product grows by 10% annually and as a result the level of incomes of the subjects of activity in the cultural sphere grows by 10% annually creation of additional workplaces (150-200 by 2023 plus 100 workplaces annually) emergence of incentives for the return of a professional workforce to Ukraine		14 000,00 millions UAH			

	locations are identified. Emphasis on the visual arts, educational programs, cultural services, performative programs. Annual programs and tourist exhibitions are developed. Considering local peculiarities, some centers have areas of permanent exhibitions. Local management and management is carried out by local specialists. Creates a program of motivation, education and professional development of art managers, curators of the network. The only web-site, attraction of the best Ukrainian specialists of culture for creation and presentation of cultural product							

Goal 2, task 4, stage 3 **"Cultural Passport" -** a program that allows Ukrainian schoolchildren to become familiar with various types of art and contemporary creative industries, including - interdisciplinary innovative creative practices, through their own experience	The state gives the pupils of 6-18 years old an opportunity to get access to a qualitative cultural product or service, thus on the one hand - stimulating the demand for such services among the population, and on the other - strengthening the competition between the representatives of the cultural and artistic sphere and the creative industries. The program provides permanent funding for a year per pupil and is distributed by educational institutions according to the number of pupils/students ("money for a child")	level of involvement of pupils/students to the programme number of service providers under the program level of customer satisfaction with the program product	Increase of incomes of cultural and creative industries institutions by 800 000,00 thousand UAH stimulation of demand, expansion of the consumer base in the cultural sector Increasing the level of competition in the sphere between institutions and organizations, which will lead to an increase in the quality of the cultural product	MCIP State Agency of Ukraine for Art and Art Education	775 000,00 thousand UAH (1-2 stages: 2022 - 2025) 920 000,00 thousand UAH per year (3 stage in total: 6 440 000, 00 thousand UAH)	State budget (if any) Funds from the Reconstruction Fund)	Requires the development of regulations	
Goal 2: **task 1 step 1;** **task 6** **stage 2;** **task 1** **stage 3.**	Cultural services centers are the best option for the restoration of the cultural infrastructure in the conditions of post-war	number of established CSCs; percentage of communities that have established CSCs;	Increasing the efficiency of local budgets by optimizing inefficient ramified networks	MCIP Ministry of regional development Ministry of Finance	3 825 millions UAH (2 stage - 2023-2025) 17 850 millions UAH (3 stage	State budget Local budgets Funds of the Reconstruction Fund	Including a subsidy for the establishment of the CSC in the laws of Ukraine on the State	

Development of a network of Cultural Services Centers	reconstruction, because on the one hand they will replace the destroyed cultural infrastructure, which has not always been a modern and comfortable environment, and on the other hand they will optimize budget spending, because several types of cultural institutions destroyed in one settlement can now be housed in one CSC	percentage of population involved in cultural practices	of cultural institutions		- 2026 - 2032)		Budget of Ukraine for each year starting from 2024. Approval of a number of resolutions of the Cabinet of Ministers of Ukraine. A number of amendments to the orders of the central executive authorities in accordance with the tasks	
Goal 2, task 3-5, step 2 **Goal 2, task 3 step 3** **Goal 3 (all objectives and stages)** **Updating of the mechanism of financing of the system of provision of the population**	Cultural services and creative expression are among the main factors of harmonious personal development and mild psychological rehabilitation and social adaptation. The latter is especially important in the conditions of post-war reconstruction of Ukraine. To provide	the amount of expenditures per person from the local budgets for culture the percentage of the difference between the average wage in the cultural sector and the average wage in the economy in Ukraine;	In the medium term will lead to a more effective use of available financial resources and increase the contribution of creative products to GDP	MCIP Ministry of Finance Ministry of Economy State Agency of Ukraine for Art and Art Education	7 980 millions UAH (2 stage - 2023-2025) 18 620 millions UAH (3 stage - 2026 - 2032)	State budget Local budgets Funds of the Reconstruction Fund ITA	Introduction of amendments to a number of existing, development of new normative and legal acts aimed at updating the mechanism for financing the system of providing cultural services to	

with cultural services	the population with basic cultural rights it is necessary to create conditions for the provision of quality cultural services of the basic set. Provision of quality cultural services is possible only with the modern material and technical support of cultural institutions. Sufficient "financing of the sphere" is one of the guarantors of its development, and in the case of cultural services - also a guarantor of the development of human capital of the state, directly affecting its economic development in the future.	the share of expenditures on culture in the total expenditures of local budgets; the share of the population involved in cultural practices; the percentage of the population with access to quality cultural services; the share of territorial communities that meet minimum standards					the population Amendments to the Budget Code of Ukraine Inclusion of the subvention for financing the provision of the basic set of cultural services in the laws of Ukraine on the State Budget of Ukraine for each year starting from 2026. Approval of a number of resolutions of the Cabinet of Ministers	

5. Necessary legal and regulatory support

	services (task 5 of the goal 2.2)				
18.	Resolution of the Cabinet of Ministers of Ukraine on approval of the Procedure and methods of monitoring of provision of population with qualitative and available cultural services (task 2 of goal 1.2)	Defining the procedure and methods of monitoring the provision of quality and affordable cultural services to the population	MCIP	May 2025	May 2025
19.	Legal basis for regulation of the system of evaluation of cultural workers (task 2 of goal 1.3)	Amendments to a number of regulatory legal acts in terms of introduction of key performance indicators for employees of cultural institutions	MCIP State Agency of Ukraine for Art and Art Education	December 2028	December 2028
20.	Regulatory legal basis for introduction in Ukraine of the system of verification of provision of cultural services (task 6 of the Goal 3.3)	Amendments to a number of regulatory legal acts in terms of implementation of the system of verification of provision of cultural services in order to increase the efficiency of budgetary funds use	MCIP State Agency of Ukraine for Art and Art Education	December 2030	December 2030

2. Creative Industries

1. Key pressing issues to be solved under the Recovery Plan

<table>
<tr><td colspan="2">The impact of war on the sphere:
37% of workers employed in creative industries lost their jobs or do not get paid during the war.
39% of creative businesses experience the decrease/lack of orders and sales.
A quarter of creative businesses experienced a turnover decrease of more than 90%.
20% of the creative industries representatives went abroad due to the war.
As for the existing state support measures, 37% of creative entrepreneurs pointed out that their business does not meet the required conditions of the support programs, namely they have an unsuitable NACE code or legal form. 28% of creative entrepreneurs stated that these measures do not address the issues of the creative business and do not satisfy its needs.
Due to the sequestrations, the budgets of the Ukrainian Cultural Foundation and the Ukrainian Book Institute have been cut.</td></tr>
<tr><td>1) Key challenges (summarized for the defined area)</td><td>The collapse of supply and demand chains, the decrease in domestic and foreign orders due to the security issues and mobilization of men.
Job loss; unfavourable work conditions for those creative professionals who keep working (air sirens, poor Internet connection, and lack of the necessary equipment).
Loss of production capacity (the ruination of offices, factories, workshops, etc.).
Brain drain, professionals fleeing abroad, the non-return of talents to Ukraine after the war.
The decrease of education quality in creative industries due to the irregularity of the educational process.
The risk of low prioritization of creative industries after the war (the overwhelming attention to the “real” sector of the economy: construction, agriculture, transportation, engineering, etc.).</td></tr>
<tr><td>2) Key possibilities (summarized for the defined area)</td><td>International technical assistance. Donors and international organizations provide funding to support creative industries in Ukraine. The EU programs House of Europe and EU4Culture offer grants and stipends, the USAID CEP offered financial assistance to artisans, and the EU4Business program offers SMEs grants for different sectors, including creative industries.
Special attention should be paid to the EU salary subsidy program — SURE. https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/financial-assistance-eu/funding-mechanisms-and-facilities/sure_en
The identification/emergence of new markets for the Ukrainian creative product.
A powerful horizontal coordination of volunteers, the self-organization of the sphere, and the launch of non-governmental initiatives aimed at maintaining the sector's employment.</td></tr>
<tr><td>3) Key constraints (summarized for the defined area)</td><td>The lack of funding to support creative industries.</td></tr>
</table>

	• The current tools aimed at supporting businesses do not take into account the specificity of creative industries. The agricultural sector is prioritized, rather than culture, which is evidenced by the differing access to relocation programs and the 5-7-9 credit scheme. • The lack of coordination between different initiatives aimed at helping the sector, which dissipates the attention and efforts of donors. • Incoherent tax and economic policy of the state as well as outdated labour legislation.

2.1. Goals aimed at solving a defined pressing issue:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
Defined pressing issue to be solved under the defined analysis area (*description*) ***Job loss in creative industries***			
Goal to be achieved to solve the issue at each stage	Preserve employment at 60%, as compared to the pre-war level	Reach the pre-war level of employment	Increase employment Increase the export of the creative product
Timeframe under the stage	End of 2022	2025	2032
Risks related to the goal achievement	The continuation of warfare in Ukraine, the unstable and unfavourable economic and tax policy	Lack of funding, the unstable and unfavourable economic and tax policy	Lack of funding, the unstable and unfavourable economic and tax policy, Russian revanchism
Goal achievement indicator	220 thousand employed creative professionals	380 thousand employed creative professionals	600 thousand employed creative professionals
General need of funds for the goal achievement			

Goal connections with other areas/directions	International assistance	International assistance, export promotion, tax liberalization, improved labour legislation, accessible credits, creation of new institutions, international cooperation	Export promotion, tax liberalization, improved labour legislation, accessible credits, creation of new institutions, international cooperation

3. The current state of implementation of program documents within the defined analysis area on the defined pressing issue:

	Title of the program document	**Current state**
	National Economic Strategy 2030 (regarding the development of creative industries)	The following task is completed: "the expansion of grant opportunities that are provided by governmental institutions in creative industries to increase competition, inclusivity, innovation, and added value of the creative product, including regional development that takes place due to the grant support by the state". However, the war and the budget sequestration made it impossible to maintain old and introduce new formats of the grant support from the Ukrainian Cultural Foundation and the Ukrainian Book Institute. The following task is in progress: "the introduction of sectoral policies for the promising sectors of creative industries in Ukraine, such as arts and crafts: the introduction of the new economic model for arts and crafts as a creative sector, which will help to unleash their export, tourist, and regional potential, including the creation of condition for the branding of the craft products by means of geographical indications and hallmarking". The Order of the Cabinet of Ministers of Ukraine No. 1677-p dated 15 December 2021 approved the State National and Cultural Program of the Development of Arts and Crafts for 2022-2025. Due to the war that shifted the funding away from culture and creative industries towards other spheres and limited the institutional capacity of the Ministry and its umbrella institutions, the execution of strategy's tasks is problematic.

4. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

п/п	Description of the task to achieve the goal	Deadline for the task fulfilment	Dependence of the task on the tasks of other directions, areas, pressing issues
Goal: Preserve employment at 60%, as compared to the pre-war level			
Stage 1: June 2022 - end of 2022			
	Task 1 Creation of proper work conditions for those workers in the creative industries who stayed in Ukraine.	December 2022	mobilization and migration policies the prioritization of CI when it comes to relocation programs
Goal: Reach the pre-war level of employment			
Stage 2: January 2023 - December 2025			
	Task 1 The provision of support to creative businesses that resume activity, and the strengthening of their capacity	December 2025	international assistance from the EU and US institutions and programs and in Ukraine (USAID, EUNIC, HouseofEurope, EU4Culture)
	Task 2 The creation of strong and capable governance system in creative industries	December 2025	Ministry of Finance, the financing of the new governmental institution aimed to support CI, international assistance
Goal: Increase the export of the creative product and employment in creative industries			
Stage 3: January 2026 - December 2032			

	Task 1 The education in creative industries brings up new talent and responds to the market needs	December 2032	international partnerships (Ministry of Foreign Affairs), educational policy (Ministry of Education and Science)
	Task 2 The completion of economic liberalization in creative industries	December 2032	Tax policy, banking legislation, Ministry of Finance

5. List of national projects on the fulfilment of the task stated in Subsection 2.3 (for the corresponding task)

1	2	3	4	5	6	7
Description of the project to the task from the Subsec. 2.3	**Project justification**	**Qualitative indicators of the project implementation**	**Responsible public authority**	**Approximate need of funds (million, UAH)**	**Suggested funding sources**	**Required regulatory framework**
Stage: Economics and institutions of wartime (short-term) – "Victory above all else!" (June 2022 – end of 2022*) * In case warfare continues, the plan will be amended in the 4th quarter of 2022, and this stage will be extended by the of 2023						
Exception from mobilization/permission to cross the border for the workers of the defined creative sectors	Creative professionals (in design, marketing, advertisement, IT sectors, etc.) depend to a lesser extent on the equipment and raw materials, as compared to those who work in other spheres. That is why, they can continue working during the war and exporting their services, thus contributing to the budget. At the same time, the mobilization of	The representatives of the defined creative sectors that keep working during the war must be exempt from mobilization during a certain period of time.	Ministry of Defence State Border Guard Service of Ukraine Ministry of Defence Ministry of Culture and Informational Policy	Not needed	Not needed	Amendments to the Resolutions of the Cabinet of Ministers of Ukraine No. 57 dated 27 January 1995 and No. 194 dated 03 March 2022.

	creative employees who keep working leads to the failure to perform, according to the agreements signed with clients. The exemption from military service is already available for those working in the agricultural sphere and critical industry, and it is suggested to expand it to creative industries as an important and export-oriented sector.					
Training for creative professionals to boost their entrepreneurial skills on the international market	Since the full-scale war started and due to the collapse of the domestic demand and supply chains, some creative professionals have switched to international markets. This activity requires additional skills and competencies (selling goods on international platforms, use of international payment systems, logistics, protection of intellectual property, etc.). Thus, seminars, training, and workshops should be held to increase the export competencies of creative industries. Similar events have been already organized for the arts and crafts sector by the Creative Industries Office under the Ministry of Culture supported by the USAID Competitive Economy Program.	1000 creative professionals completed the training and expanded competencies of working in the international environment (12 webinars)	Ministry of Economy Ministry of Culture and Informational Policy Entrepreneurship and Export Promotion Office Partners and donor organizations	USD 5,000	International assistance	

Promotion of the Ukrainian creative goods and services on the international market	The foreign demand for Ukrainian goods and services can become a source of inflow of currency into Ukraine, but the majority of creative businesses (brands, start-ups) are still unfamiliar to the foreign audience. It is suggested to provide the informational support for the initiative "Spend with Ukraine", which encourages foreigners to buy Ukrainian goods and services; Ukrainians brands should be encouraged to register on the platform.	100,000 views of the platform	Creative businesses Ministry of Culture and Informational Policy	UAH 3 m.	International assistance	
The provision of grants for the production of music videos	The opportunity to produce music videos will preserve employment (of musicians, authors, producers, directors, camerapersons, choreographers, artists, etc.) in the musical and audio-visual industries and preclude the professionals from leaving the sphere.	100 music videos produced; 2,000 jobs preserved.	Ukrainian State Film Agency	UAH 50 m.: UAH 25 m. for the production of music videos; UAH 25 m for the production of socially-relevant videos	State budget (budget of the Ukrainian State Film Agency)	
Renewal stage (medium term) – "Renewal, restart of the economy and institutions" (2023 – 2025, including additional detalization for the year 2023)* * In case warfare continues, the plan will be amended in the 4th quarter of 2022, and this stage will be extended to the years 2024-2026						
The support for the creative professionals who choose to return to Ukraine or renew their	37% of creative professionals that used to have stable employment prior to the war are now unemployed. Due to the high level	20,000 creative workers supported (compensation of salaries — UAH	Ministry of Economy MFA	20,000*6*1,000 0 = UAH 1,200, 000,000	International assistance	

activity after the war	of education, high mobility, and the knowledge of foreign languages, creative professionals are likely to emigrate from Ukraine and work abroad. The non-return of talents to Ukraine and brain drain are happening due to the lack of security, employment, guarantees, and demand. At the same time, the training of these professionals takes a lot of time, which is why the loss of creative professionals for the Ukrainian economy is a major issue. The solution is to offer subsidies to creative enterprises that do not have orders to cover the employees' salaries, which will help to preserve employment in the sphere.	10,000/month for 6 months)	Ministry of Digital Transformation Ministry of Culture and Informational Policy Government Office for Coordination on European and Euro-Atlantic Integration	**USD 41 m.**	Ukraine Recovery Fund Official account of the National Bank of Ukraine for the donations in support of Ukraine 'United24' **It is also suggested to join Ukraine to the EU SURE program** that would subsidise salaries of the creative workers to preserve their employment https://ec.europa.eu/info/business-economy-euro/economic-and-fiscal-policy-coordination/financial-	

					assistance-eu/funding-mechanisms-and-facilities/sure_en	
The support for production and export capacity of creative industries	Due to the logistical issues and destroyed infrastructure (equipment, raw materials), creative businesses cannot produce and export goods. The suggestion is to establish a grant program that would support the production and export capacity of the creative industries (funds to purchase raw materials and equipment, set up logistics, send orders within Ukraine and abroad, support relocation, marketing and communication expenses, IT support, etc.).	At least 500 creative businesses benefited from the program (2,500-5,000 workers). At least 500 grants were provided for the Ukrainian creative businesses aimed at strengthening their production and export capacity	Ministry of Economy MFA Ministry of Digital Transformation Ministry of Culture and Informational Policy	Euro 2,150,000 (300 grants of Euro 5,000, 200 grants of Euro 10,000) **Total:** **USD 2.26 m.** **UAH 67.5 m.**	International assistance Ukraine Recovery Fund State budget Official account of the National Bank of Ukraine for the donations in support of Ukraine 'United24'	
The launch of the National Creative Industries Office (NCIO) as the chief provider of state assistance for the creative businesses and	Currently, Ukraine does not have a mechanism or an institution that allows for the rapid assistance to creative businesses — there is either support of cultural projects or general assistance to businesses, which does account for the	The creation of a state institution that provides targeted assistance adjusted to the requirements and specificity of the	Ministry of Culture and Informational Policy Ministry of Finance	UAH 70 m. per annum UAH 210 m. in 2023-2025 (+ funds for separate support programs	Ukraine Recovery Fund State budget (new budget for NCIO needed)	Law on the National Creative Industries Office The Procedure for using funds within the budget program of NCIO

creative industries development	specificity of creative businesses (such as cheap credits that are unavailable to CI due to the absence of collateral). That is why an institution should be created that would be responsible for the accumulation and distribution of targeted assistance to creative businesses. This institution will implement chief assistance programs based on **sector-specific** needs (increase of production and export capacity; rent rebates for fashion brands in malls; grant support for R&D, incubation and acceleration of creative enterprises, business consulting, etc.). The launch of the institution is envisioned by paragraph 3 of the part 2 of the Chapter II 'Final Provisions' of the Law of Ukraine 'On Introducing the Amendments to the Law on Culture regarding the General Principles of Providing Cultural Services to the Population'.	creative businesses. At least 200 businesses benefited from the institution's activity during the first year after its creation.		implemented by NCIO: UAH 75 m. for the support of creative businesses; UAH 305 m. for the Creative Backpack program; UAH 10 m. for the development of the educational creative industries products; UAH 5 m. for the analysis of creative industries, etc.)	International assistance	

Support and development of projects in the sphere of culture	The grant support for the realization of projects in the spheres of culture and CI aims to:	1) 1,500 grants in the sphere of culture and CI	Ministry of Culture and Informational Policy	UAH 2,400 m (2023-2025)	Ukraine Recovery Fund	Amendments to the Law of Ukraine on

and creative industries (based on the activities of the Ukrainian Cultural Foundation)	- support the renewal of the activity of enterprises and institutions in the spheres of culture and CI; - support the renewal of the production of the innovative cultural product; - support of artists; - support of international cooperation in the spheres of culture and CI.	distributed to renew the production capacity and the creation of new jobs (2023-2025); 2) 1,500 grants distributed that support cultural and artistic projects; 3) 200 stipends awarded to artists (2023-2025); 4) 50 projects and 100 stipends for those involved in international cooperation distributed		UAH 1,700 m. (2023-2025) UAH 17 m. (2023-2025) UAH 700 m and 15 m. (2023-2025) Total: UAH 4,832 m.	State budget (Ukrainian Cultural Foundation budget program No. 3801140) Charitable donations Official account of the National Bank of Ukraine for the donations in support of Ukraine 'United24'	the Ukrainian Cultural Foundation
The support for creative hubs	Since creative hubs encourage cross-sectoral collaboration, and the creation of a competitive product, the suggestion is to run the following programs: - the education of creative hub managers (based on the materials of the British Council); - grants for creative hubs technical provision and project activities; - the cooperation of hubs with local universities, enterprises, and clusters.	1,000 CI professionals per annum benefit from the program supporting creative hubs	Ministry of Culture and Informational Policy Development partners, including the British Council in Ukraine	UAH 10 m. per annum (UAH 30 m. in 2023-2025)	Ukraine Recovery Fund International assistance (including the British Council in Ukraine) Ministry of Culture and Informational Policy (budget of the NCIO)	

	This project can be implemented as part of the activity of NCIO and the British Council in Ukraine.					
The development of policymaking skills in creative industries	To further prioritise creative industries as a source of the development of economy, communities, and cities and to understand their impact on the social and cultural life, it is necessary to educate decision-makers (representatives of central and local authorities, NGOs, local deputies, etc.) regarding the foundation of strategic planning and development of creative industries. The education can take place on the basis of the education program for policymaking "Supporting the creative economy" that was developed jointly by the British Council and Cultural Associates Oxford and adjusted to the Ukrainian context.	1,000 persons per annum completed the education	Ministry of Culture and Informational Policy Development partners, including the British Council in Ukraine	USD 50,000 per annum (in 2023-2025 — USD 150,000 (approximately UAH 4,395 m.)	Ministry of Culture and Informational Policy Development partners, including the British Council in Ukraine	
The support for cross-sectoral project in creative industries	To develop the Ukrainian creative product, adopt innovative high-tech approaches, and increase the capacity of CI representatives, the following initiatives should be supported: - collaboration between different creative sectors (crafts+design, design+IT, etc.)	Every year at least 20 cross-sectoral projects in creative industries take place	Ministry of Culture and Informational Policy Development partners, including the British Council in Ukraine	USD 100,000 per annum (in 2023-2025 — USD 300,000 (approximately UAH 8.79 m.)	Ministry of Culture and Informational Policy Development partners, including the British Council in Ukraine	

	- the exchange of experience between the representatives of different creative industries; - established platforms for cross-sectoral cooperation in creative industries. Ukraine has already facilitated this kind of cooperation: for example the program realized by the Ministry of Culture and Informational Policy and supported by USAID CEP fosters cross-sectoral cooperation between artisans and those employed in the tourism and design sectors.					
The conduct of regular analysis in creative industries	There is a need to perform regular statistical analysis of the economic effects of creative industries (macroeconomic data, multipliers) and their spillover effects in the social, culture, and regional domains, which will allow to advocate for the prioritization of creative industries in the future. These studies can be performed by NCIO.	Every year, the following studies are conducted: 1) on the economic indicators of CI (GDP, employment, turnover, taxes, multiplier, etc.); 2) on the regional development of CI; 3) on the social development of CI; 4) two or more sector-specific or thematic studies	Ministry of Culture and Informational Policy NCIO	UAH 5 m. per annum (15 m in 2023-2025)	Ukraine Recovery Fund Ministry of Culture and Informational Policy (budget of the NCIO)	

The opening of offices of international creative companies in Ukraine	The suggestion is to encourage the opening of offices of international companies, such as Apple, Spotify, and YouTube in Ukraine to improve the promotion and representation of Ukrainian creative content on these platforms. The initiative should be realized by means of political mediation.	Apple, Spotify, YouTube opened offices in Ukraine	Ministry of Digital Transformation Ministry of Culture and Informational Policy	Not needed	Not needed	
Modernization stage (strategic) - "Structural modernization and full-scale EU integration" Expected implementation: (2026 – 2032*) The terms of the expected implementation of this stage will be reviewed after 2022-2023						
The launch of the "Creative Backpack" program, an initiative that would allow school students to learn about the modern creative practices and professions while travelling Ukraine	The program will finance the trips of school students to Ukrainian cities and their acquaintance with the creative experience (tours, workshops, training in AR/VR technologies, 3D printing, participation in cinema schools, etc.). The benefits of the program are as follows: 1) the support for creative and cultural institutions that acquaint children with CI and get paid for doing so; 2) the contribution to tourism in Ukraine; 3) the development of talent, encouragement of children to get interested in creative professions, R&D, and innovations; 4) the "knitting together" of the country, the establishment of	During the first (pilot) year of the program, 5% of school students experienced the innovative creative practices. 200,000 school students participate in the "Creative Backpack" program. 10,000 trips for school students have been held, and up to 1,000 creative businesses and cultural institutions that provide services	Ministry of Culture and Informational Policy NCIO State Agency of Ukraine for Arts and Art Education	First year: UAH 300 m. + UAH 5 m. for the program administration. Total: approximately USD 10 m. The expenses for one school student: UAH 1500 (UAH 500 transportation expenses, UAH 500 food and housing expenses; UAH 500 tour expenses). Between 2026 and 2032, the	Ukraine Recovery Fund Co-financing by the Ministry of Culture and Informational (new budget needed) and parents	

	regional ties in the creative and educational spheres.	participated in the program.		program will cost UAH 2,100 m. or USD 70 m. (excluding inflation)		
The improvement of the creative industries education	The war reoriented the Ukrainian economy and formed an accurate demand on the Ukrainian creative market for export competencies and international cooperation. Thus, the suggestion is to: - provide practical education regarding selling goods on international marketplaces, intellectual property protection, etc.; - the establishment of new links, partnerships, exchange programs with foreign universities in creative industries; - grant support for the development of creative industries educational goods (including those pertaining to informal education), and the support for the development of professional and educational standards in creative industries.	1,000 CI representatives participated in the educational activities that improved their entrepreneurial skills during the first year after the program's launch	Ministry of Culture and Informational Policy Ministry of Education and Science NCIO State Agency of Ukraine for Arts and Art Education	UAH 10 m./year This budget must be directed towards NCIO, which will provide grants for the creation of educational products, involve guest lecturers and practitioners, and establish partnerships with foreign universities in CI, etc. Total (between 2026-2032): UAH 70 m. or USD 2.4 m.)	Ukraine Recovery Fund Ministry of Culture and Informational Policy	
The support for CI development by means of tax liberalization	There is a need for the fiscal stimulation to renew production and ensure the development of creative industries in the future. There is also a need to regulate the "grey" economy in the concert	The taxation system for CI enterprises is optimized, the conditions that stimulate the renewal of the	Ministry of Culture and Informational Policy Ministry of Finance Ministry of the Economy	Requires clarification that takes into account the state of CI at the moment of	International assistance can fund the analytical preparation for the implementation	Drafting the Law of Ukraine on Introducing Amendments to the Tax Code of Ukraine regarding the Promotion of the

	industry by means of introducing a "single ticket" (registry of tickets) and the change of ticket taxation mechanisms for sellers (sellers should not be able to benefit from simplified taxation, and cash registers should be mandatory in this sphere). The analytical work to change the necessary legislation and advocate for the initiative should begin during the medium-term stage.	production, logistical, and value added CI chains are in place.		methodology development	of the new tax regime	Recovery and Development of Creative Industries in Ukraine Amendments to the Procedure of the Ministry of Culture and Information Policy of Ukraine on Managing the Tickets Business Resolution of the Cabinet of Ministers of Ukraine on the Tickets Registry
Infrastructure projects in the creative industries sphere	The goal is to support the creation of the competitive Ukrainian creative product throughout the value added chain. Taking into account the high multiplier of the capital investment in CI (1,9-2,2), it is reasonable to build the infrastructure for the production of the national content ranging from creative hubs that can develop prototypes to concert halls where the content can be displayed. The funds will be directed towards: • The construction and modernization of concert halls, creative hubs, factories that produce fabric and paper,	5 concert halls built 20 creative hubs created/modernised 600 bookstores function in Ukraine 5 pilot projects of the "ideal library" realized	Ministry of Culture and Informational Policy Ministry of Infrastructure Ministry of Regional Development Regional and Kyiv City State Administrations	UAH 1 b./year (UAH 7 b. between in 2026-2032)	Ukraine Recovery Fund Ministry of Culture and Informational (new budget needed)	Amendments to the Resolution of the Cabinet of Ministers of Ukraine 'On Approval of the Procedure for Using Funds within the Budget of the Ministry of Culture and Information Policy of Ukraine for the Development and Construction of the Cultural Facilities of National Significance'

	workshops for artisans, “ideal library” (according to the Danish “4 spaces” concept; the library is an informational, educational, cultural, and leisurely centre. Between 2023-2025, the intention is to implement 5 pilot projects; budget — UAH 25 m.); • Repairs, the purchase of equipment and licensed software for concert halls, creative hubs, book stores, the factories that produce fabrics and paper, workshops for artisans, libraries. This initiative also includes the creation of a legislative mechanism that would ensure the state support for infrastructural projects, such as rent rebates for bookstores, fashion brands and designers — the program will prioritise the production of the Ukrainian creative product.

3. Book publishing and libraries

1. Key pressing issues to be solved under the Recovery Plan

The war influence on the defined analysis area:

1. Book publishing

As a result of russia's full-scale war against Ukraine, the book publishing industry found itself in an extremely difficult position. Thus, according to a survey of publishers conducted by the Ukrainian Book Institute, almost 20% of publishers lost production capacity, 6% keep partially survived production capacity, about 2/3 of the technology park of printing companies, publishers and bookstores were destroyed or severely damaged, more than 60% of publishers lost financial capacity, due to losses caused during the war, almost 50% of Ukrainian publishers will not be able to resume operations, the main publishing and printing facilities and most warehouses of finished books are in the war zone or are in the temporarily occupied territories of Ukraine, 95.1% publishers have significantly reduced sales.

In addition, according to data obtained by the Public Association "Ukrainian Association of Publishers and Booksellers" based on a survey, the average recovery rate of domestic book publishing, which can be expected at the end of 2022 may be only 35-40% compared to the prewar period. Thus, only 25-30% of the publishing houses located in Kyiv and Kharkiv, as well as in Kyiv and Kharkiv regions, and in general in the north, south and east of Ukraine, will be able to resume production on their own by the end of 2022 compared to 2021. As for publishing houses in the western part of Ukraine (mostly small and medium-sized), their production resumption volumes may be 50-70% compared to 2021. In particular, the shortage of printing paper in Ukraine (the world has sharply reduced paper production. EU-produced paper is distributed by quotas, as are imports from China and South America, which have now fallen sharply. Ukraine received only 25% of its needs), a significant increase in the price of all printing materials, from paper to plates and paints, fuels and lubricants and logistics services, will increase the price of books by at least 50%. In turn, the rapid decline in the solvency of the population will significantly reduce the receipt of working capital for the sale of book products, which will slow down the pace of recovery of full-fledged activities of the domestic publishing industry.

It is also worth emphasizing the trends that were present in the publishing industry during 2021. According to the analysis of the issue of books conducted by the State Scientific Institution "Book Chamber of Ukraine named after Ivan Fedorov" as of 1 December 2021, the number of books published in the reporting period increased by 584 printing units or by 5.7%, but the circulation of issued products continues to decline steadily, they decreased by 3038.8 thousand copies or 19.8%. Negative dynamics in terms of the number of publications and circulations is observed among publishing houses and publishing organizations of the state form of ownership. In particular, if we compare the same period in 2020 and 2021, the number of published books decreased by 582 printing units or by 22.1%, and in circulation by 499.9 thousand copies or by 40.9%.

As of 21 December 2021, the Book Chamber of Ukraine received 9,343 printing units in circulation of 12,318.8 thousand copies of books and brochures published in Ukrainian. Compared to similar data last year, the number of titles published in the Ukrainian language decreased by 660 printing units (6.6%), and circulation decreased by 3,234.9 thousand copies (20.8%).

According to preliminary forecasts of the Book Chamber of Ukraine in 2021, there was 0.61 of a book per citizen of Ukraine.

2. Libraries

The destructive impact of the consequences of the full-scale russian invasion of Ukraine on the basic network of cultural institutions, of which libraries are a part, in particular, led to the damage, destruction or seizure of library facilities; increased threats to the security of funds, staff and visitors, library buildings and property, reduced library attendance - both due to migration processes and due to the inability to fully provide information and library services to users in the library. Due to the danger of shelling and bombing, some libraries stopped serving users in the library premises. Due to the tendency to decrease the receipt of documents and the drop in attendance, the time for the implementation of the relevant production processes has been reduced, which leads to underemployment of library specialists and, accordingly, until the establishment of part-time mode. As a result of forced migration, the outflow of personnel from the industry has increased (departure to safer settlements in Ukraine or abroad), some of these specialists cannot continue to work remotely due to lack of technical or organizational capabilities. Due to the redistribution of consumption expenditures of the state and local budgets, the funding of cultural institutions is decreasing, including libraries (payment for utilities, wages, payment for goods and services, etc.), which sometimes leads to the announcement of downtime or termination of employment contracts with library staff.

<table>
<tr><td colspan="2">All the above makes it impossible to ensure a full scope and quality of basic state social guarantees for the provision of free services to the population by cultural institutions of state and communal ownership (including libraries), provided by the State Standard of Free Services by Club and Library Cultural Institutions of State and Communal Ownership, approved by the Ministry of Culture Of Ukraine № 983 as of 15 October 2013.</td></tr>
<tr><td>1) Key challenges (summarized for the defined area)</td><td>Book publishing:
Outflow of qualified personnel abroad
Lack of working capital of publishing entities
Shutdown of printing houses
Paper shortage
Reduction of financing (state, credit, own)
Insecurity of the Ukrainian book market from pirated book products
Low availability on the book market in Ukraine
Destroyed bookstores in areas of active hostilities, reduced revenue in bookstores in the eastern and central regions (as a result - closure)
Falling effective demand of the population
Libraries:
Damage or destruction of library facilities
Destruction or looting of material and technical base of libraries (machinery, equipment, library funds, other property, etc.)
The irrelevance of a significant part of library funds
Insufficient material and technical support of libraries, their technical and technological obsolescence
Unsatisfactory staffing (outflow and aging of staff, inadequate education and training system)
The system of library statistics is outdated</td></tr>
<tr><td>2) Key possibilities (summarized for the defined area)</td><td>Book publishing:
Increased interest in the Ukrainian narrative in the world and in Ukraine
Ukraine's participation in international fairs, exhibitions, conferences, congresses, etc. related to book publishing
Steady demand for Ukrainian literature in libraries and book trade in Ukraine and other countries
Established distribution
Ban on imports of russian-language books</td></tr>
</table>

	● The dominance of Ukrainian books in the domestic book market ● The Ukrainian-speaking readership has been formed ● Developed structure of book market participants ● Ukrainian legislation is harmonized with international agreements related to copyright protection **Libraries:** ● Renovation of existing and construction of new libraries ● Preservation of the optimal network of public libraries ● Grant support for libraries for restoration and development ● Digitization of the country as a strategic direction that affects all areas, including book publishing and book distribution, librarianship, stimulates demand for library services ● Update on a regular basis of library funds, including by replacing the withdrawn (written off) library funds with new editions, financing to expand the range and update the funds of library books ● Providing access to up-to-date information about available books on the market ● Expansion of partnership cooperation, in particular international; effective partnerships with cultural, educational, scientific and civil society institutions ● Public interest in the development of libraries, trust of users, community, partners in libraries as places of growth of social capital ● Corporate cooperation and support of the professional community of Ukraine and the world ● Expansion of the range of paid services, intensification of fundraising activities
3) Key constraints (summarized for the defined area)	**Book publishing and libraries** ● Imperfection of legal regulation of book publishing and library areas ● Declining GDP and budget deficit ● Financing the cultural sphere on a residual basis ● Low level of extrabudgetary funds ● Obsolescence of material and technical base, buildings and engineering communications of libraries that require significant updating ● Insufficient number and / or obsolescence of computer equipment, which slows down the introduction of the latest information and computer technologies in library processes ● Problems of staffing (aging of staff, insufficient number of specialists with appropriate education, lag of the internal system of professional development from modern society's requirements and the needs of libraries)

2.1. Goals aimed at solving a defined pressing issue:

	Stage 1: June 2022 - end of 2022	**Stage 2: January 2023 - December 2025**	**Stage 3: January 2026 - December 2032**
1) Defined pressing issue to be solved under the defined analysis area (*description*) **Book publishing:** ***Reducing the potential of the book publishing market of Ukraine***			
Goal to be achieved to solve the issue at each stage	Ensuring the maximum preservation of the production potential of the subjects of book publishing activity	Annual increase in the number of titles of Ukrainian-language book editions	Full restoration and growth of publishing and book trade potential
Timeframe under the stage	the end of 2022	2025	2032
Risks related to the goal achievement	Continuation of hostilities on the territory of Ukraine Economic crisis	Lack of funding for relevant support programs Economic and political instability	Economic and political instability
Goal achievement indicator	At least 40% of printed units of book editions from the level of the pre-war period - 2021 (without textbooks) and at least 5,000 electronic editions of works by Ukrainian authors were published in Ukraine	The range of Ukrainian printed and electronic books has been expanded by at least 25% annually	At the end of 2032, the number of book publishers that publish more than 3 titles per year increased by 30%, the number of bookstores by 200% from the pre-war level (2021)

General need of funds for the goal achievement	UAH 200 million (for a national project) UAH 290.1 million (total)	UAH 9,122.5 million (for a national project) UAH 9,442.69 million (total)	UAH 26,521.8 million (for a national project) UAH 29,071.09 million (total)
Goal connections with other areas/directions	Attracting international assistance		
2) Libraries: ***Inconsistency of library resources and services with the needs of the population in information, education, culture***			
Goal to be achieved to solve the issue at each stage	Existing libraries throughout Ukraine, where no hostilities are taking place and which are not under occupation, provide all basic library services, otherwise mobile library services are provided	Libraries have the appropriate material and technical facilities and act as centers of community development and human capital	Up-to-date literature and modern quality services are available in libraries and in a convenient format for all who need it
Timeframe under the stage	the end of 2022	2025	2032
Risks related to the goal achievement	Continuation of hostilities on the territory of Ukraine	Limited funding, in particular for the implementation of library fund renewal programs	Limited funding, in particular for the implementation of library fund renewal programs
Goal achievement indicator	At least 85% of the country's library network continues to meet the cultural needs of the population	Library funds are updated by at least 5% annually (from 2021) At least 70% of Ukrainian libraries have computers and access to broadband Internet	Library holdings are renewed by at least 5% annually Every library in Ukraine has a computer and access to broadband internet

General need of funds for the goal achievement	UAH 50 million (total)	UAH 25 million (total)	
Goal connections with other areas/directions	Education, national information security, national memory and identity	Education, national information security, national memory and identity	Education, national information security, national memory and identity

3. The current state of implementation of program documents within the defined analysis area on the defined pressing issue:

№	Title of the program document	Current state
1	Strategy for the development of librarianship in Ukraine until 2025 "Qualitative changes in libraries to ensure sustainable development of Ukraine", approved by the Order of the Cabinet of Ministers of Ukraine dated 23 March 2016 № 219-r	The strategy is a framework document that forms a vision, defines priorities, tasks and main actions for achieving qualitative changes in the library area of Ukraine. The purpose of the Strategy is to identify key issues in the development of librarianship in Ukraine, the priorities of modern libraries in ensuring the sustainable development of Ukraine, areas, objectives and key actions aimed at their implementation. One of the strategic directions of library development defined by the Strategy, is to improve the legal framework related to library activities and to regulate the standards of the library and information area in accordance with international standards. In order to implement this direction, it was envisaged, in particular, to amend the Law of Ukraine “On Libraries and Library Affairs”. On 2 February 2021, the draft Law of Ukraine “On Amendments to the Law of Ukraine“ On Libraries and Library Affairs ” (№ 5002) was registered in the Verkhovna Rada of Ukraine. On 8 September 2021 this draft was adopted as a basis.
2	Strategy for popularization of the Ukrainian language until 2030 "Strong language - a successful state", approved by the Order of the Cabinet of Ministers of Ukraine dated 17 July 2019 № 596-r	The action plan for the implementation of the first stage (until 2022) of the Strategy for the promotion of the Ukrainian language until 2030 "Strong language - a successful state", approved by the Cabinet of Ministers of Ukraine on 16 December 2020 № 1585 provides for a number of measures to form a holistic information and cultural space through the Ukrainian-language product. These are, in particular, the implementation of the program of replenishment of library funds (with priority for children's and youth literature), participation in international book exhibitions, fairs, the implementation of the program to support translations of Ukrainian literature into other languages and more.

4. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

p / p	Description of the task to achieve the goal	Deadline for the task fulfilment	Dependence of the task on the tasks of other directions, areas, pressing issues
Direction: Book publishing			
Stage 1: June 2022 - end of 2022 **Goal 1: Ensuring the maximum preservation of the production potential of the subjects of book publishing**			
1	Task 1. Promotion of Ukrainian books in Ukraine and in the world	15 December 2022	Dependence on other directions, areas: international partnerships (MFA)
2	Task 2. Creating conditions for the preservation and support of the publishing industry	15 December 2022	Problems: 1) Outflow of qualified personnel abroad 2) Reduction of financing (state, credit, own)
Stage 2: January 2023 - December 2025 **Goal 2: Annual increase in the number of titles of Ukrainian-language book editions**			
1	Task 1. Ensuring support for the Ukrainian book market	15 December 2025	Problems: 1) Lack of proper regulation 2) Limited funding
2	Task 2. Creation and development of digital projects in the field of book publishing	15 December 2025	Introduction of the mechanism of grant support in the book publishing area (providing grants for replenishment of library funds of territorial communities libraries with books) Replenishment of library funds Legislative irregularities

3	Task 3. Expanding citizens' access to quality Ukrainian literature	15 December 2025	Problems: 1) Lack of proper regulation 2) Limited funding
4	Task 4. Popularization of reading and Ukrainian literature in Ukraine and abroad	15 December 2025	Dependence on other directions, areas: international partnerships (MFA)
Stage 3: January 2026 - December 2032 **Goal 3: Full restoration and growth of publishing and book trade potential**			
1	Task 1. Supporting the development of the domestic book market and meeting the needs of readers	15 December 2032	Sufficient funding
2	Task 2. Expansion of the book trade network	15 December 2032	Sufficient funding
Direction: Libraries			
Stage 1: June 2022 - end of 2022 **Goal 1: Existing libraries throughout Ukraine, where there is no hostilities and which are not under occupation, provide all basic library services, otherwise mobile library services are provided**			
1	Task 1. Organization of effective and high-quality library services in martial law	2022	Problems: 1) Continuation of active hostilities on the territory of Ukraine with coverage of a larger territory 2) Limited funding (local budgets)
	Stage 2: January 2023 - December 2025 **Goal 2: Libraries have adequate logistics and act as centers of community development and human capital**		

1	Task 1. Restoration of libraries affected by the russia's aggression against Ukraine, and optimization of the library network	2024	Depends on the direction: audit of losses incurred as a result of the war
2	Task 2. Strengthening the material and technical base and development of human resources of public libraries	2025	Sufficient funding
3	Task 3. Automation of library processes and launch of national digital library projects	2025	Sufficient funding
	Stage 3: January 2026 - December 2032 **Goal 3: Up-to-date literature and modern quality services are available in libraries quickly and in a convenient format for all who need it**		
1	Task 1. Modernization of material and technical base of public libraries	2032	Sufficient funding
2	Task 2. Formation of high-quality personnel potential of library institutions	2032	

5. National project "Development of Creative Industries and Book Ecosystem"

Description of the project	Project justification	Qualitative indicators of the project implementation	Economic effect (influence on GDP, budget, employment, etc.)	Responsible public authority	Approximate need of funds (million, UAH)	Suggested funding sources	Required regulatory framework	Related areas of the EU legislation (general comment)
Development of the book ecosystem								
Stage 1 "Everything to win"								

Support for projects in the publishing area, in particular on a grant basis (including the creation of electronic editions of works by Ukrainian authors) **"Book publishing", goal 1, task 2, stage 1**	In wartime and postwar conditions (paper shortages, difficulties in printing and logistics, lack of funds from publishers, low solvency of the population) there was a need to publish and sell new works in electronic format	Electronic editions of 5,000 works by Ukrainian authors have been created	Increase of tax revenues in the budget of Ukraine, preservation of jobs in the field of publishing	MCIP State Institution "Ukrainian Book Institute"	50	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24"		
Purchase of books to replenish the funds of public libraries **"Book publishing", goal 1, task 2, stage 1**	Support of Ukrainian publishers, renewal of library funds, satisfaction of cultural needs of Ukrainian society by providing readers with access to new high-quality Ukrainian-language book editions (works) in libraries	At least 786,000 book copies available from publishers were purchased	Preservation of jobs in publishing, increasing tax revenues to the budget of Ukraine, stimulating the creation of a creative product with high added value	MCIP State Institution "Ukrainian Book Institute"	150	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24"		
Stage 2 "Recovery, restart of the economy and institutions"								
Introduction of certificates for the purchase of books **"Book publishing", goal 2, task 3, stage 2**	Stimulating demand, developing a culture of reading, supporting reader demand and all market participants	Total certificates thousand units 2023 - 806.0 2024 - 791.2 2025 - 796.1	Increasing the book market, increasing tax revenues	MCIP Ministry of Digital Transformation of Ukraine	2133.1	State budget (budget program of Ukrainian Book Institute 3801560)	Requires: 1) adoption of the draft Law of Ukraine “On Amendments to Certain	

				State Institution "Ukrainian Book Institute"			Laws of Ukraine Concerning Stimulation of the Development of Ukrainian Book Publishing and Book Distribution" (Reg. № 6287 as of 5 November 2021); 2) development and adoption of resolutions of the Cabinet of Ministers of Ukraine, which must approve: sample and description of the certificate form issued in paper form, the	

							procedure for forming a certificate in electronic form, its electronic copy, the procedure for issuing and issuing a certificate, and the procedure for purchasing books with the use of the certificate and reimbursement of the value of the book editions purchased with the use of the certificate to the distributors of publishing products	

Support for projects in the publishing area, in particular on a grant basis **"Book Publishing", goal 2, task 1, stage 2**	The need to support projects in the publishing area by providing grants for: 1) translation of works of Ukrainian literature into foreign languages, 2) for the translation of works of foreign literature into Ukrainian, 3) writing by authors (creation) of new literary works 4) preparation and publication of book editions of works of Ukrainian literature (including electronic) 5) organization and holding of programs and events to promote reading (book exhibitions, fairs, literary festivals, competitions, thematic actions, promotional and communication campaigns) 6) ensuring the capacity of public libraries of territorial communities.	1. The number of translated and published works of Ukrainian literature in foreign languages - 300 units. 2. The number of translated and published works of foreign literature in Ukrainian - 450 units. 3. The number of created new literary works - 495 units. 4. The number of supported projects for the preparation and publication of books - 600 units. 5. At least 25 events of various levels are held annually, 114	Preservation of jobs in publishing	MCIP, Ministry of Finance, State Institution "Ukrainian Book Institute"	649.4	Recovery Fund funds State budget (budget program of Ukrainian Book Institute 3801560)		

		projects are supported 6. 390 libraries are supported						
Purchase and delivery of book products to replenish library funds **"Book publishing", goal 2, task 3, stage 2**	Supporting Ukrainian publishers, meeting the spiritual, educational and cultural needs of Ukrainian society by giving readers access to new high-quality Ukrainian-language book editions (works) in libraries; the need to replace morally and physically obsolete library collections with new relevant literature	Total number of purchased book titles / circulation: 2023 - 2500/3000 2024 - 2800/3000 2025 - 3000/3000 Average price of a book edition: 2023 - 200 UAH 2024 - 240 UAH 2025 - 280 UAH	Increasing tax revenues to the budget of Ukraine, stimulating the creation of a creative product with high added value	MCIP State Institution "Ukrainian Book Institute"	6054.3	Recovery Fund funds State budget (budget program of Ukrainian Book Institute 3801560)	Requires: 1) adoption of the Order of the MCIP "On Amendments to the Procedure for Selection, Purchase and Distribution of Book Products to Replenish Library Funds" 2) adoption of the Resolution of the Cabinet of Ministers of Ukraine “On approval of the Methodology for	

							determining the amount (amounts) of payments to experts of the Ukrainian Book Institute”	
Support of bookstores by providing state subsidies (ensuring the expansion of the book trade network) **"Book publishing", goal 2, task 3, stage 2**	Without the development of the book trade network, the restoration and development of book publishing is not possible. Before the war, there were 200 bookstores in Ukraine, and 2,000 in Poland. Reimbursement of rent is envisaged.	Number of bookstores in Ukraine: 2023 - 220 2024 - 230 2025 - 250		MCIP State Institution "Ukrainian Book Institute"	UAH 285.7 million	Recovery Fund funds State budget (budget program of Ukrainian Book Institute 3801560)	MCIP Order “On Approval of the Application Form with the Obligation to Observe in the Relevant Specialized Bookstore for the Period of Validity of the Certificate of Conformity” 3. List of projects of the subgroup "Book Publishing and Libraries" to fulfil the tasks and achieve the goals

1	2	3	4	5	6	7
Description of the project	**Project justification**	**Qualitative indicators of the project implementation**	**Responsible public authority**	**Approximate need of funds (million, UAH)**	**Suggested funding sources**	**Required regulatory framework**
Direction: Book publishing						
Stage: Economics and institutions of wartime (short-term) - "Everything to win!" (June 2022 - end of 2022 *) * In the event of a delay in active hostilities, the plan will be adjusted in the 4th quarter of 2022, accordingly, this phase (with the planning of major activities and their financing) will be extended to 2023. Goal: Ensuring the maximum preservation of the production potential of the subjects of book publishing						
Task 1. Promotion of Ukrainian books in Ukraine and in the world						

1. Preparation and distribution of catalogs of Ukrainian literature for children and adults	Assist in the promotion of quality Ukrainian book publications abroad, in particular, through the purchase of Ukrainian books by foreign libraries	Formed catalogs, each in the amount of 1000-1500 titles of books	MCIP State Institution "Ukrainian Book Institute"	not required	not required	
2. “Books without borders”	Psychological support for families in the host countries, returning "feeling home" to Ukrainian children by providing children with books forced to leave Ukraine as a result of the russia’s aggression against Ukraine	200,000 books have been published and distributed Ukrainian literary content is presented abroad	MCIP MFA State Institution "Ukrainian Book Institute"	UAH 72 million (200 thousand books x UAH 360)	Charitable contributions of EU citizens and companies, budget funds of EU countries	not required
3. Representation of Ukraine at international book events	Promotion of Ukrainian books in the world, establishing contacts between representatives of the Ukrainian book publishing industry and foreign partners, promoting the export of rights. Dissemination of truthful information about the russia’s war against Ukraine. An appeal to the world community to support the project of printing books for children who	National stands at international book fairs were organized in Frankfurt, Bologna, London, Paris, Warsaw, Prague, Gothenburg (2022) and other cities (subsequent years) according to certain priorities. Political statements, declarations,	MCIP MFA State Institution "Ukrainian Book Institute"	UAH 7.4 million organization of events (including UAH 0.2 million business trip	2022 - state budget, partly - free participation from the organizers.	

	were forced to leave Ukraine due to the war.	manifestos were distributed. Contacts have been established in the field of book publishing, translation contracts have been concluded				
4. Formation of a catalog (database) of profiles of Ukrainian authors, publishers, translators and illustrators	Effective popularization of literature is impossible without the consolidation and visibility of various actors in the literary process: writers, publishers, translators, illustrators, and others. The stated catalog aims to present the actors of the Ukrainian book market in a structured way both to the reader - to get acquainted with the names and trends of modern literature, and to the professional audience - to develop partnerships.	A catalog of Ukrainian authors has been formed, profiles have been formed and posted on the PEC website: Standardized profiles of authors 300 units Standardized publisher profiles 150 units Standardized profiles of illustrators 150 units Standardized profiles of translators 100 units	MCIP State Institution "Ukrainian Book Institute"	UAH 0.70 million (for the development of a bilingual electronic catalog)	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24", funds of public non-profit organizations	Resolution of the Cabinet of Ministers of Ukraine as of 19 April 2022 № 472 “Some issues of using funds received on official accounts for donations in support of Ukraine”

5. Preparation and distribution of the catalog of Ukrainian book editions on actual thematic directions	Popularization and distribution of current Ukrainian book editions in Ukraine	A thematic catalog of up to 2000 titles of book editions has been formed	MCIP State Institution "Ukrainian Book Institute"	not required	not required	
Task 2. Creating conditions for the preservation and support of the book publishing industry						
1. Support for projects in the publishing area, in particular on a grant basis (including the creation of electronic editions of works by Ukrainian authors)	In wartime and postwar conditions (paper shortages, difficulties in printing and logistics, lack of funds from publishers, low solvency of the population) there was a need to publish and sell new works in electronic format	Electronic editions of 5,000 works by Ukrainian authors have been created	MCIP State Institution "Ukrainian Book Institute"	UAH 50 million (5000 * 10 thousand UAH)	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24"	Resolution of the Cabinet of Ministers of Ukraine as of 19 April 2022 № 472 “Some issues of using funds received on official accounts for donations in support of Ukraine”
2. Translation of Ukrainian works into foreign languages and their publication abroad	Translation needs to be supported, which is difficult to break through on a commercial basis, such as new works, young authors, weak markets, difficult to translate content	200 translations of Ukrainian works into foreign languages have been made	MCIP State Institution "Ukrainian Book Institute"	UAH 8 million (payment of rights to Ukrainian publishers 200 editions x UAH 40 thousand)	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24"	Resolution of the Cabinet of Ministers of Ukraine as of 19 April 2022 № 472 “Some issues of using funds received on official accounts for donations in support of Ukraine”
3. Preparation and distribution of a	Popularization and distribution abroad of the catalog of current	A list of books recommended for	MCIP	UAH 2 million	Recovery Fund funds	Resolution of the Cabinet of Ministers of Ukraine as of 19

catalog of current Ukrainian books recommended for translation, and publication of catalogs of excerpts from works offered for translation into foreign languages	works of Ukrainian literature recommended for translation. In particular, in order to encourage foreign publishers to translate and publish works of Ukrainian literature, it is necessary to provide them with maximum information about the plot and characters of the work, features of the author's style, etc. The volume of the translated passage is up to 20 pages of the original edition. The language of translation is mostly English	translation in the amount of at least 600 titles, prepared 4 catalogs of excerpts from 50 works in each 4x50x20 = 4000 pages.	State Institution "Ukrainian Book Institute"	(4 thousand pages x 0.5 thousand UAH)	Official MCIP account for donations in support of Ukraine "United24"	April 2022 № 472 “Some issues of using funds received on official accounts for donations in support of Ukraine”
4. Purchase of books to replenish the funds of public libraries	Support of Ukrainian publishers, renewal of library funds, satisfaction of cultural needs of Ukrainian society by providing readers with access to new high-quality Ukrainian-language book editions (works) in libraries	Purchased at least 786 thousand available copies of book publishers	MCIP State Institution "Ukrainian Book Institute"	UAH 150 million (786 thousand editions x UAH 191)	Recovery Fund funds Official MCIP account for donations in support of Ukraine "United24"	Resolution of the Cabinet of Ministers of Ukraine as of 19 April 2022 № 472 “Some issues of using funds received on official accounts for donations in support of Ukraine”
5. Prohibition of import of russian-language books from the russian federation, the Republic of Belarus and restrictions on	The formation of a competitive legal book market of Ukrainian books, the expansion of the Ukrainian-language publishing segment creates conditions for the formation of the Ukrainian-speaking readership, which will	The import of book products from the russian federation and the Republic of Belarus is prohibited		not required		Law of Ukraine “On Amendments to Certain Laws of Ukraine Concerning the Establishment of Restrictions on the Import and Distribution of Publishing Products Concerning the Aggressing State, the

the import of russian-language books from other countries	contribute to the consolidation and development of the Ukrainian nation, the establishment of national identity					Republic of Belarus, and the Temporarily Occupied Territory of Ukraine" (№ 7459 as of 13 June 2022)
6. Providing Ukrainian publishing entities with paper for printing books	Resumption of paper imports in the required volumes and establishment of own paper production will help restore publishing potential and establish a competitive book market in Ukraine	Removal of restrictions on foreign currency settlements abroad. Restoration of import quotas. Temporary ban on waste paper exports. Production of own paper from secondary raw materials or alternative raw materials. Introduction of the mechanism of extended producer responsibility. Intergovernmental agreements on providing Ukraine with trade credits or free aid in the form of paper	Ministry of Economy Ministry of Finance			Development and adoption of the draft law "On waste management" Adoption of the sectoral law "On packaging and packaging waste"
7. Introduction of preferential tariffs for Ukrposhta and other operators for	Will help reduce the cost of book publications, increase sales, support logistics, provide support and development of the book area	100% coverage of the territory of Ukraine by delivery of book products of domestic production	Ministry of Economy Ministry of Infrastructure	Requires additional calculations	Recovery Fund funds State budget	

sending books, incl. abroad						
8. Introduction of preferential terms for lending to publishers	Preferential lending to publishing companies will eliminate the imbalance caused by russia's military aggression in the settlements of booksellers with publishers-suppliers of books and publishers with printing companies - producers of books, and will take measures to fully restore the publishing potential.	Legislative regulation determination of the state percentage of guarantee of the credits received by subjects of book publishing for restoration and expansion of manufacture of book production, at the level not less than 80% of volume of the received credit; recognition by the bank of book products of publishing houses as collateral. Loan programs for publishers	Ministry of Economy Ministry of Finance			
Recovery phase (medium-term) - "Recovery, restart of the economy and institutions" (2023 - 2025, with separate details for 2023) * * In case of protracted active hostilities, the plan will be adjusted in the 4th quarter of 2022, respectively, this phase (with the planning of major activities and their financing) will be postponed to 2024-2026) Objective: Annual increase in the number of titles of Ukrainian-language book editions						
Task 1. Ensuring support for the Ukrainian book market						

1. Support for projects in the publishing area, in particular on a grant basis (including the creation of electronic editions of works by Ukrainian authors), namely:	Implementation of grant support programs for publishers, authors and libraries will increase the reading activity of Ukrainians, make books available, ensure the recognition of Ukrainian authors in Ukraine and abroad, as well as provide support for novice authors, increase the capacity and responsibility of libraries, which will contribute to the formation of a sustainable book market in Ukraine and will make the Ukrainian book popular all over the world		MCIP, Ministry of Finance, State Institution "Ukrainian Book Institute"	UAH 649.4	Recovery Fund funds State budget (budget program UBI 3801560)	It is necessary to adopt the draft Law of Ukraine "On Amendments to Certain Laws of Ukraine on Stimulating the Development of Ukrainian Book Publishing and Book Distribution" (Reg. № 6287 as of 5 November 2021). Required development and adoption: 1. Resolutions of the CMU “On amendments to the procedure for using funds provided in the State budget of the Ukrainian Book Institute to support book publishing and popularization of Ukrainian literature in the world”; 2. MCIP’s order “On the approval of the procedure for competitive selection of projects implemented with the support of the Ukrainian Book Institute; 3. MCIP’s order “On the approval of the standard form of the Grant Agreement for project support” 4. Resolutions of the CMU “On the approval of the methodology	

						for determining the amount (amounts) of payments to experts of the Ukrainian Book Institute”	
1) ensuring grants for the translation of works of Ukrainian literature in foreign languages	translations that are difficult to break through on a commercial basis need support, such as new works, young authors, weak markets, content that is difficult to translate	Number of translated and published works 300 units. 2023 - 100 translations 2024 - 100 translations 2025 - 100 translations	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 54.9 million 2023 - UAH 15.0 million 2024 - UAH 16.5 million 2025 - UAH 18.15 million + remuneration of experts 2023 - UAH 1.35 million 2024 - UAH 1.8 million 2025 - UAH 2.07 million	Recovery Fund funds State budget (budget program UBI 3801560)		
2) providing grants for the translation of works of foreign literature into Ukrainian	translations that are difficult to break through on a commercial basis, such as non-commercial publications, content that is difficult to translate	Q-ty of translated and published works 450 units. 2023 - 150 translations 2024 - 150 translations 2025 - 150 translations	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 71.1 million 2023 - UAH 19.9 million 2024 - UAH 21.89 million	Recovery Fund funds State budget (budget program		

				2025 - UAH 24.079 million + remuneration of experts 2023 - UAH 1.35 million 2024 - UAH 1.8 million 2025 - UAH 2.07 million	UBI 3801560)	
3) providing grants for authors to write (create) new literary works	the need to provide scholarships/grants to young authors is due to the need to create new Ukrainian narratives	Number of created new literary works 495 units. 2023 - 150 2024 - 165 2025 - 180	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 54.8 million 2023 - UAH 15.0 million 2024 - UAH 16.5 million 2025 - UAH 18.15 million + remuneration of experts 2023 - UAH 1.35 million 2024 - UAH 1.8 million 2025 - UAH 2.07 million	Recovery Fund funds State budget (budget program UBI 3801560)	

4) providing grants for the preparation and publication of book editions of works of Ukrainian literature	The rejection of russian books will expose a significant number of genre-themed niches that need to be filled. Difficult economic conditions limit the ability of publishers to do it quickly.	Number of supported projects 600 units 2023 - 200 2024 - 200 2025 - 200	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 170.7 million 2023 - UAH 50.0 million 2024 - UAH 55.0 million 2025 - UAH 60.5 million) + remuneration of experts 2023 - UAH 1.35 million 2024 - UAH 1.8 million 2025 - UAH 2.07 million	Recovery Fund funds State budget (budget program UBI 3801560)	
5) providing grants for the organization and holding of programs and events to promote reading (book exhibitions, fairs, literary festivals, competitions, thematic actions, promotional and communication campaigns)	Literary festivals, book fairs and other events to promote literature and reading are necessary to support and develop both Ukrainian readers and the market. It is during such events that top lists are formed, bestsellers appear, and authors and publishers meet with readers.	At least 25 events of various levels are held annually Number of supported projects 114 units 2023 - 30 2024 - 44 2025 - 40	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 132.4 million 2023 - UAH 40.0 million 2024 - UAH 44.0 million 2025 - UAH 48.4 million	Recovery Fund funds State budget (budget program UBI 3801560)	

6) providing grants to ensure the capacity of public libraries of territorial communities	Visiting libraries and using paper books remains popular all over the world, and new publications are a magnet that attracts readers to libraries. Some libraries were completely destroyed, while in others the book collections were significantly reduced after the write-off of obsolete Soviet publications and books by russian publishers. Promoting the capacity of public libraries, including replenishment of library funds with books, information on which is available in the electronic catalog "Books on the market" and the implementation of related projects: acquisition, support, development of automated library information systems and computer equipment, staff training, etc. .	Number of supported libraries: 2023 - 120 2024 - 130 2025 - 140	MCIP, Ministry of Finance, SI "Ukrainian Book Institute"	UAH 165.5 million 2023 - UAH 50.0 million 2024 - UAH 55.0 million 2025 - UAH 60.5 million	Recovery Fund funds State budget (budget program UBI 3801560)	
2. Inclusion in the list of branches of knowledge and specialties of the profession "Publishing and editing"	The need to train professional universal workers in the publishing industry, because the modern market of Ukrainian book publishing is developing rapidly and, of course, lacks professional editors and publishers	Restoration of the specialty "Publishing and editing" for the training of professional editors and publishers, overcoming the crisis of shortage of qualified personnel in the field	MES			Cross-sectoral issue MES Amendments to the Resolution of the Cabinet of Ministers dated 29 April 2015, № 266 "On approval of the list of branches of knowledge and

						specialties in which higher education students are trained"
Task 2. Creation and development of digital projects in the field of book publishing						
1. Creating a catalog "Books on the market"	Upgrading the automated information-analytical system, which contains information about available books on the market offered by publishers for sale, will allow timely filling and updating of the electronic catalog by publishers to select new quality books to replenish library funds, as well as constant information of book market participants and external users about new books	Software product update and support: - update the version of the Support System; - completion of document forms, process templates (according to the customer's requests); - software settings as a result of changes (according to the customer's requests); - support of the System (according to the customer's requests).	MCIP SI "Ukrainian Book Institute"	UAH 0.22 million 2023 - UAH 0.05 million 2024 - UAH 0.07 million 2025 - UAH 0.1 million	Recovery Fund funds State budget (budget program UBI 3801560)	1. Adoption of the draft law of Ukraine “On amendments to certain laws of Ukraine concerning stimulation of the development of Ukrainian book publishing and book distribution” (Reg. № 6287 as of 5 November 2021)
2. Creation of the resource "Literary map of Ukraine"	Lighting and monitoring book events of Ukraine in real-time	Appropriate software has been developed. Constant software update.	MCIP SI "Ukrainian Book Institute"	UAH 0.4 million 2023 - UAH 0.2 million 2024 - UAH 0.1 million 2025 - UAH 0.1 million	Recovery Fund funds State budget (budget program UBI 3801560)	

Task 3. Expanding citizens' access to Ukrainian literature						
1. Support of bookstores by providing state subsidies	Without the development of the book trade network, the restoration and development of book publishing is impossible. Before the war, there were 200 bookstores in Ukraine, and 2,000 in Poland. Reimbursement of rent is envisaged.	Number of bookstores in Ukraine: 2023 - 220 2024 - 230 2025 - 250	MCIP SI "Ukrainian Book Institute"	UAH 285.7 million 2023 - UAH 86.3 million 2024 - UAH 94.93 million 2025 - UAH 104.423 million	Recovery Fund funds State budget (budget program UBI 3801560)	1. Adoption of the draft law of Ukraine “On amendments to certain laws of Ukraine concerning stimulation of the development of Ukrainian book publishing and book distribution” (Reg. № 6287 as of 5 November 2021) 2. Order of the MCIP "On approval of the application form with the obligation to comply with the relevant specialized store for the sale of books during the validity of the certificate of conformity." 3. MCIP’s order “On the approval of the procedure for issuance of a certificate of conformity”. 4. MCIP’s order “On the approval of the state subsidy application form”.
2. Introduction of certificates for the purchase of books	Stimulating demand, developing a culture of reading, supporting reader demand and all market participants	Total certificates thousand units 2023 - 806.0 2024 - 791.2 2025 - 796.1	MCIP SI "Ukrainian Book Institute"	UAH 2133.1 million 2023 - UAH 671.72 million	Recovery Fund funds State budget	1. 				2024 - UAH 705.43 million 2025 - UAH 755.9 million	(budget program UBI 3801560)	distribution" (Reg. № 6287 as of 5 November 2021); 2. MCIP's order "On the approval of the certificate form"; 3. MCIP's order "On granting the procedure for issuing certificates for the purchase of books".
3. Purchase and delivery of book products to replenish library funds	Supporting Ukrainian publishers, meeting the spiritual, educational and cultural needs of Ukrainian society by providing readers with access to new high-quality Ukrainian-language book editions (works) in libraries	Total number of purchased book titles / circulation: 2023 - 2500/3000 2024 - 2800/3000 2025 - 3100/3000 Average price of a book edition: 2023 - 200 hryvnias 2024 - 240 hryvnias 2025 - 280 hryvnias	MCIP SI "Ukrainian Book Institute"	UAH 6054.3 million 2023 - UAH 1,500 million 2024 - 2016 mln 2025 - 2520 million UAH + remuneration of experts 2023 - UAH 6.1 million 2024 - UAH 6.1 million 2025 - UAH 6.1 million	Recovery Fund funds State budget (budget program UBI 3801560)	Approval in the new edition of the procedure for selection, purchase and distribution of book products for replenishment of library funds Approval of the procedure for determining the amount (amounts) of payments to experts of the Ukrainian Book Institute is determined according to the methodology approved by the Cabinet of Ministers of Ukraine
Task 4. Popularization of reading and Ukrainian literature in Ukraine and abroad						
1. Participation in international events	Promotion of Ukrainian books in Ukraine and in the world,	Number of events: 2023 - 7	MCIP	UAH 43.47 million	Recovery Fund funds	

aimed at implementing programs to promote the reading of Ukrainian literature in Ukraine and abroad, which are held abroad	establishing contacts between representatives of the Ukrainian book publishing industry and foreign partners, promoting the export of rights.	2024 - 7 2025 - 7	SI "Ukrainian Book Institute"	2023 - UAH 13.1 million 2024 - 15.03 mln 2025 - 15.34 mln	State budget (budget program UBI 3801560)	
2. Organization and holding of international and national events to promote reading, Ukrainian literature in Ukraine and abroad	Implementation of programs to promote reading and Ukrainian literature in Ukraine will promote the wide promotion of Ukrainian books in Ukraine and abroad	The number of events was organized and held: 2023- 15 2024 - 15 2025 - 15	MCIP SI "Ukrainian Book Institute"	UAH 178.46 million 2023 - UAH 48.8 million 2024 - UAH 64.86 million 2025 - 64.8 mln	Recovery Fund funds State budget (budget program UBI 3801560)	
3. Update of the annual award of the President of Ukraine "Ukrainian book of the year"	The Annual Prize of the President of Ukraine "Ukrainian Book of the Year" was launched in 2009 in accordance with the Presidential Decree of December 16, 2009 № 1058 "On the Annual Prize of the President of Ukraine “Ukrainian Book of the Year". There are 3 prizes in 3 nominations. It is awarded to the Day of Employees of publishing, printing and book distribution in order to celebrate authors, publishers and publishing	Every year 3 prizes were awarded in certain nominations, the monetary part of the prize was paid to the winners - authors and publishers.	Office of the President of Ukraine, Ministry of Culture and Information Policy of Ukraine Goskomteleradio	UAH 0.9 million	Recovery Fund funds State budget of Ukraine	Decrees of the President of Ukraine on approval of the new composition of the Committee on the annual award "Ukrainian book of the year", approval of the updated regulations on the annual award of the President of Ukraine "Ukrainian book of the year".

	organizations that have made a significant contribution to the promotion of Ukrainian books and the development of domestic publishing. Currently, the further functioning of the award requires substantive and organizational changes, including an increase in the monetary part of the award, which now amounts to UAH 100 000 each (50% to the author of the work and 50% to the publisher). Last time the award was given in 2018. The actualization of the award will help to draw attention to the best works of national literature in Ukraine and the world, as well as to popularize reading.					
Modernization stage (strategic) - "Structural modernization and full integration into the EU" Expected planning terms: (2026 - 2032 *) The planning dates of the stage will be adjusted based on the results of 2022-2023 Objective: Growth of publishing and book trade potential						
Task 1. Supporting the development of the domestic book market and meeting the needs of readers						
1. Grant support for book publishing and libraries	Implementation of grant support programs for publishers, authors and libraries will increase the reading activity of Ukrainians, make books available, ensure the	Grant support provided for: translations of foreign works in Ukrainian	MCIP SI "Ukrainian Book Institute"	UAH 2,439.0 million 2026 - 252.7	Recovery Fund funds State budget	

	recognition of Ukrainian authors in Ukraine and abroad, as well as support support for novice authors, increase the capacity and responsibility of libraries. Ukraine and will make the Ukrainian book popular all over the world	language - 1050 translations; works by Ukrainian authors in foreign languages - 700 translations; ensuring the capacity of libraries of territorial communities - 1260 libraries were supported; organization and holding of programs and events to promote reading (book exhibitions, fairs, literary festivals, competitions, thematic actions, promotional and communication campaigns) - 336 events; preparation and publication of book editions of works of Ukrainian literature - 1750 new editions; writing by authors (creation) of new literary works - 1680 works.		2027 - 278.0 2028 - 305.8 2029 - 345.3 2030 - 379.8 2031- 417.8 2032 - 459.6	(budget program UBI 3801560)	

2. The program of replenishment of public libraries	Satisfying the spiritual, educational and cultural needs of Ukrainian society, promoting the development of skills and motivation to read, supporting the Ukrainian language by providing readers with access to new high-quality Ukrainian-language books (works) in libraries.	Total number of purchased book titles / circulation: 2026 - 3000/3000 2027 - 3050/3000 2028 - 3100/3000 2029 - 3100/3100 2030 - 3150/3100 2031 - 3200/3100 2032 - 3350/3200 Average price of a book edition: 2026 - UAH 300 2027 - UAH 330 2028 - UAH 355 2029 - UAH 365 2030 - UAH 370 2031 - UAH 370 2032 - UAH 370	MCIP SI "Ukrainian Book Institute"	UAH 23,778.5 million + UAH 44.6 million (experts) 2026 - UAH 2,700.0 million 2027 - 3019.5 million UAH 2028 - UAH 3301.5 million 2029 - UAH 3507.65 million 2030 - 3613.05 million UAH 2031 - UAH	Recovery Fund funds State budget (budget program UBI 3801560)	

				3,670.4 million 2032 - UAH 3966.4 million + remuneration of experts 2026 - UAH 6.1 million 2027 - UAH 6.2 million 2028 - UAH 6.3 million 2029 - UAH 6.3 million 2030 - UAH 6.4 million 2031 - UAH 6.5 million		

				2032 - UAH 6.8 million		
3. 4. Promotion and popularization of Ukrainian books,	Implementation of programs aimed at promotion of Ukrainian books in Ukraine and around the	Ukraine's constant participation in international fairs,	MCIP SI "Ukrainian Book Institute"	UAH 836.0 million	Recovery Fund funds	

authors and publishing projects in Ukraine and abroad	world, organization and holding of international promotional events, nationwide comprehensive campaigns to promote domestic authors, publications, publishing projects will make Ukrainian books popular and the community of Ukrainian authors and publishers known around the world. The implementation of nationwide promotional comprehensive campaigns will stimulate the demand for reading Ukrainian literature in the country, which will increase circulation, expand the formats and genre of the book, increase the number of authors on the market. The promotional campaign will involve all book ecosystem agents, influencers, as well as related creative clusters to develop new publishing projects implemented in the cultural environment of the country.	exhibitions, scientific conferences, congresses, etc. related to book publishing, literature and reading is ensured. Thematic action "All-Ukrainian information campaign to promote reading" was held Number of events: 2026 - 24 2027 - 26 2028 - 28 2029 - 30 2030 - 32 2031- 34 2032 - 36		2026 - 88.1 2027 - 96.9 2028 - 106.6 2029 - 117.3 2030 - 129.0 2031- 141.9 2032 - 156.2	State budget (budget program UBI 3801560)	
5. Filling the domestic book market with professional and specialized literature	The post-war recovery of the country's economy, especially strategic high-tech industries, will require prompt measures to prepare and retrain human	Translation and publication of professional and specialized literature in a circulation	MES		Recovery Fund funds	Cross-sector project

published by Ukrainian publishers through grants	resources involved in the process of recovery, adjustment and full-fledged launch of new modern industries. Such training and retraining of staff will be impossible without providing this process with a sufficient amount of specialized professional literature, which is usually of foreign origin.	determined by experts representing a particular industry				Draft law “On the amendments to the law on state support of book publishing”
6. Providing certificates for the purchase of books	Stimulating demand, developing a culture of reading, supporting reader demand and all market participants	5.6 million certificates were issued	MCIP SI "Ukrainian Book Institute"	UAH 5.6 million	Recovery Fund funds State budget (budget program UBI 3801560)	
7. Fight against piracy and counterfeiting in the book sphere in e-commerce (on marketplaces)	Current norms and mechanisms for protection of rights are not enough. Combating the online distribution of counterfeit books carried out mainly manually, by filing complaints against sellers at marketplaces and submitting applications on the commission of criminal offenses to the	The draft law was adopted	MCIP Goskomteleradio	not required	not required	Requires the development and adoption of a separate draft law "On amendments to certain laws of Ukraine on combating the distribution of counterfeit book products"

	cyberpolice department of the national police of Ukraine. In order to grow the legal Ukrainian book market, it is necessary to introduce more effective and faster mechanisms, in particular, mandatory requirements for the rules of trade on marketplaces, the availability of distribution rights. specific book products (copyright objects), the introduction of a simplified procedure for blocking sellers at marketplaces for the sale of illegal book products.					
Task 2. Expansion of the book trade network						
1. Subsidizing bookstores	A strong impulse to the growth of the domestic book market due to the increase in the number of bookstores and, as a consequence, the creation of new jobs and the growth of the book publishing and book distribution industry, and consequently the payment of taxes.	Rent compensation for bookstores. Growth of the bookstore network up to 600 units: Number of new bookstores: 2026 - 15 2027 - 25 2028 - 35 2029 - 45 2030 - 65 2031- 75	MCIP SI "Ukrainian Book Institute"	UAH 298.7 million 2026 - 8.6 2027 - 15.8 2028 - 24.3 2029 - 34.4 2030 - 54.7	Recovery Fund funds State budget (budget program UBI 3801560)	

		2032 - 90		2031- 69.4 2032 - 91.5		
Direction: Libraries						
Stage: Economics and institutions of wartime (short-term) - "Everything possible to win!" (June 2022 - end of 2022 *) * In the event of a continuation in active hostilities, the plan will be adjusted in the 4th quarter of 2022, accordingly, this phase (with the planning of major activities and their financing) will be extended to 2023. Objective: Existing libraries throughout Ukraine, where no hostilities are taking place and which are not under occupation, provide all basic library services, otherwise mobile library services are provided						
Task 1. Providing effective and high-quality library services in martial law						
1. Actualization of the funds of libraries of Ukraine	Countering the active phase of the information war, reducing the spread of russian and Soviet propaganda narratives and their negative impact on various target audiences	Books of russian and Soviet publishing houses were confiscated from the funds of libraries of Ukraine (according to certain criteria)	MCIP, local governments	No need		Law of Ukraine "On libraries and library affairs" Decree of the President of Ukraine as of 28 December 2021 № 685/2021 on the implementation of the decision of the National security and defense council of Ukraine as of 15 October 2021 "On information security strategy", law "On sanctions"
2. Organization of non-stationary forms of library services in	A significant part of deoccupied and frontline settlements has suffered from the destruction of	Number of settlements whose residents are	Local governments	UAH 50 million	Recovery Fund funds	Laws of Ukraine "On libraries and library affairs", "On State social standards and State social

regions (settlements) where the State social norms of providing the population with public libraries are not fulfilled (“Mobile libraries”)	infrastructure, including social and cultural ones, as a result of which the provision of services to the population (in particular, library, administrative) has been suspended or complicated. The level of financial and material security of the inhabitants of these settlements has also deteriorated. Therefore, the implementation of the project "Mobile libraries" using similar experience, which is common in almost all EU countries (where mobile libraries that provide library, information, educational, administrative services are used in small settlements, where it is economically impractical to maintain stationary libraries), will help to overcome the consequences of the war faster; provide support to citizens who find themselves in a difficult social situation; bring the provision of services closer to the place of residence.	provided with the service			Local budgets MTD	guarantees", Resolution of the Cabinet of Ministers as of 6 February 2019 № 72 "On approval of State social standards for providing public libraries in Ukraine"

	One mobile library will be able to provide services to residents of at least 5-10 settlements					
3. Updating the forms of statistical reporting in the field of librarianship	The need to include in the reporting and accounting of new relevant data on the activities of libraries due to the significant expansion of information and library services, including online platforms, which is not reflected in the statistics. The 6-nk form, which is currently in force, does not fully cover all relevant performance indicators that would demonstrate the degree of achievement of the goals of all library processes.	The MCIP's order was adopted and registered with the Ministry of Justice of Ukraine	MCIP	No need		
Recovery phase (medium term) - "Recovery, restart of the economy and institutions" (2023 - 2025, with separate details for 2023) * In the event of continuation in active hostilities, the plan will be adjusted in the 4th quarter of 2022, respectively, this phase (with the planning of major activities and their financing) will be postponed to 2024-2026). Objective: Libraries have adequate logistics and act as centers of community development and human capital						
Task 1. Restoration of libraries affected by the armed aggression of the russian federation against Ukraine, and optimization of the library network						
1. Optimization of the network of public libraries in accordance with the State social	Migration processes caused by the russian invasion of Ukraine have changed the ratio between the population / inhabitants of certain regions, cities, towns, villages and	The number of public libraries meets the requirements of the State social standards for providing the public	Local governments		Local budgets International	

standards of providing the population with public libraries in Ukraine	the rate of providing the population with a network of public libraries, respectively, the need for public libraries has increased or decreased depending on migration.	with public libraries in Ukraine			technical assistance	
2. Restoration of libraries damaged by the military aggression of the russian federation against Ukraine	Staff, premises, material and technical base Restoration of access to library services, providing access to information	Number of restored libraries	Local governments, central executive bodшуi, which are subordinated to libraries, and institutions whose subdivisions are libraries	The amount can be determined by the results of the loss analysis	Infrastructure Restoration Fund	
3. Implementation of pilot projects "Ideal library"	The concept of the library, which has 4 spaces, was developed in 2010 by researchers from the Royal School of Library Science and Information Science Dorte Skot-Hansen, Casper Hvenegaard Rasmussen and Henrik Jochumsen (Copenhagen, Denmark). It assumes that the library combines the functions of information, educational, communication, cultural, creative, leisure center.	At least 5 pilot projects have been implemented	Local governments	UAH 25 million	Infrastructure Restoration Fund	
Task 2. Strengthening the material and technical base and development of human resources of public libraries						

1. Improving the competencies of librarians in marketing, IT, communications, raising extra-budgetary funds, as well as management staff on management approaches and tools	In order to stimulate innovation processes in libraries, as well as the formation professionalism of library staff	At least 60% of librarians have been trained	Local governments			
Task 3. Informatization of library processes and development of digital projects in libraries (see projects in the section of digital transformations)						
Modernization stage (strategic) - "Structural modernization and full integration into the EU" (2026 - 2032 *) * The planning dates of the stage will be adjusted based on the results of 2022-2023 Objective: Current literature and modern quality services are available in libraries quickly and in a convenient format for all who need it						
Task 1. Modernization of the material and technical base of public libraries (see the section with projects of digital transformations)						
1. Expanding the range of paid services provided by libraries	In order to diversify the financial income of libraries, it is proposed to expand the list of paid services that can be provided by state and municipal cultural institutions that are not leased. Necessary to add the following services: - coworking services;	The resolution of the Cabinet of Ministers of Ukraine was adopted	MCIP	not required	not required	Resolution of the Cabinet of Ministers of Ukraine of December 2, 2020 № 1183 List of paid services that may be provided by state and municipal cultural institutions that are not leased

	- functioning of a permanent exhibition-sale of modern Ukrainian books.					
Task 2. Formation of high-quality personnel potential of library institutions						
1. Improving the competencies of librarians in marketing, IT, communications, raising extra-budgetary funds, as well as management staff on management approaches and tools	In order to stimulate innovation processes in libraries, as well as the formation of professionalism of library staff	At least 70% of librarians have been trained	Local governments		Recovery Fund funds Local budgets

7.	MCIP’s order "On amendments to the procedure for selection, purchase and distribution of book products to replenish library funds" **"Book publishing", goal 2, task 3, stage 2**	Improving the procedure for selection, purchase and distribution of book products to replenish library funds.	MCIP	2023	1 March 2023

4. Ethnic affairs and religion

1. Key pressing issues to be solved under the Recovery Plan within the direction “ethnic affairs and religion”

The war influence on the defined analysis area:

- As of May 24, 2022, 129 buildings of spiritual significance (excluding adjacent buildings) were destroyed or damaged as a result of hostilities in at least thirteen regions of Ukraine: Kyiv, Dnipropetrovsk, Donetsk, Zhytomyr, Zaporizhia, Luhansk, Lviv, Mykolaiv, Odesa, Sumy. Kharkiv, Kherson and Chernihiv. The vast majority of them (101 out of 129) are Orthodox churches. Mosques, synagogues, Catholic and Protestant churches, religious educational institutions and important administrative buildings of religious organizations were also damaged.
- The war exacerbated the problem of society's attitude to religious organizations, whose headquarters are in the aggressor state. Along with calls on public authorities to ban the activities of such religious organizations in Ukraine, there are increasing demands on the religious communities of certain churches (most often in the Ukrainian Orthodox Church (UOC) communities) to change their subordination and become part of the Orthodox Church of Ukraine (OCU). Many see this as a way to reduce russia's hostile influence on the Ukrainian religious community in particular and on Ukrainian society as a whole.
- The military actions caused by the russian federation posed a threat to the preservation of compact housing and cultures of a number of ethnic communities in Ukraine - Crimean Tatars, Krymchaks, Karaites (Crimean Peninsula), North Azovian Greeks (North Azovian region), Meskhetian Turks (Northern Black

	Sea region). A number of cultures in these communities are simultaneously unique and vulnerable. Thus, according to the UNESCO Atlas of the World's Languages in Danger, Crimean Tatar, Karaite, Urum, Roumean languages belong to the languages under risk of disappearing. ● Increased interest of the international community in understanding the Ukrainian context, including in the field of ethnic affairs and religion, after decades of limited attention successfully used by russian propaganda (which disseminates false narratives about the state of interethnic and interreligious relations in Ukraine, interpretations of state policy in ethnic affairs and religion).	
1)	Key challenges (summarized for the defined area)	● the threat to the preservation of Ukraine's ethnic diversity, in particular through the disappearance of unique ethnocultures (North Azovian Greeks), which were in a vulnerable position before the full-scale invasion of the russian federation; ● damage to material objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine; ● disseminating narratives of russian disinformation and propaganda aimed at dividing Ukrainian society by instrumentalizing ethnic and religious factors, discrediting Ukrainian authorities and society in the eyes of the international community.
2)	Key possibilities (summarized for the defined area)	● the unification of Ukrainian society in counteracting russian aggression created the basis for the long-term consolidation of society, the crystallization of Ukrainian identity, in particular among representatives of various ethnic and religious communities of Ukraine; ● the rupture of economic, cultural and other ties with russia has created a window of opportunity to solve various problems of religious communities in Ukraine (including the problem of the unity of Ukrainian Orthodoxy) without the intervention of the russian side; ● wider opportunities for international informing on the current state of affairs in the field of ethnic affairs and religion of Ukraine, which was complicated in previous years due to russian propaganda and the weak focus of the international community on the state of affairs in Ukraine
3)	Key constraints (summarized for the defined area)	● limited material resources for financing activities in the field of ethnic affairs and religion due to the radical change of priorities of the state in wartime; ● radicalization of society's attitude towards communities associated with russian federation; ● uncertainty about the timing of the end of the Russian-Ukrainian war and the final extent of the damage

2. Goals, tasks, and stages of the Recovery Plan within the direction "ethnic affairs and religion" of the defined area:

2.1. Goals aimed at solving a defined pressing issue

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
1) Defined pressing issue to be solved under the defined analysis area *(description)* **Threat to the preservation of ethnic and religious diversity of Ukraine**			
Goal to be achieved to solve the issue at each stage	**The intermediate consequences of the negative impact of the Russian-Ukrainian war on the life and culture of ethnic communities in Ukraine have been overcome**	**The consequences of the negative impact of the Russian-Ukrainian war on the state of ethnic and religious diversity of Ukraine have been overcome**	**Ethnic and religious communities integrated into Ukrainian society preserve and develop their cultural identity**
Timeframe under the stage	the end of 2022	the end of 2025	the end of 2032
Risks related to the goal achievement	continuation of hostilities in some Ukrainian territories, lack or inability to obtain reliable information on damaged objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine	continuation of hostilities in some Ukrainian territories / resumption of hostilities after the armistice; lack of funding; the irreversible nature of certain losses caused by the war; low level of political prioritization of the sphere	constant security threat from the russian federation; lack of funding; low level of political prioritization of the sphere
Goal Achievement indicator	a list of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine affected by the Russian-Ukrainian war has been created	number of rebuilt / repaired / restored objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine number of implemented projects aimed at preserving the	number of implemented projects aimed at preserving the cultural identity of ethnic communities of Ukraine the level of awareness of representatives of NGOs of ethnic communities of Ukraine about the existing opportunities

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		cultural identity of ethnic communities of Ukraine	for state support of cultural projects on the topic of preserving the identity of ethnic cultures of Ukraine, unity in diversity (%) the level of satisfaction of representatives of NGOs of ethnic communities of Ukraine with the available opportunities for state support of cultural projects on the topic of preserving the identity of ethnocultures of Ukraine, unity in diversity (%)
General need of funds for the goal achievement	UAH 36.552 million (USD 1.224 million according to the official NBU exchange rate as of June 9, 2022)	UAH 43.41 million (USD 1.466 million according to the official NBU exchange rate as of June 9, 2022)	UAH 0.7 million (USD 20.4 thousand according to the official NBU exchange rate as of June 9, 2022)
Goal connections with other areas/directions	cultural heritage, audit of war losses, education, social protection	audit of war losses, cultural heritage, culture, cinema, education and science, national memory, tourism	culture
2) Defined pressing issue to be solved under the defined analysis area *(description)* **Low level of awareness among the international community about the state of interethnic and interreligious relations in Ukraine**			

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Goal to be achieved to solve the issue at each stage	Ensure informing foreign audiences about the state of interethnic and interreligious relations in Ukraine, the impact of the war on ethnic and religious communities of Ukraine		
Timeframe under the stage	the end of 2022		
Risks related to the goal achievement	fatigue of foreign audiences from the topic of Ukraine and the Russian-Ukrainian war; predominance in the information space of foreign audiences of narratives of russian disinformation / propaganda; lack of funding		
Goal Achievement indicator	number of public events held to inform foreign audiences number of public comments to foreign media on the state of interethnic and interreligious relations in Ukraine, the impact of the war on ethnic and religious communities of Ukraine		
General need of funds for the goal achievement	UAH 4.04 million (USD 135.5 thousand according to the official		

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032

2.2. The current state of implementation of program documents within the defined analysis area on the defined pressing issue:

No	Title of the program document	Current state
	Strategy for promoting the realization of the rights and opportunities of persons belonging to the Roma national minority in Ukrainian society for the period up to 2030 (approved by the Order of the Cabinet of Ministers of Ukraine of July 28, 2021 № 866-r)	In August 2021, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience began work on the formation of a draft Action Plan until 2023 to implement the Roma Strategy. The draft action plan involved more than 70 representatives of Roma NGOs, public authorities, international partners, who worked in the format of eight working groups, in accordance with the areas defined by the Strategy: "Statistical Information and Data", "Employment", "Provision of social protection", "Legal protection

		and anti-discrimination", "Access to quality education", "Access to health services", "Improving the quality of living conditions", "Roma culture, history, art, language". Participants in the drafting of the action plan included the following international partners: UN Women Ukraine, UN Monitoring Mission for Human Rights in Ukraine, UNICEF, UNHCR Office in Ukraine, OSCE Monitoring Mission for Human Rights in Ukraine, Council of Europe Office in Ukraine, American Bar Association Rule of Law Initiative (ABA ROLI). The public discussion of the draft action plan was conducted in the format of sending written proposals and comments from 5 to 20 October 2021. Based on its results, a draft Action Plan has been prepared, which is currently at the stage of interdepartmental approval. DESS, together with the Council of Europe Office in Ukraine, also consulted with representatives of regional state administrations on the preparation of regional action plans for the implementation of the Strategy.
	National Strategy for Human Rights (approved by Decree of President of Ukraine № 119/2021)	Detailed information on ensuring the rights of national minorities and indigenous peoples of Ukraine is available on the official website of State Service of Ukraine for Ethnic Affairs and Freedom of Conscience (https://dess.gov.ua/realising-rights-of-national-minorities-in-ukraine/), as well as in the official reports of Ukraine on the implementation of international treaties, in particular the Council of Europe Framework Convention for the Protection of National Minorities (available at: https://rm.coe.int/5th-sr-ukraine-en/1680a52485).
	Strategy for the Development of the Crimean Tatar Language for 2022-2032 (approved by the Order of the Cabinet of Ministers of Ukraine of February 23, 2022 № 224-r)	Responsible public body: Ministry of Reintegration

2.3. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

No	Description of the task to achieve the goal	Deadline for the task fulfilment	Dependence of the task on the tasks of other directions, areas, pressing issues
Aim: preservation of ethnic and religious diversity of Ukraine			

Goal 1. The intermediate consequences of the negative impact of the Russian-Ukrainian war on the life and culture of the ethnic communities of Ukraine have been overcome			
Stage 1: June 2022 – end of 2022			
	Task 1. The extent of damage to objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine is determined	December 2022	cultural heritage, audit of losses incurred as a result of the war
	Task 2. The intermediate negative consequences of the Russian-Ukrainian war on the usual way of life of the ethnic communities of Ukraine have been overcome	December 2022	social protection, education
	Task 3. Projects aimed at preserving the cultures of ethnic communities of Ukraine are supported	December 2022	national memory, cinema, culture
Goal 2. The consequences of the negative impact of the Russian-Ukrainian war on the state of ethnic and religious diversity of Ukraine have been overcome			
Stage 2: January 2023 – December 2025			
	Task 1. Restoration of objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine	December 2025	cultural heritage, audit of losses incurred as a result of the war
	Task 2. Creating sustainable mechanisms to support the cultures of ethnic and religious communities of Ukraine	December 2025	culture, education and science, national memory, tourism
	Task 3. Projects designed to preserve the culture of ethnic communities are implemented	December 2025	national memory, tourism, education and science, cinema, culture
Goal 3. Ethnic and religious communities integrated into Ukrainian society preserve and develop their cultural identity			

Stage 3: January 2026 – December 2032			
	Task 1. Access of ethnic communities of Ukraine to the mechanisms of state support and awareness of ethnic communities of Ukraine regarding their existence are provided	December 2032	

	Description of the task to achieve the goal	**Deadline for the task fulfilment**	**Dependence of the task on the tasks of other directions, areas, pressing issues**
Goal 1. To provide informing foreign audiences on the state of interethnic and interreligious relations in Ukraine, the impact of the war on the ethnic and religious communities of Ukraine			
Stage 1: June 2022 – end of 2022			
	Task 1. To provide informing foreign audiences on the state of interethnic and interreligious relations in Ukraine, the impact of the war on the ethnic and religious communities of Ukraine by government officials during the war.	December 2022	
	Task 2. To provide informing foreign audiences on the state of interethnic and interreligious relations in Ukraine, the impact of the war on the ethnic and religious communities of Ukraine during the war through the tools of cultural diplomacy	December 2022	cultural diplomacy, information policy, international relations, cinema

	Description of the task to achieve the goal	**Deadline for the task fulfilment**	**Dependence of the task on the tasks of other**

			directions, areas, pressing issues
Aim: formation and ensuring the effective functioning of the institutional ecosystem aimed at supporting the sustainable consolidation of Ukrainian society			
Goal 1. To form unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in wartime			
Stage 1: June 2022 – end of 2022			
	Task 1. The participation of ethnic communities of Ukraine in counteracting russian aggression is highlighted	December 2022	media and information security
	Task 2. The legislation on the protection of the rights of national minorities has been updated	December 2022	
	Task 3. Building a dialogue of religious communities for the sake of understanding and interaction in wartime	December 2022	
	Task 4. Conducting research to assess the state of interethnic relations	December 2022	
Goal 2. To form unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in post-war conditions			
Stage 2: January 2023 – December 2025			
	Task 1. Institutional ecosystem aimed at supporting the sustainable consolidation of Ukrainian society has been formed	December 2025	education, justice, internal affairs
	Task 2. Unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in the post-war conditions have been formed.	December 2025	media and information security, culture, cinema

	Task 3. Conducting research to assess the state of interethnic relations	December 2025	
Goal 3. Citizens of Ukraine, regardless of religious or ethnic identity, are recognized and felt an integral part of Ukrainian society			
Stage 3: January 2026 – December 2032			
	Task 1. Effective functioning of the institutional ecosystem aimed at supporting the sustainable consolidation of Ukrainian society, unity in diversity is ensured	December 2032	education, internal affairs
	Task 2. Measures to back the sustainable consolidation of Ukrainian society, unity in diversity are supported	December 2032	education, media and information security

List of national projects on the fulfillment of the task stated in Subsection 2.3 (for the corresponding task)

Description of the project	**Project justification**	**Criteria / indicators of the project implementation (quantitative or qualitative)**	**Responsible public authority**	**Approximate need of funds (million, UAH)**	**Suggested sources of financing**	**Regulatory provision**
Stage: Economics and institutions of wartime (short-term) - "Everything to win!" (June 2022 - end of 2022 *) * In the case of a delay in active hostilities, the plan will be adjusted in the 4th quarter of 2022, accordingly, this phase (with the planning of major activities and their financing) will be extended to 2023.						
Goal. The intermediate consequences of the negative impact of the Russian-Ukrainian war on the life and culture of ethnic communities in Ukraine have been overcome						
Task 1. The extent of damage to objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine is determined						

Creating a list of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine affected by the Russian-Ukrainian war	The military actions caused by the invasion of the russian federation cause irreparable damage to the objects of spiritual significance and cultural heritage of the ethnic and religious communities of Ukraine, some of which are at the same time of significant historical value. Fixation of the caused damage will allow to conduct as soon as possible an estimation of the caused losses for the purpose of definition of extent of the material resources necessary for restoration of these objects. Up-to-date data on damaged facilities can also be used in external informing on the consequences of russian aggression in Ukraine in order to consolidate international support in counteracting the russian federation and rebuilding Ukraine.	A list of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine affected by the Russian-Ukrainian war has been created	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience , regional and Kyiv military administrations	_____	_____	
Task 2. The intermediate negative consequences of the Russian-Ukrainian war on the usual way of life of ethnic communities of Ukraine are overcomed						
Creation of modular towns in places of compact residence of IDPs	A number of shelters in large cities are full. Simultaneously, representatives of certain ethnic communities (including the Roma) report about cases of discrimination in access to shelters.	100% of IDPs without permanent housing have the opportunity to live in modular towns	Ministry of Regional Development, Ministry of Social Policy, regional and	UAH 14.9 million (USD 428.8 thousand according to the official	Recovery Fund State budget funds, grants	

	The current shelter system does not provide long-term shelter for IDPs who have lost their homes / been forced to leave for a long time. Under such conditions, it is considered appropriate to build modular towns, which can be a long-term solution for those IDPs who cannot return to their hometowns.		Kyiv military administrations	exchange rate of the NBU as of June 9, 2022)		
Creation of educational spaces at modular towns / places of temporary residence for integration of IDP children into the educational process that was disrupted due to the war in Ukraine	Due to the outbreak of war, a significant number of children who were forced to leave their places of residence lost access to the educational process. This situation is especially exacerbating for people in difficult life circumstances, in particular members of the Roma national minority, who are deprived of the technical capacity to continue their education properly. Therefore, children living in shelters and modular camps should be provided with the technical capacity to continue participating in the educational process. Some members of the Roma national minority suggest that this be done through the proper technical provision of public places, such as libraries, their transformation into educational spaces and access to them.	100% of IDP children living in shelters / modular towns have access to the educational process	Ministry of Education and Science, Ministry of Regional Development, Ministry of Social Policy, regional and Kyiv military administrations	UAH 3 million (USD 101.5 thousand according to the official NBU exchange rate as of June 9, 2022)	Recovery Fund international technical assistance state budget funds	

Ensuring monitoring and coordination of modular towns and adaptive programs for IDPs in the regions	For effective operation of modular camps and accompanying adaptive programs (training spaces, employment of IDPs), as well as to ensure an anti-discrimination approach in access to existing programs, it is necessary to conduct monitoring and coordination work on the ground. Task: ● monitoring of discrimination when settling in shelters, modular towns; ● monitoring and coordination of educational spaces, advocacy for the inclusion of IDPs in adaptive programs in the regions; ● monitoring of employment and programs for entrepreneurs, analysis of the economic component in the regions to find the best employment options for IDPs.	100% of IDPs were given access to shelter / modular camps. 100% of IDP children living in shelters / modular towns have access to the educational process. 100% of IDP children living in shelters / modular towns have access to employment programs	Ministry of Education and Science, Ministry of Regional Development, Ministry of Social Policy, regional and military administrations in the regions hosting IDPs (Zaporizhzhya, Dnipropetrovsk, Lviv, Zakarpattia, Vinnytsia)	UAH 0.5 million (USD 16.9 thousand according to the official NBU exchange rate as of June 9, 2022)	Recovery Fund international technical assistance state budget funds	
Task 3. Projects aimed at preserving the cultures of ethnic communities of Ukraine are supported						
Establishment of the Karaite community center "Karaite House in Halych"	The city of Halych (Ivano-Frankivsk region, Ukraine) is a city of compact residence of Crimean Karaites from the XIII century, who for centuries have preserved their own religion, language and traditions. Here is the only museum	Karaite community center "Karaite House in Halych" was established	Ministry of Culture and Information Policy, State Service of Ukraine for	UAH 0.5 million (0.016 million euros according to	Charitable assistance of the Karaites of Israel, Poland, Lithuania, Ukraine;	

	of Karaite history and culture in Ukraine. Today, in connection with the military aggression of the russian federation, the city of Halych has become a center of Karaite refugees from the cities of Kharkiv, Mykolayiv and the temporarily occupied Melitopol, Kherson, etc. Crimean Karaites have been forced to leave their cells twice since 2014 due to the annexation of Crimea. The Karaite ethnographic center "Kale" was closed in the temporarily occupied Melitopol, and the Sunday school for the study of the Karaite language and the Karaite folk ensemble were closed too. As a result, the Karaites, the indigenous people of Ukraine, are threatened with the disappearance of their own culture, language and traditions. Establishment and development of the Karaite community center "Karaite House in Halych" will contribute to the preservation of the indigenous people of Ukraine - the Karaites; reproduction of the traditional way of life of the Karaites; development of national crafts		Ethnic Affairs and Freedom of Conscience	the official exchange rate of the NBU as of June 23, 2022)	state and local budget funds; funds raised from other sources not prohibited by law	

	(wood carving, stone), clothing and textiles; revival of musical traditions; conducting religious rites and services; revival of the spiritual school of Karaiteism; creation of a new tourist location and new tourist routes with a visit to the Karaite community center "Karaite House in Galicia". The project envisages obtaining premises for living and worship, materials for garden equipment, furniture, household appliances, woodworking machines and equipment, sewing machines, office equipment, and the Internet.					
Creation of the museum "Crimean Tatar Estate" on the territory of the National Museum of Ethnography and Life of Ukraine	Given the temporary occupation of the Crimean peninsula and the dispersed settlement of Crimean Tatars in the rest of Ukraine, it is extremely important for the preservation of Crimean Tatar culture is the creation of the so-called "living museum", which would combine the authentic accuracy of the culture and life of the Crimean Tatars and modern technologies and reflections of masters and artists on the history, personalities, events of the Crimean Tatar people. Such a museum will play an important role in preserving the Crimean Tatar culture, as well as perform an important	The "Crimean Tatar Estate" was created on the territory of the National Museum of Ethnography and Life of Ukraine	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, UCF, SE "Crimean House", Ukrainian Institute (permit documentation,	UAH 12.586 million (EUR 0.409 million according to the official NBU exchange rate as of June 9, 2022) (total project cost)	Donor support (Tika, Turkey), private patrons, state budget funds	

	educational function, giving all visitors the opportunity to get acquainted with it and the history of the Crimean Tatars.		memorandum of cooperation)			
Creation of the documentary film "Crimea Inside Me"	The project involves the creation of a documentary film that reveals the stories of various Crimean Tatars: from a child, a soldier, a cultural figure to political leaders who were forced to leave the Crimean peninsula and start a new life in mainland Ukraine, where each has a different craft and is a small part of a large image-personification of the Crimean Tatar people, its culture and way of life. The concept of the film envisages the use of the "Crimean Tatar Estate" Museum as one of the landmark locations.	A documentary has been made	Ministry of Culture and Information Policy, SE "Crimean House", General Staff of Ukraine	UAH 3.666 million (124.1 thousand US dollars according to the official exchange rate of the NBU as of June 23, 2022) (total project cost)	Private patrons, state budget funds, grants from foreign institutions (Tika, Turkey)	
Conducting an educational residence "Ethno Film Residence"	Filming the experience of ethnic cultures of Ukraine is extremely important in the conditions of the Ukrainian-Russian war, which is already having a devastating effect on the preservation of certain ethnic cultures of Ukraine. The format of the residency includes a 10-day training workshop for entrants, students and anyone interested, where they will learn how to create ethnographic cinema. Under the	The residence was held	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 1.4 million (0.045 million euros according to the official exchange rate of the NBU as of June 23, 2022)	Recovery Fund Grants, state budget funds	

	guidance of teachers from the Department of Folklore of the Taras Shevchenko National University of Kyiv and teachers from the Kyiv National I. K. Karpenko-Kary Theatre, Cinema and Television University, all interested and pre-selected students will take a theoretical and practical course of study, and in collaboration with each other and teachers will conduct expeditions to the villages of Bessarabia where they will create ethnographic films together. As a result of the training, short films on ethnographic topics will be created, which will be shown at OKO ethnographic film festival in Torun (Poland) in November 2022.					
Goal. Ensure informing foreign audiences about the state of interethnic and interreligious relations in Ukraine, the impact of the war on ethnic and religious communities of Ukraine						
Task 1. To provide informing foreign audiences on the state of interethnic and interreligious relations in Ukraine, the impact of the war on the ethnic and religious communities of Ukraine by government officials during the war						
Providing public comments / interviews to foreign media by government officials on the state of interethnic	The need for this measure is related to the growing interest of the international community in understanding the Ukrainian context, including in the field of ethnic affairs and religion, and the need to draw its attention to current issues in these areas caused by the war.	100 public comments / interviews by government officials were provided to foreign media	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs	_____	_____	

and interreligious relations in Ukraine, the impact of the Russian-Ukrainian war on the ethnic and religious communities of Ukraine	This is especially important against the background of the dissemination of false narratives of russian disinformation / propaganda about the state of interethnic and interreligious relations in Ukraine, the interpretation of state policy measures in the field of ethnic affairs and religion, etc.		and Freedom of Conscience			
Task 2. To provide informing on the state of interethnic and interreligious relations in Ukraine, the impact of the war on the ethnic and religious communities of Ukraine during the war through the tools of cultural diplomacy						
Conducting public portable tablet photo exhibitions in Greece on the impact of the war on the usual way of life of ethnic communities in Ukraine (especially North Azovian Greeks)	In the context of the Russian-Ukrainian war, it is extremely important to inform the international community about the devastating impact of the Russian-Ukrainian war on traditional life and the preservation of the cultures of certain ethnic communities in Ukraine. The North Azovian Greeks are the communities most affected by the fighting after February 24, 2022, as their compact residence has traditionally remained the Northern Azov Sea area (after the deportation of Greeks from the Crimea in the 18th century at the initiative of Russian Empress Catherine II). At the initiative of representatives of these communities,	6 photo exhibitions were held in these places	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, MFA	UAH 0.221 million (EUR 0.007 million according to the official NBU exchange rate as of June 23, 2022)	International technical assistance, private donor support, state budget funds	

	it is planned to hold portable tablet photo exhibitions in Greece, dedicated to the themes of Mariupol and the North Azovian Greeks. Venues: Athens, Piraeus, Patras, Zograf, island Aegina, island Kitnos.					
Print photo album "The City of Mary"	The photo album will include professional photos of peaceful Mariupol, Mariupol during the war, photos of Azovstal (before / after) and photos from the life of the North Azovian Greeks of Ukraine. It is offered to print about 500 copies. It is planned to distribute these copies in Greece and among the large Greek communities in Europe.	500 copies of the photo album were printed	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 0.283 million (EUR 0.009 million according to the official NBU exchange rate as of June 23, 2022)	International technical assistance, private donor support, state budget funds	
Public screenings of the film "As Vasilevun Rumei"	The film was shot by members of the Greek public association "Enotita", a group of directors, thanks to a grant won from UA: SUSPILNE. The film depicts the daily life, rituals, and traditions of the North Azovian Greeks, most of whom lived compactly before the full-scale russian invasion of the North Azov region. The film is planned to be shown in Athens, Thessaloniki, Patras, Piraeus,	There have been at least 7 public screenings of the film	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, MFA	UAH 1.41 million (0.046 million euros according to the official exchange rate of the NBU as of June 23, 2022)	International technical assistance, private donor support, state budget funds	

	and the residence of large Greek communities in Germany, Australia, and the United States. During the screening of the documentary, it is planned to hold lectures on the Greeks of Ukraine with the participation of Araggioni Margaryta (Ph.D., A.Yu. Krymsky Institute of Oriental Studies, leading researcher), as well as a screen photo exhibition of the life of Greeks in Ukraine, Mariupol before the beginning of a full-scale russian invasion on February 24, 2022 and after.					
Conducting the international ethnographic film festival "OKO" in Poland	Foreign screenings of films on the ethnic diversity of Ukraine, the impact of the Russian-Ukrainian war on the situation of ethnic communities in Ukraine are an extremely important tool of cultural diplomacy, able to draw foreign attention to the problem of preserving Ukraine's ethnic cultures during the war. The OKO Festival is the first and only film festival in Ukraine, the focus of which is entirely on showing ethnographic films on the topic of ethnic diversity in Ukraine and the world. The festival has been held for	A film festival was held	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 2.126 million (0.069 million euros according to the official exchange rate of the NBU as of June 23, 2022)	International technical assistance, state budget funds, partnership assistance	

	about 2 years (2020 - online, 2021 - Bolgrad, Odesa region) and serves as a platform for the exchange of ideas and interaction between filmmakers, ethnographers, anthropologists and folklorists. In 2022, the third edition of the film festival is expected to be in Torun, Poland. This year's film festival includes both an international and a Ukrainian program. Traditionally, all events and film screenings will be available online on the festival website.					
Goal. To form unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in wartime						
Task 1. The participation of ethnic communities of Ukraine in counteracting russian aggression is highlighted						
Coverage of the participation of ethnic communities in Ukraine in counteracting russian aggression	Collection and dissemination of such information: ● serves as a tool to counter the narratives of russian disinformation and helps to form a positive image of Ukraine in the world; ● contributes to the consolidation and internal unity of Ukrainian society, deepening interethnic tolerance in Ukraine.	Monitoring of the participation of ethnic communities of Ukraine in counteracting russian aggression has been created	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	_____	_____	
Dissemination of information about the participation of	Dissemination of such information: ● serves as a tool to counter the narratives of russian	A public event dedicated to this topic was held (with the	Ministry of Culture and Information	UAH 0.301 million (EUR 0.01	International technical assistance,	

ethnic communities in Ukraine in counteracting russian aggression	disinformation and helps to form a positive image of Ukraine in the world; • contributes to the consolidation and internal unity of Ukrainian society, deepening interethnic tolerance in Ukraine	involvement of representatives of ethnic communities) Created 4 communication materials on this topic	Policy, State Service of Ukraine for Ethnic Afairs and Freedom of Conscience	million according to the official exchange rate of the NBU as of June 23, 2022)	international technical assistance, state budget funds	
Task 2. The legislation on the protection of the rights of national minorities has been updated						
Preparation of the draft Law of Ukraine "On Ethnic Diversity and National Unity"	Component of the implementation of the recommendations of the European Commission to complete the reform of the legal framework for national minorities and to adopt mechanisms for its immediate and effective implementation. It will include the protection of the rights of national minorities and the needs of integration of society, taking into account hybrid threats from the aggressor state. In particular, the draft law will contain provisions on the functioning of national minority languages, which are needed in the context of the Law of Ukraine "On Ensuring the Functioning of the Ukrainian Language as the State Language", which in turn contains references to a separate law regulating minority languages.	The draft Law has been submitted to the Verkhovna Rada of Ukraine	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	_____	_____	

Task 3. Building a dialogue of religious communities for the sake of understanding and interaction in wartime						
Religious information project "God against War / Religious Ethos in practice during the war"	The war with russia has a significant information and propaganda dimension. Not the least role in it is played by the enemy's broadcast of dangerous ideologues and narratives that justify aggression against Ukraine. Ideological concepts such as "russian world" have been actively promoted for years through a network of religious organizations associated with russia. Therefore, today there is a need to develop projects that can fill the religious space with other ideas, concepts and narratives. This implies the need for powerful information resources that can work effectively with Ukrainian and foreign religious audiences, thus gaining allies for Ukraine in the fight against the enemy and strengthening information resistance to Russian aggression. Religious information project "God against War / Religious Ethos in practice during the war" (website: ethos.org.ua; Telegram-channel of the project: https://t.me/GodAgainstWar) was created on the educational platform	Held 2 online conferences (1 time in 2-3 months) with subsequent publication of materials in different formats (text, video, audio). Published 15 interviews (video + text) (2-3 times a month). 200 publications were made on the website and in the Telegram channel - 200 (2-3 per day) in Ukrainian. 200 publications on the website (2-3 per day) in English. Held 2 thematic courses of lectures on the Ethos platform, its own YouTube channel (in video / podcast format)	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 0.602 million (EUR 0.02 million according to the official exchange rate of the NBU as of June 23, 2022)	International technical assistance, state budget funds, patronage	

	Ethos in order to organize a joint case and information struggle against the war of Christian (and not only) thinkers and ministers of the churches of Ukraine and the world. This project is, in essence, a de facto continuation of many years of educational activities during the war, which is carried out by the team of the publishing house "Dukh i Litera" (Spirit and Letter), the community of Assumption Readings, Kyiv Summer Theological Institute, Open Orthodox University, etc. Project goal: ● to bring the voices of Christians of Ukraine to the world and to hear the voices of Christians of the world addressed to us; ● talk about the service of churches during the war; ● to inform Ukrainians about the position and main messages from the Christian churches of the world, thought leaders, Christian philosophers and theologians, international interreligious and interfaith organizations on the situation in Ukraine; ● to accumulate in one place the testimonies of church leaders, priests and ordinary believers of Ukrainian churches who					

	found themselves in different places and in different circumstances; ● testify to the practical implementation and promote the conscious application of church documents on issues of war and peace, such as the recent document of the Ecumenical Patriarchate "For the Life of the World / On the Way to the social Ethos of the Orthodox Church ", which contains a section" War, Peace and Violence "; ● provide informational support to humanitarian and peace initiatives; ● to expose the anti-Christian essence of the "theology" of war and the ideology of the "russian world"; ● to develop the theology of peace even during war; ● to create a network of people of good will and cooperation in Ukraine and the world.					
Building interfaith and interreligious dialogue for the sake of understanding and interaction	Interfaith and interreligious harmony creates a model of harmonious interaction in society, which Ukrainian society especially needs in times of war. Conflicts on religious grounds are a dangerous factor in destabilizing a society that the enemy is trying to	10 new stories have been published within the project "30 Years of Interaction, 30 Years of Co-creation".	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs	UAH 0.301 million (EUR 0.01 million according to the official exchange	Recovery Fund State budget funds, grants	

	exploit. This can be countered by organizing a wide space for interfaith and interreligious dialogue. It is important for the state to become the initiator and moderator of such a dialogue, because this is what will be able to involve the parties in the dialogue who avoid it. Support for the development of projects initiated by the State Service of Ukraine for Ethnic Policy and Freedom of Conscience: "30 Years of Interaction, 30 Years of Co-creation" (https://spilno.dess.gov.ua/), "Tell Us About Your Faith" (https://faith.dess.gov.ua/).	Published 5 video interviews within the project "Tell us about your faith". 6 dialogue meetings (online / offline) were held between the clergy of the Ukrainian Orthodox Church and the Ukrainian Orthodox Church (1 per month)	and Freedom of Conscience	rate of the NBU as of June 23, 2022)		
Project "Religion & Culture / New format of religious holidays" Creating a new interfaith format for celebrating religious holidays, which in Ukraine are state holidays, with the involvement of modern forms of	Ukraine has a number of religious holidays that are celebrated at the state level. Implementation of the Decree of the President of Ukraine №303 / 2020 should further expand their list. The search for new formats for celebrating religious holidays will facilitate the transmission to society of important ideas and narratives based on ancient traditions, but have not lost relevance for modern man, which in	A pilot project to celebrate December 25, 2022 ("Open Christmas, or How Ukrainians Celebrate Christmas on December 25" on the territory of the National Reserve of Sophia of Kyiv) has been implemented	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 0.15 million (EUR 0.005 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund state budget funds, patronage, grants	

culture and education	turn will contribute to the recovery and consolidation of social relations. Recovery stage (medium term) - "Recovery, restart of the economy and institutions" (2023 - 2025, with separate details for 2023) * * In case of protracted active hostilities, the plan will be adjusted in the 4th quarter of 2022, respectively, this phase (with the planning of major activities and their financing) will be postponed to 2024-2026)						
Goal. The consequences of the negative impact of the Russian-Ukrainian war on the state of ethnic and religious diversity of Ukraine have been overcome						
Task 1. Restoration of objects of spiritual significance, cultural heritage of ethnic and religious communities of Ukraine						
Assessment of damage / destruction of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine	As of the beginning of May 2022, at least 116 buildings of spiritual significance were damaged (the full list and map of damaged objects is available at: https://dess.gov.ua/u-serednomu-dvi-na-den/). Assessment of losses from damage or destruction is part of the process of comprehensive restoration of the state in the postwar period. Appropriate professional assessment will provide an understanding of the extent of damage, as well as determine the amount of material resources needed to restore.	The damage and the estimated cost of works on the restoration of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine were determined.	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, Ministry of Regional Development, regional and Kyiv city state administrations	_____	Recovery Fund	

Restoration of objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine	During the war, a number of buildings and objects of spiritual significance and cultural heritage of ethnic and religious communities of Ukraine were damaged and / or destroyed. Reconstruction / repair / restoration of such facilities is necessary to further provide the society with the opportunity to exercise their religious rights and to preserve their own identity. Ukraine, unity in diversity	There are no stable conditions for financing cultural and artistic projects on the theme of preservation and development of cultures of ethnic communities of Ukraine, unity in diversity. The volume of regional expenditures in this area is uneven and insufficient. Thus, in 2020, the total amount of such expenditures amounted to 4.059 million hryvnias, and 54.6% of this amount (2.187 million hryvnias) were expenditures only in the Zakarpattia region. In other regions in 2020 the volume of expenditures in this area was within 100 thousand hryvnias in 5 oblasts, within 100-500 thousand hryvnias - in 4 oblasts and the city of Kyiv, within 500 thousand - 1 million hryvnias - in 1 oblast, in 12 more oblasts such expenditures were not made (9 of them belong to border regions). The possibility of financing these projects through the mechanism of the Ukrainian Cultural Fund is also characterized by a lack of sustainability and an extremely high entry threshold, due to the nature and peculiarities of project applications, competitive project	diversity has been created.	and Freedom of Conscience, Ministry of Finance			

	selection procedure (issues of competence of experts in the field of ethnic affairs, inconsistency of the competitive procedure of the nature of projects of ethnic communities of Ukraine, especially those aimed at preserving vulnerable languages and cultures). As a result, there is a lack of systematic policy in the field of ensuring the rights of ethnic communities in Ukraine. This does not allow for the proper implementation of the cultural and information rights of national minorities and indigenous peoples of Ukraine, enshrined in Ukraine's commitments under international agreements such as the Council of Europe Framework Convention for the Protection of National Minorities, the European Charter for Regional or Minority Languages.					
Establishment of the National Commission for the Crimean Tatar Language	The Strategy for the Development of the Crimean Tatar Language for 2022-2032 provides for the establishment of the National Commission for the Crimean Tatar Language as an advisory body to ensure an appropriate level of interagency coordination, coordination	The National Commission for the Crimean Tatar Language has been established, its activities are properly ensured, the	Ministry of Reintegration	_____	_____	Strategy for the Development of the Crimean Tatar language for 2022-2032

	of central and local executive bodies on issues related to the Strategy.	Commission effectively performs its functions.				
Task 3. Projects designed to preserve the culture of ethnic communities are implemented						
Establishment of the Karaite community center "Karaite House in Halych"	The city of Halych (Ivano-Frankivsk region, Ukraine) is a city of compact residence of Crimean Karaites from the XIII century, who for centuries have preserved their own religion, language and traditions. Here is the only museum of Karaite history and culture in Ukraine. Today, in connection with the military aggression of the russian federation, the city of Halych has become a center of Karaite refugees from the cities of Kharkiv, Mykolayiv and the temporarily occupied Melitopol, Kherson, etc. Crimean Karaites have been forced to leave their cells twice since 2014 due to the annexation of Crimea. The Karaite ethnographic center "Kale" was closed in the temporarily occupied Melitopol, and the Sunday school for the study of the Karaite language and the Karaite folk ensemble were closed too.	Effective functioning of the Karaite community center "Karaite House in Halych" ensured	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 2 million (0.065 million euros according to the official exchange rate of the NBU as of June 23, 2022)	Charitable assistance of the Karaites of Israel, Poland, Lithuania, Ukraine; state and local budget funds; funds raised from other sources not prohibited by law	

	As a result, the Karaites, the indigenous people of Ukraine, are threatened with the disappearance of their own culture, language and traditions. Establishment and development of the Karaite community center "Karaite House in Halych" will contribute to the preservation of the indigenous people of Ukraine - the Karaites; reproduction of the traditional way of life of the Karaites; development of national crafts (wood carving, stone), clothing and textiles; revival of musical traditions; conducting religious rites and services; revival of the spiritual school of Karaiteism; creation of a new tourist location and new tourist routes with a visit to the Karaite community center "Karaite House in Galicia". The project envisages obtaining premises for living and worship, materials for garden equipment, furniture, household appliances, woodworking machines and equipment, sewing machines, office equipment, and the Internet.					
Creation of the museum "Crimean Tatar Estate" on the	Given the temporary occupation of the Crimean peninsula and the dispersed settlement of Crimean Tatars in the rest	The "Crimean Tatar Estate" was created on the territory of the	Ministry of Culture and Information	UAH 12.586 million (EUR 0.409	donor support (Tika, Turkey), private patrons,	

territory of the National Museum of Ethnography and Life of Ukraine	of Ukraine, it is extremely important for the preservation of Crimean Tatar culture is the creation of the so-called "living museum", which would combine the authentic accuracy of the culture and life of the Crimean Tatars and modern technologies and reflections of masters and artists on the history, personalities, events of the Crimean Tatar people. Such a museum will play an important role in preserving the Crimean Tatar culture, as well as perform an important educational function, giving all visitors the opportunity to get acquainted with it and the history of the Crimean Tatars.	National Museum of Ethnography and Life of Ukraine	Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, Ukrainian Cultural Fund, SE "Crimean House", Ukrainian Institute (permits, memorandum of cooperation)	million according to the official NBU exchange rate as of June 23, 2022) (total project cost)	state budget funds	
Creation of the documentary film "Crimea Inside Me"	The project involves the creation of a documentary film that reveals the stories of various Crimean Tatars: from a child, a soldier, a cultural figure to political leaders who were forced to leave the peninsula and start a new life in mainland Ukraine, where each has a different craft and is a small part of a large image-personification of the Crimean Tatar people, its culture and way of life. The concept of the film envisages the use of the "Crimean Tatar Estate" Museum as one of the landmark locations.	A documentary has been made	Ministry of Culture and Information Policy, SE "Crimean House", General Staff of Ukraine	UAH 3.666 million (USD 124.1 thousand according to the official exchange rate of the NBU as of June 9, 2022) (total project cost)	Private patrons, state budget funds, grants from foreign institutions (Tika, Turkey)	

Project "Uniting Senses"	The project is an attempt to rethink the approach to understanding the heritage of the Crimean Tatars in the all-Ukrainian cultural space. The socially significant content created as a result of its implementation will contribute to the feeling of Crimean Tatar citizens of their belonging to Ukraine, will reflect the intercultural dialogue within the country and will support cultural diversity. The project envisages a set of activities built around the central activity - a social advertising campaign in 10 cities of Ukraine and the Internet, which is dedicated to reflecting common meanings for the Crimean Tatar and Ukrainian ethnic groups. The campaign includes the placement of a number of thematic billboards and citylights on outdoor advertising in 10 cities of Ukraine, posters and animated videos in the subways of 3 cities, distribution of relevant videos and digital posters on the Internet, using Crimean Tatar ornament Ornek, Ukrainian images applied decorative art, as well as quotes relevant to the mental meanings of both peoples.	A collection of 5 women's and 5 men's Crimean Tatar national costumes has been created. An extensive information campaign was conducted online and offline (in 10 cities of Ukraine) with the participation of city authorities and actors of the I. Franko National Academic Drama Theater. 10 interactive seminars / events for the student audience were held An exhibition on the theme of Crimean Tatar and Ukrainian jewelry was held A collection of Crimean Tatar traditional songs has been created (with the involvement of Jamala)	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 3.77 million (EUR 0.123 million according to the official NBU exchange rate as of June 23, 2022)	Grants (implemented with the support of Switzerland, provided through SDC (Swiss Agency for Development and Cooperation, Swiss Federal Department of Foreign Affairs)	

		A joint theatrical performance of Ukrainian, Crimean Tatar and Polish youth was held An innovative Crimean Tatar cultural and educational center at the Vernadsky Tavriya National University has been established and operates. Created a website with a presentation of masters of decorative art - carriers of the element Ornek, who live in the Crimea and mainland Ukraine, in three languages (Crimean Tatar, Ukrainian, English)				
Yeshil Ada Project	"Yeshil Ada" translates from the Crimean Tatar as "Green Island". The project envisages a partnership between the NGO Alem, connoisseurs of the	"Green island" in the form of Ornek created on the territory of the M. M. Goal. To form unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in post-war conditions						
Task 1. Institutional ecosystem aimed at supporting the sustainable consolidation of Ukrainian society has been formed						
Preparation and approval of the State national-cultural target program "Unity in Diversity"	Component of the implementation of the recommendations of the European Commission to complete the reform of the legal framework for national minorities and to adopt mechanisms for its immediate and effective implementation. Issues of ethnic affairs and sustainable consolidation of Ukrainian society	The Concept of the State National-Cultural Target Program “Unity in Diversity” was adopted The State National-Cultural Target Program “Unity in Diversity” was adopted	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, other bodies of	—	—	

	belong to the competence of a number of public authorities operating in the fields of culture, language, tourism, information policy, education, science, interethnic relations, religion and protection of national minorities and indigenous peoples in Ukraine, and human freedoms and others. Therefore, there is a need for greater focus and coordination of public policy in this area, which provides for the availability of certain material resources and proper coordination of executive authorities and local governments. The existence of a clear strategy of state policy in the field of protection of the rights of national minorities, indigenous peoples, interethnic relations was also the subject of interest of the European Union at the stage of submitting Ukraine's answers to the European Commission Questionnaire. Taking into account all these factors, it is considered necessary to address the issue of consolidation of Ukrainian society with the help of a separate state target program. It is expected that this tool will ensure an appropriate level of goal setting, a strategic approach to solving the problem, a clear amount of material resources needed to address it,		state power with a mandate in the spheres of ethnic affairs and religion			

	as well as coordination of efforts between public authorities and local governments at various levels, appropriate intersectoral and interregional relations.					
Establishment of regional offices of State Service of Ukraine for Ethnic Affairs and Religion	Component of the implementation of the recommendations of the European Commission to complete the reform of the legal framework for national minorities and to adopt mechanisms for its immediate and effective implementation. The sphere of ethnic affairs and religion are two key themes in russian narratives aimed at justifying aggression and imperial ambitions. Accordingly, the centralized implementation of policy in this area, a stable and strong presence of the central government in the regions is critical. Taking into account regional peculiarities is an important element of effective state policy, however, it is in this area that decentralization is equivalent to creating risks to national security.	In each region there are offices of State Service of Ukraine for Ethnic Affairs and Religion, which are part of a single national legal entity, performing monitoring, educational and mediation functions, providing administrative services to religious organizations.	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Religion, Office of the President of Ukraine	UAH 150 million (EUR 4.887 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund state budget funds	Requires adaptation of the regulatory framework
Introduction of a legal definition of hate speech in	Currently in Ukraine there is no legal definition of "hate speech". Despite the existence of Article 161 of the Criminal Code of Ukraine in Ukrainian	A legal definition of hate speech and responsibility for its use introduced	Ministry of Justice, Ministry of Internal Affairs, Security	_____	Grants, international technical	

Ukrainian legislation	legislation, representatives of ethnic communities of Ukraine and international organizations (Council of Europe) have repeatedly stated that this rule is extremely general, as it does not distinguish between discrimination, hate speech and hate crimes. In addition, Ukrainian law does not provide for the distinction between types of legal liability for certain offenses that may relate to examples of hate speech, instead criminalizing any of its potential manifestations. Due to the lack of such a distinction, it is extremely difficult to estimate the number of officially registered cases of hate speech in Ukraine. At the same time, mentions of hate speech are contained in the Strategy for Promoting the Rights and Opportunities of Persons Belonging to the Roma National Minority and Ukrainian Society until 2030, approved by the order of the Cabinet of Ministers of Ukraine dated 28.07.2021 № 866-r 14. In this strategic document, hate speech is mentioned as 1) one of the problems that necessitate the approval of the Strategy; 2) a phenomenon to be prevented, monitored and counteracted		Service of Ukraine, Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, Ombudsman for Human Rights in Ukraine		assistance, state budget funds	

	by measures within the framework of Objective 2 of the Strategy. The strategy emphasizes the need to develop a methodology for monitoring and responding to hostilities in society. Therefore, the legal definition of hate speech should also involve the establishment of different types of responsibility for the conduct of acts					
Establishing of a system for monitoring the dissemination of hate speech in the Ukrainian information space	Due to the lack of a legal definition of hate speech in Ukrainian law, law enforcement agencies are also unable to adequately enforce the Additional Protocol to the Council of Europe Convention on Cybercrime, which criminalizes racist and xenophobic acts committed by computer systems ratified by Ukraine on 1 April 2007. The Law "On Basic Principles of Ensuring Cyber Security of Ukraine" does not include the authority of the Cyber Police Department of the National Police to investigate actions aimed at inciting hostility. In an interview with the Council of Europe, it was stated that the department does not investigate cybercrime related to incitement to hatred and does not have a working definition of hate speech.	A methodology and division of responsibilities for monitoring the use of hate speech in the Ukrainian information space has been created	Ministry of Justice, Ministry of Internal Affairs, Security Service of Ukraine, Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, Ombudsman for Human Rights in Ukraine, Prosecutor	UAH 1.04 million (0.034 million euros according to the official exchange rate of the NBU as of June 23, 2022)	Recovery Fund Grants, international technical assistance, state budget funds	

	The lack of a legal definition of hate speech and appropriate monitoring does not allow tracking the real general trends of the spread of this phenomenon in Ukraine, which significantly makes it impossible to effectively prevent discrimination, hate crimes in Ukraine. It is expected that such monitoring should cover the dissemination of cases of hate speech in the Ukrainian online space, media, education, etc. At the same time, this issue of areas for monitoring remains debatable. It is also important to determine the responsibility of public authorities in collecting and compiling such information.		General's Office of Ukraine			
Introduction of elements of multicultural education in general secondary education institutions by making changes to curricula	Multicultural education is aimed at forming in children a sense and understanding of the principles of tolerance, willingness to cooperate, coexistence with social groups of different races, religions, ethnic groups. The introduction of elements of multicultural education in the general secondary education system is one of the most fundamental infrastructural solutions, which can strengthen the	Changes have been made to the curricula of general secondary education in a number of subjects Didactic materials reflecting changes in educational programs, principles of	Ministry of Education and Science, Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs	Additional funds are not provided, as it is expected that the creation of didactic teaching materials will take place as part	State budget funds, international technical assistance, grants	

	consensus within Ukrainian society in the long run, especially in matters of religion and interethnic relations. In formal education, the introduction of multicultural education is partly reflected in changes in curricula. Thus, the promotion of the study of the history, traditions, language and culture of minorities within the territory of the state is one of the requirements of the UN Declaration on the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities (Article 4). Article 12 of the Framework Convention for the Protection of National Minorities requires States to "foster knowledge of the culture, history, language and religion of their national minorities and of the majority". According to paragraph 34 of the CSCE/OSCE Copenhagen Document, in school curricula states "must also take into account the history and culture of national minorities." The content of educational programs is also updated by the OSCE Hague Recommendations on the Rights of National Minorities to Education. In the context of Ukraine it is proposed:	multicultural education are created	and Freedom of Conscience	of the planned update of textbooks and manuals for general secondary education.		

	1) creation of working groups at the Ministry of Education and Science of Ukraine with the involvement of DESS and representatives of ethnic communities of Ukraine to analyze current curricula and prepare the necessary changes; 2) making changes to the curriculum in a number of subjects (previously proposed "History of Ukraine"; "Geography", "Ukrainian Literature", "Music", "Art", "Law", "I and Ukraine", "Ukraine and the World" , "History of the Native Land"); 3) preparation of relevant didactic materials (textbooks, manuals, multimedia materials for use in lessons)					
Creating the Register of Religious Organizations of Ukraine (RROU)	Today in Ukraine it is impossible to conduct adequate, full-fledged monitoring and analysis on the basis of data in state registers on the state of networks of religious organizations (it is not even possible to obtain accurate information on the number of legal entities within a particular religious association). This, in turn, complicates the solution to the problem of transparency in the functioning of religious organizations,	Register of Religious Organizations of Ukraine (RROU) has been created	Ministry of Digital Transformation, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 5 million (EUR 0.163 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund State budget funds, grants	

	organizations founded by them and other related organizations, which in particular weakens the ability to counter security challenges for Ukraine. The presence of RROU would significantly increase monitoring capabilities as a state of the network of religious organizations, as well as promote regional unification and transparency of state policy in the field of administrative services to religious organizations: the ability to apply through applicants' personal offices, increase transparency and efficiency of these procedures. Creation of the separate Register of Religious Organizations of Ukraine, the holder and administrator of which is State Service of Ukraine for Ethnic Affairs and Freedom of Conscience and part of the fields of which is related to the Unified State Register (USR) (requires funding to order IT specialists to create such a register) ● RROU should be created according to the technical task of State Service of Ukraine for Ethnic Affairs and Freedom of Conscience.					

	• The data available in the USR will be automatically updated in the RROU fields, ie only the State Service of Ukraine for Ethnic Affairs and Freedom of Conscience fields and not the USR fields can be adjusted within the RROU. • RROU should be available for use by specialists of Kyiv city and regional state administrations, which provide registration services and coordinate canonical activities. • The RROU will provide for the online offices of applicants for administrative services to religious organizations, where it is possible to quickly check the date of submission of documents for consideration, their content, deadlines and results of their processing. This system will ensure the transparency of the review of documents, which is especially important in the context of changes in church jurisdiction.					
Task 2. Unifying narratives and practices that promote the practical implementation of the principle of unity in diversity in the post-war conditions have been formed.						
Creation and technical support of	The need to create such an online platform is caused by the need to	An interactive online platform "Unity in	Ministry of Culture and	UAH 4.011 million	Recovery Fund	

the interactive online platform "Unity in Diversity"	concentrate available information on ethnic and religious diversity of Ukraine in one place, create a platform for ongoing discussion of topical issues of ethnic and religious communities of Ukraine, policies to protect national minorities and indigenous peoples, religion and interethnic relations. The online platform is expected to be available in Ukrainian and English. It is expected that the platform will act as the information hub on the ethnic and religious diversity of Ukraine, in particular, will include a forum, a map of the settlement of ethnic communities of Ukraine, objects of their cultural heritage and tourist routes, information about public associations of ethnic communities of Ukraine (activities, location of local centers, proposals), artists, information on the history of ethnic and religious Ukraine, online archive of their intangible cultural heritage, etc.	Diversity" has been created	Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	(EUR 0.13 million according to the official NBU exchange rate as of June 23, 2022)	State budget funds, grants, international technical assistance

Building interfaith and interreligious dialogue for the sake of understanding and interaction	Interfaith and interreligious harmony creates a model of harmonious interaction in society, which Ukraine especially needs in times of war. Conflicts on religious grounds are a dangerous factor in destabilizing society. This can be countered by organizing a wide space for interfaith and interreligious dialogue. It is important for the state to become the initiator and moderator of such a dialogue, because this is what will be able to involve the parties in the dialogue who avoid it. The Center for Interfaith Dialogue and Cooperation should become a neutral space for multi-format meetings of representatives of different denominations and religions in order to build dialogue, understanding and harmony.	The Center for Interfaith Dialogue and Cooperation has been established 60 dialogue meetings of clergy of different denominations and religions were held	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 3.98 million (EUR 0.129 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund State budget funds, grants, international technical assistance	

Development of the project New Library of Sophia (Wisdom)	The new Library of Sophia (Wisdom) is a joint project of the State Service for Ethnic Affairs and Freedom of Conscience, the Open Orthodox University of St. Sophia the Wisdom and the Sophia of Kyiv National Reserve. The project was launched as an inclusive interactive platform designed to unite the efforts of religious and ethnic communities, social scientists, art critics, historians, librarians and all concerned. Combined with the leitmotif of wisdom, the project aims to promote mutual recognition of the dignity of each. The new library of Sophia (Wisdom) is designed to unite the efforts of all churches and religious organizations in a common educational work together with scholars and experts in the preservation and promotion of Ukrainian spiritual culture and historical monuments. The project provides for the creation of an electronic collection of quotations and texts, thoughts of the present and the past, which help to reveal various aspects of wisdom that are important to everyone, as well as a printed edition of	1800 publications, 60 materials translated from foreign languages, 36 seminars / webinars / conferences, 9 paper publications that require translation from foreign languages, 18 publications that do not require translation. 			Conscience, regional and Kyiv city state administrations	rate as of June 23, 2022)		
Project "Religion & Culture / New format of religious holidays" (creation of a new format for celebrating religious holidays, which in Ukraine are state, with the involvement of modern forms of culture and education)	Ukraine has a number of religious holidays that are celebrated at the state level. Implementation of the Decree of the President of Ukraine №303 / 2020 should further expand their list. The search for new formats for celebrating religious holidays will facilitate the transmission to society of important ideas and narratives based on ancient traditions, but have not lost relevance for modern man, which in turn will contribute to the recovery and consolidation of social relations. Creation of new formats of celebration of religious holidays, which in Ukraine are state, with the involvement of modern forms of culture and education. Disclosure and actualization of the meanings of religious holidays for the religious and non-religious part of Ukrainian society. Introduction of the meanings of religious holidays in the modern context.	The celebration was held in an updated format - Christmas 07.01 - Epiphany 19.01 (ecological dimension) - Holy Week and Easter - Trinity / Green Sunday (environmental dimension) - Day of the Baptism of Kyivan Rus' 28.07 (Pochayna River) - Sophia of Kyiv Day, September 21 (Feast of Wisdom) - Intercession of the Theotokos on October 14 - St. Nicholas Day, December 19 (assistants of St. Nicholas) - Open Christmas 25.12	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 4.51 million (0.147 million euros according to the official exchange rate of the NBU as of June 23, 2022)	Recovery Fund State budget funds, patronage, grants	

	Religious holidays have aspects that are important to a non-religious person. Thus, some holidays have a distinct ecological dimension (Epiphany, Trinity), others - associated with active charity (St. Nicholas Day, Christmas) or encourage better acquaintance with key events in national history (Day of the Baptism of Kyivan Rus'). The essence of the project is to show that the celebration of religious holidays is not limited to events inside religious buildings. They can be celebrated in such a way as to fill the public space with meanings that can change the public consciousness for the better and positively influence public relations.					
Ethno-art hub "Alem"	It is planned to create a space for the promotion of ethnic cultures of Ukraine (with an emphasis on the Crimean Tatar ethnic culture) and an original place with ethnic design and meaningful technical and cultural content. It is expected that such a space will be multifunctional, in particular, it can be used for cultural and artistic events of ethnic communities of Ukraine, events with the participation of foreign diplomatic missions etc.. In general,	Ethno-art hub "Alem" created	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 35 million (EUR 1.138 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund Grants, state budget funds, charitable assistance	Adoption of the draft Law of Ukraine "On Amendments to Certain Legislative Acts of Ukraine Regarding the Implementation of the Provisions of the Convention for

	this room will be a space to promote and support the viability of ethnic cultures of Ukraine. It is preliminarily expected that the size of the room will be approximately 800 sq.m.					the Safeguarding of the Intangible Cultural Heritage" of 17.01.2020 № 2771
Task 3. Conducting research to assess the state of interethnic relations						
Assessment of the state of interethnic relations in the regions of compact residence of ethnic communities of Ukraine	Conducting public opinion polls in regions with a compact population of Ukrainian ethnic communities is extremely important for identifying conflict potential and actual issues in the field of protection of the rights of national minorities and indigenous peoples, interethnic relations.	16 focus groups, 4 surveys were conducted	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, regional state administrations	UAH 1.95 million (EUR 0.063 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund Grants, state budget funds	
Modernization stage (strategic) - "Structural modernization and full integration into the EU" Expected planning terms: (2026 - 2032 *) The planning dates of the stage will be adjusted based on the results of 2022-2023.						
Goal. Ethnic and religious communities integrated into Ukrainian society preserve and develop their cultural identity						
Task 1. Access of ethnic communities of Ukraine to the mechanisms of state support and awareness of ethnic communities of Ukraine regarding their existence are provided						

Conducting trainings for public associations of ethnic communities of Ukraine in the field of cultural management and writing project applications	There is an uneven level of skills and abilities of representatives of national minorities and indigenous peoples, necessary for submitting quality project applications and project implementation, in particular in the areas of project management, budgeting, communication strategy development, fundraising, etc. As a result, during 2020, the Ukrainian Cultural Foundation submitted only 16 applications for cultural and artistic projects dedicated to the theme of ethnic communities and only 8 of them were supported. It is planned to hold trainings in Kyiv, as a place where a significant number of NGOs of Ukrainian ethnic communities are concentrated, and in the regions, especially in places of compact residence of certain ethnic communities.	Conducted 6 trainings for public associations of ethnic communities of Ukraine in the field of cultural management and writing project applications	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, Ukrainian Cultural Foundation	UAH 0.7 million (0.023 million euros according to the official exchange rate of the NBU as of June 23, 2022)	Recovery Fund State budget funds, grants, international technical assistance	
Goal. Citizens of Ukraine, regardless of religious or ethnic identity, are recognized and felt an integral part of Ukrainian society						
Task 1. Effective functioning of the institutional ecosystem aimed at supporting the sustainable consolidation of Ukrainian society, unity in diversity is ensured						
Raising awareness of the peculiarities	Caused by difficulties in identifying cases and methods of struggle,	number of trainings on hate speech	Ministry of Internal Affairs,	UAH 1 million	Recovery Fund	

of detection, methods of combating and preventing hate speech among government officials	prevention of hate speech among government officials, including law enforcement agencies (have an additional need to understand the specifics of qualifications and pre-trial investigation of such cases). Adequate understanding and the ability to distinguish between cases of hate speech and discrimination, hate crimes are extremely important to ensure the effectiveness of policies to combat the dissemination of hate speech in Ukraine.	the number of public officials who took part in the trainings the number of law enforcement officers who took part in the trainings availability of didactic materials for higher education institutions in the law enforcement system	Security Service of Ukraine, Prosecutor General's Office of Ukraine, Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience, regional state administrations	(0.033 million euros according to the official exchange rate of the NBU as of June 23, 2022)	International technical assistance, grants, state budget funds	
Ensuring the high performance of regional offices of State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	The sphere of ethnic affairs and religion are two key themes in Russian narratives aimed at justifying aggression and imperial ambitions. Accordingly, the centralized implementation of policy in this area, a stable and strong presence of the central government in the regions is critical. Taking into account regional peculiarities is an important element of effective state policy, however, it is in this area that decentralization is equivalent to creating risks to national security.	In each region there are offices of State Service of Ukraine for Ethnic Affairs and Religion, which are part of a single national legal entity, performing monitoring, educational and mediation functions, providing administrative services to religious organizations.	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 350 million (EUR 11.381 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund State budget funds	

Introduction of elements of multicultural education in general secondary education institutions by making changes to curricula	Multicultural education is aimed at forming in children a sense and understanding of the principles of tolerance, willingness to cooperate, coexistence with social groups of different races, religions, ethnic groups. The introduction of elements of multicultural education in the general secondary education system is one of the most fundamental infrastructural solutions, which can strengthen the consensus within the Ukrainian society in the long run, especially in matters of religion and interethnic relations. In formal education, the introduction of multicultural education is partly reflected in changes in curricula. Thus, the promotion of the study of the history, traditions, language and culture of minorities within the territory of the state is one of the requirements of the UN Declaration on the Rights of Persons Belonging to National or Ethnic, Religious and Linguistic Minorities (Article 4). Article 12 of the Framework Convention for the Protection of National Minorities requires States to "foster knowledge of the culture, history, language and religion of their national minorities and	Didactic materials reflecting changes in educational programs, principles of multicultural education are created	Ministry of Education and Science, Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	Additional funds are not provided, as it is expected that the creation of didactic teaching materials will take place as part of the planned update of textbooks and manuals for general secondary education.	State budget funds, international technical assistance, grants	

	of the majority". According to paragraph 34 of the CSCE/OSCE Copenhagen Document, in school curricula states "must also take into account the history and culture of national minorities." The content of educational programs is also updated by the OSCE Hague Recommendations on the Rights of National Minorities to Education. In the context of Ukraine it is proposed: 1) creation of working groups at the Ministry of Education and Science of Ukraine with the involvement of DESS and representatives of ethnic communities of Ukraine to analyze current curricula and prepare the necessary changes; 2) making changes to the curriculum in a number of subjects (previously proposed "History of Ukraine"; "Geography", "Ukrainian Literature", "Music", "Art", "Law", "I and Ukraine", "Ukraine and the World" , "History of the Native Land"); 3) preparation of relevant didactic materials (textbooks, manuals, multimedia materials for use in lessons)					
Task 2. Measures to back the sustainable consolidation of Ukrainian society, unity in diversity are supported						

Conducting extensive information campaigns on the topic of combating hate speech, unity in diversity	Extensive information campaigns are designed to raise awareness of Ukrainian society about the recognition of manifestations of hatred, to form in it a culture of unity and rejection of the use of insults, manifestations of violence against others on the grounds of identity. It is expected that the dissemination of relevant values will be a long-term guarantee of integration and unity of Ukrainian society.	5 information campaigns were conducted Audience coverage rate	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 15 million (EUR 0.488 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund Grants, international technical assistance, state budget funds	
Support of public initiatives in the field of introduction of multicultural education through tools of non-formal education	Along with the introduction of multicultural education in the curricula of general secondary education institutions, it is extremely important to support such educational programs in the field of non-formal education, in particular the formats of thematic children's camps, trainings, competitions, etc. It is proposed to provide administrative and financial support to public projects on multicultural education in the field of non-formal education.	7 public initiatives in the field of multicultural education through non-formal education tools were supported Number of people covered by these initiatives	Ministry of Culture and Information Policy, State Service of Ukraine for Ethnic Affairs and Freedom of Conscience	UAH 2.1 million (EUR 0.068 million according to the official NBU exchange rate as of June 23, 2022)	Recovery Fund State budget funds, international technical assistance, grants

5. The Field of Information Policy and Security

1. The core problems that need to be resolved within the framework of the Recovery Plan in the field of "Media and Information Security"

The impact of war on a certain area of analysis:

Since 2014, Russia has deployed a massive propaganda machine to justify the occupation of the Autonomous Republic of Crimea and the city of Sevastopol, certain territories of Ukraine that are the part of Donetsk and Luhansk regions, and clean up Russia's act, which is turning more and more into a fascist state day by day. Before the invasion, Russian propaganda television resources had presented Ukraine as a territory formed by Russian entities, effectively declaring the aggressor's intentions to destroy Ukrainian statehood. After the attack, Russian propagandists do not hesitate to deny such terrible tragedies as killing civilians in Bucha, and tell that so-called "journalists" shoot staged videos, including those with hostages. The situation is similar in publishing. In recent years, Russia has released a lot of anti-Ukrainian publications, including publications with scenarios for the destruction of Ukraine. Russia has shown not only a complete disregard for basic human rights, such as the right to freedom of speech or the right to freedom of assembly, effectively banning them on its territory, but also has used liberal norms of European law to promote propaganda and interfere in internal affairs, especially during election periods, which posed a threat to European security.

Ideologically, the Russian Federation imitates the fascist and Nazi regimes of Hitler, Mussolini, and others. Moreover, in terms of cruelty and the degree of destruction of civilian infrastructure, the Rashists surpassed their spiritual ideologists. Therefore, the fact of state terrorism on the Russian Federation's side, and the neo-Nazi nature of its political, totalitarian regime, are obvious to the whole world. This conclusion is confirmed by the UN General Assembly resolution "Aggression against Ukraine," adopted on March 2, 2022, and by the calls of many governments of almost all countries worldwide.

Russian disinformation is aimed at justifying military aggression against Ukraine, concealing the real scale of hostilities, Russia's crimes against humanity, war crimes, and crimes of aggression. Moreover, in the occupied territories, one of the first steps for Russians is the seizure of the information space, information isolation, spreading their propaganda, and redirecting Internet traffic through the servers of the Russian Federation. At the same time, the aggressor has attacked the information and telecommunication infrastructure: a large amount of technical equipment providing broadcasting on the territory of Ukraine was destroyed by the aggressor. We are talking about TV towers, telecommunication equipment, and the equipment of media outlets, including the National Public Broadcasting Company of Ukraine.

The main problems of the information space of Ukraine have remained the outdated legislative framework and low culture of information consumption. Thus, despite a decades-long attempt to develop and adopt legislation to improve the regulation of audiovisual media, including on the Internet, and strengthen the role of the regulator, the media legislation of Ukraine needs to be significantly updated, taking into account both international obligations and challenges of the war.

The last decade has been marked by the rapid growth of internet audiences in Ukraine, and the convergence of content delivery, where viewing linear speech on a smartphone is as mundane as watching on a regular TV. At the same time, the development of social networks and hybrid applications, along with undoubted advantages, brought the phenomenon of anonymous channels and dubious sources. Against the background of low media literacy (media culture), such resources affect the uninformed consumer through emotions and mixing truth with outright lies. This, in turn, helps bad players spread conspiracy theories and manipulate public opinion, especially in situations of election periods or phenomena such as pandemics. High-quality regulation and active education of the population from 1 to 100 years is one of the most important tasks. Uncritical perception of information poses threats to the political and economic stability of democratic states.

During the martial law, the information infrastructure has been assessed, and other problematic issues have been sorted out in order to provide citizens with socially necessary information by restoring national television, radio broadcasting, local media, and access to the Internet and telecommunications.

1) Key challenges (summarized for a specific area)	1) information and telecommunication infrastructure, damaged or destroyed as a result of Russia's military aggression against Ukraine; 2) inability for many media to carry out professional activities; 3) low level of media literacy of the population of Ukraine; 4) coordinated dissemination of false information, destructive propaganda, other information operations by Russian propagandists and Russian special services
2) Key opportunities (summarized for a specific area)	1) expansion of Ukraine's presence on the global media market; 2) development of the system of strategic communications and improving the quality of communications of state bodies and local self-government bodies with the society; 3) strengthening the information security of the state; 4) strengthening the protection of professional activities of journalists, including during the martial law
3) Key restrictions (summarized for a specific area)	1) the information and telecommunication infrastructure of Ukraine destroyed by the Russian Federation; 2) the ongoing large-scale military aggression of the Russian Federation against Ukraine makes it impossible to return local media to the temporarily occupied territory of Ukraine and to the zone of active hostilities, the full implementation of their activities on these territories; 3) funding gap to ensure the functioning of the media (loss of sources of funding: payment for advertising, subscription, etc.); 4) low culture of information consumption by the population of Ukraine; 5) the outdated national legislation and the need to adapt it to the EU legislation

2. Goals, tasks and stages of the Recovery Plan in the field of "Media and Information Security"

Strategic goal: Every Ukrainian has an opportunity to freely practice freedom of speech, has access to information, and masters critical thinking skills. Ukrainian society is resistant to external and internal information threats.

Strategic goal description: To provide Ukrainians with an opportunity to freely practice freedom of speech and access to information through the restoration and development of an open, free, diverse media market and information security, increasing society's resilience to external and internal information threats, including through increasing the level of critical thinking of the population.

Operational goals:

1. Preserving and ensuring the development of the media market, expanding Ukraine's presence on the global media market
2. Ensuring freedom of speech and access to information
3. Ensuring information security

2.1. The goals aimed at solving the certain problem:

<table>
<tr><th></th><th>Stage 1: June 2022 – end of 2022</th><th>Stage 2: January 2023 – December 2025</th><th>Stage 3: January 2026 – December 2032</th></tr>
<tr><td colspan="4">1. A certain problem that requires a solution in the specified field of analysis (description)
Due to the occupation and war, the media have lost sources of funding – advertising, subscription, and were forced to leave dangerous zones. Some of the editors ceased their activities.The state should develop mechanisms for compensation (and financial support for the period of the martial law and post-war economic recovery) to editorial offices whose main possessions had been destroyed and seized.</td></tr>
<tr><td rowspan="2">The goal that needs to be achieved to solve the problem at every stage</td><td colspan="3">Every Ukrainian has an opportunity to practice freedom of speech freely, has access to information, and masters critical thinking skills; Ukrainian society is resistant to external and internal information threats.</td></tr>
<tr><td>Providing the population with news, and other socially necessary information, raising awareness of the international community about events related to Russia's armed aggression and war crimes, as well as refuting Russian disinformation and building resilience in its spread</td><td>Pre-war indicators of the functioning of mass media</td><td>Ukraine is a new center/leader of the Eurasian media market.

The level of development of the media and advertising market ensures the possibility of the existence of a variety of sustainable independent media.</td></tr>
</table>

Deadline within the stage	end of 2022	2025	2032
Risks of achieving the goal	Continuation of hostilities on the territory of Ukraine, unstable and unfavorable economic situation	Lack of funding of relevant support programs, unstable and unfavorable economic situation	Unstable and unfavorable economic, tax policy, aggression by the Russian Federation
Measurable indicators to achieve the goal	1) at least 50% of the media in the domestic media market has been preserved; 2) 57% of people have a high and above-average media literacy according to estimates conducted by independent organizations; 3) the indicator of the level of freedom of speech according to the estimates of international organizations has not decreased compared to the indicator for 2021	1) 100% of the pre-war indicators of the functioning of the media have been achieved, including the number of jobs in the field of mass media and advertising, which as of December 31, 2025, is not less than this figure as of December 31, 2021; 2) the volume of the advertising and communication market of Ukraine as of December 31, 2025 is not less than this indicator as of December 31, 2021; 3) increased the number of people with high and above-average media literacy from 55% to 60%	1) following international and/or national media status indices, the Ukrainian media environment is assessed as viable and provides the necessary resources for the production of high-quality content and the existence of a variety of sustainable media companies; 2) the number of people with high and above-average media literacy is 65%
The total amount of need for financial resources to achieve the goal	UAH 1.73 billion	UAH 45.590 billion	UAH 44.17 billion
Linking a goal to other directions	Attracting National Information Security international assistance	Attracting National Information Security international assistance, international partnerships and cooperation	International partnerships and cooperation National Information Security

3. The current state of implementation of program documents in the selected field of analysis on a certain problem:

	Program Document Title	Current Status

	Information Security Strategy approved by the decision of the National Security and Defense Council of Ukraine as of October 15, 2021 "On the Information Security Strategy," put into effect by the Decree of the President of Ukraine as of December 28, 2021 No. 685/2021	The Information Security Strategy (hereinafter referred to as the Strategy) defines current challenges and threats to Ukraine's national security in the information sphere, strategic goals, and objectives aimed at countering such threats, as protecting the rights of individuals to information, and protecting personal data. The Strategy contains seven strategic goals, in order to achieve which the tasks have already been implemented during the legal regime of the martial law, namely: 1) an analysis of the information campaign conducted by the Russian Federation for the purpose of disinformation to promote the achievement of the armed aggression goals; 2) preparation and dissemination of information materials on: - fixation of crimes against cultural heritage committed by the Russian Federation on the territory of Ukraine; - expansion of sanctions by foreign states, foreign cultural institutions against the Russian Federation in the cultural and information spheres; - support by the governments of foreign states for the preservation, reconstruction of monuments of architecture and cultural institutions destroyed and damaged as a result of Russian aggression; - holding domestic and foreign institutions and cultural figures of artistic and informational actions in support of Ukraine; - counteraction to information and cultural aggression and expansion by the Russian Federation; - financial and economic support for the development of the sphere of culture and creative industries; - appeal of churches and religious organizations of Ukraine to the world leaders to stop the aggression by the Russian Federation; condemnation by international organizations in the field of culture of armed aggression; - application of sanctions to organizations, mass media, cultural figures and the information sphere of the Russian Federation; - debunking the narratives and myths created by Russian propaganda; 3) the round-the-clock telethon "#UAразом" is continuing broadcasting on the leading television channels of Ukraine. A technical opportunity has been created to access the broadcast of the telethon via open satellite to the viewers of European countries; 4) since 08.04.2022, the project "Historical Resistance" airs three times a week. Every Monday, Wednesday, and Friday, Ukrainian professional historians, political scientists, and philosophers debunk Russian historical fakes on the air of the telethon and introduce viewers and listeners the pages of our heroic past; 5) the TV project of foreign broadcasting "FREEDOM" is being implemented in Russian language;

		6) Ukrainian journalists, directors, and PR specialists who create video content of different formats and various topics in cooperation with the Ministry of Culture and Information Policy have created an information regiment ₩AW: War Against War. The purpose of the platform is to strengthen opposition to Russian propaganda; 7) MCIP and the Association for Innovative and Digital Education “Totonis” have launched an international platform #MyWar (www.mywar.in.ua), through which each Ukrainian, as a war witness of the Russian Federation against Ukraine, can describe their history, present facts, and personal experiences. Citizens of all countries of the world can see and read these facts in their native languages and express their support for Ukraine through real actions; 8) the National Media Literacy Project "Filter" is being implemented; 9) On April 30, 2022, a hub for journalists, "Media Center Ukraine - Ukrinform," was created, which performs the following essential functions: holding public and non-public events for media workers; assisting foreign media in covering the war; assisting Ukraine in shaping a winning information policy; 10) measures are being taken to support information and psychological operations by public authorities in the security and defense sector, as well as the Center for Countering Disinformation at the NSDC of Ukraine and the Center for Strategic Communications and Information Security.

4. Defining tasks for achieving goals from subparagraph 2.1 (to each specified purpose)

	Description of the Task on Achieving the Goal	**Task Deadline**	**Dependence of the Task on Tasks of Other Directions, Areas, Problems**
Goal: every Ukrainian has the opportunity to practice freedom of speech freely, has access to information, and masters critical thinking skills. Ukrainian society is resistant to external and internal information threats			
Purpose: To provide the population with news, and other socially necessary information, raising awareness of the international community about events related to Russia's armed aggression and war crimes, as well as refuting Russian disinformation and building resilience in its spread			
Stage 1: June 2022 – end of 2022			

	Task 1 To provide the population with news, other socially necessary information, to raise awareness of the international community about events related to Russia's armed aggression and war crimes, as well as refute Russian disinformation and build resilience regarding its spread	December 2022	issues of financing the information sphere (Ministry of Finance), mobilization of media representatives
	Task 2 Ensure the implementation of the National Media Literacy Project "Filter"	December 2022	Educational Policy (MES)
Goal: Pre-war indicators of the functioning of mass media			
Stage 2: January 2023 – December 2025			
	Task 1 To provide the population with news, other socially necessary information, to raise awareness of the international community about events related to Russia's armed aggression and war crimes, as well as refute Russian disinformation and build resilience regarding its spread	December 2025	issues of information sphere financing (Ministry of Finance), National Council of Television and Radio Broadcasting of Ukraine
	Task 2 Ensure the implementation of the National Media Literacy Project "Filter"	December 2025	Educational Policy (MES)
	Task 3 Reach the pre-war indicators of the functioning of the mass media	December 2025	issues of financing information sector (Ministry of Finance), international partnerships (MFA)
	Task 4 Ensure the implementation of the Information Security Strategy	December 2025	
Goal: Ukraine is a new center/leader of the Eurasian media market. The level of development of the media and advertising market ensures the possibility of the existence of a variety of sustainable independent media.			

Stage 3: January 2026 – December 2032			
	Task 1 Create conditions for the development of the media and advertising market, ensuring the possibility of the existence of a variety of sustainable independent media.	December 2032	information sector financing (Ministry of Finance), international partnerships (MFA)
	Task 2 Ensure the implementation of the National Media Literacy Project "Filter"	December 2032	Educational Policy (MES)

5. National projects for the implementation of the task from subparagraph 4 (to the corresponding task)

Project Description **Опис проекту**	**Substantion** **Обґрунтування**	**Criteria/ Indicators of the Proposal Implementation (quantitative or qualitative)**	**Main Responsible Body of the State Authority**	**Estimated Need for Funding (million UAH)**	**Proposed Sources of Funding**	**Regulatory Support**
The Economics and Wartime Institutions Stage is "Everything for the victory!" 2022						
Project "Strong media and protection against disinformation" includes the following events: 1) assistance in providing the population with news and other socially necessary information,	Ukrainian media play an essential role in national resistance. They provide Ukrainians with operational information from the front, are an important component of the alert, and allow the authorities to communicate effectively with the society. As a result of more than 100 days of the war, the media have lost the vast majority of sources of income and the part of equipment, completely destroyed advertising market; journalists	1. Until the end of active hostilities, the production and distribution of all available types of communication channels of the Information Marathon "Unified News #UAразом" is ensured; 2. Programs of the tv foreign broadcasting project "FREEDOM" have at least 5 million unique viewers on	MCIP	300,0	Recovery Foundation funds State budget (3801020) Charitable contributions	We need to amend the resolutions of the Cabinet of Ministers of Ukraine as of December 28, 2000, No. 1921, and March 3, 2022, No. 194 in the part regarding the reservation of military-bound employees of the

including through the support of national, regional, and local media; 2) implementation by the Center for Strategic Communications and Information Security of the Spravdi project aimed at countering disinformation campaigns and destructive propaganda; 3) implementation of the National Media Literacy Project "Filter"; 4) ensuring the work of the media hub "Media Center Ukraine - Ukrinform" and creating favorable conditions for the activities of media representatives; 5) formation and support of a positive image of Ukraine in the world by promptly,	and other workers mobilized to protect the country. Maintaining the ability of the media to inform Ukrainians is critical to victory. At the same time, in parallel with direct military aggression against the Ukrainian people, Russia is waging an information war both on the territory of Ukraine and around the world. Disinformation spread through Russian propaganda media, influencers recruited by public figures of other states is aimed at leveling the horrors of the war, harming international support for Ukrainian resistance, and legitimizing Russian propaganda narratives about Ukraine. Countering such subversive information activities is an important area of protection for Ukraine.	YouTube every month and are available to satellite broadcasting users in the western part of the Russian Federation, Europe, and Ukraine; 3. The number of people with high and above-average media literacy, according to estimates conducted by independent organizations, is 55%; 4. The number of foreign journalists working in Ukraine to cover the armed aggression of the Russian Federation as of December 31, 2022 is 8,000 people; 5. As of December 31, 2022, at least ten information campaigns in support of Ukraine's military and humanitarian goals during the war have been conducted; 6. The number of media outlets that received assistance to continue their activities, including grants for the production of content, equipment, discounts on the services of state-owned companies, etc., as of		100,0 10,0 500,0 20,0		TRC under the legal regime of the martial law, as well as the possibility of exemption from the transfer of vehicles and equipment to military formations during mobilization.

objectively informing about Ukrainian events, including ensuring the awareness of the international community about events related to Russia's armed aggression and war crimes, as well as countering Russian disinformation and building mechanisms for its dissemination; 6) ensuring an adequate level of funding for JSC “NPTRCU” necessary for the development of socially necessary content; 7) institutional grants for media and journalists to preserve jobs and maintain the viability of the information sphere.		December 31, 2022, is at least 50 (in case of funds allocation).		300,0		

The Recovery Stage is "Restoration, restart of the economy and institutions" 2023-2025.						
Project "Strong media and disinformation protection," which includes the following events: 1) conducting a national assessment of the state of the media market and changes in the consumption of media products caused by the war; 2) compensatory support for national, regional, and local media, online and central media, institutional grants for media and journalists to preserve jobs and maintain the viability of the information sphere, and provide independent producers with grants for the creation of audiovisual and audio works that contribute to the restoration of Ukraine	The media need support, since a lot of newsrooms have ceased their work; due to suffering losses a large number of media outlets are in danger of suspending their activities. The resumption of advertising and media sponsorship revenues is possible only after business activity and mass consumption resumption. Therefore, at the initial post-war stage state assistance will be required. The project will include: • an assessment of the state of media and advertising markets, as well as changes in media consumption caused by the war; • introduction of preferential lending for institutional support of media and advertising; • introduction of state support for the creation of audiovisual and audio products, primarily children's, educational, scientific, and educational television programs (including historical topics); • strengthening state support in the field of cinematography, especially state support for the creation of	1. Creation of a system of government strategic communications in Ukraine through the implementation of measures aimed at implementing the policy of "one voice" in the information space, improving the quality of communication between the state bodies and society.	Government strategic communications should promote state priorities, organize informing the process of post-war restoration of Ukraine, implement reforms of the Cabinet of Ministers of Ukraine, involve the public in dialogue (interaction), etc. In order to implement the "one voice" policy in the information space and improve the quality of communication between the state bodies and society, it is essential to develop a concept for the functioning of the Government's strategic communications system. Based on this strategic document, create a communication office UA Starcom with the appropriate legal status, authority, and functionality to perform		MCIP SCMU other central executive bodies		Recovery Foundation funds State budget funds; funds raised from other sources not prohibited by the law (development partners)	

	tasks in the field of strategic communications.					
All EC. Cross-cutting project	Support the creation and development of vocational education institutions (including secondary education) for the field of cinematography, television, and radio broadcasting. Introduction of grant support for educational projects in professional media education.					

6. Cultural heritage

1. Key pressing issues to be solved under the Recovery Plan within the direction "Preservation of cultural heritage"

The war influence on the defined analysis area:	
1) Key challenges (summarized for the defined area)	1. Gross violation by the enemy of the basic principles and generally accepted norms of international law. 2. Conscious destruction of the international legal order and a real threat to international peace and security.

	3. The real threat to the preservation of the national cultural heritage of Ukraine and its cultural values 4. Loss of cultural values and cultural heritage of Ukraine and threat to the viability of elements of intangible cultural heritage. 5. Illegal, violent and unjust actions of the Russian occupiers in relation to the cultural heritage of Ukraine and its cultural values. 6. The vast majority of cultural heritage sites need restoration. 7. Suspension of budget funding for restoration and restoration of monuments. 8. Determination of losses of the movable heritage of Ukraine. 9. Protection and preservation of employees (physical protection, financial material support). 10. Protection of movable heritage during martial law (in the war zone, in the occupied territories, in the deoccupied territories). 11. Creation of algorithms/instructions for the protection of movable heritage during hostilities. Developed logistics for each individual museum (preparation (materials), packaging, evacuation/ transportation, evacuation routes, temporary storage of relocated collections, legal support, physical support and security, interaction with local authorities). 12. Creation of new repositories in museums, as well as reserve for relocated collections of movable heritage. 13. Lack of arrangements with partner institutions for temporary evacuation abroad and legal framework developed for this purpose. 14. Lack of self-regulation in the field of archaeological heritage research as a guarantee of development of quality of works. 15. Non-transparent method of issuing a qualification document (open letter) for research. 16. Procrastination of the procedure for starting work on the study of archaeological heritage (the need to obtain an open letter for research separately for each object of archaeological heritage instead of confirming the qualification of the contractor with the appropriate professional certificate for certain categories of objects). 17. Reduced competition among executors of works on research of archaeological heritage.

2) Key possibilities (summarized for the defined area)	1. Preservation of Ukrainian culture through the restoration of cultural heritage monuments. 2. Development of scientific and technical potential of Ukrainian specialists in the field of cultural heritage preservation. 3. Development of new restoration technologies on a domestic basis. 4. Creation of a single digital register of movable heritage. 5. Creation of programs for the protection of movable heritage. 6. Upgrading the material and technical base of museums (preserving institutions) to ensure the preservation of movable heritage (during hostilities, relocation of collections, and preservation of relocated collections). 7. Renovation of old storages and creation of new ones. 8. Establishment of a partnership network with international partners for a joint network of places for temporary evacuation of collections. 9. Introduction of self-regulation in the field of archaeological heritage research. 10. Development of scientific and technical potential of Ukrainian specialists in the field of archaeological heritage research. 11. Reduction of administrative burden on the contractor. Obtaining a certificate of responsible contractor for certain categories of objects will allow you to start work on the basis of confirmation of the profession by a certificate, rather than an open letter for each individual object. 12. Reduction of corruption risks when issuing a qualification document.
3) Key constraints (summarized for the defined area)	1. Lack of a single central executive body (CEB) responsible for the process and outcome of cultural heritage conservation. The field of restoration of cultural heritage sites and preservation of cultural heritage is regulated by various CEBs (Ministry of communities and territories development of Ukraine, Ministry of Culture and Information Policy of Ukraine). This leads to inconsistencies in decisions and the long period of adoption of the normative legal acts. 2. Lack of a separate speciality "architect-restorer" (excluded by the Resolution of the Cabinet of Ministers of Ukraine in 2015).

	3. Lack of separate certification of the responsible contractor of certain types of works (services) related to the creation of architectural objects leads to non-professional work on the restoration of cultural heritage sites. 4. The lack of self-regulatory organizations of specialists in the restoration of cultural heritage sites leads to a decrease in professional growth. 5. Absence or imperfection of basic normative legal acts in the field of restoration (Procedure for development of scientific and project documentation on restoration, basic industrial building standards, etc.). 6. Lack of clearly defined administrative procedures for the restoration of cultural heritage sites (double permits, etc.) 7. The sphere is not decentralized. Small powers of local governments. 8. Imperfect system of ordering research and design documentation through an open bidding procedure, which does not take into account the professional level of the developer. 9. A small number of specialists, restorers-builders and restorers of works of art. 10. Limited financial resources for the restoration of cultural heritage sites. 11. Lack of developed evacuation algorithms and facilities. 12. Insufficient number of trained specialists for actions in extreme situations, small museums teams, mostly with female staff. 13. In general, there is a lack of specialists for the management and protection of movable heritage, including those with international experience. 14. Poor network professional interaction of Ukrainian institutions (preservation of movable heritage) both at the national level and at the international level. 15. Lack of additional technical facilities for permanent storage "near you": materials to protect the building where there are collections, packaging and transport packaging, lack of many own transport / arrangements with local authorities to provide such transport. 16. Lack of restitution policy and normative legal acts developed for this purpose. 17. Lack of certification of the responsible contractor of works on research of archaeological heritage in the legislation and at the level of by-laws. 18. Limited number of specialists in the search and return of cultural values.

	19. Fragmentary nature of consideration of cases concerning search and return of cultural values. 20. Lack of systematic scientific and legal support of the processes of search and return of cultural values (lost because of hostilities, illegally exported because of hostilities). 21. Absence in the State budget of Ukraine on the general fund of the budget of the program "Measures on search and return of cultural values of Ukraine".

2. Goals, tasks, and stages of the Recovery Plan within the direction "Preservation of cultural heritage" of the defined area:

2.1. Goals aimed at solving a defined pressing issue

	Stage 1: June 2022 – end of 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
1) Defined pressing issue to be solved under the defined analysis area *(description)* **Recording of damage and loss of cultural heritage, restoration, return of movable heritage objects (description)**			
Goal to be achieved to solve the issue at each stage	Recording, determination of losses and estimated cost of works on restoration of movable/immovable/ intangible cultural heritage	Restoration of cultural heritage. Development of algorithms for the return of stolen/ exported movable heritage	Return of stolen works, compensation for lost works
Timeframe under the stage	December 2022	December 2022	December 2022
Risks related to the goal achievement	Continuation of hostilities. Access to collections.	Continuation of hostilities. Lack of specialists.	Complicated legal procedure, unwillingness of the aggressor country to reimburse/compensate for losses, lack of documented losses due to lack of uniform registers. Lack of developed restitution policy
Goal Achievement indicator	Creation of registers of missing, stolen, damaged cultural heritage sites	Damaged movable/ immovable cultural heritage sites have been restored. An evacuation	Return of works, payment of compensations. Compensational restitution

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		algorithm has been developed for each museum individually.	
General need of funds for the goal achievement	1000	10000	5000
Goal connections with other areas/directions	Attracting international assistance	Attracting international assistance, international partnerships and cooperation	International partnerships and cooperation
2) Preservation of movable heritage during hostilities (description)			
Goal to be achieved to solve the issue at each stage	Update and create new instructions for the preservation and evacuation of movable heritage. Providing materials for storage, evacuation to safe places of collections. Determining the priority of evacuation of works. Examination of the state of preservation of movable cultural heritage with subsequent restoration.	Creating an "bug-out bag" for each institution that deals with the preservation of movable heritage (protective materials for buildings, collections, transport containers, technical support for actions in case of power outage, etc., own transport or understanding who provides it, team training and availability (or attachment to teams) in "critical response teams")	Creation of new museum depositories in Ukraine, international network of museum depositories for temporary evacuation of collections (for countries at risk). Development of normative legal acts of international cooperation and evacuation
Risks related to the goal achievement	Lack of relevant specialists locally, hostilities	Lack of relevant specialists and resources	Lack of relevant specialists, financial support, political situation in the world, normative legal acts vary from country to country
Goal Achievement indicator	Creation of instructions/ algorithms of preservation and evacuation for each institution in cooperation with	Creating an "bug-out bag" program for institutions and providing international	Updated and new museum depositories in Ukraine, created a network and algorithm for

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	the Ministry of Culture and local governments. Evacuation/ensuring the preservation of the most valuable items in the collections from areas of hostilities and potential threats.	technical assistance for the program.	interaction with international museum depositories. Developed normative legal acts.
General need of funds for the goal achievement	1000	4000	5000
Goal connections with other areas/directions	Attracting international assistance	Attracting international assistance, international partnerships and cooperation	International partnerships and cooperation
3) Creation a system of management and preservation of cultural heritage (description)			
Goal to be achieved to solve the issue at each stage	Introduction of an electronic system of accounting for movable/immovable/ intangible cultural heritage. Update of legislative acts on registration of movable/ immovable/intangible cultural heritage in electronic form	Reforming the system of protection and preservation of movable /immovable/intangible cultural heritage. Development and implementation of restitution policy	Creation of a decentralized system of cultural heritage protection bodies. Creation a system of research and scientific designing-manufacturing profile institutions in the field of protection and preservation of movable / immovable / intangible cultural heritage
Risks related to the goal achievement	Lack of resources	Lack of relevant specialists and resources	
Goal Achievement indicator	Number of digitized cultural heritage sites	Updated legislation in the field of protection and preservation of movable / immovable / intangible cultural heritage	Number of movable / immovable / intangible cultural heritage sites in satisfactory condition

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
General need of funds for the goal achievement	The total amount of funds within the direction of digital projects	100000	49000
Goal connections with other areas/directions	Attracting international assistance	Attracting international assistance, international partnerships and cooperation	International partnerships and cooperation

2.2. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

No	Description of the task to achieve the goal	Deadline for the task fulfilment	Dependence of the task on the tasks of other directions, areas, pressing issues
Goal 1. **Restoration of movable / immovable / intangible cultural heritage**			
Stage 1: June 2022 – end of 2022			
1.	Task 1. Recording, determination of losses and estimated cost of works on restoration of movable / immovable/intangible cultural heritage	December 2022	Attracting international assistance
Stage 2: January 2023 – December 2025			
2.	Task 1. Restoration of cultural heritage	December 2025	Task 2 of the Goal 2
3.	Task 2. Development of algorithms for the return of stolen/exported movable property	December 2023	International partnerships and cooperation
Stage 3: January 2026 – December 2032			
4.	Task 1. Return of stolen works, compensation for lost works	December 2032	International partnerships and cooperation

Goal 2. **Preservation of movable cultural heritage during hostilities**			
Stage 1: June 2022 – end of 2022			
1.	Task 1. Recording, determination of losses and estimated cost of works on restoration of movable / immovable/intangible cultural heritage	December 2022	International partnerships and cooperation
2.	Task 2. Examination of the state of preservation of movable cultural heritage	December 2022	Task 1 of the Goal 1
3.	Task 3. Providing materials for the preservation of collections and their evacuation to safe places	December 2022	International partnerships and cooperation
Stage 2: January 2023 – December 2025			
4.	Task 1. Creating an "bug-out bag" for each institution that deals with the preservation of movable heritage	December 2023	International partnerships and cooperation
5.	Task 2. Critical Response Team Training	December 2025	International partnerships and cooperation
Stage 3: January 2026 – December 2032			
6.	Task 1. Creation of new depositories in Ukraine, international network of depositories for temporary evacuation of collections (for countries at risk).	December 2026	International partnerships and cooperation
7.	Task 2. Development of normative legal acts of international cooperation and evacuation and implementation of a separate budget program "Measures to find and return cultural values of Ukraine".	January 2026	International partnerships and cooperation

Goal 3. **Creation a system of management and preservation of cultural heritage**			
Stage 1: June 2022 – end of 2022			
1.	Task 1. Introduction of an electronic system of accounting for movable/immovable/intangible cultural heritage	December 2022	Attracting international assistance

Goal 3. **Creation a system of management and preservation of cultural heritage**			
Stage 1: June 2022 – end of 2022			
2.	Task 2. Update of legislative acts on registration of movable/immovable/intangible cultural heritage in electronic form	December 2022	International partnerships and cooperation
Stage 2: January 2023 – December 2025			
3.	Task 1. Reforming the system of protection and preservation of movable/immovable/intangible cultural heritage	December 2025	International partnerships and cooperation
4.	Task 2. Development and implementation of restitution policy	December 2025	Task 3 of the Goal 1
Stage 3: January 2026 – December 2032			
5.	Task 1. Creation of a decentralized system of cultural heritage protection bodies	January 2026	International partnerships and cooperation
6.	Task 2. Creation a system of research and scientific designing-manufacturing profile institutions in the field of protection and preservation of movable/immovable /intangible cultural heritage	December 2032	International partnerships and cooperation

7. National Memory

1. **Key pressing issues to be solved under the Recovery Plan within the direction «National Memory»**

The war influence on the defined analysis area::

The 'denazification' of Ukraine, declared by the leader of the Russian neo-nazi regime, is, in fact, a declaration of genocide and the destruction of Ukrainians as an ethnic group. In addition to the openly aggressive intention to seize territories and valuable natural resources, this war is also a war for identity. Compared to our neighbors, the countries of Central and Eastern Europe, the issue of national memory for Ukraine goes beyond the analysis and condemnation of totalitarian Nazi and communist regimes. This poses new challenges and provides opportunities for improving public policy on the restoration and preservation of national memory.

Considering the background of ingrained Soviet stamps and lack of quality research, popularization of them through media and other informational channels, insufficient attention to issues of remembrance from the Ukrainian state in the first decades of independence, created a convenient field for manipulation and conflict over historical issues, especially during election campaigns or 'significant dates'. The Revolution of Dignity triggered the beginning of changes in this area, causing an active process of overcoming the totalitarian legacy ('decommunization') This process aims to encourage a rethinking of the recent past by opening archives of repressive agencies and stopping the glorification of pearsons in public space (toponymic names, monuments, etc.), who were responsible for hundreds and thousands of killings of innocent victims.

Since the reclamation of independence, the aggressor did not think that Ukraine should have an opportunity to learn the truth about the crimes of the past, deportations, extrajudicial executions, and deportation to concentration camps. Since 1994, the most extensive archives in Russia have been classified. Later, Russia opened (fabricated) criminal cases against researchers, such as Dmitriev, to prevent further disclosure. Russia has tried to implement a similar policy in Ukraine, starting with removing a significant number of archived criminal cases in the fall of 1991, and then closing access to archives through proxy politicians in 2010-2014. At the same time, Russia carried out informational and historical aggression in the Western arena, to provoke conflicts, spread historical fakes, and undermine the legitimacy of the Ukrainian state.

However, the influence of Russian propaganda on the historical field was largely offset since the beginning of a full-scale invasion. The processes of rethinking the past in Ukrainian society, which had previously been hampered by Russian propaganda and its agents in Ukraine, have accelerated significantly.

According to the sociological group 'Rating', the results of a nationwide poll conducted in late April 2022 showed a sharp change in Ukrainian society's views on any markers related to the aggressor's country, compared to the results of the end of February 2022. This change was caused by Russian aggression. 'Decommunization' and 'derussification' of public opinion happened. 'Soviet' is now mostly perceived as 'Russian,' and therefore hostile. The main reason for this is the active usage of soviet symbols and speculations on the 'common' historical past by Russian propaganda in the war against Ukraine.

As a result, Ukrainian national heroes and symbols began replacing on significant historical figures, imposed by Soviet propaganda.

Thus, as of the end of April 2022, Ukraine recorded the lowest level of nostalgia for the collapse of the USSR (11%) in the history of observation. The vast majority (87%) feel no regret about it.

One of the main changes in historical memory is the reassessment of the attitude toward May 9 as Victory Day. Up until 2022, the vast majority of the adult population (80%) perceived this day as having significant personal symbolism. In 2022, a large number of respondents described it as a relic of the past (36%) or a regular day (23%).

There was a significant increase in support for the recognition of the OUN and UIA as participants in the struggle for Ukrainian independence. 81% of people support it, and only 10% have something against it. The support rate has quadrupled since 2010 and doubled since 2015.

In recent years, there has been a positive dynamic in the attitude toward Ukrainian historical figures, known for causing a heated debate in society for decades. In particular, the positive view of Ivan Mazepa (44% in 2012, 76% in 2022), Symon Petliura (26% in 2012, 49% in 2022), and Stepan Bandera (22% in 2012, 74% in 2022). It is important to note that south-eastern regions, whose citizens speak exclusively Russian in everyday life, showed a positive attitude towards the ideologists of Ukrainian nationalism.

More than 65% support renaming the Ukrainian streets, which previously had Russian or soviet names. 71% support dismantling monuments associated with Russia, and 62% support the ban on radio and TV products from Russia.

At the same time, the initiative to exclude works of Russian authors from the school curriculum proved controversial (35% showed support, 30% do not support it, and 31% are neutral). A relative majority (40%) opposes the idea of dismantling monuments dedicated to the Second World War. 19% support this initiative, and 36% are neutral about it.

(https://ratinggroup.ua/en/research/ukraine/desyatyy_obschenacionalnyy_opros_ideologicheskie_markery_voyny_27_aprelya_2022.html)

Today Ukraine is experiencing the most difficult test in its recent history, a full-scale war with the Russian aggressor. Unfortunately, in this war, we have thousands of lost lives and numerous destructions. It includes the loss of cultural heritage sites and documents and recordings of the crimes of the past. We also have a historic victory, a united nation fighting for its freedom.

Today it is equally important to talk about the struggle and victory, understand the price we pay, and do everything to prevent history from repeating itself. It's critical to talk about how the war in Ukraine became a challenge for the world, a revision of all the rules from the world's playbook, in all fields.

We are facing the challenge of improving, and updating the concepts of national memory, which will unite Ukrainians around a common past. The renewal of this concept should be based on:

- the process of rethinking Ukrainian history in the European and world context, restoring the longevity of Ukrainian statehood, and the formation and popularization of a pantheon of heroes and prominent figures.

- development of critical thinking as a key tool in the fight against propaganda, imposing historical myths.

<table>
<tr><td colspan="2">Rethinking Ukrainian history is both a return of our past to the European and world context and the exclusion of the focus on the imperial/soviet/Russian tradition.

The aim is to harmonize the history of Ukraine, build the concept of continuity — from the birth of Ukrainian statehood to the present, as well as create a historical narrative of the unifying position of modern Ukrainians living in different regions of our state. It is important to develop criteria for evaluating historical figures, both those who directly influenced Ukrainian history and those who played an indirect role in it. It's important to account for the differences in the humanitarian values of the 21 century and the time of their activity. Create the concept of controversial characters in Ukrainian history.

The formation of national memory should happen with a broad public understanding and dialogues, intensifying during the war. The beginning of a historical debate is a sign of a healthy democratic process in a modern European state.

The war for identity will not end with the cessation of hostilities. This war will continue as long as Russia maintains its colonial narratives, a culture of denial of Ukraine, and a desire to expropriate history. Ukraine must therefore take on the task of helping to restore the national memories of Belarus and colonized peoples of Russia, to overcome their totalitarian and colonial/imperial legacy.</td></tr>
<tr><td>1) Key challenges (summarized for the defined area)</td><td>Renewal of the national memory's concept, reassessment (rethinking) of previous hystorical narratives about the common past with Russia, and improvement of state policy on restoration and preservation of national memory.

Memorialization and musefication, and preservation of memory of modern Russian-Ukrainian war and the Revolution of Dignity, struggle for democratic values, dignity, and freedom in Ukraine and the world.

Raising awareness of Ukrainian history and the historical competence of the citizens of Ukraine.

Ensuring the integration of the Ukrainian historical narrative into the collective memory of the citizens of the EU member states, NATO, and in the global context.

Assisting in the restoration of national memories of the peoples of the Russian Federation and Belarus, and creating tools for the derashification of Russia.</td></tr>
</table>

2) Key possibilities (summarized for the defined area)	High demand for removing Soviet and imperial heritage from the public space. Radical reduction of the influence of Russian propaganda in Ukraine, including one in the historical field. The growing interest in the past among the Ukrainian citizens The growing interest in Ukraine and its past among the other countries Renewal of the Ukrainian historical narratives High level of respect for Ukrainian defenders in society The need for relevant commemorative practices High demand for access to historical truth
3) Key constraints (summarized for the defined area)	Limited resources (human, financial, time) Lack of needed funding and lack of qualified staff Lack of Ukrainian cultural product on historical subjects, including in foreign languages Inconsistency of the legislative field with the current challenges Lack of coordinated interaction between public authorities and local governments

2. 2. Goals, tasks, and stages of the Recovery Plan within the direction "National memory" of the defined area:

2.1. Goals aimed at solving a defined pressing issue:

	Stage 1: June 2022 – end of 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
1) Defined pressing issue to be solved under the defined analysis area (description) **Renewal of the national memory's concept, reassessment (rethinking) of previous historical narratives about the common past with Russia and improvement of state policy in the field of restoration and preservation of national memory**			
Goal to be achieved to solve the issue at each stage	To initiate a public dialogue about rethinking previous historical narratives about a common past with Russia; remove Russian imperial markers from the Ukrainian public space.	Form and implement the renewed Ukrainian historical narrative and updated state memory policy; complete the removal of Russian imperial markers from the Ukrainian	Ukrainian society is consolidated around a common national memory.

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		public space.	
Timeframe under the stage	By the end of 2022	December of 2025	December of 2032
Risks related to the goal achievement	Hostilities and occupation of Ukrainian territories Disorganized public dialogue Differences in approaches from local self-government and civic initiatives Lack of regulatory framework Manipulations of Russian propaganda	Lack of financial resources Limited human resources for quality implementation of changes Disorganized public dialogue Manipulations of Russian propaganda Lack of coordinated network between public authorities Over-bureaucratization of processes	Lack of financial resources Limited human resources for quality implementation of changes Manipulations of Russian propaganda
Goal Achievement indicator	realization of expert and public discussions; realization of information campaigns (videos, exhibitions, virtual projects); Adoption of the necessary normative acts that will regulate the sphere; Dismantling (moving into the museum space) 99% of the memorial objects that fall under the restrictions set by the legislation on "decommunization"; dismantling	Adoption of legislative and other acts that will determine the state policy in the field of restoration and preservation of national memory; Approving new educational programs on the history of Ukraine; Ensuring open access to archival documents of the repressive agencies of the communist totalitarian regime through ensuring the full	Introduction of new programs on the history of Ukraine into the educational process; Change, update expositions of 90% of historical and local lore museums; Digitization and providing access to documents of the National Archival Fund

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	(moving into the museum space) of at least 70% of the memorial objects, which are Russian imperial markers; Changing at least 70% of the names that are Russian imperial markers	functioning of the State Archive of the Ukrainian Institute of National Remembrance (reconstruction, transportation of archival information carriers, organization of digitization); The symbolic space of the country is completely devoid of communist and colonial markers.	The dominance of relevant commemorative practices in Ukrainian society is ensured
General need of funds for the goal achievement	Renaming and dismantling will be carried out at the expense of local governments and initiators of renaming/dismantling Conducting expert discussions, information campaigns (videos, exhibitions, virtual projects) - 3 million	It is not possible to determine at this stage	It is not possible to determine at this stage

2. The current state of implementation of program documents within the defined analysis area on the defined pressing issue:

№	Title of the program document	Current state
1	Resolution of the Cabinet of Ministers of Ukraine of July 9th, 2014 № 292 "Issue of the Ukrainian Institute of National Remembrance"	The task of implementing state policy on restoration and preservation of the national memory of the Ukrainian people is entrusted to the Ukrainian Institute of National Remembrance. It is a central executive agency whose activities are directed and coordinated by the Cabinet of Ministers of Ukraine through the Minister of Culture and Information Policy.
	Resolution of the Cabinet of Ministers of Ukraine of November 12, 2014, № 684 "Some issues of the Ukrainian Institute of National Remembrance"	
	Resolution of the Cabinet of Ministers of Ukraine of October 3, 2018, № 799 "Some issues on the activities of the Ukrainian Institute of National Remembrance"	

	Resolution of the Cabinet of Ministers of Ukraine of April 5, 2014, № 85 "Some issues if approval of the number of employees of the staff and territorial agencies of central executive agencies, other state agencies " (as amended by the Resolution of the Cabinet of Ministers of October 3, 2018, № 799)	
2	Resolution of the Cabinet of Ministers of Ukraine of March 3, 2021, № 179 "On approval of the National Economic Strategy for the period up to 2030" Resolution of the Cabinet of Ministers of Ukraine of March 10, 2021, № 202 "An amending the National Economic Strategy for the period up to 2030"	As part of the National Economic Strategy, the Ukrainian Institute of National Remembrance is constantly monitoring compliance with the law on the prevention of propaganda and the use of symbols of the communist totalitarian regime. In 2021, over 200 letters were sent to local self-government agencies and the executive branch with recommendations on preventing propaganda and using the symbols of the communist totalitarian regime. The Institute implements various events to promote the history and prominent figures for Ukrainian and foreign audiences. In 2021-2022, the Institute carried out more than 30 thematic events (including those happening online). The Institute systematically establishes cooperation with state agencies and archival institutions in the states, that are former republics of the USSR, to gain access to archival information of the repressive agencies of the communist totalitarian regime of 1917-1991. The resolution of the Cabinet of Ministers of Ukraine of March 17, 2021, № 215 "On amendments to the List of archival institutions, cultural institutions, educational and scientific institutions to which documents and publications are sent in the framework of international exchange, exempt from customs duties" was adopted. International agreements on cooperation between the State Archives of the Ukrainian Institute of National Remembrance and the Historical Archives of the Hungarian State Security, the Security Services Archive in the Czech Republic, the Institute for the Study of Totalitarian Regimes of the Czech Republic, the Commission for disclosure of documents and announcing affiliation of Bulgarian citizens with the State security and the intelligence services of the Bulgarian national army were signed. Cooperation has been established with the 'Polis Asia' Analytical Center to study the facts of

		repression in the history of the Ukrainian and Kyrgyz peoples. As part of providing funding for the construction of the Memorial to the Heavenly Hundred Heroes and the Museum of the Revolution of Dignity, the Institute informs that the construction of the Memorial to the Heroes of the Heavenly Hundred has been suspended due to the seizure of land. The Institute and the National Memorial Complex to the Heavenly Hundred Heroes - Museum of the Revolution of Dignity are taking all necessary measures to address this issue. An Interdepartmental Working Group on the implementation of the project "National Memorial Complex to the Heroes of the Heavenly Hundred - Museum of the Revolution of Dignity" was established. An agreement on the free transfer of the rights to the project of the National Memorial Complex to the Heroes of the Heavenly Hundred - The Revolution of Dignity Museum has been signed with the winners of the architectural competition. A tender has been held for the preparation of design and estimate documentation for the design of the building of the Museum of the Revolution of Dignity, design work is underway.
3	Law of Ukraine "On Condemnation of Communist and National Socialist (Nazi) Totalitarian Regimes in Ukraine and Prohibition of Propaganda of Their Symbols" of April 9, 2015, № 317-VIII	In compliance with the laws called "decommunization" during 2015-2021, most of the public spaces were cleared of propaganda of the communist regime. Access to documents of the regime's repressive agencies is also open. Fighters for independence were recognized at the state level, and the rehabilitation of victims of the communist regime has continued. New commemorative practices have been introduced, to honor participants and victims of World War II, with a focus on the value of human life and condemnation of aggression. The public has reached a consensus, defining the Holodomor as a crime of genocide.
4	Law of Ukraine "On the Legal Status and Honoring the Memory of Fighters for Ukraine's Independence in the Twentieth Century" of April 9, 2014, № 314-VIII	
5	Law of Ukraine "On Perpetuation of the Victory over Nazism in World War II of 1939-1945" of April 9, 2015, № 315-VIII	
7	Law of Ukraine "About rehabilitation of victims repressed by the communist totalitarian regime of 1917-1991" of April 17, 1991, № 962-XII	The Ukrainian Institute of National Remembrance (UINR) ensures the practical implementation of the state procedure for restoring the rights of persons, repressed by the communist totalitarian regime. In particular, it ensures the work of the National Rehabilitation Commission. In 2021, 8
	Order of the Ministry of Culture of Ukraine "On approval of the Regulations on the National Commission for Rehabilitation and the Standart Regulations on the	

	Regional Commission for Recovery" of October 25, № 926 Resolution of the Cabinet of Ministers of Ukraine "On some issues of implementation of the Law of Ukraine "About rehabilitation of victims repressed by the communist totalitarian regime of 1917-1991" of May 19, 2021, № 535	meetings of the National Commission were held (from 13th to 20th). In total, during its existence, the Commission considered over 1000 substantiated proposals from regional rehabilitation commissions. UINR prepared additions and changes to the explanations and recommendations to the Law of Ukraine "On rehabilitation of victims repressed by the communist totalitarian regime of 1917-1991." To optimize the work, in 2022 the Sector for ensuring the activities of the National Commission for Rehabilitation was created by the Institute.
9	Order of the Cabinet of Ministers of Ukraine "On measures to commemorate the defenders of Ukraine for the period up to 2025" of January 29, 2021, № 37-p	The Ukrainian Institute of National Remembrance, following the Order of the Cabinet of Ministers of Ukraine "On measures to commemorate the defenders of Ukraine for the period up to 2025", implements measures and assists in their implementation, in the following areas: - commemorating the memory of the defenders of Ukraine by establishing memorials in their honor to local infrastructure, educational institutions, and military units. In particular, the Institute supported the initiative of the Kyiv City Center for Assistance to Participants in the Anti-Terrorist Operation to erect a memorial to the fallen soldiers on the Alley of Remembrance on the territory of the "Peremoha" Park of Culture and Recreation in the Dniprovskyi district of Kyiv. With the assistance of the Institute, in the Kukavka village, Mohuliv-Podilskyi district, Vinnytsia region, a memorial was unveiled on the mass grave of 19 soldiers of the 3rd Cavalry Regiment of the 3rd Iron Division of the UPR Army who died in battle with units of the 8th Cavalry Division of the Red Army. The Institute participated in the installation of memorial plaques in Ichnia, Chernihiv region, in honor of Colonel of the Medical Service of the UPR Army Yuri Dobrylovsky and honor of the soldier of the 72nd separate mechanized brigade named after the Black Cossacks Serhiy Petrauskas; - holding thematic exhibitions of works of art, documents, photographs, and posters dedicated to the memory of the defenders of Ukraine; - organization, holding of events to mark anniversaries, memorable and historical dates, and international days related to honoring the memory of the

		defenders of Ukraine and laying flowers on the graves of the defenders of Ukraine, including those done by the foreign diplomatic missions of Ukraine. In particular, the Institute, with the participation and support of the Ministry of Defense, the Armed Forces of Ukraine, representatives of the regional territorial community, Zhytomyr Regional State Administration, and Zhytomyr Regional Council in the village Bazar of the Narodytsya settlement territorial community of Zhytomyr region, organized events on the occasion of the 100th anniversary of the Second Winter Campaign of the UPR Army and the 100th anniversary of the shooting of UPR Army soldiers near the village of Bazar. In 2021, on the initiative of the Poltava Representation of the North-Eastern Interregional Department of the Ukrainian Institute of National Remembrance and with the support of the Education Department of the Executive Committee of the Petrovsko-Romenskaya Territorial Community of the Myrhorod District of Poltava Oblast, an educational and commemorative event on the occasion of 100th birthday of the head of "Skhidniaky" sotnia of the UIA Mykola Savchenko. A ceremony of laying flowers to the monument to the soldiers of the UPR Army took place at the Ukrainian Military Cemetery in Przemyśl (Poland). The event was organized by the Special Operations Forces of the Armed Forces of Ukraine, the Ukrainian Institute of National Remembrance, the Ukrainian community in Poland; - visiting military burials and military monuments by war veterans and members of the families of fallen (deceased) defenders of Ukraine. In particular, in the Krasna Hora tract on the border of Volyn and Lviv oblasts, where the graves of four UIA soldiers are located, a commemorative event on the Day of Defenders of Ukraine was organized by the Ukrainian Foundation and the Western Interregional Department of the UINR. The Institute participated in and facilitated the organization of official state events on the occasion of the Day of Remembrance of Defenders of Ukraine, including the laying of flowers at the graves of participants in the Russian-Ukrainian war; -production and placement of social advertisements about fallen compatriots

		- soldiers who defended Ukraine during the anti-terrorist operation, ensuring its implementation or implementation of measures to ensure national security and defense, repel and deter armed aggression of the Russian Federation against Ukraine in Donetsk and Luhansk regions; - development of methodological explanations for holding events to honor the memory of the fallen defenders of Ukraine. The Institute has developed a set of methodological recommendations for the commemoration of the fallen defenders of Ukraine; - formation of the list of burial places of defenders of Ukraine abroad for the organization and carrying out commemorative events. In particular, a 65-positions long list of Ukrainian defenders' burials abroad was prepared for the organization and holding of commemorative events for 18 states; - conducting search operations to establish the unknown burial places and names of the defenders of Ukraine, in particular the fighters for the independence of Ukraine in the XX century and persons who died (went missing) during the Second World War. In 2021, the Institute initiated and funded actions to conduct excavation work, exhumation, and reburial of the remains of defenders of Ukraine, including fighters for Ukraine's independence in the XX century and those who died (went missing) during World War II in 5 locations. 37 remains were exhumed and reburied as a result. - production of fiction and documentary films about the heroism of the defenders of Ukraine. For example, last year the Institute, together with the Women's Veterans Movement, conducted and presented a video project "Women who died for Ukraine." The project included eight 20-minute films about the fallen defenders; - conducting thematic lessons, and conversations dedicated to the heroism of the defenders of Ukraine in educational institutions, higher military educational institutions (higher education institutions with specific training conditions), military units, foreign diplomatic missions of Ukraine, and cultural institutions. The Institute organized and held several events. It also

		developed and sent information materials, guidelines, and presentations on the heroism of Ukrainians to educational institutions, military units, foreign diplomatic missions of Ukraine, and cultural institutions.
10	Decree of the President of Ukraine "On the Strategy of National-Patriotic Education for 2020-2025" of May 18, 2019, № 286/2019 Order of the Cabinet of Ministers of Ukraine "On approval of the State Target Social Program of National-Patriotic Education for the period up to 2025" of October 9, 2020, № 1233-p Resolution of the Cabinet of Ministers of Ukraine "On approval of the action plan for the implementation for the Strategy of national-patriotic education for 2020-2025" of October 9, 2020, № 932	Within the powers and in the manner prescribed by applicable law, as well as to implement action plans and work plans, the Institute systematically and regularly implements measures aimed at national-patriotic education. Such as: increasing the knowledge about prominent figures of Ukrainian statehood, fighters for independence, and territorial integrity of Ukraine; to overcome the postcolonial and post-totalitarian destructive consequences in the minds of the population. In cooperation with the Ministry of Youth Affairs and Sports of Ukraine, the Ministry of Education and Science of Ukraine, the Ukrainian State Center for National and Patriotic Education, Local History and Tourism of Student Youth, local governments, and NGOs, the Institute annually holds and supports seminars, events, tournaments and open events of patriotic orientation for different audiences. Last year, more than 30 such events took place in various settlements of Ukraine. In addition, the Institute produces popular printed and video products of national-patriotic and historical direction, which are distributed free of charge to the general population of Ukraine. Within the framework of cooperation with the Ukrainian State Center for National and Patriotic Education, the Institute staff annually participates in the III (All-Ukrainian) stage of the All-Ukrainian Children's and Youth Military-Patriotic Game "Falcon" ("Jura") (senior age group) - holds tournaments and thematic tours. The Institute annually and systematically implements educational projects and cooperates with teachers. UINR constantly develops sets of methodical materials and separate editions on issues of historical memory. The Institute focuses on preserving and conveying to children the history of the Holodomor, the culture of remembrance of the Second World War and the Holocaust, and issues of national and patriotic education.

11	Order of the Cabinet of Ministers of Ukraine "About approval of the strategy on promoting the Ukrainian language until 2030"Strong language is a successful state" of July 17, 2019 №596-p Order of the Cabinet of Ministers of Ukraine "About approval of the action plan for implementation of the first stage (until 2022) of the strategy on promoting the Ukrainian language until 2030 "Strong language is a successful state" of December 16, 2020, № 1585	The Institute carries out systematic and continuous work, popularizing the Ukrainian language. The information posted on the web resources of the Institute, in particular, electronic materials about the cultural heritage of the Ukrainian people and the history of the state, was developed and disseminated in Ukrainian. In addition, the following websites of the Institute were filled with materials in Ukrainian: "Virtual Museum of Russian Aggression", "Online Oral History Archive", and "Ukrainian Revolution". The official YouTube channel of the Institute in 2021 posted more than 100 thematic videos in Ukrainian. As part of the promotion and organization of the study of the history of Ukrainian statehood, the stages of the struggle for the restoration of statehood, in 2021 the Institute implemented 23 publishing projects in Ukrainian. 15 editions were prepared and published with a total circulation of 8,895 copies. 8 editions are ready for printing (e-versions). 7 informational and educational projects, created both directly by the Institute and in cooperation with partners, were exhibited at the exhibition planes of the Institute in Kyiv. In 2021 and 2022, the Institute continued to cover and promote events and figures of Ukrainian history with the help of various videos. A total of 23 video products were created in the Ukrainian language. The Institute regularly develops and provides the Ministry of Education and Science, the Ministry of Culture and Information Policy, the Ministry of Foreign Affairs, the Ministry of Veterans Affairs of Ukraine, other ministries, regional and Kyiv city state administrations, and the media with guidelines, visual and information materials for memorable dates; stages of state formation and preparation of lessons on bravery. The work to comprehend and refute Russian imperial myths about Ukraine's past is underway. A number/series of thematic round tables were held within this area (10 events in 2021).
12	Law of Ukraine "On access to the archives of the repressive agencies of the	Under Article 12 of the Law of Ukraine "On access to archives of the

	communist totalitarian regime of 1917-1991"	repressive agencies of the communist totalitarian regime of 1917-1991", to ensure the right to access archival information of repressive agencies, the State Archives of the Ukrainian Institute of National Remembrance was established (hereinafter — SA of UINR). One of the main tasks of SA of UINR was to carry out measures for the reconstruction of the building (building #5) on Pukhivska street, 7, Kyiv, to provide accommodation for SA UINR. As of May 5th, 2022, the project documentation has been fully developed (stages "Project" and "Working Documentation"), and a positive expert conclusion has been obtained.
	The government's Priority Action Plan for 2021, approved by order of the Cabinet of Ministers of Ukraine dated March 24, 2021 №276-p.	
	Action plan on measures to support the sphere of culture, protection of cultural heritage, development of creative industries, and tourism, approved by order of the Cabinet of Ministers of Ukraine on February 3, 2021. № 84.	

3. Determination of tasks to achieve goals stated in Subsection 2.1 (for each defined goal)

No	Description of the task to achieve the goal	Deadline for the task fulfillment	Dependence of the task on the tasks of other directions, areas, pressing issues
Goal 1. Initiate a public dialogue to rethink previous historical narratives about a common past with Russia; remove Russian imperial markers from the Ukrainian public space			
Stage 1: June 2022 – end of 2022			
1.1.	Conducting cycles of expert and public discussions on the problems of rethinking historical narratives	December of 2022	No
1.2	Formation of criteria and explanations for the purification of public space from Russian imperial and totalitarian markers	December of 2022	Yes, it is necessary to take into account the need for cultural heritage protection.
1.3	Conducting information campaigns	December of 2022	No
1.4.	Purification of public space from Russian imperial and totalitarian markers	December of 2022	Yes, interaction with local governments and communities is needed

1.5.	Carrying out the first stage of research on the influence of narratives of historical memory on the social and political behavior of citizens of Ukraine (trust in the government, interethnic and interreligious relations, economic orientations, foreign policy orientations)	December of 2022	Yes, implementation is possible with the appropriate funds

8. Digital transformations in culture

1. 1. The main problems that must be solved within the framework of the Recovery Plan in the direction of "Functioning of the financial system, its reformation"

The impact of war on a specific area of analysis:	
1) Key challenges (generalized for a specific area)	In Ukraine, there is no single information resource that would contain comprehensive information in the field of culture and information policy, in particular information about cultural values and cultural heritage of Ukraine, there are no centralized electronic lists of museum objects, objects of immovable cultural heritage, printed and handwritten publications. The primary problems that need to be solved are the lack of development of cultural heritage by society, the encouragement of innovative trends, active cultural policy of the state based on the modern scientific and digital concept of national culture; intensive development of cultural infrastructure (including digital), coverage of the entire sphere of Ukrainian culture with modern information and communication systems, legislative stimulation of private initiatives and

	contributions to Ukrainian culture, active participation in world cultural life, openness of one's own culture to it.
2) Key capabilities (generalized for a specific area)	Implementation of the project will provide an opportunity to carry out a digital transformation in culture, will provide automation of accounting processes for information about cultural heritage and cultural values, as well as access to digital content. The project will accelerate cultural institutions equipped with digital, modern workplaces. The formation and implementation of state policy in the field of culture and information policy, in particular the distribution of state financial resources, will be based on real data that will be centralized and protected. Ukrainians will have open and transparent access to cultural services and information in the field of culture and information policy.
3) Key limitations (generalized for a specific area)	Digitization of the world requires the use of digital tools that will provide access to cultural services and information on a permanent basis, regardless of time and space factors. Digitization of the sphere of Ukrainian culture involves the following Phases: collection, validation and generalization of various types of data, creation of the necessary infrastructure and overcoming ignorance of the population regarding the functioning and possibilities of using the digital space in the sphere of culture, regulation of these issues at the legislative level.

1.1. **Goals, tasks, stages of the Recovery Plan in the direction of "Digital transformations in culture" in the chosen field:**

1.2. Goals are aimed at solving a specific problem: Digital transformations in culture — is a comprehensive strategic vision of digital development, digital transformations and digitalization of the sphere of culture and information policy, which corresponds to the principles of implementation by executive authorities of the principles of the state policy of digital development.

	Phase 1: June 2022 - end of 2022	**Phase 2: January 2023– December 2025**	**Phase 3: January 2026– December 2032**
The identified problem that requires a solution in the specified area of analysis:Implementation of the electronic system of the State Register of Immovable Heritage of Ukraine			
The goal that must be achieved to solve the problem at each stage	Construction of a technical Task for the development of software for the State Register of Immovable Heritage of Ukraine. Development of the basic software of the State Register of Immovable Heritage of Ukraine.	Expanding the functionality of the software of the electronic State Register of Immovable Heritage of Ukraine. Completion of digitization of information on immovable cultural heritage objects and existing urban planning documentation in the part of	Full automation of the process of recording immovable heritage of Ukraine.

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
	Modernization of server equipment. Ensuring the interaction of the State Register of Immovable Heritage of Ukraine with other information resources (E-Construction and Address Register)	historical and architectural reference plans of settlements. Entry of the specified information into the State Register of Immovable Heritage of Ukraine.	
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	Short deadlines for the implementation of the electronic system of the State Register of Immovable Heritage of Ukraine	Lack of funds due to continued martial law in the country; lack of specialists.	The need to make changes to the current legislation of Ukraine, as well as the need to reengineer processes
Measured indicator of goal achievement	Documented technical and other requirements for the development of software for the electronic system of the State Register of Immovable Heritage of Ukraine	Information on 100% of objects has been digitized and entered into the electronic system of the State Register of Immovable Heritage of Ukraine	Registration of immovable heritage of Ukraine is carried out exclusively in electronic form.
The total size of the need for financial resources to achieve the goal, million hryvnias	21,5	20	20
Connection of the goal with other directions	Implementation of the electronic system of the register of the Museum Fund of Ukraine	Implementation of the electronic system of the register of the Museum Fund of Ukraine	Implementation of the electronic system of the register of the Museum Fund of Ukraine
The identified problem that requires a solution in the specified area of analysis:Implementation of the electronic system of the register of the Museum Fund of Ukraine			
The goal that must be achieved to solve the problem at each stage	Technical task for the creation of software for the register of the Museum Fund of Ukraine.	Entering information about the list of collections into the electronic system of the register of the Museum Fund of Ukraine.	Finalization of the software of the electronic system of the register of the Museum Fund of Ukraine.

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
	Development of the basic software of the electronic registry system of the Museum Fund of Ukraine.	Ensuring the integration of all institutions authorized to store the state part of the Museum Fund of Ukraine. Modernization of server equipment.	Ensuring the accounting of Museum objects of the state part of the Museum Fund of Ukraine exclusively in electronic form
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	Short deadlines for the introduction of the electronic electronic system of the register of the Museum Fund of Ukraine.	Lack of funds due to the continuation of martial law in the country; lack of specialists.	The need to make changes to the current legislation of Ukraine, the need to reengineer processes
Measured indicator of goal achievement	Documented technical and special requirements for the development of software of the electronic system of the register of the Museum Fund of Ukraine. Development of software for entering information about the list of museum collections. Integration into the electronic system of the Museum Fund of Ukraine register of 50% of institutions authorized to store the state part of the Museum Fund of Ukraine. Ensuring that the list of museum objects is filled by significant institutions at a level not lower than 30% of the total volume of collections.	Ensuring interoperability of the electronic system of the register of the Museum Fund of Ukraine. Integration into global and European systems. Implementation of the public part of the electronic system of the register of the Museum Fund of Ukraine. Creation of tools for monitoring the movement of museum valuables. Integration into the electronic system of the Museum Fund of Ukraine register of 70% of institutions authorized to store the state part of the Museum Fund of Ukraine. Ensuring that the list of museum objects is filled by significant institutions at a level not lower than 80% of the total volume of collections.	Implementation of accounting of destroyed, damaged and stolen museum objects of the state part of the Museum Fund of Ukraine in the electronic system of the register of the Museum Fund of Ukraine. Integration into the electronic system of the Museum Fund of Ukraine register of 100% of institutions authorized to store the state part of the Museum Fund of Ukraine. Ensuring that the list of museum objects is filled by significant institutions at a level not lower than 95% of the total volume of collections.

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The total size of the need for financial resources to achieve the goal, million hryvnias	15	18	21
Connection of the goal with other directions	Computerization and internetization of museums and reserves, which store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine	Computerization and internetization of museums and reserves, which store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine	Computerization and internetization of museums and reserves, which store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine
The identified problem that requires a solution in the specified area of analysis: Computerization and internalization of museums and reserves, which store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine			
The goal that must be achieved to solve the problem at each stage		Provision of museums and nature reserves that store museum objects with modern computer equipment and Internet access	Provision of museums and nature reserves that store museum objects with modern computer equipment and Internet access
The deadline is within the stage		24 months	72 months
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.
Measured indicator of goal achievement		70% of museums and reserves that store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine are 50% equipped with computer equipment and have access to high-speed Internet	100% of museums and reserves that store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine are 100% equipped with computer equipment and have access to high-speed Internet

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The total size of the need for financial resources to achieve the goal, million hryvnias		2000	2000
Connection of the goal with other directions		Implementation of the electronic system of the register of the Museum Fund of Ukraine	Implementation of the electronic system of the register of the Museum Fund of Ukraine
The identified problem that requires a solution in the specified area of analysis: finalization of the electronic system of the registry of the National List of Elements of the Intangible Cultural Heritage of Ukraine			
The goal that must be achieved to solve the problem at each stage	Development of the technical task for finalizing the electronic system of the registry of the National list of elements of the intangible cultural heritage of Ukraine	Development of software for the electronic system of the registry of the National List of Elements of the Intangible Cultural Heritage of Ukraine	
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	Absence of a regulatory legal basis for the formation of an electronic system of the National List of Elements of the Intangible Cultural Heritage of Ukraine	Lack of funds due to the continuation of martial law in the country; lack of specialists.	The need to make changes to the current legislation of Ukraine, the need to reengineer processes
Measured indicator of goal achievement	Documented technical and other requirements for the development of software for the electronic system of the registry of the National List of Elements of the Intangible Cultural Heritage of Ukraine	Software for the electronic system of the registry of the National List of Elements of the Intangible Cultural Heritage of Ukraine	The accounting of elements of the intangible cultural heritage of Ukraine is carried out exclusively in the electronic system

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The total size of the need for financial resources to achieve the goal, million hryvnias		1	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Digitization of musical heritage of Ukrainian composers, creation of an electronic library of musical scores;			
The goal that must be achieved to solve the problem at each stage	Development of a technical task for the creation of software for an electronic library of sheet music scores of Ukrainian composers	Development of an electronic library of music scores of Ukrainian composers. Digitization of 1,000 musical scores by Ukrainian composers.	Modernization of server and additional equipment. Digitization of sheet music of 10,000 scores of Ukrainian composers
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	Brief terms for the digitization of musical heritage of Ukrainian composers.	Lack of funds due to the continuation of martial law in the country; lack of specialists.	The need to make changes to the current legislation of Ukraine, the need to reengineer processes
Measured indicator of goal achievement	Documented technical and other requirements for the electronic library of music scores of Ukrainian composers.	Introduction of an electronic library of music scores of Ukrainian composers. Entry of at least 1,000 sheet music.	Availability of modern servers and components, as well as additional equipment for proper system operation.
The total size of the need for financial resources to achieve the goal, million hryvnias	5	5	5
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: implementation of the electronic system of the register of masters of folk arts and crafts			

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The goal that must be achieved to solve the problem at each stage	Development of the technical task for the development of the software of the electronic system of the register of masters of folk arts and crafts	Development of software for the electronic system of the register of masters of folk arts and crafts	Marking and popularization of the products of the masters of folk arts and crafts
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	The need to make changes to the current legislation	Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Documented technical and other requirements for the electronic system of the register of masters of folk arts and crafts	Implementation of the electronic system of the register of masters of folk arts and crafts	Entering 100% of information about the products of masters who have unique technologies
The total size of the need for financial resources to achieve the goal, million hryvnias		4,9	2
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Implementation of the electronic register system of the National System of Centralized Cataloging			
The goal that must be achieved to solve the problem at each stage	Development of the technical task of developing the software of the electronic system register of the National System of Centralized Cataloging	Software development of the electronic register system of the National System of Centralized Cataloging	Creation of relevant electronic catalogs
The deadline is within the stage	7 months	24 months	12 months

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
Risks of achieving the goal	Short deadlines for the implementation of the national system of centralized cataloging.	Lack of funds due to the continuation of martial law in the country, lack of specialists.	
Measured indicator of goal achievement	Documented technical and other requirements for creating software for the electronic system register of the National System of Centralized Cataloging.	Software of the electronic system register of the National System of Centralized Cataloging. Connecting to the system 80% of the registry filler libraries. filling of electronic catalogs by 70%.	Connection to the system of 100% of libraries, 100% filling of electronic catalogs.
The total size of the need for financial resources to achieve the goal, million hryvnias		6,9	7
Connection of the goal with other directions	Library work, protection of cultural heritage.	Library work, protection of cultural heritage.	Library work, protection of cultural heritage.
The identified problem that requires a solution in the specified area of analysis: Creation of an electronic system for certification (independent testing) of teaching staff of specialized art education institutions			
The goal that must be achieved to solve the problem at each stage	Development of a technical task for the development of software for an electronic system for certification (independent testing) of teaching staff of specialized art education institutions	Development of software for an electronic system for certification (independent testing) of teaching staff of specialized art education institutions Preparation of relevant test tasks. Implementation of an electronic system for certification (independent testing) of teaching staff of specialized art education institutions	Annual update of test tasks
The deadline is within the stage	6 months	24 months	72 months

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
Risks of achieving the goal	Short deadlines for the creation of an electronic system for certification (independent testing) of teaching staff of specialized art education institutions	Lack of funds due to the continuation of martial law in the country, lack of specialists.	The need for process reengineering.
Measured indicator of goal achievement	Documented technical and other requirements for the development of electronic system software for certification (independent testing) of teaching staff of specialized art education institutions	Electronic system software for certification (independent testing) of teaching staff of specialized art education institutions	Certification (independent testing) of teaching staff of institutions of specialized art education exclusively in electronic form remotely.
The total size of the need for financial resources to achieve the goal, million hryvnias.		8	
Connection of the goal with other directions	Education	Education	Education
The identified problem that requires a solution in the specified area of analysis: creation of a mobile application for studying the Ukrainian language "My Language".			
The goal that must be achieved to solve the problem at each stage	Construction of the technical task of the mobile application software for learning the Ukrainian language "My language".	Development of mobile application software for learning the Ukrainian language "My Language". Formation of language packages	Update language packs
The deadline is within the stage	6 months	24 months	72 months
Risks of achieving the goal	Short deadlines for creating a mobile application for learning the Ukrainian language "My Language".	Lack of funds due to the continuation of martial law in the country, lack of specialists.	The need to make changes to the current legislation of Ukraine, the need to reengineer processes.
Measured indicator of goal achievement	Documented technical and other requirements for the development of the	Mobile application software for studying the Ukrainian language "My Language".	10 new topics to explore update materials by all created.

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
	mobile application software for learning the Ukrainian language "My Language".	Developed topics for learning the Ukrainian language, download to the application.	App popularity.
The total size of the need for financial resources to achieve the goal, million hryvnias.		4,8	
Connection of the goal with other directions		Cultural heritage and cultural values.	Cultural heritage and cultural values.
The identified problem that requires a solution in the specified area of analysis: Creation of a complex information and search system of the archive			
The goal that must be achieved to solve the problem at each stage	Development of a technical task for the development of software for a complex electronic information and search system of the archive	Software development of a complex electronic information and search system of the archive. Digitization of paper documents and entering information into the complex electronic information and search system of the archive.	Further filling of the complex electronic information and search system of the archive. Integration with global search engines in the specified field
The deadline is within the stage	6 months	24 months	72 months
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Documented technical and other requirements for software development of a complex electronic information and search system of the archive	Formation of an archive of more than 100,000 case titles in a complex electronic information and search system, which includes the digitization of 600,000 digital images of documents	

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The total size of the need for financial resources to achieve the goal, million hryvnias.		9,5	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Creation of an interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine			
The goal that must be achieved to solve the problem at each stage	Creation of an electronic list of defenders of Ukraine in whose honor memorial plaques have been installed	Creation of a technical task for the development of software for an interactive map of monuments and memorial plaques in honor of the fallen defenders of Ukraine Development of software for an electronic system of an interactive map of monuments and memorial signs in honor of fallen defenders and citizens of Ukraine	Expanding the functionality of the interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine.
The deadline is within the stage	6 months	24 months	72 months
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Entering 80% of the information on the placement of memorial plaques into the list.	Providing information about all subjects on the interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine	Consolidation of complete information into an interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine, taking into account the order of their creation

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The total size of the need for financial resources to achieve the goal, million hryvnias.		10	12
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Introduction of certificates for the purchase of books			
The goal that must be achieved to solve the problem at each stage	Stimulation of demand, development of reading culture, support of reader demand and all market subjects	Creation of a technical task for the development of software for an electronic system of certificates for the purchase of books Development of software for an electronic system of certificates for the purchase of books Implementation of the electronic system of certificates for the purchase of books	
The deadline is within the stage	6 months	24 months	
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Formation of criteria for selection of publishing works	Formation of more than 500,000 electronic certificates annually.	
The total size of the need for financial resources to achieve the goal, million hryvnias.		21	

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
Connection of the goal with other directions	Implementation of the electronic register system of the National System of Centralized Cataloging	Implementation of the electronic register system of the National System of Centralized Cataloging	
The identified problem that requires a solution in the specified area of analysis: Computerization and internalization of public libraries			
The goal that must be achieved to solve the problem at each stage		Provision of public libraries with modern computer equipment and Internet access	Provision of public libraries with modern computer equipment and Internet access
The deadline is within the stage		24 months	72 months
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.
Measured indicator of goal achievement		70% of public libraries are 50% equipped with computer equipment and have access to high-speed Internet	100% of public libraries are 100% computerized and have access to high-speed Internet
The total size of the need for financial resources to achieve the goal, million hryvnias.		1000	3000
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Creation of the National Electronic Library			
The goal that must be achieved to solve the problem at each stage	Forming a list of books, rare and valuable documents that constitute cultural heritage	Creation of a technical Task for the development of the software of the National Electronic Library	Further development of the electronic library

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
		Development of software of the National Electronic Library Digitization of the formed list of books of rare and valuable documents that constitute cultural heritage	
The deadline is within the stage	6 months	24 months	72 months
Risks of achieving the goal	Denial of access due to hostilities	Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.
Measured indicator of goal achievement	At least 20% of documents that constitute cultural heritage	Documented technical and other requirements for software development of the National Electronic Library. Software of the National Electronic Library. Digitization of the created list of books of rare and valuable documents that constitute cultural heritage of at least 20% of the documents that constitute cultural heritage.	At least 70% of documents that constitute cultural heritage
The total size of the need for financial resources to achieve the goal, million hryvnias.		60	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Implementation of the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products			

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The goal that must be achieved to solve the problem at each stage	Creation of a technical Task for the development of software for the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	Development of software for the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	
The deadline is within the stage	6 months	24 months	
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Documented technical and other requirements for the development of software for the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	Software of the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products. Implementation of the State Register of Publishers, Manufacturers and Distributors of Publishing Products. Issuance of a certificate to subjects of the publishing business in electronic form	
The total size of the need for financial resources to achieve the goal, million hryvnias.		25	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Creation of an automated system of the basic network of cultural institutions			

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The goal that must be achieved to solve the problem at each stage	Creation of a technical task for the development of software for the automated system of the basic network of cultural institutions	Software development of the automated system of the basic network of cultural institutions Integration with The unified state register of enterprises and organizations of Ukraine. It is impossible to prevent the closure of cultural institutions without the approval of the relevant ministry. Purchase of server equipment.	
The deadline is within the stage	6 months	24 months	
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	
Measured indicator of goal achievement	Documented technical and other requirements for software development of the automated system of the basic network of cultural institutions	Software of the automated system of the basic network of cultural institutions Entering information about all cultural institutions into the network	
The total size of the need for financial resources to achieve the goal, million hryvnias.	4	8	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Automated system for submission and administration of applications for receiving state support in the field of arts			

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
The goal that must be achieved to solve the problem at each stage	Creation of a technical task for the development of software for an automated system of submission and administration of applications for state support in the field of arts	Development of a software automated system for submission and administration of applications for state support in the field of arts	Expanding the functionality of the automated system for submission and administration of applications for state support in the field of arts
The deadline is within the stage	6 months	24 months	72 months
Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.
Measured indicator of goal achievement	Documented technical and other requirements for software development of an automated system for submission and administration of applications for state support in the field of arts	Software for the automated system of submission and administration of applications for receiving state support in the field of arts State support in the field of arts is provided exclusively through electronic applications.	State support in the field of culture and information policy is provided exclusively through electronic applications
The total size of the need for financial resources to achieve the goal, million hryvnias.		6	
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Creation of an electronic system for reviewing and approving the statutes of religious organizations and an all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine			
The goal that must be achieved to solve the problem at each stage	Creation of a technical Task for the development of software for an electronic system for reviewing and	Development of software for an electronic system for reviewing and approving the statutes of religious	Approval of statutes of religious organizations and canonical activities of

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
	approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	foreign citizens in Ukraine exclusively in electronic form

Risks of achieving the goal		Lack of funds due to the continuation of martial law in the country; lack of specialists.	The need to make changes to the current legislation of Ukraine, the need to reengineer processes
Measured indicator of goal achievement	Documented technical and other requirements for the development of software for the electronic system for reviewing and approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	Software for the electronic system for reviewing and approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	100% of approvals are done electronically
The total size of the need for financial resources to achieve the goal, million hryvnias.		5	55
Connection of the goal with other directions			
The identified problem that requires a solution in the specified area of analysis: Completion of the second part of the project "Virtual Museum of Russian Aggression" and the development of digital platforms of the Ukrainian Institute of National Memory.			
The goal that must be achieved to solve the problem at each stage	Construction of the technical Task for finalizing the software of the project	Creating and ensuring the functioning of the 2nd phase of the Virtual Museum of	Ensuring equal access to the truth about the war, increasing trust in the state, and

	Phase 1: June 2022 - end of 2022	Phase 2: January 2023– December 2025	Phase 3: January 2026– December 2032
	"Virtual Museum of Russian Aggression" and the development of digital platforms of the Ukrainian Institute of National Memory.	Russian Aggression, ensuring the functioning and filling of the Archive of Oral History, the Virtual Necropolis of Ukrainian Emigration and other digital platforms of the Ukrainian Institute of National Memory.	consolidating society in the long term will contribute to the development of the humanitarian sphere and, accordingly, a positive impact on GDP.
The deadline is within the stage	7 months	24 months	72 months
Risks of achieving the goal	Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.	Lack of funds due to the continuation of martial law in the country; lack of specialists.
Measured indicator of goal achievement	Documented technical and other requirements for finalizing the software of the "Virtual Museum of Russian Aggression" project and the development of digital platforms of the Ukrainian Institute of National Memory.	The public part of the "Virtual Museum of Russian Aggression" is available to users. The Oral History Archive, the Virtual Necropolis of Ukrainian Emigration and other digital platforms of the Ukrainian Institute of National Memory are 60% full.	Combating fakes, increasing public awareness of the war by 30%, increasing public trust in the authorities.
The total size of the need for financial resources to achieve the goal, million hryvnias.	2	3	3
Connection of the goal with other directions	History, countering disinformation.	History, countering disinformation.	History, countering disinformation.

1.3. The current state of implementation of program documents in the selected area of analysis regarding the identified problem:

1.	Proposals for tasks of the National Informatization Program for 2022, 06.12.2021;	

	Proposals for tasks of the National Informatization Program for three years, 06.12.2021; Feasibility study (hereinafter referred to as feasibility study), 06.12.2021; Priority directions and Tasks (projects) of digital transformation for the period until 2023.	

1.4. Definition of tasks to achieve the goals from subsection 2.1 (for each defined goal)

	Description of the task to achieve the goal	**Deadline for completing the task**	**Dependence of the task on the tasks of other directions, areas, problems**
Goal: Implementation of the electronic system of the State Register of Immovable Heritage of Ukraine			
Phase 1: June 2022 - end of 2022			
1.	Task 1: Construction of the electronic system of the State Register of Immovable Heritage of Ukraine, creation of software, provision of serviceable server and additional equipment.	December 2022	It depends on the tasks of other directions, areas, problems.
2.	Task 2: Implementation of the electronic system of the State Register of Immovable Heritage of Ukraine	December 2022	It depends on the tasks of other directions, areas, problems.
3.	Task 3: Integration of the electronic system of the State Register of Immovable Heritage of Ukraine with other information resources.	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023 – December 2025			
4.	Task 1: Digitization of immovable heritage of Ukraine.	December 2025	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
5.	Task 2: Digitization of urban planning documentation	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
6.	Task 3: Full automation of accounting of immovable heritage of Ukraine.	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Створення електронного реєстру Музейного фонду України, цифровізація інфраструктури музеїв.			
7.	Task 1: Construction of the technical task for the electronic system of the register of the Museum Fund of Ukraine.	December 2022	It depends on the tasks of other directions, areas, problems.
8.	Task 2: Creation of electronic system software for institutions authorized to store the state part of the Museum Fund of Ukraine	December 2022	It depends on the tasks of other directions, areas, problems.
9.	Task 3: Creation of an electronic list of museum treasures, ensuring the possibility of its filling.	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
10.	Task 1: Ensuring interoperability of the electronic registry system of the Museum Fund of Ukraine, integration with global and European electronic resources	December 2025	It depends on the tasks of other directions, areas, problems.
11.	Task 2: Ensuring the possibility of monitoring the movement of museum objects	December 2025	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
Phase 3: January 2026– December 2032			
12.	Task 1: Updating of server equipment to ensure the functions of the electronic system of the register of the Museum Fund of Ukraine.	December 2032	It depends on the tasks of other directions, areas, problems.
13.	Task 2: Implementation of accounting of destroyed, damaged and stolen museum objects of the state part of the Museum Fund of Ukraine	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Computerization and internetization of museums and reserves, which store museum objects that are state property and belong to the state part of the Museum Fund of Ukraine			
Phase 2: January 2023– December 2025			
14.	Task 1: Purchase of at least 60,000 computers and 25,000 scanners, connecting 70% of institutions to the Internet	December 2025року	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
15.	Task 1: Purchase of at least 25,000 computers and scanners for digitization of the state part of the Museum Fund of Ukraine, connection of 10% of institutions to the Internet	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Finalization of the electronic system of the registry of the National List of Elements of the Intangible Cultural Heritage of Ukraine			
Phase 1: June 2022 - end of 2022			
16.	Task 1: Amendments to the current legislation, construction of a technical task for finalizing the software of the electronic registry system of the National List of Elements of the Intangible Cultural Heritage of Ukraine.	December 2022	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
17.	Task 2: Creation of an interactive online map of objects of cultural heritage of ethnic and religious communities of Ukraine, their popularization.	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
18.	Task 1: Implementation and filling of the electronic system of the register of the National List of Elements of the Intangible Cultural Heritage of Ukraine	December 2022	It depends on the tasks of other directions, areas, problems.
Goal: Digitization of musical heritage of Ukrainian composers, creation of an electronic library of music scores.			
Phase 1: June 2022 - end of 2022			
19.	Task 1: Creation of a list of works that require digitization, formation of a technical task for the development of software for an electronic library of sheet music scores of Ukrainian composers	December 2022	It depends on the tasks of other directions, areas, problems.
20.	Task 2: Development of software for an electronic library of music scores of Ukrainian composers	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
21.	Task 1: Introduction of an electronic library of music scores of Ukrainian composers.	December 2023	It depends on the tasks of other directions, areas, problems.
22.	Task 2: Introduction of a public electronic library of music scores of Ukrainian composers.	December 2023	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
23.	Task 1: Filling the electronic library of music scores of Ukrainian composers.	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Implementation of an electronic system of the register of masters of folk arts and crafts.			
	Phase 1: June 2022 - end of 2022		
24.	Task 1: Amendments to the current legislation, construction of a technical task for the development of software for the electronic system of the register of masters of folk arts and crafts	December 2022	It depends on the tasks of other directions, areas, problems.
	Phase 2: January 2023– December 2025		
25.	Task 1: Development of software for the electronic system of the register of masters of folk arts and crafts.	December 2023	It depends on the tasks of other directions, areas, problems.
26.	Task 2: Implementation of the electronic system of the register of masters of folk arts and crafts.	December 2024 року	
	Phase 3: January 2026– December 2032		
27.	Task 1: Consolidation of information and carrying out labeling of all products of masters of folk arts and crafts.	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Implementation of the electronic system register of the National System of Centralized Cataloging.			
	Phase 1: June 2022 - end of 2022		
28.	Task 1: Implementation of the electronic register system of the National System of Centralized Cataloging.	December 2022	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
29.	Task 2: Connection to the system of public libraries.	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
30.	Task 1: Creating electronic catalogs and ensuring the possibility of filling them.	December 2025	It depends on the tasks of other directions, areas, problems.
31.	Task 2: Implementation of software for 100% of state libraries.	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
32.	Task 1: Modernization of server and additional equipment	October 2026	It depends on the tasks of other directions, areas, problems.
33.	Task 2: Implementation of software for automating library and information processes.	February 2027	It depends on the tasks of other directions, areas, problems.
Goal: Створення електронної системи для проходження сертифікації (незалежного тестування) педагогічних працівників закладів спеціалізованої мистецької освіти			
Phase 1: June 2022 - end of 2022			
34.	Task 1: Construction of a technical task for the development of software for an electronic system for certification (independent testing) of teaching staff of specialized art education institutions.	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
35.	Task 1: Implementation of an electronic system for certification (independent testing) of teaching staff of specialized art education institutions	December 2025	It depends on the tasks of other directions, areas, problems.
36.	Task 2: Filling the electronic system with test tasks		It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
37.	Task 1: Annual update of test tasks.	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Creation of a mobile application for studying the Ukrainian language "My Language".			
Phase 1: June 2022 - end of 2022			
38.	Task 1: Construction of a technical task for the development of software for the creation of a mobile application for learning the Ukrainian language "My Language",	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
39.	Task 1: Formation of language packages.	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
40.	Task 1: Update language packs.	December 2023	It depends on the tasks of other directions, areas, problems.
Goal: Creating a comprehensive information retrieval system archive			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
Phase 1: June 2022 - end of 2022			
41.	Task 1: Construction of the technical task for the development of the software of the complex information and search system of the archive	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
42.	Task 1: Software development of a complex information and search system of the archive	December 2023	It depends on the tasks of other directions, areas, problems.
40.	Task 2. Implementation of the software of the complex information and search system of the archive	December 2023	It depends on the tasks of other directions, areas, problems.
43.	Task 3. Digitization of paper documents and entering information into the complex electronic information and search system of the archive	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
44.	Task 1. Further digitization of paper documents and entry of information into the complex electronic information and search system of the archive	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Creation of an interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine			
Phase 1: June 2022 - end of 2022			
45.	Task 1. Creation of an electronic list of defenders of Ukraine in whose honor memorial plaques have been installed	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
46.	Task 1. Construction of a technical task for the development of software for an interactive map of monuments and memorial plaques in honor of the fallen defenders of Ukraine	December 2023	It depends on the tasks of other directions, areas, problems.
47.	Task 2. Development of software for an interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine	December 2024 року	It depends on the tasks of other directions, areas, problems.
48.	Task 3. Implementation of software for an interactive map of monuments and memorial plaques in honor of fallen defenders of Ukraine	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
49.	Task 1. Further development of the platform of the interactive map of monuments and memorial plaques in honor of the fallen defenders of Ukraine, automation of the creation process	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Introduction of an electronic system of certificates for the purchase of books			
Phase 1: June 2022 - end of 2022			
50.	Task 1: Formation of criteria for selection of publishing works	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
51.	Task 1. Construction of the technical task for the development of the software of the electronic system of certificates for the purchase of books	December 2023	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
50.	Task 2. Development of software for an electronic system of certificates for the purchase of books	December 2023	It depends on the tasks of other directions, areas, problems.
52.	Task 3. Development of software for an electronic system of certificates for the purchase of books	December 2024	
53.	Task 4. Creation of certificates exclusively in the electronic form of certificates for the purchase of books	December 2025	
Goal: Computerization and internalization of public libraries			
Phase 2: January 2023– December 2025			
54.	Task 1: Purchase of at least 35,000 computers and connection of 70% of institutions to the Internet	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
55.	Task 1: Purchase of at least 100,000 computers and connection of 100% of institutions to the Internet	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Creation of the National Electronic Library			
Phase 1: June 2022 - end of 2022			
56.	Task 1: Forming a list of books, rare and valuable documents that constitute cultural heritage	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
57.	Task 1: Construction of the technical task for the development of the software of the National Electronic Library	December 2023	It depends on the tasks of other directions, areas, problems.
58.	Task 2: Development of software of the National Electronic Library	December 2024	It depends on the tasks of other directions, areas, problems.
59.	Task 3: Implementation of the software of the National Electronic Library	December 2024	It depends on the tasks of other directions, areas, problems.
60.	Task 4: Entry of digitized information into the National Electronic Library	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			
61.	Task 1: Finalization of the software of the National Electronic Library	December 2032	It depends on the tasks of other directions, areas, problems.
62	Task 2: Entry of digitized information into the National Electronic Library	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Implementation of the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products			
Phase 1: June 2022 - end of 2022			
63.	Task 1: Construction of a technical task for the development of software for the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	December 2022	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
Phase 2: January 2023– December 2025			
64.	Task 1: Development of software for the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	December 2023	It depends on the tasks of other directions, areas, problems.
65.	Task 2: Implementation of the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	December 2024	It depends on the tasks of other directions, areas, problems.
66.	Task 3: issuance of certificates exclusively in electronic form using the electronic system of the State Register of Publishers, Manufacturers and Distributors of Publishing Products	December 2025	It depends on the tasks of other directions, areas, problems.
Goal: Creation of an automated system of the basic network of cultural institutions			
Phase 1: June 2022 - end of 2022			
67.	Task 1: Design of the technical task for the development of the software of the automated system of the basic network of cultural institutions	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
68.	Task 1: Software development of the automated system of the basic network of cultural institutions	December 2023	It depends on the tasks of other directions, areas, problems.
69.	Task 2: Implementation of the automated system of the basic network of cultural institutions	December 2023	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
70.	Task 3: Integration from the automated system of the basic network of cultural institutions of the Unified State Register of Enterprises and Organizations of Ukraine	December 2023	It depends on the tasks of other directions, areas, problems.
71.	Task 4: Automation of the process of changing the legal status of cultural institutions is impossible without agreement with the relevant ministry.	December 2024	It depends on the tasks of other directions, areas, problems.
72.	Task 5: Purchase of server equipment	December 2025	It depends on the tasks of other directions, areas, problems.
Goal: Automated system for submission and administration of applications for state support in the field of arts			
Phase 1: June 2022 - end of 2022			
73.	Task 1: Construction of a technical task for the development of software for an automated system for submission and administration of applications for receiving state support in the field of arts	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
74.	Task 1: Development of software for an automated system of submission and administration of applications for receiving state support in the field of arts	Червень 2024 року	It depends on the tasks of other directions, areas, problems.
75.	Task 2: Implementation of an automated system for submission and administration of applications for receiving state support in the field of arts	December 2025	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
76.	Task 2: Expanding the functionality of the automated system for submission and administration of applications for receiving state support in the field of arts in order to ensure full automation of the processes of submission and administration of applications for receiving state support in culture	December 2032	It depends on the tasks of other directions, areas, problems.
Goal: Creation of an electronic system for reviewing and approving the statutes of religious organizations and an all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine			
Phase 1: June 2022 - end of 2022			
77.	Task 1: Construction of a technical task for the development of software for an electronic system for reviewing and approving the statutes of religious organizations and an all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
78.	Task 1: Development of software for an electronic system for reviewing and approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	December 2024 року	It depends on the tasks of other directions, areas, problems.
79.	Task 2: Implementation of an electronic system for reviewing and approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine	December 2025	It depends on the tasks of other directions, areas, problems.
80.	Task 2: Integration of the electronic system for reviewing and approving the statutes of religious organizations and the all-Ukrainian electronic system for approving the canonical activities of foreign citizens in Ukraine with the Unified State Register of Enterprises and	December 2025	It depends on the tasks of other directions, areas, problems.

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
	Organizations of Ukraine and the integrated interdepartmental automated system of information exchange on matters of control of persons, vehicles and goods crossing the state border.		
Phase 3: January 2026– December 2032			
81.	Task 1: Approval of statutes of religious organizations and canonical activities of foreign citizens in Ukraine exclusively in electronic form	December 2032	It depends on the tasks of other directions, areas, problems.
Phase 1: June 2022 - end of 2022			
	Task 1: Construction of a technical Task for finalizing the software of the "Virtual Museum of Russian Aggression" project	December 2022	It depends on the tasks of other directions, areas, problems.
	Task 2: Development of digital platforms of the Ukrainian Institute of National Memory	December 2022	It depends on the tasks of other directions, areas, problems.
Phase 2: January 2023– December 2025			
	Task 1: Creating and ensuring the functioning of the 2nd phase of the Virtual Museum of Russian Aggression	December 2024	It depends on the tasks of other directions, areas, problems.
	Task 2: Ensuring the functioning and filling of the Oral History Archive, the Virtual Necropolis of Ukrainian Emigration and other digital platforms of the Ukrainian Institute of National Memory	December 2024	It depends on the tasks of other directions, areas, problems.
Phase 3: January 2026– December 2032			

	Description of the task to achieve the goal	Deadline for completing the task	Dependence of the task on the tasks of other directions, areas, problems
	Task 1: Ensuring the functioning and filling of the Oral History Archive, the Virtual Necropolis of Ukrainian Emigration and other digital platforms of the Ukrainian Institute of National Memory	December 2027	It depends on the tasks of other directions, areas, problems.

List of national projects for the implementation of the task from subsection 2.3 (for the corresponding task)

Description of the project to task N from subsection 2.3	Justification of the necessity of the project	Quality performance indicators of the project	Economic effect (impact on GDP, budget, employment, etc.)	The main responsible body of state power	Estimated need for financing (million UAH)	Proposed sources of funding	Necessary regulatory and legal support	Adjacent sphere of regulation of EU law (general comment)
Digital transformations in culture is a comprehensive strategic vision of digital development, digital transformations and digitalization in culture, which corresponds to the principles of implementation of the principles of the state policy of digital development by executive authorities.	Implementation of the project will provide an opportunity to carry out a digital transformation of culture, provide automation of information accounting processes, equipping with digital, modern workplaces, as well as access to digital content. The formation and implementation of state policy in the field of culture and information policy, including the distribution of state financial resources, will	Creation of a unified information environment in the field of culture and information policy, which will increase the quality level of management decision-making and implementa		Ministry of Culture and Information Policy of Ukraine.	120	Register of immovable cultural heritage — TAPAS; electronic register of the Museum Fund of Ukraine funds of the Lublin Triangle Fund; other projects — funds from the state	Changes are needed regarding the implementation of experimental projects on digitalization of records of cultural heritage objects. INTRODUCTION

The Ukrainian MIC comprises over 50 enterprises, which employed more than 50 thousand people in 2021 and produced UAH 7.2 billion worth of goods, more than 20% of which were exported.

Resistance of Ukraine against the full-scale armed aggression of the Russian Federation has pinpointed the flaws in equipment of the Armed Forces of Ukraine and other military forces with modern armaments and military equipment (hereinafter referred to as the AME) necessary to complete their designated tasks. First and foremost, this has manifested itself in insufficient supply of the core items (complexes, systems) before the start of the war as well as a result of major losses of AME and expenses suffered during the first months of the aggression.

The following is the impact of the Russian Federation on the operation of the domestic Military-Industrial Complex (hereinafter referred to as the MIC):

- destruction of enterprises and production equipment;
- outflow of capital and freezing of investment projects due to military-related risks;
- destruction of cooperative ties and supply chains of raw materials, component parts, and materials has exacerbated the pre-existing issue of supply of MIC enterprises with electronic components not manufactured in Ukraine and imported from abroad (first and foremost, microelectronics) and necessary raw materials;
- increased demand for AME by the state customers and insufficient level of preparedness of the MIC production and repair enterprises network to quickly meet the needs the Armed Forces and repair AME damaged or inoperative as result of military action;
- almost complete cessation of export supplies of finished products, component parts, units, military-purpose and double-purpose equipment;
- outflow of human capital resulting from forced external and internal migration of the population, changes in region-based workforce balance and its inconsistency with the location of the production capacities;
- rapid transition of the Armed Forces from the obsolete Soviet-era equipment (complexes, systems) to the state-of-the-art AME due to large-scale supply of modern weapons by Western allies. Therefore, the national MIC has shifted its focus mainly towards conducting repairs of the existing Soviet-era and post-Soviet-era AME used by the Armed Forces and stored in warehouses;
- absence of scientific-technical and production-technological base for the development and production of military aircraft (aeroplanes, helicopters), air defence systems / missile defence systems and aerospace defence systems, ammunition of various calibres.
- Defence funding requirements have increased significantly compared to pre-war levels.
- It is expected that in 2022 the Ukrainian economy will shrink by 45.1%.
- The expenses for defence forces, as well as their transition to the NATO standards, are expected to further increase.
- In case of a long-term war, the country might face the risk of a limited capability to attract internal and foreign capital to meet the needs of the defence sector;
- Low level of emergency material-technical supplies of the Armed Forces of Ukraine (hereinafter referred to as the AFU) — therefore, a need for production and accumulation of ammunition, missiles, etc.

For the post-war development of MIC, first of all, it is necessary to intensify the development of the military-technical cooperation, in particular attract foreign investment into the MIC enterprises, implement joint cooperation projects, obtain the necessary documentation and technologies for modernisation and repairs of the Western-type weapons.

1. Key issues to be solved within the framework of the Recovery Plan within the direction "Development of the Military-Industrial Complex"

Impact of the war on the defined analysis area:

1.1. Key challenges	1. **LIMITED FUNDING OF MIC INDUSTRIES** **Limited budget funding.** MIC's capacity for growth will be limited by the amount of funding attracted. The needs for armaments funding will increase dozens of times compared to their pre-war levels. Historically, the budget funds allocated to armaments have been insufficient for their development. **Difficulties in attracting investments faced by the MIC enterprises.** Attraction of investments into Ukraine's MIC has always been considered a bottleneck. However, active military action on the territory of Ukraine, as well as the constant military threat during the post-war period, further complicate this process. Among the key issues related to investment attraction one can identify the following: absence of efficient investment attraction mechanisms, in particular absence of state guarantees and an acceptable lending mechanism, bureaucratic obstacles; low level of military-technical cooperation aimed at attracting international companies to invest in MIC enterprises; reduced interest of investors in investing in Ukraine's MIC and a significantly increased cost of capital for enterprises resulting from military-related risks; etc. 2. **IMPERFECT REGULATORY ENVIRONMENT** **Inconsistency of the state military-industrial policy.** Multiple changes in the MIC management approaches complicate the establishment of an efficient environment for its development. Among the key issues related to the state military-industrial policy one can identify the following: inconsistency between military-industrial and military-technical policy; absence of an efficient mechanism to regulate the matters related to intellectual property; etc. **Suboptimal defence procurement processes.** The current defence procurement procedures (demand planning, execution of procurement procedures, etc.) do not create preconditions for the development of Ukraine's MIC. Among the key issues related to defence procurement one can identify the following: absence of long-term demand planning for MIC products; absence of an efficient pricing policy and respectively a low level of profitability of the defence projects in the interests of the state customers; secrecy and bureaucracy of the defence procurement process; etc. **Suboptimal effectiveness of foreign trade.** Currently, the foreign economic potential of Ukraine's MIC is not fully fulfilled. Among the key issues related to foreign trade one can identify the following: low level of military-technical cooperation with other countries; inefficient export-import operations management process of the MIC-related products; insufficient level of state support for MIC products export; etc. 3. **MANUFACTURING RESTRICTIONS** **Disruption of operational activity of the MIC enterprises resulting from military action.** The full-scale aggression of the Russian Federation has a significant impact on Ukraine's MIC enterprises. Since one of the goals of the invasion is to destroy the military and military-industrial potential of Ukraine, the Russian forces launch missile and bomb strikes against

	the MIC enterprises, which inflicts damage and disrupts the operational activity processes. Among the key issues related to the aggression of the Russian Federation one can identify the following: decreased production capacity of MIC resulting from military action; supply chain disruption (cessation of production / decreased production of the domestic suppliers for the MIC enterprises; logistics-related issues; etc.). **The capacity of the domestic MIC cannot fully meet the needs of the AFU.** The capacity of the domestic MIC cannot fully meet the needs of the AFU, in particular due to the absence of engineering schools in some fields. Therefore, a need arises for repairing a wide range of armaments of foreign manufacture in the absence of relevant documentation and technical preparation of production. At the same time, the capacity for production of the state-of-the-art domestic armaments at the needed scale is limited due to loss of significant portion of production capacities and the absence of mass production of specific component parts of modern armaments. Low level of automation and digitalisation of production and management processes.

1.2. Key possibilities	**INCREASED INTEREST TOWARDS UKRAINE IN THE WORLD.** An active foreign policy activity of the country's leadership facilitated an increased interest towards Ukraine in the world as well as the definitive establishment of Ukraine's positive image on the international arena. In its turn, an efficient resistance against the armed aggression of the Russian Federation, in particular with the use of domestic MIC products, results in an increased interest towards defence products manufactured in Ukraine. It is expected that these factors will have a positive impact on the effectiveness of the export activity of Ukraine's MIC enterprises as well as create new opportunities for the attraction of funding from international partners. **RAPPROCHEMENT WITH NATO, THE USA, THE UNITED KINGDOM, AND SELECT EUROPEAN COUNTRIES.** During the full-scale war against the Russian Federation, the military-technical cooperation between Ukraine and its key allies has intensified and strengthened. It is expected that these relations will be maintained during the post-war period, which will allow to ensure an efficient transfer of technologies and intensify the innovative development of the domestic MIC in accordance with the best international practices. **PRESENCE OF POLITICAL WILL AND SUPPORT OF THE SOCIETY IN RELATION TO MIC'S DEVELOPMENT.** The full-scale aggression by the Russian Federation yet again highlighted the importance of maintaining consistently high level of defence capability of the state and existence of a well-developed MIC. The above-mentioned provides an additional emphasis to the need to develop this area for the political leadership of the country and ensures a widespread support of this course in the Ukrainian society. It is expected that this will also allow to gain the support of the key stakeholders to increase investment into MIC, accelerate the implementation of the reforms, and unite the public around this goal.

1.3. Key limitations	**UNPREDICTABILITY OF THE DURATION AND INTENSITY OF MILITARY ACTION ON THE TERRITORY OF UKRAINE** In spite of the existence of various predictions and expert assessments, the duration and the intensity of the military action cannot be accurately predicted. This uncertainty creates limitations for efficient planning of restoration and development of MIC. Therefore, a number of assumptions are to be made. **ABSENCE OF TECHNOLOGIES.** Prevalence of the third and fourth technological generation technologies, as well as the absence of the fifth and sixth technological generation technologies, in the military-industrial production results in non-compliance of the line-up of systems and subsystems of armaments and military equipment manufactured by the domestic MIC enterprises with the state-of-the-art level. **DURATION OF THE REFORM IMPLEMENTATION PROCESS.** Implementation of the majority of the proposed measures requires time and consistency, which limits the number and scale of the measures that can be implemented simultaneously and determines the duration of recovery and development of Ukraine's MIC. **LIMITED HUMAN RESOURCES.** Forced migration resulting from large-scale military action on the territory of Ukraine exacerbates the personnel shortage issue present in select sectors of the economy. It is expected that this limitation will continue to exist during the post-war period. The working professions specialist training system is destroyed while an efficient human resources policy aimed at encouraging men and women to develop their professional career in MIC is absent. **LIMITATIONS OF ORGANISATIONAL NATURE.** Absence of a clear-cut MIC management structure, existence of duplicate structures, non-completion of the "Ukroboronprom" State Concern reform, complete absence of coordination of the activity of the non-state-owned enterprises by the state. Absence of a complete and reliable vision of the needs of the Armed Forces and other military forces in domestically-produced weapons, at least for the short-term period. Complete absence of information about the needs of the defence forces based on the network-centric warfare doctrine. Low level of coordination and cooperation between the scientific institutions of the National Academy of Sciences of Ukraine, the leading technical universities, and weapons

	developers. There is no universal state database of technologies and state-of-the-art technical solutions accessible to weapons developers.

2. Goals, tasks and stages of the Recovery Plan within the direction "Development of the Military-Industrial Complex" for specific fields

2.1. Goals aimed at resolving identified problems

	Stage 1: June 2022 – end of 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
1) Limited funding of the MIC sectors			
Goal to be achieved to solve the issue during each stage	Establish financial-economic instruments aimed at resuming production, including the urgent need production	Increase the investment attractiveness and improve the financial state of the MIC enterprises	Implement joint projects wit private internal and external partners
Deadline within the stage	December 2022	December 2025	December 2032
Risks related to the goal achievement	Lack of financial resources necessary to implement the instruments Continued destruction of MIC enterprises, which will result in an increase in financial resources necessary for recovery	Political risks, namely the unwillingness to pursue a more open investment policy, which is justified by the national security protection Corruption risks	Unwillingness of international partners to participate in the proposed projects Corruption risks
Measurable goal achievement indicator	Percentage of AFU's urgent needs met by the domestic MIC enterprises — at least 50% Percentage of operational enterprises — at least 70%	The amount of funds obtained from privatisation of MIC enterprises, which were de facto transferred to the State Trust Fund for Development of the Military-	The number of state-private partnership projects implemented — 20 projects. The amount of investments attracted via implementation of

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		Industrial Complex of Ukraine — UAH 305.9 million. The annual average number of employees of MIC enterprises — 125,000 people. The annual average salary of an MIC employee — UAH 21,830.	state-private partnership projects — USD 400 million.
Total funding requirement for the goal achievement	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed
Links between the goal and other directions	Audit of losses due to the war Modernisation and Development of Security and Defence Recovery and development of the economy Recovery of infrastructure	Modernisation and Development of Security and Defence Recovery and development of the economy	Modernisation and Development of Security and Defence Recovery and development of the economy
2) Imperfect regulatory environment			
Goal to be achieved to solve the issue during each stage	Forming an organisationally and functionally balanced MIC structure. Improving the planning and management system	Implement a systemic reform of MIC, in particular find a perfect balance between state and private enterprises, improve the cooperation between the	Establish efficient mechanisms of supporting technical and technological development of MIC enterprises

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		state customer and implementers, establish corporate governance at state enterprises	
Deadline within the stage	December 2022	December 2025	December 2032
Risks related to the goal achievement	Absence of consensus among various stakeholders related to the vision for development of this sector Absence of an objective assessment of the potential and capabilities of MIC enterprises	Sabotage of the reform by select stakeholders due to the desire to preserve the existing influence Corruption risks	Absence of sufficient funding to implement the necessary measures Corruption risks
Measurable goal achievement indicator Specific values will be indicated later		Percentage of the state-owned economic operators that de facto comply with the state enterprises governance standards adopted by OECD. Average time to process an export-import military-purpose and double-purpose product application. Percentage of armaments and military equipment procurements	Degree of amortisation/depreciation of the key funds at enterprises.

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		conducted in compliance with competitive procedures.	
Total funding requirement for the goal achievement	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed
Links between the goal and other directions	Modernisation and Development of Security and Defence	Modernisation and Development of Security and Defence Recovery and development of the economy	Modernisation and Development of Security and Defence Education and science
3) Manufacturing restrictions			
Goal to be achieved to solve the issue during each stage	Identify the needs of the defence forces in armaments and the capacity and expediency to meet these needs by the MIC enterprises	Establish critically important, and modernise the existing, enterprises, complete the transition to the NATO standards	Intensify the integration of national producers into the international armaments market and improve their export potential, further develop military-technical cooperation
Deadline within the stage	December 2022	December 2025	December 2032
Risks related to the goal achievement	Continued destruction of MIC enterprises Absence of an objective assessment of the potential and capabilities of MIC enterprises	Absence of sufficient funding to implement the necessary measures Absence of an objective assessment of the potential	Absence of sufficient funding to implement the necessary measures Absence of political will in potential partner countries Corruption risks

	Stage 1: June 2022 – end of 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		and capabilities of MIC enterprises Corruption risks	
Measurable goal achievement indicator Specific values will be indicated later		Percentage of armaments and military equipment procurements containing reference to NATO standards.	Number of international exhibitions with Ukrainian expositions / delegations as participants, number of signed agreements/memorandums and number of signed contracts. Total profits of MIC enterprises (in the context of government contracts and exports)
Total funding requirement for the goal achievement	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed	to be estimated after necessary calculations are completed
Links between the goal and other directions	Modernisation and Development of Security and Defence	Modernisation and Development of Security and Defence	Modernisation and Development of Security and Defence

2.2. Current state of implementation of the programme documents relating to the relevant issue in the defined analysis area

No.	Title of the programme document	Current situation

1	Strategy for the Development of the Military-Industrial Complex of Ukraine (adopted by the Decree of the President of Ukraine No. 372/2021 of 20 August 2021 "On Decision of the National Security and Defence Council of Ukraine of 18 June 2021 'On the Strategy for the Development of the Military-Industrial Complex of Ukraine' ")	Implementation of the 1st stage measures of the Strategy of the state sector of the Military-Industrial Complex of Ukraine in accordance with the Law of Ukraine "On the Peculiarities of Reforming the Enterprises of the Military-Industrial Complex of the State Form of Ownership": 1. Ensured the development and adoption by the Cabinet of Ministers of Ukraine of the Action Plan on implementation of the Law of Ukraine "On the Peculiarities of Reforming the Enterprises of the Military-Industrial Complex of the State Form of Ownership" (Protocol No. 155 of 29 December 2021). 2. The Cabinet of Ministers of Ukraine adopted the following decision: - Ordinance of the Cabinet of Ministers of Ukraine No. 1594-p of 09 December 2021 "On Termination through Reorganisation of the "Ukroboronprom" State Concern into a Joint-Stock Company"; - Ordinance of the Cabinet of Ministers of Ukraine No. 1595-p of 09 December 2021 and Resolution of the Cabinet of Ministers of Ukraine No. 1280 of 09 December 2021 on approval of reorganisation of the member enterprises of the concern into business entities. 3. "Ukroboronprom" State Concern adopted the decision to reorganise 47 out of 63 of its member enterprises, which, in accordance with the decision of the Steering Committee of the Concern, are subject to reorganisation into business entities. **Due to the beginning of the war, the reorganisation of the enterprises has not been completed.**
2	State target programme for reforming and developing the Military-Industrial Complex for the period until 2021	The Cabinet of Ministers of Ukraine adopted the Resolution No. 1350-35 of 23 December 2021 "On Extending the Implementation of the State Target Programme for Reforming and Developing the Military-Industrial Complex for the period until 2021" **(extended until 2022)**

3	Action Plan on implementation of the Law of Ukraine "On the Peculiarities of Reforming the Enterprises of the Military-Industrial Complex of the State Form of Ownership" (The Protocol Decision of the Cabinet of Ministers of Ukraine of 29 December 2021, Protocol No. 155)	The Law implementation measures have been initiated. The report on the state of implementation of measures No. **1.4-3.2/1422 of 11 April 2022** has been sent via a letter to the Ministry of Economy of Ukraine.
4	Ordinance of the CMU No. 1544-p of 28 October 2020 "On Adoption of the National Action Plan on Implementation of the 'Women, Peace and Security' UN Security Council Resolution for the period until 2025"	The following National Action Plan measures have been envisaged, but require further implementation, with their implementer being the Ministry of Strategic Industries of Ukraine: • introduction of changes and amendments into the Articles of Association of the "Ukroboronprom" State Concern, in particular the sections related to ensuring participation of women in the activity of the Steering Committee of the Concern; • development, expansion, and application of the infrastructure security analysis results taking into account the equal rights and opportunities for men and women principle (territory security audit)

2.3. Definition of tasks for the goal achievement from paragraph 2.1

No.	**Description of the task for the goal achievement**	**Deadline for the task**	**Dependence of the task on the tasks within other directions, areas and issues**
Goal 1: Establish financial-economic instruments aimed at resuming production, including the urgent need production			
Stage 1: June 2022 – end of 2022			
1.1	Task 1. Assess the cost of resumption of work of critical production facilities	August 2022	Audit of losses due to the war
1.2	Task 2. Exempt the MIC enterprises from income taxes if such an income was obtained in the form of target charity assistance aimed at	August 2022	Recovery and development of the economy

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
	reinforcing the defence capacity and mobilisation readiness of the country, protection of the population during emergency situations arising during peaceful and war times		
1.3	Task 3. Develop a funding mechanism for production resumption	September 2022	Recovery and development of the economy Recovery of infrastructure
1.4	Task 4. Establish funding mechanisms for production resumption	October 2022	Recovery and development of the economy Recovery of infrastructure
Goal 2. Improve the investment attractiveness and financial state of the MIC enterprises			
Stage 2: January 2023 – December 2025			
2.1	Task 1. Restructure the bad debts of the MIC enterprises	June 2023	Recovery and development of the economy
2.2	Task 2. Improve the legislation in the field of attraction and protection of domestic and foreign investments, in particular lift restrictions on establishment of joint ventures with foreign companies and conducting joint business with them, ensure the accessibility of risk insurance instruments (including military risks) for investment purposes, extend the scope of the Law of Ukraine "On Industrial Parks" and other investment stimulation and support instruments to the field of MIC	December 2023	Recovery and development of the economy
2.3	Task 3. Develop a mechanism for interest rate reduction on loans, and extension of credit terms (loan terms) under government guarantees, to implement programmes related to improving the defence capacity and security of the state.	December 2023	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
			Recovery and development of the economy
2.4	Task 4. Ensure capital investment aimed at establishment of new, as well as modernisation and expansion of the existing, production capacities of the MIC enterprises in accordance with the content of the following: a) state weapon development programmes; b) state MIC development programmes; c) military-technical cooperation programmes and plans; d) programmes and plans for development and launch of civilian-purpose products.	December 2024	Modernisation and Development of Security and Defence Recovery and development of the economy
2.5	Task 5. Establish mechanisms of tax incentives to encourage investments into MIC and provide tax/customs preferences to offset agreements	December 2025	Modernisation and Development of Security and Defence Recovery and development of the economy
Goal 3. Implement joint projects with private internal and external investors			
Stage 3: January 2026 – December 2032			
3.1	Task 1. Establish legal instruments for efficient operation of the state-private partnership and establishment of joint ventures, with all of the above in the interests of the national security and defence	January 2026	Modernisation and Development of Security and Defence Recovery and development of the economy
3.2	Task 2. Determine the list of projects, as well as criteria for their implementation, through the mechanism of state-private partnership	December 2026	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
			Recovery and development of the economy
Goal 4. Forming an organisationally and functionally balanced MIC structure. Improving the planning and management system			
Stage 1: June 2022 – end of 2022			
4.1	Task 1. Development of state target programme projects in the field of weapons development and Military-Industrial Complex in the following areas: ● Aircraft production and repairs ● Armoured vehicles ● High-precision weapons and ammunition ● Radiolocation, radio communication, and special instrument building ● Aerospace programme ● Other areas	December 2022	Modernisation and Development of Security and Defence
4.2	Task 2. Identify the directions for development of the MIC production in accordance with the investment priorities	December 2022	Modernisation and Development of Security and Defence
4.3	Task 3. Update the content of the strategic state documents: ● The Law of Ukraine «On the National Security of Ukraine» ● The National Security Strategy of Ukraine ● The Military Security Strategy of Ukraine ● The Strategic Defence Bulletin of Ukraine ● The MIC Development Strategy of Ukraine	December 2022	Recovery and development of the economy Modernisation and Development of Security and Defence
Goal 5. Implement a systemic reform of MIC, in particular find a perfect balance between state and private enterprises, improve cooperation between state customer and implementers, establish corporate governance at state enterprises			

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
Stage 2: January 2023 – December 2025			
5.1	Task 1. Intensify the activity related to attraction of the NATO trust funds resources	December 2023	Modernisation and Development of Security and Defence
5.2	Task 2. Establishment of the CALS (Continuous Acquisition and Lifecycle Support) technology, with the establishment of the Lifecycle Support Centre, introduction of the performance-based AME systems exploitation support concept — PBL (Performance-Based Lifecycle Product Support) agreements — to contracting practice of AME supply by the MIC to the Ministry of Defence	December 2023	Modernisation and Development of Security and Defence
5.3	Task 3. Development, implementation, and annual adjustment (if necessary) of the pricing procedure for AME and its component parts taking into account the use of lifecycle support agreements and inclusion of cost for development of the new AME models into their supply price	December 2023	Modernisation and Development of Security and Defence Recovery and development of the economy
5.4	Task 4. Reform the state-owned enterprises management system in the field of MIC Introduce corporate governance standards, anti-corruption measures, IFRS, and reporting to the shareholders at MIC state-owned enterprises	December 2023	Recovery and development of the economy
5.5	Task 5. Improve the mechanisms of planning and conducting defence procurement	December 2024	Modernisation and Development of Security and Defence
5.6	Task 6. Establish an efficient and flexible price formation mechanism for products procured without competitive procedures, namely implement the following measures: review profitability norms for single-supplier procurement of military-purpose products, works, and	December 2024	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
	services; establish a mechanism of including credit/loan servicing expenses into the production costs of MIC products for state defence contracts		
5.7	Task 7. Establish a unified closed information system for customers and participants of defence procurement	December 2025	Modernisation and Development of Security and Defence
Goal 6. Establish efficient mechanisms of supporting technical and technological development of MIC enterprises			
Stage 3: January 2026 – December 2032			
6.1	Task 1. Establish mechanisms of economic incentives to utilise state-of-the-art technologies, in particular those related to energy saving and use and recycling of rare-earth metals, etc.	December 2026	Recovery and development of the economy
6.2	Task 2. Establish a system of professional training of MIC specialists. Establish professional technical education structures under the leading enterprises of MIC sectors, establish government demand for training specialists of secondary special and higher education. Social security for the specialists	December 2026	Education and Science
6.3	Task 3. Review the structure of orders for development of new items and types of weaponry, its management and funding	December 2026	Modernisation and Development of Security and Defence
6.4	Task 4. Establish and ensure full functioning of the Agency for Defence Technologies	December 2026	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
6.5	Task 5. Develop and ensure funding for the Programme for Development of Defence Technologies	December 2026	Modernisation and Development of Security and Defence
6.6	Task 6. Determine the funding priorities for the State Fund for Development of MIC of Ukraine taking into account the goals of the state target programmes for reforming and developing MIC and developing weapons and military equipment	December 2026	Modernisation and Development of Security and Defence
6.7	Task 7. Assess the viability of establishing mechanisms of military-civilian integration	December 2027	Modernisation and Development of Security and Defence
6.8	Task 8. Streamline the procedures for importing equipment for research purposes, testing, development, and production of armaments and military equipment	December 2028	Recovery and development of the economy
6.9	Task 9. Establish an intellectual property items management system	December 2028	Recovery and development of the economy
6.10	Task 10. Improve the technology protection system	December 2032	
Goal 7. Identify the defence force's need for armaments and the ability and the appropriateness of MIC enterprises to meet this need			
Stage 1: June 2022 – end of 2022			
7.1	Task 1. Development of a matrix of defence forces' needs in armaments based on data provided by the Group on Security and Defence. (Capabilities based planning) and assessment of the capacity and expediency to meet this need by the MIC enterprises of Ukraine	December 2022	Modernisation and Development of Security and Defence
7.2	Task 2. Placement of enterprise on the territory of Ukraine taking into account the proximity to the borders with the aggressor, dispersion,	December 2022	Modernisation and Development of Security

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
	vitality, duplication of production capacities, network coverage, availability of qualified personnel, infrastructure, coordination of the above-mentioned issues with the local authorities		and Defence
Goal 8. Establish critically important, and modernise the existing, enterprises, complete the transition to the NATO standards			
Stage 2: January 2023 – December 2025			
8.1	Task 1. Establishment of low-tonnage special chemical plants and their dispersion along the territory of the country	December 2025	
8.2	Task 2. Establishment of production of ammunition and cartridges compatible with NATO calibres, including licenced ones	December 2025	
8.3	Task 3. Ensuring unification, standardisation. Placement of orders for production of identical items of weaponry at different enterprises, optimisation of workload of enterprises	December 2025	Modernisation and Development of Security and Defence
8.4	Task 4. Establishment of intra-sectoral and inter-sectoral exchange of best practices, inventions, technical and technological solutions	December 2025	Modernisation and Development of Security and Defence
8.5	Task 5. Optimisation of equipment storage facilities and increase in their workload. Establishment of active cooperation in field of optimal equipment use, expansion of intra-sectoral and inter-sectoral outsourcing	December 2025	Modernisation and Development of Security and Defence
8.6	Task 6. Adaptation of the Ukrainian standards and regulations to NATO standards while preserving the permissible level of national identity	December 2025	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
8.7	Task 7. Establish product quality assessment mechanisms in accordance with the international ISO standards and other international and European quality assessment documents	December 2025	Modernisation and Development of Security and Defence
8.8	Task 8. Ensure the review (and extension) of Series B level inter-state standards	December 2025	Modernisation and Development of Security and Defence
8.9	Task 9. Establish an electronic database of standardisation-related normative documents in force in Ukraine	December 2025	Modernisation and Development of Security and Defence
8.10	Task 10. Ensure funding of production preparation measures in accordance with the goals of the state programmes for weapon development	December 2025	Modernisation and Development of Security and Defence
8.11	Task 11. Determine the priorities and projects aimed at establishment of new production capacities of MIC and related fields (use of rare-earth metals: titanium, aluminium, uranium, etc.)	December 2025	Modernisation and Development of Security and Defence
Goal 9. Intensify the integration of national producers into the international armaments market and improve their export potential, further develop the military-technical cooperation			
Stage 3: January 2026 – December 2032			
9.1	Task 1. Develop legal and normative base to ensure the development of the military-technical cooperation	December 2026	Modernisation and Development of Security and Defence

No.	Description of the task for the goal achievement	Deadline for the task	Dependence of the task on the tasks within other directions, areas and issues
9.2	Task 2. Ensure further development of military-technical cooperation, in particular intensify the signing of intergovernmental agreements on military-technical cooperation that provide for mutual protection of investments, technologies, specific measures related to joint production of weapons, military and special equipment to satisfy the needs of third states	December 2032	Modernisation and Development of Security and Defence
9.3	Task 3. Intensify the cooperation with the leading international defence institutions	December 2026	Modernisation and Development of Security and Defence
9.4	Task 4. Improve the export control system, in particular implement the following measures: simplify the procedures of obtainment of permits to conduct export-import operations in defence sector for economic operators; establish an electronic licencing system in the field of state export control to automate the processes of administrative services provision, reporting and oversight in this field; intensify the participation of Ukraine in the activity of international export control regimes	December 2026	Recovery and development of the economy
9.5	Task 5. Provide support to the exports sector and diversify sales markets, in particular by means of utilising the export credit agency mechanisms in the field of MIC	December 2032	Recovery and development of the economy
9.6	Task 6. Ensure domestic production of products of foreign manufacture that are supplied within the framework of military-technical cooperation measures	December 2032	Recovery and development of the economy
9.7	Task 7. Intensify the presence of Ukraine on international markets, active promotion on external markets of new and modernised types of	December 2032	Recovery and development of the economy

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Digitalization” working group

July 2022

Contents

Executive summary for the part of the Recovery Plan prepared by the Working Group on Digitalization 3
Key issues to be solved within the framework of the Recovery Plan 5
List of the existing strategies/concepts/programmes: 5
STAGE: WAR-TIME ECONOMY AND INSTITUTIONS "ALL FOR THE VICTORY!"
(short-term activities from June 2022 until the end of 2022) 8
1. Development of public e-services 8
2. Institutional development of Digitalization 9
3. Development of DIIA Centres network (administrative service centres) 12
4. Development of public electronic registers, their optimisation and centralisation of support, introduction of electronic interaction 14
5. Improvement of the government regulation of the use of electronic trust services, creating favourable conditions for the provision and receiving of electronic identification services 16
6. Restoring the destroyed electronic communications networks 16
7. Ensuring conditions for the stable functioning of the digital economy during martial law 19
8. Post-war reconstruction of Ukraine's infrastructure and economy is taking place with the help and on based on open data 10 21
9. Increasing cyber resilience of the state and efficiency of response to cybersecurity incidents 22
Increasing the cybersecurity level at public authorities, local self-government bodies and critical infrastructure facilities 24
RECOVERY STAGE — RECOVERY, RELAUNCH OF THE ECONOMY AND INSTITUTIONS
(goal achievement indicators and mid-term activities for 2023–2025 to achieve the goals) 25
1. Development of public e-services 25
2. Institutional development of Digitalization 28
3. Development of the network of DIIA Centres (administrative service centres) 29
4. Development of public electronic registers, their optimization and centralization of support, introduction of electronic interaction 33
5. Improvement of the government regulation of the use of electronic trust services, creating favourable conditions for the provision and receiving of electronic identification services 35
6. Providing the population with access to high-speed Internet 38
7. Public information resources in cloud technologies 41
8. Promotion of digital economy 42
9. Post-war reconstruction of Ukraine's infrastructure and economy is taking place with the help and on based on open data 48
10. Development of the potential of the national cybersecurity ecosystem 51
MODERNISATION STAGE "STRUCTURAL MODERNISATION AND COMPLETE INTEGRATION INTO THE EU"
(strategic goals for 2026–2032 * Terms of planning of the stage will be adjusted based on the results of 2022–2023) 56
1. Development of public e-services 56
2. Ukraine is a digital hub 57

3. Development and dissemination of modern Internet access technologies 57
4. Public-private partnership 58
5. The development of products of the defence sector of Ukraine is based on the use of the latest technologies 58
6. Country of innovations 58
7. Ukraine is an international leader in the field of anti-corruption, development of civil society institutions and openness of public information 59
8. Developed ecosystem of cybersecurity and capability of active cyberprotection 59

Executive summary for the part of the Recovery Plan prepared by the Working Group on Digitalization

THE STATE OF THE SPHERE BEFORE THE WAR:

- The share of ICT in the country's GDP was more than 4% and had the potential for growth. In 2021, the Ukrainian IT sector grew by 36% compared to 2020, reaching $6.8 billion in exports of computer services (compared to $5 billion in 2020). Currently, the share of exports of IT services to Ukraine is about 2.7% of GDP.
- Before the start of full-scale aggression, Ukraine was one of the European leaders in the level of development of the open data sphere (6th place in the European Open Data Maturity 2021 rating). About 7 million Ukrainians used the services based on them every month. The share of GDP generated by open data ranged from 0.8 to 1.3%
- As of 01.01.2022, the level of coverage of fiber-optic networks of the rural population and the level of coverage of the population by 4G mobile Internet was 89%.
- More than 100 electronic public services were available on The Unified State Web Portal of Electronic Services (75+ through the Portal and 20+ through the mobile application).
- The transformation of Administrative Service Centers at district state administrations has begun and the network of Administrative Service Centers has been expanded to 2,891 access points.
-

THE IMPACT OF THE WAR ON THE INDUSTRY:

- Since the beginning of the active phase of hostilities, the number of vacancies in the IT market in Ukraine has halved
- 22% of optical networks and almost 11% of mobile towers* were destroyed. Losses of digital infrastructure. The level of destruction of networks of deoccupied settlements is up to 100%.
- Destruction of the Administrative Service Centers in the territories that were or are under temporary occupation; lack of access to registers and information systems / prolonged restoration of access to these systems
- Temporary (for the period of martial law) restriction of access to the National Open Data Portal to ensure the interests of national security
- Increasing demand for public services, including electronic, taking into account the circumstances of relocation, loss of documents, etc
- A large number of state information resources reported DDoS attacks. Most of them were simply shut down due to their inability to resist attacks.

KEY CHALLENGES:

- Risk of change of IT companies jurisdiction from Ukrainian to foreign and loss of investment capital.
- A significant number of people do not have access to the Internet at all or the quality of access has significantly decreased.
- A significant number of people in need of public services have left their homes or are in the temporarily occupied territories.

- The balance between ensuring transparency and accountability of the authorities in the conditions of war and control over the expenditures for the reconstruction of Ukraine and ensuring the interests of national security and defence.
- Increased level of threats in cyberspace, which require rapid response, readiness of technical means and specialists.

Vision:

Ukraine is a country with the most convenient public services for citizens and businesses, high-speed Internet spread and a developed digital economy. The state's cybersecurity system is the most modern in the world.

Strategic goals:

1. Developed digital economy / IT industry
2. Restoration and development of digital infrastructure
3. Citizens and businesses have access to quality, affordable and convenient public services, digital solutions and electronic identification
4. Strengthening cybersecurity and resilience of digital infrastructure

Key activities with the breakdown by periods:

2022 - STAGE: WAR-TIME ECONOMY AND INSTITUTIONS "ALL FOR THE VICTORY!"

- Ensuring the stable functioning of the digital economy / IT industry
- Restoration of destroyed digital infrastructure
- Introduction of comprehensive electronic public services, restoration of the network of administrative service centers
- Protection of state information resources

2023-2025 - RECOVERY STAGE — RECOVERY, RELAUNCH OF THE ECONOMY AND INSTITUTIONS

- Development of the digital economy and post-war reconstruction of Ukraine with the help and on the basis of open data
- Development of Internet networks, connection of Asia and Scandinavian countries through Ukraine by main Internet traffic through the Black Sea
- Electronic translation of key public services, expansion and modernization of the Administrative Service Centers network
- Development of the potential of the national cybersecurity ecosystem

2026-2032 - MODERNISATION STAGE "STRUCTURAL MODERNISATION AND COMPLETE INTEGRATION INTO THE EU"

- Creation of the most favourable conditions for the functioning of the digital economy (IT, startup ecosystem, innovation, AI, blockchain, etc.)
- Ukraine is a digital hub for Asian and European backbone Internet traffic
- Most public services are available in electronic form and the number and quality of public services in the Administrative Service Centers is increased
- Developed cybersecurity ecosystem and active cyber defence capabilities

Expected indicators for 2025::

- the share of IT in the structure of Ukraine's GDP is 10%
- 100% of electronic public services are implemented according to plan
- 100% of critical information infrastructure facilities are covered by sensors
- 30% of state information resources transferred to the cloud
- 95% of the population has access to high-speed Internet

1. Key issues to be solved within the framework of the Recovery Plan

List of the existing strategies/concepts/programmes:

- Action Programme of the Cabinet of Ministers of Ukraine, as approved by the Resolution of the Cabinet of Ministers of Ukraine No. 471 of 12 June 2020;
- Public Administration Reform Strategy for 2022–2025 approved by the Ordinance of the Cabinet of Ministers of Ukraine No. 831-p of 21 July 2021
- Action Plan for the Implementation of the Open Government Partnership Initiative in 2021–2022 approved by the Ordinance of the Cabinet of Ministers of Ukraine No. 149-p of 24 February 2021
- Ordinance of the Cabinet of Ministers of Ukraine No. 365-p of 17 February 2021 "Some issues of digital transformation"
- The concept of development of the electronic services system in Ukraine approved by the Ordinance of the Cabinet of Ministers of Ukraine No. 918-p of 16 November 2016
- Cybersecurity Strategy of Ukraine. Adopted by the Decree of the President of Ukraine No. 447/2021 of 26 August 2021.
- Strategy for the development of innovation activities for the period until 2030, approved by the Ordinance of the Cabinet of Ministers of Ukraine No. 526-p of 10 July 2019
- Roadmap for IT education reform approved by the Order of the Ministry of Education and Science of Ukraine, the Ministry of Digital Transformation of Ukraine No. 1418/181 of 23.12.2021 "On approval of the Action Plan for IT education reforming"
- Ordinance of the Cabinet of Ministers No. 1556-p of 02.12.2020 "On approval of the Concept of development of artificial intelligence in Ukraine"
- Ordinance of the Cabinet of Ministers No. 438-p of 12.05.2021 "On approval of the action plan for the implementation of the Concept of development of artificial intelligence in Ukraine for 2021–2024"
- National Economic Strategy until 2030, as approved by the Resolution of the Cabinet of Ministers of Ukraine No. 179 of 3 March 2021;
- The government programme for stimulating the economy to overcome the negative consequences caused by the restrictive measures aimed at preventing the outbreak and the spread of the coronavirus disease COVID-19 caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) for 2020–2022, as approved by the Resolution of the Cabinet of Ministers of Ukraine No. 534 of 27.05.2020;
- National Strategy for Barrier-Free Environment in Ukraine until 2030, as approved by the Ordinance of the Cabinet of Ministers of Ukraine No. 366-p of 14 April 2021;
- The Government Strategy for Regional Development for 2021-2027 approved by the Resolution of the Cabinet of Ministers of Ukraine No. 695 of 5 August 2020;
- On Approval of the Action Plan for Broadband Internet Access Enhancement for 2021–2022 No. 1069-p of 8 September 2021;
- On Approval of the Action Plan on Releasing Radio Bands in the 694–790 MHz and 790–862 MHz Ranges from Radio Electronic Devices of the Radio Broadcasting Service (TV) for Implementation of the LTE Radio Technology No. 1457-p of 18 November 2020;
- On Approval of the Action Plan for the Implementation of the Fifth Generation Mobile Communication System in Ukraine No. 1409-p of 11 November 2020;
- On the Approval of the Action Plan for Improving Quality of Mobile Communication Services for 2020–2022 No. 1189-p of 30 September 2020

Key challenges in the area:

- **Public services (electronic and those provided by the ASC and / or directly by the operators providing them)** — a significant number of are staying outside of their place of residence and therefore cannot get all the necessary services (the principle of extraterritoriality does not apply to all services yet; also,

not all services are available in electronic form); long interruption in the provision of certain services by the operators providing them; disorder of the names of the documents required to order services; insufficient systematic development of public services (lack of service life cycle, the need for further institutional development, streamlining the administrative fee for services, decentralisation of certain groups of services on the local level, development of methodological support, etc.), the difficulty of providing services to Ukrainians who temporarily moved abroad due to hostilities; increasing demand for public services due to relocation, loss of documents, the need for state social benefits, pensions, etc.

- **Public registers and electronic interaction** — the war put forward an issue of physical protection of public information systems, their fault tolerance, data storage and placement of public information systems abroad resulting in temporary suspension of access to these registers; Inaccuracy of data in registers, lack of a unique cross-identifier, low quality of central directories and standards, insufficient preparedness of public information systems to electronic interaction,
- **Administrative Services Centres** — the destruction of ASCs on the territories that were or are under temporary occupation; lack of access to registers and information systems or prolonged time needed for the restoration of access to these systems to provide services to citizens; not all communities have established ASCs (the need for further development of the ASCs network); lack of possibility to provide e-services in settlements with no Internet access (digital divide); the difficulty of providing services due to the lack of unified software that guarantees the ability to work with various government information systems; lack of possibility for citizens to receive services where convenient; lack of electronic interaction between the participants of the service delivery process (Trembita, System of electronic interaction of executive bodies)
- **Trust services and electronic identification** — the need to accelerate the process of European integration and complicate the transition to a reliable means of identification (qualified electronic signature), the accreditation system being unprepared, the lack of a sufficient level of mutual recognition
- **Digital documents** — the war created a need to use digital images of documents in addition to or instead of physical copies, which were lost or which are temporarily inaccessible to citizens, which can be presented (provided) by a person on a smartphone through the mobile application Diia Portal.
- The need to introduce digital and anti-corruption tools in the management processes of compensation for damage caused by the armed aggression of the Russian Federatio
- Lack of sufficient funding for all areas of digitalization
- At least 726 fixed-line electronic communications operators have suffered as a result of hostilities. After the de-occupation of populated areas networks are damaged by up to 100%. Across the country, the quality of data transmission over fixed Internet access networks decreased by an average of 13% (estimated as of 01.05.2022).
- In 12.2% of settlements there is no access to mobile communication, in 3.1% it is only partially accessible. 3,534 base stations of mobile operators are not operational, which is almost 11% of their total number. The total number of non-operating base stations has increased by 700 over the last month. The quality of data transmission over mobile Internet access networks decreased by an average of 26% (estimated as of 01.05.2022) throughout the country.
- Creating possibilities for foreigners to do business in Ukraine without the need to be physically present in its territory.
- Implementation of EU acts in the field of e-commerce to the legislation of Ukraine.
- Creation of a legal framework for the application of artificial intelligence technologies
- Creating a legal framework for virtual assets market
- Reforming IT education in order to improve the level of acquired knowledge and skills in the IT field
- Guarantees for the functioning of the IT business during martial law and in the post-war period
- Improving the legal framework for innovation and investment
- Low level of protection of information resources of public authorities, local self-government bodies, critical infrastructure facilities;
- The lack of qualified personnel in the area of information security;
- Increasing cyber resilience of the state and efficiency of response to cybersecurity incidents;

- The necessity for harmonization of the regulatory framework of Ukraine in the area of information security in line with requirements of the EU and NATO, as well as practice of more developed countries.

Key possibilities:

- readiness of countries to cooperate and accelerate European integration processes
- possibility of increasing donor and inexpensive credit financing
- presence of public interest and willingness to use electronic services by citizens and businesses
- Rebuilding electronic communications infrastructure with new technological solutions (including the deployment of NGN networks), optimizing the cost of deploying new networks with joint investments and joint use of infrastructure, increasing the resilience and reliability of telecommunications networks, simplifying bureaucratic processes for industry development, financial and technical support from international agencies and experts.
- The EU Connecting Europe Facility (CEF) considers the possibility of funding projects aimed at creating infrastructure from the EU budget.
- Implementation of the e-residency project will ensure the creation of favourable conditions for foreigners to do business in Ukraine online, without the need for physical presence, which will increase state budget revenues by filling it with taxes paid by e-residents;
- Integration of Ukraine into the EU Digital Single Market and prospects for Ukraine's accession to the EU;
- Return of Ukrainian providers of virtual assets from foreign registration jurisdictions to Ukraine will lead to the filling of the state budget;
- Creation of Ukraine's own blockchain infrastructure will create the prospect of integration into the relevant EU infrastructure, which is currently under construction;
- Ukraine becoming one of the top five countries with the highest number of start-ups per capita.
- Ukraine's accession to the pan-European network of start-up associations for the integration of Ukrainian start-ups into the EU innovation ecosystem
- significantly improved state and private interaction in the area of cybersecurity during the war;
- improved interaction and coordination between the main entities of the national cybersecurity system;
- availability of the significant number of highly-qualified personnel at the main facilities mobilized for the period of the war;
- large amount of the international technical assistance in the area of cybersecurity provided to Ukraine since the war started;
- improved interaction with international partners.

Key limitations / framework:

- time;
- resources;
- complex bureaucratic processes;
- Electronic communications equipment is mainly manufactured abroad, and its cost depends on currency fluctuations, which limits the ability to clearly identify financing needs as the costs are linked to the national currency. Currently, the logistics of bringing equipment to Ukraine is difficult due to the war, importers assign a high degree of delivery risk, which leads to higher prices for equipment.
- Cable production in Ukraine has been partially destroyed, other plants are forced to restructure logistics chains in the supply of raw materials and materials to manufacture products.
- A significant number of specialists in the field have been drafted, and the replacement of qualified specialists requires considerable time for their training.
- Due to active hostilities, the destruction of networks continues. The overall scale of destruction can be projected from the experience of the de-occupied territories.
- Martial law in the territory of Ukraine, which may suspend the involvement of foreign nationals as e-residents. The reputation risks in Ukraine related to the peculiarities of taxation of e-residents.

- The lack of state regulation of the virtual assets market makes it impossible to conduct appropriate economic activities, which hinders the filling of the state budget and contributes to the continued functioning of the grey virtual assets market;
- Changing the national course of the IT education reform;
- Lack of guarantees for conducting IT activities during martial law
- Outflow of start-ups and technology specialists abroad as a result of hostilities
- outflow of qualified personnel from the market and potential lack for filling in vacancies at public authorities and critical information infrastructure facilities;
- lack of budget financing of cybersecurity projects;
- continuous aggression against Ukraine in cyberspace, which requires responding and limits resources for implementing cybersecurity projects;
- risks of physical destruction of infrastructure.

2. Detailed action plan:

STAGE: WAR-TIME ECONOMY AND INSTITUTIONS "ALL FOR THE VICTORY!"

(short-term activities from June 2022 until the end of 2022)

1. Development of public e-services

Challenges/problems: a significant number of are staying outside of their place of residence and thus cannot get all the necessary services (the principle of extraterritoriality does not apply to all services and not all services are available in e-form), long interruption in the provision of certain services by the operators providing them; the difficulty of providing Ukrainians with services abroad in the context of their migration

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)
The field of public e-services is related to all directions

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
To develop and approve a concept and action plan in its regard for transferring public services into electronic form To adopt the action plan for Digitalization of public services	The concept and action plan for transferring public services into electronic form is approved by the Government decision Action plan for Digitalization of public services	CMU resolution	Ministry of Digital Transformation	31.12.2022	the action plan has been approved

Digitalization of public services	Educational documents in an electronic form; certificate-confirmation of the status of the tax resident in electronic form;	departmental orders, CMU resolutions, laws	Central executive authorities	12.2022	at least __ public services have been digitalised
Creation of comprehensive public e-services	e-Death, e-Entrepreneur, English version of the Diia Portal, “International Students”, Educational documents in an electronic form	departmental orders, CMU resolutions, laws	Central executive authorities	12.2022	at least complex electronic public services have been launched
Improving public regulatory policy and the deregulation process, increasing the transparency and quality of public policy in this area	Regulatory portal	departmental orders, CMU resolutions, laws	State Regulatory Service	31.12.2022	- The service for planning regulatory activity and scheduling action plans of regulatory bodies on draft regulatory acts preparation for the next calendar year has been created; - An online service for regulatory impact analysis has been created - A service for publishing the developed draft regulatory acts has been created - A tool for public discussing draft regulatory acts with business has been created - A register of receipts of regulatory acts for approval of Public Regulatory Service (PRS) and decisions adopted by the PRS has been created; - The effectiveness of regulatory acts is being monitored online (based on “performance indicators” the decision is made whether to

					leave the act in force, change or repeal it); - Training materials, statistics, examples and online tools for preparing regulatory impact analysis, etc. are posted.
Development of an integrated automated public monitoring (control) system	automated public monitoring (control) system has been integrated	departmental orders, CMU resolutions, laws	State Regulatory Service	31.12.2022	the possibility to take measures of state monitoring (control) remotely by filling out an online form has been provided

2. Institutional development of Digitalization

Challenges/problems: Lack of key strategic documents in the field of digitalization which should determine the directions of its development, key tasks and deadlines for their implementation, insufficient ability to quickly transfer public services into e-form; the need for standardisation of the subject area (formation of directories of documents, data); the need to develop methodological support for re-engineering services; lack of service life cycle; disorderly administrative fee for the provision of services; the need for further decentralisation of certain groups of services at the local level

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)
The field of public e-services is related to all directions

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Strategic planning for the development of the digital sphere of Ukraine until 2025	Development of the Digital Agenda of Ukraine for 2022–2025 (Digital Agenda 2022–2025) Development of a Strategy for transferring public services into electronic form during	CMU resolution	Ministry of Digital Transformation Central executive authorities	31.10.2022	A normative document defining the digital development of Ukraine until 2025 has been adopted. The Strategy has been approved

	the reconstruction period (recovery period)				
Standardisation of the subject area of public services	Creation of a directory of documents, data	departmental order	Ministry of Digital Transformation	31.12.2022	Directories of documents and data have been created
Simplification of the process of development and testing of e-services	Testbed and toolkit platform, creation of development and testing tools for it	departmental orders	Ministry of Digital Transformation	31.12.2022	An information platform has been created, and filled with tools for developing and testing electronic services
Systematic organisation of providing methodological, consulting and practical assistance to public authorities during the creation and development of e-services	Shaping a concept of an e-service centre of excellence Creation of an e-service centre of excellence	departmental order, CMU resolution	Ministry of Digital Transformation	31.12.2022	The Concept has been approved
Development of service re-engineering guidelines	Development and approval of national methodology for re-engineering services	departmental order	Ministry of Digital Transformation	31.12.2022	Methodology has been approved
Strengthening the anti-corruption potential of re-engineering and transferring public services to electronic form	Development, testing and approval of the methodology for assessing corruption risks in re-engineering and transfer of public services into electronic form	CMU resolution	Ministry of Digital Transformation National Agency on Corruption Prevention	31.12.2022	Methodology has been approved
Improving the procedure for digital expertise by including tools to identify corruption-causing factors and corruption risks	Preparation of changes in the procedure of digital examinations and	Amending the Rules of Procedure of the CMU and departmental order	Ministry of Digital Transformation	31.12.2022	Regulation of the Cabinet of Ministers of Ukraine on the procedure for digital

	development of methods for digital examinations		National Agency on Corruption Prevention		examinations has been amended Methodology has been approved
Improving the interaction between MDT and NAPC in Digitalization of public services	Preparation of the Procedure for interaction between MDT and NAPC in Digitalization of public services	joint order	Ministry of Digital Transformation National Agency on Corruption Prevention	31.12.2022	Procedure for Interaction has been approved
Development of the concept and draft Law of Ukraine on All-In-One Social Service	USSIS, all-in-one social service	Draft Law of Ukraine "On All-in-One Social Service"	Ministry of Social Policy	01.09.2022	Concept of implementation of all-in-one social service has been approved The draft law "On all-in-one social service" has been developed and registered in the Verkhovna Rada
Approval of the resolution of the Cabinet of Ministers on digital accessibility of public digital solutions (barrier-free concept)	Digital accessibility (barrier-free concept)	CMU resolution	Ministry of Digital Transformation	01.09.2022	The Resolution of the Cabinet of Ministers approving the obligation to comply with the requirements of the standard DSTU EN 301 549: 2022 in the development (modernization) of public information systems has been approved
Increased institutional capacity of the Ministry of Finance by automating the processes of approval of the projects within the National Informatization Programme (NIP) and their integration with the procurement system	Accelerated and increased transparency of informatization processes	Amending the Law of Ukraine (presented to the Verkhovna Rada of Ukraine) Amending CMU resolutions	Ministry of Digital Transformation	31.12.2023	NIP process automation system has began its commercial operation and the respective legal and normative acts have been adopted.

3. Development of DIIA Centres network (administrative service centres

Challenges/problems: the destruction of ASCs in the territories that were or are under occupation; lack of access to registers and information systems or prolonged time needed for the restoration of access to these systems to provide services to citizens; not all communities have established ASCs (the need for further development of the ASCs network); insufficient integration of services into ASCs.

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)
3. recovery and construction of infrastructure; 11. building, urban development, modernisation of cities and regions;

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
ASCs resuming their operation and development of an offline service network	Development of an offline service network	Law, CMU resolution, departmental orders	Ministry of Digital Transformation	31.12.2022	Analysis of the damage to ASCs caused by the enemy. Restoration of ASCs operation and creation of new access points to services
Providing e-services in the ASCs	Modernisation of the "Beehive" information system — "Beehive 2.0"	CMU resolution, departmental orders	DIR SoE, Ministry of Digital Transformation	31.12.2022	Possibility for "non-digital citizens" to order a service with the ASC administrator acting as a "digital intermediary". The interdepartmental document flow between ASCs and a system for ASCs, e-interaction with electronic public registers and information systems has been established
Revision of the normatively established requirement and terms of creation of ASCs in territorial communities with a population	Development of an offline service network	Law	Ministry of Digital Transformation	31.12.2022	draft law on amending the Law of Ukraine "On

of more than 10 thousand people and in territorial communities with less than 10 thousand people					Amendments to Certain Legislative Acts of Ukraine Concerning Optimization of the Network and Functioning of Administrative Service Centres and Improvement of Access to Administrative Services Provided in Electronic Form" (hereinafter referred to the "Law") submitted to the Cabinet of Ministers of Ukraine
Update the list of mandatory services provided in ASCs related to changes in the procedure for their provision due to martial law and in order to bring them closer to citizens, in particular, for the benefit of persons affected by war	Making services more accessible	CMU ordinance	Ministry of Digital Transformation	31.12.2022	An ordinance has been adopted to amend the list of services that administrative service centres must provide
Completion of the process of transformation of raion state administrations ASCs into ASCs formed by local self-government	Development of an offline service network	CMU ordinance	Oblast state administrations Ministry of Economy Ministry of Digital Transformation	31.12.2022	The property of the ASCs formed under raion state administrations is transferred, if necessary, to the councils to ensure the work of ASCs
Updating and filling the Diia Centres Platform	National web-platform of administrative service centres (Diia Centres Platform)	CMU resolution	Ministry of Digital Transformation	31.12.2022	Diia Centres Platform contains up-to-date materials for the day-to-day work of the ASCs, training courses, results of quarterly monitoring of the provision of administrative services and the success history of the ACSs.

Improving the system of monitoring and evaluation of the quality of administrative services	system of online monitoring and evaluation of the quality of administrative services	CMU resolution	Ministry of Digital Transformation	31.12.2022	monitoring indicators has been optimized the results of ASCs' activity in 2022 has been monitored and published
Settlement of the issue of payment for the provision of administrative services (administrative fee) by introducing uniform principles for determining the administrative fee for the provision of administrative services	Update of the methodology for calculating the fee for the provision of administrative services (administrative fees)	CMU resolution	Ministry of Digital Transformation	31.12.2022	The Cabinet of Ministers of Ukraine has adopted a resolution to that effect

4. Development of public electronic registers, their optimisation and centralisation of support, introduction of electronic interaction

Challenges/problems: Enabling the citizens of Ukraine to obtain timely data on the facts of access to their personal data by the authorities.
No unique personal identifier of a natural person in the public electronic registers.

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Development and implementation of a subsystem for monitoring access to personal data of the electronic interaction system of Trembita public electronic information resources	Improvement of e-interoperability of electronic information resources	resolution of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation	31.12.2022	The Cabinet of Ministers of Ukraine has adopted a resolution to that effect The subsystem for monitoring of access to personal data of the system of electronic interaction of the public electronic information resources of Trembita is introduced

Development and submission to the Cabinet of Ministers of Ukraine of a draft law on bringing certain acts of legislation of Ukraine in line with the Law of Ukraine "On Public Electronic Registers"	Development of the system of public e-registers	Draft Law of Ukraine	Ministry of Digital Transformation, central executive authorities	31.12.2022	The Law of Ukraine has been adopted "On Amending Some Laws of Ukraine Regulating the Administration of Public Electronic Registers in Which Personal Data are Processed"
Dissemination of unique registry entry number as a personal identifier of an individual in public electronic registers which process personal data.	Development of the system of public e-registers	Amending some laws of Ukraine regulating the administration of public electronic registers in which personal data are processed	Ministry of Digital Transformation, State Migration Service	31.12.2022	The Law of Ukraine has been adopted "On Amending Some Laws of Ukraine Regulating the Administration of Public Electronic Registers in Which Personal Data are Processed"
Creation of the Register of public e-registers	Development of the system of public e-registers	resolution of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation	31.12.2022	An act of the Cabinet of Ministers of Ukraine on the procedure for maintaining the register of public electronic registers has been adopted
Modernisation of the information system "Software Platform for the Rollout and Support of Public e-Registers"	Development of the system of public e-registers	CMU resolutions, departmental orders	Ministry of Digital Transformation, State Service of Special Communications and Information Protection	31.12.2022	7+ registers rolled out on the information system "Software Platform for the Rollout and Support of Public e-Registers"
Improvement of data quality in public e-registers.	Improvement of data quality in public e-registers.	Resolutions of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation, State Tax Service, State Migration Service, Ministry of Justice	31.12.2022	Personal data in 5 public electronic registers has been compared
Providing convenient unified access to the data of licensed registers of economic activity	License portal	departmental orders, CMU resolutions, laws	State Regulatory Service	31.12.2022	Stage 1 of the Unified Register of Licenses has been introduced the service of submitting online complaints against license seekers, licensees regarding actions (inaction) of licensing bodies regarding violations of legislation in the field of licensing has been introduced; - Register of complaints of license seekers,

					licensees regarding actions (inaction) of licensing authorities regarding violations of legislation in the field of licensing; - Online service for licenses applications.
Creation of a regulatory framework for the preparation and holding of the nationwide census using national electronic information resources	Nationwide census	Amending the Law of Ukraine "On the Nationwide Census"	State Statistics Service	31.12.2022	The Law of Ukraine "On Nationwide Census" has been amended (support in the Verkhovna Rada for the adoption of draft law No. 5108 of 19.02.2021)
Development and trial run of the Register of damaged or destroyed property	Notification of damaged and destroyed real estate and application for compensation for damaged or destroyed real estate (1 priority)	CMU resolutions, departmental orders	Ministry of Infrastructure Ministry for Communities and Territories Development Ministry of Digital Transformation National Agency on Corruption Prevention	31.12.2022	The analysis of corruption risks involved in the procedure of submitting the notification of damaged and destroyed real estate and the application for compensation for damaged or destroyed real estate has been carried out (1 priority)
	E-reconstruction* (1 priority) *E-reconstruction is a set of subsystems (modules) of the Register of damaged or destroyed property which will facilitate administration of management processes to compensate for damage caused by armed aggression of the Russian Federation	CMU resolutions, departmental orders	Ministry of Infrastructure Ministry for Communities and Territories Development Ministry of Digital Transformation National Agency on Corruption Prevention State Property Fund of Ukraine Ministries and central executive authorities Military administrations	31.12.2022	An analysis of corruption risks involved in the processes of using and maintaining the Register of damaged or destroyed property has been carried out; An analysis of the legal support for the maintenance and operation of the Register of damaged or destroyed property, in particular the processes of filling the Register with information, has been carried out. Draft amendments to the Resolutions of the Cabinet of Ministers of Ukraine No. 326 of 20.03.2022, No. 380 of 26.03.2022, No. 473 of 19.04.2022, No. 474 of 19.04.2022, No. 257 of 12.04.2017 and other relevant acts have been prepared.

					The terms of reference for the development of the Register of damaged or destroyed property were prepared, the presence / absence of corruption risks in it has been assessed.
On the improvement of banking institutions and business	As part of the integration of interaction mechanism of Diia and / or OpenDataBot MDT National Bank	departmental orders, CMU resolutions, laws	Ministry of Digital Transformation National Bank Ministry of Justice	2022–2024	Opening public data, automating reporting and control procedures, creating an API for the interaction of central executive authorities and business, abandoning paper documents and replacing them with effective electronic services — digital transformation of government regulation.

5. Improvement of the government regulation of the use of electronic trust services, creating favourable conditions for the provision and receiving of electronic identification services

Challenges/problems: the need to accelerate the process of European integration and complications involved in the transition to reliable means of identification (qualified electronic signature)

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Improving the procedure for identification and authentication of legal entities and natural persons to receive electronic services, including electronic trust services during martial law in Ukraine, which will ensure the appropriate level of e-services' provision for legal entities and natural persons	Ensuring the technical feasibility of using electronic signatures or seals based on public key certificates issued by qualified providers of electronic trust services without information that the private key is stored in a qualified electronic signature or seal via appropriate information and communication systems	Amending the Resolution of the Cabinet of Ministers of Ukraine No. 300 of 17 March 2022	Ministry of Digital Transformation	31.12.2022	technical possibility of uninterrupted use of electronic signatures or seals has been provided

6. Restoring the destroyed electronic communications networks

Challenges/problems: 12.2% of settlements have no access to mobile communication, 3.1% have partial access. 3,534 base stations of mobile operators are not operational, which is almost 11% of their total number.

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Promoting the creation of a foreign private venture fund for Ukrainian start-ups		-	Ministry of Digital Transformation	December 2022	Ukrainian start-ups have a possibility to submit applications to the venture fund
Transformation of the IT education system in order to increase the number of highly qualified IT specialists	IT Nation educational project	-	Ministry of Digital Transformation	December 2022	At least 3,000 students with new IT knowledge

8. Post-war reconstruction of Ukraine's infrastructure and economy is taking place with the help and on based on open data 10

Challenges/problems: Before the start of the full-scale aggression, Ukraine was one of the European leaders by the open data development level. Around seven million Ukrainians used the open data-based services every month. Open data were a basis for the anti-corruption policy and the main factor of development of the civil society, accountability and transparency of the authorities.
The post-war recovery must be effected with due consideration of the requirements of the anti-corruption policy and in accordance with the international transparency and accountability standards. At the same time, as there are active hostilities in the territory of Ukraine, open data have to be published with due respect for the national security interests of Ukraine.

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)
Open data are related to the activities of all subgroups, since they are the basis of policy-making and independent and objective analysis of policy effectiveness and achievement of these goals.

Activities	Project	Necessary legal framework	Responsible	Timeframes	Performance indicator
Restoration of the work of the Unified State Web Portal of Open Data and ensuring the renewal of the publication of open data sets		Respective amendments to Resolutions of the Cabinet of Ministers of Ukraine No. 835 of 21.10.2015 and No. 867 dated 30.11.2016 in order to ensure publication of public information as open data, with	Ministry of Digital Transformation	31.12.2022	Relevant amendments to the current legislation have been adopted The work of a uniform government-run open data web portal has been renewed

		due consideration of the top-priority protection of the national security interests of Ukraine.			The work of the competence centre in the field of open data Diia.Open data has been resumed.
Development of a comprehensive post-war reconstruction monitoring system based on open data	Comprehensive post-war reconstruction monitoring system based on open data	Development of amendments to Resolution of the CMU No. 835 dated 21.10.2015 regarding enlargement of the list of the data sets to be published as open data, for the data sets to be included into such list for the post-war recovery.	Ministry of Digital Transformation	December 2022	Technical requirements for creating the system have been developed amendments made to the applicable legal and normative acts of the CMU

9. Increasing cyber resilience of the state and efficiency of response to cybersecurity incidents

Challenges/problems:

1) Lack of the register of critical infrastructure facilities (CIFs) and the register of the critical information infrastructure facilities (CIIFs).
2) No preconditions for rapid growth of national production of competitive protection means.
3) A large umber of state information resources affected by cyber and DDoS attacks since the start of the war.
4) Problem associated with correction of vulnerabilities in the state information resources.
5) Use of the Russian software, which can potentially contain spyware or other malware, by the public authorities, citizens and businesses.
6) Most state-owned companies are not ready for new cyberattacks at the organisational level, do not have necessary technical infrastructure and properly trained in-house specialists.
7) Threat Intelligence of insufficient performance.
8) Active hostilities and regular missile attacks, which creates the risk of seizure or physical destruction of the DC in the territory of Ukraine.
9) Some of the main public registers and critical infrastructure facilities fail to create backup copies in the data centre of the State Service of Special Communications and Information Protection and data centres abroad, which creates data loss risks.
10) Some of the main public registers and critical infrastructure facilities fails to consistently inform the State Cyber Protection Centre of the cybersecurity incidents, which results in insufficiently efficient counteraction to cyberincidents all over the country.
11) Incomplete consistency of the information and cyber protection requirements in Ukraine with the EU and NATO requirements.

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Strengthening the protection of the public information resources	Developing the register of forbidden software	Resolution of the Cabinet of Ministers of Ukraine on regulation of use of DDoS protection, traffic cleaning and CDN services Draft Law of Ukraine "On Amending Certain Legislative Acts of Ukraine as to Emergency Actions to Improve the Capacity for Cyber Protection of State Information Resources and Critical Information Infrastructure Facilities"	State Service of Special Communications and Information Protection	cember 2022	The Cabinet of Ministers of Ukraine has adopted a resolution to that effect The draft Law has been registered with the Verkhovna Rada of Ukraine the register has been developed provided that the Law has been adopted
Increasing cyber resilience of the state and efficiency of response to cybersecurity incidents	Trainings on response to incidents and use of threat intelligence for the public authorities and critical infrastructure facilities. Cyber training in threat hunting and life fire formats for the main cybersecurity entities, public authorities, local self-government bodies and CIFs		State Service of Special Communications and Information Protection Central executive authorities other stakeholders	December 2022	at least three trainings and two cyber workshops have been conducted
Continuing and deepening the cooperation of Ukraine and the EU in cybersecurity, in particular, another round of the political dialogue.			Ministry of Foreign Affairs Secretariat of the National Security and Defence Council State Service of Special Communications and Information Protection Security Service of Ukraine	July 2022	the cyber dialogue has been conducted

Assessing protection of the critical infrastructure of Ukraine (making the list of priority facilities)			State Service of Special Communications and Information Protection	December 2022	at least twenty facilities have been assessed
Improving the cybersecurity level in the public authorities, local self-government bodies and critical infrastructure facilities	updated qualification requirements in accordance with the European Qualifications Framework, development of professional standards Resolution of the Cabinet of Ministers of Ukraine "On Approving the Procedure for Searching for and Detecting Potential Vulnerabilities of Information (Automated), Electronic Communications, Information and Communication Systems, Electronic Communications Network Based on the Public Offer"		State Service of Special Communications and Information Protection	December 2022 September 2022	at least six professional standards have been developed The Cabinet of Ministers of Ukraine has adopted a resolution to that effect
Creating the infrastructure for preservation of the state information resources for backup and backup information infrastructures (mobile data centres, data centres abroad) to be placed	National Centre for Backup of State Information Resources		State Service of Special Communications and Information Protection	December 2022	at least three facilities of the National Backup Centre have been commissioned
Fighting cybercrime against children	Development of the online platform that will contain educational information for self-protection of their rights on the Internet by citizens, in particular to protect the children's rights, and tools to inform or infringement of rights in the cyberspace as a sub-system of the Unified State Web Portal of Open Data "Diia. Digital Education", and its information content		Ministry of Digital Transformation	December 2022	The online platform has been developed and launched
Improving the cyber protection of the critical information infrastructure facilities	Development of the register of the critical information infrastructure facilities (CIIFs).		State Service of Special Communications	December 2022	The register of CIIFs has been created

			and Information Protection		

RECOVERY STAGE — RECOVERY, RELAUNCH OF THE ECONOMY AND INSTITUTIONS

(goal achievement indicators and mid-term activities for 2023–2025 to achieve the goals)

1. Development of public e-services

Current situation (problems/challenges): The need to develop a unified approach to the processes of planning the transfer of services into electronic form, the need for complex re-engineering of business processes with appropriate changes in legislation, the unwillingness of public bodies to transfer services into electronic form.

Risks related to the goal achievement: lack of political will at the level of individual ministries, lack of funding, long processes of changing legislation

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
Share of electronic public services on the Unified State Web Portal of Electronic Services implemented in accordance with the plan	to be determined in the plan	to be determined in the plan	100
Number of administrative and other public services the information on which is available on the Public Services Guide	2,250	2,300	2,350

Activities to achieve goal 1:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Digitalization of public services	Priority services, including education, health care	departmental orders, CMU resolutions, laws	Central executive authorities	2023 2024 2025	The planned public services have been digitalised
Creation of comprehensive public e-services	e-Death, e-Entrepreneur, English version of Diia Portal, “International students”, Educational documents in an electronic form	departmental orders, CMU resolutions, laws	Central executive authorities	2023 2024 2025	The planned complex electronic public services have been launched

Provide functional smartphones to all elderly people	eSmartphone		Ministry of Digital Transformation	2023-2024	Elderly people are granted with possibility of receiving public services in a convenient way, obtain digital literacy and facilitate interaction with public services
Services for veterans	E-veterans	departmental orders, CMU resolutions	Ministry for Veterans Affairs, Ministry of Social Policy, Ministry of Digital Transformation		e-Services for veterans have been introduced
Preschool and school education services (including e-education certificate)	Creation of e-kindergarten and e-school systems	laws, CMU resolution	Ministry of Education and Science Ministry of Digital Transformation	12.2023	Ability to register children in preschool and school education institutions via the electronic queue. Electronic office for parents of children in educational institutions (registration, transfer to another institution, the ability to pay for services). Obtaining an e-education certificate for school students.
Ukrainians abroad (services for Ukrainians abroad, cross-border services)	Difficulty in obtaining public services in diplomatic missions, lack of possibilities for consuls to interact with the necessary public registers, the small number of services and the long time it takes to provide services in the diplomatic missions, lack of possibilities to receive services across borders..	Law of Ukraine, Resolution of the Cabinet of Ministers of Ukraine	Ministry of Foreign Affairs Ministry of Digital Transformation	12.2023	Possibilities for convenient receipt of public services by Ukrainian citizens (at least 40 services) abroad in diplomatic missions and/or in foreign institutions using cross-border services
Simplification of the process of obtaining permits	Creation of an E-Permit system	Law of Ukraine, Resolution of the Cabinet of Ministers of Ukraine	Ministry of Economy	12.2023	Ability to request permits online

Creation of the online apostille service and the apostille register	Development of the E-Apostille system	Resolution of the Cabinet of Ministers of Ukraine, departmental orders	Ministry of Justice	12.2023	Functions of filing applications, obtaining apostille and checking authenticity of an apostilled document online. Functions of verification of Apostille and apostilled document in other countries — parties to the Hague Convention
Development of tourism services for foreigners and citizens	Tourism services (e-tourism)	Law of Ukraine, Resolution of the Cabinet of Ministers of Ukraine	State Agency for Tourism Development		Tourism services for foreigners and citizens have been developed
Creating a system for online marriage registration	Online marriage registration	Law of Ukraine, Resolution of the Cabinet of Ministers of Ukraine, departmental orders	Ministry of Justice	12.2023	Ability to register a marriage online Electronic register of registered marriages
Creation of a publicly available DIIA tool to facilitate and ensure access to buildings/territories/events, provide possibilities for many to generate invitations in DIIA, issue of a QR-pass, validation (e.g. pass to the Chernobyl exclusion zone)	DIIA as a tool for access to buildings/territories/events – QR (a form of e-pass)	Resolution of the Cabinet of Ministers of Ukraine	Ministry of Infrastructure Ministry of Ecology and Natural Resources Ministry of Internal Affairs Ministry of Digital Transformation		Tools forming invitations to DIIA, issuing QR-passes, validation has been developed
Introduction and expansion of the functions of UNITED24, the unified portal to collect donations in support of Ukraine, and launch of the module with major public needs (lots)	UNITED24	Resolution of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation	12.2024	UNITED24, the unified portal to collect donations in support of Ukraine, has been launched, there are more charitable donations to support the army, medicine, recovery of the destroyed infrastructure and Digitalization.
Description in the Guide to Public Services for Minors	Creation of a separate category in the Guide, which contains services for minors with a detailed description of		Ministry of Digital Transformation	12.2023	A separate category of services with a description for minors included in the Guide

	how and where to get them, the necessary documents, deadline, costs, etc.				
Court services provided in electronic form			State Judicial Administration (by agreement) Ministry of Digital Transformation	31.01.2023	Receipt of court notices and documents in Diia. Payment of court fees in Diia. Submission of documents according to templates. Online Participation in court hearings.
Implementation of the universal social service functionality in the Unified information system of the social sphere on the industrial scale	USSIS, all-in-one social service	CMU resolutions	Ministry of Social Policy	31.01.2023	The functionality of all-in-one social service has been implemented in the USSIS Automatic assignments and payments are centralized and are made on the industrial scale All-in-one social service is provided both online, through the Diia Portal, and offline, through structural subdivisions of the Department of Social Protection and ASCs.
Integration of the Diia Portal with the Unified Information System of the Social Sphere and implementation and launch of the all-in-one social service	USSIS, all-in-one social service		Ministry of Digital Transformation Ministry of Social Policy	31.06.2023	The functionality of the all-in-one social service is implemented and provided online through Diia Portal and its integration with USSIS The service is automatic and proactive, automatic (without human participation) appointment and payment is carried out in a centralised manner
Prevention of distribution of counterfeit products and goods for which taxes have not been paid	Development of the National Electronic Goods Identification System (NEGIS)	CMU resolutions	Ministry of Digital Transformation State Tax Service	31.12.2023	The first stage of development of the NEGIS, Goods Identification, has been completed The second stage of development of the NEGIS, Goods Track and Trace, has been completed

2. Institutional development of Digitalization

Current situation (problems/challenges): **Lack of key strategic documents and methodologies.**

Risks related to the goal achievement: **Long bureaucratic process of approval of normative documents, risk of non-implementation of approved strategic documents and action plans**

Links with other areas **(subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)**

Activities to achieve goal 2:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Simplification of the process of development and testing of e-services	Testbed and toolkit platform, creation of development and testing tools for it	departmental orders	Ministry of Digital Transformation	31.12.2024	The information platform is filled with tools for development and testing of electronic services
Improvement of the system of organising provision of guidance, consulting and practical assistance to public authorities in the creation and development of e-services, as well as improvement of trans-border cooperation to expedite Ukraine's integration into the European digital space	Creation of an e-service centre of excellence with its representative office in the EU.	departmental orders, CMU resolution	Ministry of Digital Transformation	31.12.2024	The centre has been created
To update the action plan for Digitalization of public services	The action plan for Digitalization of public services has been updated	departmental orders	Ministry of Digital Transformation	2024	The updated action plan for Digitalization of public services
Development of service re-engineering guidelines	Improvement of national methodology for re-engineering services	departmental order	Ministry of Digital Transformation	31.12.2024	Number of services implemented using the methodology
Creation of a service lifecycle	Creation of a service lifecycle	Law, CMU resolution	Ministry of Digital Transformation	2024	The service lifecycle has been created, it is clear and understandable at all levels
Adoption of the Law of Ukraine "On All-In-One Social Service" in the second reading and its signature by the President	USSIS, all-in-one social service	Law of Ukraine "On All-in-One Social Service"	Ministry of Social Policy	31.12.2023	The Law of Ukraine "On All-In-One Social

					Service" has been adopted in the second reading and signed by the President
Development and approval of legal and normative acts regulating the procedure for providing all-in-one social services. The Law of Ukraine has entered into force.	USSIS, all-in-one social service	CMU resolutions	Ministry of Social Policy	31.06.2023	The law has entered into force, acts of the Cabinet of Ministers of Ukraine and Orders of the Ministry of Social Policy and other bodies regulating the provision of all-in-one social services have been approved
The draft Law of Ukraine which determines the mandatory requirements to use DSTU EN 301 549: 2022 standard for the creation (modernisation) of information systems owned by public authorities, local self-government bodies, utility companies, institutions and enterprises whose state share in the authorized capital exceeds 50 percent has been developed	Digital accessibility (barrier-free concept)	Law of Ukraine	Ministry of Digital Transformation	01.06.2023	The law has been developed and registered in the Verkhovna Rada of Ukraine

3. Development of the network of DIIA Centres (administrative service centres)

Current situation (problems/challenges): not all communities have ASCs (need for further development of ASC network), lack of e-services in ASC (digital divide), difficulty in providing services due to lack of unified software that guarantees the ability to work with different State Centre for Information Resources, insufficient integration of services in ASC, lack of possibility for citizens to receive services where convenient; lack of electronic interaction between the participants of the service delivery process (Trembita, System of electronic interaction of executive bodies)

***Risks related to the goal achievement*:** lack of access to the temporarily occupied territories, lack of sufficient funding for the development of the ASC network

Links with other areas **(subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)**
3. recovery and construction of infrastructure; 11. building, urban development, modernisation of cities and regions;

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
The number of administrative services centres (services are available not in all communities); (need for further development of ASC network), lack of e-services in ASC (digital divide), difficulty in providing services due to lack of	City, settlement, village councils representing the interests of territorial communities with the	City, settlement, village councils representing the interests of territorial communities with a	

unified software that guarantees the ability to work with different State Center for Information Resources, insufficient integration of services in ASC, lack of possibility for citizens to receive services where convenient; lack of electronic interaction between the participants of the service delivery process (Trembita, system of electronic interaction of executive bodies) (offline)	population above 10 thousand members — to establish Administrative Service Centres in accordance with this Law	population below 10 thousand members — to establish Administrative Service Centres in accordance with this Law (in the event of allocation of appropriate public funding for the construction, reconstruction, arrangement of premises and equipment of these centres)	

Activities to achieve goal 3:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
ASCs resuming their operation and development of the network of administrative service centres (offline services)	Providing services offline	departmental orders, CMU resolution	Ministry of Digital Transformation	31.12.2024	ASC has appropriate premises and staff for work. The work of telecommunication channels has been established. A training system for staff has been created The access of the population to receive services has been simplified ASCs have been established in all communities
Modernisation of the “Beehive 2.0” information system — “Beehive 3.0”	Beehive 3.0	departmental orders, CMU resolution	DIR SoE, Ministry of Digital Transformation	31.12.2024	The single window for administrators to provide public services
Modernisation of administrative service centres in Diia.Centres and expansion of the network of access points to public services	Modernisation of ASCs in Diia.Centres	Law, CMU resolution	Ministry of Digital Transformation	31.12.2024	the legislation on the operation of Diia.Centres has been amended

Expanding the list of services which must be provided by ASCs and increasing the percentage of integration of services related to public registration of civil status, administrative services of a social nature, pension services, services for drivers and passport services into ASCs	Making services more accessible	CMU ordinance	Ministry of Digital Transformation	31.12.2024	An ordinance has been adopted to amend the list of services that administrative service centres must provide
Introduction of a system of advance appointment to ASCs	System of advance appointment to ASCs	No need	Ministry of Digital Transformation	31.12.2023	a system of advance appointment to ASCs has been introduced
Ensuring the use of the functionality of the National web-platform of administrative service centres (Diia Centres Platform)	National web-platform of administrative service centres (Diia Centres Platform)	CMU resolution	Ministry of Digital Transformation	31.12.2023	ASC staff is trained and advised on various aspects of ASC activities on the Diia Centres Platform.
Improving the system of online monitoring and evaluation of the quality of administrative services	system of online monitoring and evaluation of the quality of administrative services	No need	Ministry of Digital Transformation	31.12.2024	The system of online monitoring and evaluation of the quality of administrative services has been integrated with the National web platform of administrative service centres Monitoring and evaluation of the quality of administrative services with relevant quality indicators, basic service requirements, including those related to accessibility, has been introduced. a software product Module for assessing the quality of services of the online monitoring and quality

					assessment services has been introduced and a study of the level of public satisfaction with the quality of administrative services in the ASCs has been conducted
Unification of identifiers and names of services in the Guide to Public Services with services provided through ASCs in order to facilitate monitoring of the quality of service provision	Guide to public services	Law, CMU resolution	Ministry of Digital Transformation	31.12.2024	Services provided through the ASC are aligned with the identifiers and names of services in the Guide to Public Services
Development and restoration of the network of centres for the provision of administrative services through a subvention from the state budget to local budgets for the development of the ACSs network	Subvention for the restoration of ASCs and the development of the ASCs network	CMU resolution	Ministry of Digital Transformation	31.12.2025	Amendments have been made to the current legislation on the priority provision of subventions for the development of the ASCs network to communities where the ASC has been damaged / destroyed as a result of military aggression by the Russian Federation

4. Development of public electronic registers, their optimization and centralization of support, introduction of electronic interaction

Current situation (problems/challenges):

- the war put forward an issue of physical protection of public information systems, their fault tolerance, data storage and placement of public information systems abroad resulting in temporary suspension of access to these registers; inaccuracy of data in registers, lack of a unique cross-identifier, low quality of central directories and standards, insufficient preparedness of public information systems to electronic interaction.

Risks related to the goal achievement:

Links with other areas **(subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)**

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
The Register of public e-registers has been introduced	1	-	-
The Unified Public Register of Addresses has been introduced	-	-	1
The Unified Public Demographic Register reaching the status of the population register (according to the UN definition) has been introduced	-	-	1

Activities to achieve goal 4:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
The Unified Public Demographic Register reaching the status of Population register (according to the UN definition)	Development of the basic public e-registers	Law of Ukraine "On the Register of the Population"	Ministry of Digital Transformation, Ministry of Internal Affairs, State Migration Service, Ministry of Justice	31.12.2025	The Population Register has been introduced
Development and introduction of the Unified Public Register of Addresses	Development of the basic public e-registers	The Law of Ukraine "On the Unified Public Register of Addresses"	Ministry of Digital Transformation, Ministry for Communities and Territories Development	31.12.2025	The Unified Public Register of Addresses has been introduced
Creation and commissioning of software and hardware of the Register of public e-registers	Development of the system of public e-registers	Resolution of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation	31.12.2023	The Register of public e-registers has been introduced
Modernisation of the information system "Software Platform for the Rollout and Support of Public e-Registers"	Development of the system of public e-registers	CMU resolutions, departmental orders	Ministry of Digital Transformation, State Service of Special Communications and Information Protection	31.12.2022	10+ registers rolled out on the information system "Software Platform for the Rollout and Support of Public e-Registers"

Verification of personal data in public e-registers in accordance with the Law of Ukraine “On Public Electronic Registers”	Improvement of data quality in public e-registers. (Register matching)	Resolutions of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation, State Tax Service, State Migration Service, Ministry of Justice	31.12.2024	Personal data in 30 public electronic registers has been compared
Modernisation of the system of electronic interaction of the public electronic information resources of Trembita (update of its components)	Improvement of e-interoperability of electronic information resources	CMU resolution, orders	Ministry of Digital Transformation	31.12.2023	Performance of the system of electronic interaction of the public electronic information resources of Trembita has been increased and harmonized in accordance with EU requirements and standards related to cryptography
Preparation for the nationwide census using national electronic information resources	Nationwide census	Resolutions of the Cabinet of Ministers of Ukraine	State Statistics Service, Ministry of Digital Transformation	31.12.2023 31.12.2024 31.12.2025	the list of national electronic information resources which data can be used for conducting the nationwide census has been identified, preparations for their use for the needs of nationwide census have been made. data from national electronic information resources included in the list of national electronic information resources which can be used for conducting the nationwide census has been compared

					material and technical base for conducting the nationwide census using national electronic information resources has been created a trial census using national electronic information resources has been conducted
Launch of the USSIS into commercial operation	USSIS, all-in-one social service	CMU resolution	Ministry of Social Policy	01.04.2023	USSIS with the function of centralized payment of social benefits has been put into commercial operation

5. Improvement of the government regulation of the use of electronic trust services, creating favourable conditions for the provision and receiving of electronic identification services

Current situation (problems/challenges): The need to build an accreditation system
Risks related to the goal achievement: Lack of funding and inability to make changes to relevant regulations (laws)
Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
Adoption of the Law "On Amending Some Legislative Acts of Ukraine to Ensure the Signing of an Agreement between Ukraine and the EU on the Mutual Recognition of Qualified Electronic Trust Services and the Implementation of the EU Legislation in the Area of Electronic Identification" (reg. No. 6173 of 12.10.2021)	Adopted	-	-
Trust services mutual recognition agreement has been signed	GDPR implementation Publication of DS Adoption of standards (ISO/IEC 17011&17065, ETSI TS 119 612, ETSI EN 319 403)	Preparation of an agreement on mutual recognition	Signing an agreement on mutual recognition and its monitoring

A conformity assessment body has been established in the area of electronic trust services and accredited by the Ukrainian National Bar Association in accordance with ISO/IEC 17065 in conjunction with ETSI EN 319 403-1			

Activities to achieve goal 5:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Simplification the use of electronic signatures and introduction of remote identification	Diia.Signature	Law of Ukraine "On Electronic Trust Services"	Ministry of Digital Transformation	2023	Legislation has been amended based on the results of the implementation of pilot projects in the field of electronic trust services and electronic identification
Approximation of national legislation to European requirements in the field of electronic identification and electronic trust services	Harmonisation of Ukrainian and the EU legislation	draft Law "On Amending Some Legislative Acts of Ukraine to Ensure the Signing of an Agreement between Ukraine and the EU on the Mutual Recognition of Qualified Electronic Trust Services and the Implementation of the EU Legislation in the Area of Electronic Identification" (reg. No. 6173 of 12.10.2021)	Ministry of Digital Transformation State Service of Special Communications and Information Protection	2023	Adoption of the Law "On Amending Some Legislative Acts of Ukraine to Ensure the Signing of an Agreement between Ukraine and the EU on the Mutual Recognition of Qualified Electronic Trust Services and the Implementation of the EU Legislation in the Area of Electronic Identification" (reg. No. 6173 of 12.10.2021)

To introduce in Ukraine a technical possibility to verify qualified providers of electronic trust services from the EU and information on services provided by them, and in the EU – a technical possibility to verify qualified providers of electronic trust services from Ukraine and information on services provided by them	Technical interoperability	-	Ministry of Digital Transformation, Diia SoE, developers	2023	The Ukrainian Trust List is part of the EU Trust List The EU Trust List is integrated with the Ukrainian Trust List
Ensuring mutual recognition of electronic trust services between Ukraine and the EU	Cross-border interoperability of trust services	Law of Ukraine "On Electronic Trust Services"	Ministry of Digital Transformation	2023–2024	Trust services mutual recognition agreement has been signed
Establishment of a conformity assessment procedure in the field of electronic trust services based on recognition within the framework of the International Accreditation Forum according to the ISO/IEC 17065 standard, in combination with ETSI EN 319 403-1	Audit of qualified trust service providers	Law of Ukraine "On Electronic Trust Services"	State Service of Special Communications and Information Protection, Ukrainian National Bar Association	2022–2023	A conformity assessment body has been established in the area of electronic trust services and accredited by the Ukrainian National Bar Association in accordance with ISO/IEC 17065 in conjunction with ETSI EN 319 403-1
Introduction of certification of qualified electronic signatures or seals in accordance with international standards (ISO/IEC 15408 -common criteria) by conformity assessment bodies accredited by the national accreditation body of Ukraine	Certification of qualified electronic signatures or seals according to common criteria	Law of Ukraine "On Electronic Trust Services"	State Service of Special Communications and Information Protection, Ukrainian National Bar Association	2022–2023	Qualified electronic signatures or seals have been certified according to common criteria (ISO / IEC 15408)
Dissemination of Ukrainian passport (in the form of ID-card) with certificates of qualified electronic signature as a basic means of electronic identification among the population	ID card		Ministry of Internal Affairs State Migration Service	2023–2025	80% of the population of Ukraine received a passport of a citizen of Ukraine (in the form of ID-card)

Introduction of a qualified electronic trust service for the formation, verification and validation of a qualified website authentication certificate	Qualified website authentication certificate	Law of Ukraine "On Electronic Trust Services"	Ministry of Digital Transformation	2023–2025	The service related to formation, verification and validation of a qualified certificate of authentication of the website is being provided
Introduction of qualified electronic trust service of registered electronic delivery	Registered electronic delivery	Law of Ukraine "On Electronic Trust Services"	Ministry of Digital Transformation	2023–2025	A registered electronic delivery service is being provided
Modernization of the integrated electronic identification system ID.gov.ua (update of components, interaction with public registers and cross-border interoperability with eIDAS Node)	Electronic identification system has been integrated	Law of Ukraine "On Electronic Trust Services"	Ministry of Digital Transformation	2023–2025	The productivity of the system of integrated electronic identification and its interaction with public electronic information resources has been increased and harmonized in accordance with EU requirements and standards
Regarding the need to extend the validity of advanced electronic signatures		CMU Resolution No. 617 of 24 May 2022	CMU Ministry of Digital Transformation	2022–2023	Due to the current situation in the country, it is important to be able to extend the validity of advanced electronic signatures for the period of martial law and 1 year after it ends, as it is currently impossible to replace them with QES.
Regarding the use of electronic signatures generated on the platforms "Docusign", "Hellosign" and other similar services		Law of Ukraine "On Electronic Documents and Electronic Document Flow" and Law of Ukraine "On	Ministry of Digital Transformation State Archive Service	2022–2023	This will help businesses sign foreign trade agreements and documents related to

		Electronic Trust Services", all the related legal and normative acts			their implementation (additional agreements, settlement and primary documents) intend to use service platforms "Docusign", "Hellosign" and other similar services to create electronic signatures. Due to martial law this issue has become increasingly important and its solution will help businesses conduct electronic document management more easily and comfortably and at lower cost.

6. Providing the population with access to high-speed Internet

Current situation (problems/challenges): 12.2% of settlements have no access to mobile communication, 3.1% have partial access. 3,534 base stations of mobile operators do not work, which is almost 11% of the total number. At least 726 fixed-line electronic communications operators have suffered as a result of hostilities. After the de-occupation of populated areas networks are damaged by up to 100%.

Risks related to the goal achievement: no access to areas where electronic communications networks have been damaged. Lack of necessary equipment and materials, government funding programmes for network rehabilitation, extremely high level of infrastructure access fees

3. recovery and construction of infrastructure; 11. building, urban development, modernisation of cities and regions; 4. economic recovery and development

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
Share of the population that has access to mobile Internet at a speed of at least 2 Mbps, %	To be estimated after the end of hostilities	93	95
Share of rural households that have the technical ability to connect to fixed broadband Internet access at a speed of at least 100 Mbps, %	To be estimated after the end of hostilities	90	95

Share of households using fixed broadband Internet access at a speed of at least 30 Mbps, %	To be estimated after the end of hostilities	50	75
Share of social infrastructure institutions and local self-governments that are connected to broadband Internet access at a speed of at least 100 Mbps, %	To be estimated after the end of hostilities	90	95
Share of population with access to Gigabit broadband Internet connection, %	Have not been studied	10% against the previous year	10% against the previous year
Number of towers built to accommodate electronic communications equipment, pcs	200 in rural areas		
Share of railway coverage with mobile communications and Internet	30% along railways	40% along railways	70% along railways
Number of running sensor complexes, units	114	150	150
Draft project for construction of a transport intercontinental network of electronic communications through the Black Sea developed, pcs.	-	-	1 (project developed and approved)

Activities to achieve goal 6:

Activities	Project	Necessary legal framework	Responsible	Timeframes	Performance indicator
Developing and implementing a compensation mechanism for access to infrastructure	Developing and implementing a compensation mechanism for access to infrastructure	Resolution of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation Ministry of Energy Ministry of Infrastructure Ukrzaliznytsia (Ukrainian Railways) Ministry for Communities and Territories Development National Energy and Utilities Regulatory Commission National Commission for Electronic Communications	01.12.2023	The law of Ukraine on "Access to Construction Facilities, Transport, Electric Power with the View to Development of Electronic Communications Networks" has been amended.

			Anti-Monopoly Committee of Ukraine State Property Fund of Ukraine		
Creating a common roaming space with the EU		legal and normative acts (as necessary)	National Commission for Electronic Communications Ministry of Digital Transformation	01.12.2023	A common roaming space for Ukraine and the EU has been created
Harmonization of frequencies in accordance with the EU requirements	Bands in the 694–790 MHz, 790–862 MHz ranges have been released from radio electronic devices of radio broadcasting service (TV)		National Council of Ukraine for Television and Radio Broadcasting Ministry of Digital Transformation National Commission for Electronic Communications	01.06.2023	Frequencies have been released from television
Introduction of fifth generation mobile communication within 700 MHz frequency bands		NCEC has made a decision to issue a license for the use of radio frequency resources of Ukraine in the 700 MHz frequency range	National Commission for Electronic Communications Ministry of Digital Transformation	01.12.2023	NCEC has made a decision to issue a license for the use of radio frequency resources of Ukraine in the 700 MHz frequency range
Introduction of fifth generation mobile communication within 3,400–3,600 MHz frequency bands		NCEC has made a decision to issue a license for the use of radio frequency resources of Ukraine in the 3,400–3,600 MHz frequency range	National Commission for Electronic Communications Ministry of Digital Transformation	01.12.2025	Decision has been made

Transforming cities into Smart cities	A framework document on transforming cities into Smart Cities has been developed.	Resolution of the Cabinet of Ministers of Ukraine "On Approving the Concept of Development of Smart Cities in Ukraine"	Ministry of Digital Transformation Ministry for Communities and Territories Development Ministry of Infrastructure Ministry of Reintegration Ministry of Finance	01.12.2023	A framework document has been developed The Cabinet of Ministers of Ukraine has adopted a resolution to that effect
Increasing the number of qualified electronic communications professionals	Development and implementation of the training programme for electronic communications professionals		Ministry of Education and Science Ministry of Digital Transformation Ministry of Economy	01.09.2023	the specialists are being trained within the special programme
Preservation of intercontinental traffic from Asia to Europe bypassing Russia through Ukraine and the Black Sea (Phase 1 — creating regulatory conditions for the construction of backbone lines bypassing the aggressor state)	. Government Programme "Ukraine — Digital Hub for Asian and European Backbone Traffic"	Resolution of the Cabinet of Ministers of Ukraine on the measures to preserve the intercontinental traffic	Ministry of Digital Transformation Ministry of Foreign Affairs Ministry of Infrastructure Ministry of Digital Transformation State Service of Special Communications and Information Protection National Commission for Electronic Communications other stakeholders	01.12.2025	A draft construction project has been developed The Cabinet of Ministers of Ukraine has adopted a resolution to that effect
Creation of the Gigabit Society in Ukraine	Gigabit Society	Resolution of the Cabinet of Ministers of Ukraine "On the State Programme for Creating the Gigabit Society"	Ministry of Digital Transformation Ministry of Finance	01.12.2023 01.12 2025	The Cabinet of Ministers of Ukraine has adopted a resolution to that effect

					the Internet access at a speed of 1 Gbps has been increased for 20% of the population
Creating electronic communications networks in areas economically unattractive for operators: along railways and in rural areas	Government programme for the construction of electronic communications facilities		Ministry of Digital Transformation, Ministry of Infrastructure Ukrzaliznytsia (Ukrainian Railways) State Service of Special Communications and Information Protection National Commission for Electronic Communications	01.12.2025	70% of railways are covered by mobile internet and the level of population coverage is 95%
Development (expansion) of the national electromagnetic spectrum control system based on the sensor suites.	National electromagnetic spectrum control system based on the sensor suites.		National Commission for Electronic Communications		414 sensor suites have been launched in twenty-one settlements

7. Public information resources in cloud technologies

Current situation (problems/challenges): At the beginning of the military aggression, public registers were forcibly disconnected in order to keep their records intact. Each individual registry required physical relocation to a safe place. The lack of requirements and capabilities for the preservation of public information resources in cloud storage created a risk of irreversible loss of information.
Risks related to the goal achievement: lack of funding, lack of obligation for critical infrastructure to use cloud technologies.
Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi) 3. recovery and construction of infrastructure

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
Cloud Infrastructure Development Strategy created, pcs.	1 (concept approved)		
Number of critical infrastructure facilities using cloud technologies, pcs.	-	200	500

Number of public information resources transferred to the cloud, %.	-	15%	30%

Activities to achieve goal 7:

Activities	Project	Necessary legal framework	Responsible	Timeframes	Performance indicator
Development of cloud technologies	Developing the Concept of cloud infrastructure development. Transferring public information resources to the cloud, ensuring the information is stored and backed up.	Ordinance of the Cabinet of Ministers on approving the Cloud Infrastructure Development Strategy. Resolution of the Cabinet of Ministers of Ukraine "On Supporting Operation of State Registers"	State Service of Special Communications and Information Protection Ministry of Finance National Academy of Sciences of Ukraine (by agreement) State Service of Special Communications and Information Protection Ministry of Finance	01.12.2023 01.12.2024 01.12.2025	The Cabinet of Ministers of Ukraine has adopted the order The Cabinet of Ministers of Ukraine has adopted a resolution to that effect 30% of public information resources have been transferred to the cloud

8. Promotion of digital economy

Current situation:

- Ukrainian economy does not fully use the potential of the IT sector which affects the development of IT business, attraction of investment and employment levels;
- incomplete harmonization of Ukrainian legislation in the field of e-commerce with EU regulations; low level of funds filling the state budget acquired as a result of business activities of foreigners;
- lack of state regulation of the virtual assets market;
- lack of legal and normative acts on artificial intelligence;
- lack of financial autonomy of higher education institutions in Ukraine;
- lack of possibilities for students to receive international-level knowledge while studying in higher education institutions of Ukraine;
- lack of legislative regulation of the use of blockchain technology in public administration

Risks:

- change of jurisdiction of IT companies from Ukrainian to foreign; loss of intellectual capital; loss of investment capital; non-receipt of taxes to state and local budgets; lack of interest of IT companies and IT specialists in joining initiatives and using new tools offered by the state;
- non-compliance with the Action Plan on the implementation of the Association Agreement between Ukraine, on the one hand, and the European Union, the European Atomic Energy Community and their Member States, on the other hand, namely: Activity 1913 "Legislative regulation of legal relations in the field of information services (in particular e-commerce) in accordance with acquis", measure No. 1 "development and submission to the Cabinet of Ministers of Ukraine of a draft law on e-commerce", as well as blurred prospect of Ukraine's potential accession to the European Union;

- registration of Ukrainian users of the virtual assets market outside Ukraine involves the payment of taxes in other jurisdictions and does not contribute to the budgets at all levels;
- political and economic instability, war in Ukraine
- existing obstacles for the implementation of the Concept of development of artificial intelligence in Ukraine

Links with other areas:
1. European integration; 4. economic recovery and development; 6. functioning of the financial system, its reform and development; 10. public administration; 15. education and science; 16. youth and sports

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
Share of the information technologies sector in the structure of Ukraine's gross domestic product, percentage	6	8	10
Number of legal entities that have acquired the status of a resident of the legal regime of Diia City and are entered in the register of Diia City residents, quantity	1,000	1,500	2,000
Number of persons who received e-resident status, quantity	1,000	5,000	7,000
Number of startups registered in Ukraine, quantity	2,200	3,000	4,000

Activities to achieve goal 8:

Activities	Project	Necessary legal framework	Responsible	Timeframes	Performance indicator
Increase in the number of specialists of the international level necessary for food companies	1.9. Launch of double-degree programs for training specialists required by food companies in partnership with international universities 1.5. IT Nation educational project		Ministry of Digital Transformation Ministry of Education and Science Ministry of Digital Transformation	2023–2025 2023	At least two partner universities of the international level have been involved under the double-degree program At least 3,000 students with new IT knowledge
Development of e-residency, including expansion of the list of services for e-residents and improvement of the product range	Holding advertising campaigns in order to involve foreigners to carry out entrepreneurial activity in Ukraine	Improvement of the legal framework to regulate opportunities for e-residents (where necessary)	Ministry of Digital Transformation	2023 2024–2025	at least 500 e-resident Individual Entrepreneurs have been engaged

		Amendments to Order of the Ministry of Digital Transformation No. 152 of 13.10.2020 in order to expand the list of the countries whose citizens may obtain the status of an e-resident			citizens of new countries have been given an opportunity to become e-residents
Development and promotion of the special legal regime of Diia City	1.10. Advertising campaigns to attract residents	Development of the legal and normative acts governing relations with a resident of Diia City (where necessary)	Ministry of Digital Transformation	2023–2025	A series (at least 5) of activities to promote Diia City has been held The necessary legal and normative acts have been developed
Increase of financial opportunities for startups which have already attracted investments, by means of doubling investments attracted	1.21. Matching Grants	Development of legal and normative acts regarding the implementation of the Matching Grants programme	Ministry of Digital Transformation Ministry of Finance Ukrainian Startup Fund	2023–2025	The legal and normative acts regarding the implementation of the Matching Grants programme have been developed
Creation of the conditions to launch the most ambitious global projects in Ukraine, including comprehensive support thereof by the state, and transformation of Ukraine into the most attractive country for the world investors and technological giants.	1.23. Polygon of world ideas	Development of legal and normative acts (where necessary)	Ministry of Digital Transformation Ministry of Justice National Bank of Ukraine Ministry of Finance other central executive authorities	2023–2025	The analytical report on implementation of the Polygon of world ideas initiative has been drawn up
Grant support for startups by the Innovation Development Fund (Ukrainian Startup Fund)	The following support programmes are being implemented within the framework of the project: Dual-purpose grant support programme Grant programme of early support of startups		Innovation Development Fund Ministry of Finance Ministry of Digital Transformation	2023–2025	startups have an opportunity to receive a grant

	Innovation voucher programme Acceleration programme Programme of startup support at the idea stage Programme of deep tech startup support				
Information support and assistance in development of venture funds for the Ukrainian startups	1. Foreign private venture fund 2. DISC Capital public-private partnership		Ministry of Digital Transformation	2023–2025	Ukrainian startups have a possibility to submit applications to venture funds
Creation of a legal framework for the application of artificial intelligence technologies		Development of the legal and normative act on implementation of the recommendations of the Council of Europe on the human rights impacts of algorithmic systems	Ministry of Digital Transformation	June 2024	The legal and normative act has been adopted
Development of the artificial intelligence technologies, machine learning and introduction thereof into the priority sectors		development of the legal and normative acts that prescribe the priorities and main tasks of development of the artificial intelligence technologies in the defence planning documents Approval of the State Programme for Using the Artificial Intelligence Technologies in the Priority Industries	Ministry of Defence Ministry of Digital Transformation Ministry of Digital Transformation Ministry of Strategic Industries	December 2025 December 2024	Legal and normative acts have been adopted Legal and normative act has been adopted
Harmonization of the Ukrainian legislation in the field of e-commerce with the EU acquis	1.12. Creation of a web-portal for consumers in the area of e-commerce	Legal and normative act(s) implementing Directive 2000/31/EC of the European	Ministry of Digital Transformation	December 2023 2024 December 2025	Legal and normative act has been drafted

		Parliament and of the Council of 8 June 2000 on certain legal aspects of information society services, in particular electronic commerce, in the Internal Market ("Directive on electronic commerce"), Digital Services Act - Proposal for a Regulation of the European Parliament and of the Council on a Single Market For Digital Services (Digital Services Act) and amending Directive 2000/31/EC, Digital Markets Act - Proposal for a Regulation of the European Parliament and of the Council on contestable and fair markets in the digital sector (Digital Markets Act), as well as related legal and normative acts in the area of e-commerce. Resolution of the Cabinet of Ministers of Ukraine that approves the regulation on the web-portal for consumers in the area of e-commerce	Ministry of Digital Transformation Ministry of Economy		Legal and normative act has been adopted A resolution has been adopted The web-portal for consumers in the area of e-commerce has been created
Development of the legal framework for using the blockchain technology (BT) in public administration		development of the act of the Cabinet of Ministers of Ukraine (the concept, the programme) on defining the blockchain technology and use thereof in public administration, in particular, determining the principles, conditions and areas of use of the blockchain	Ministry of Digital Transformation	2023	an act of the Cabinet of Ministers of Ukraine has been adopted

		technology in public administration			
Development of the scope of application of the blockchain technology (BT), including introduction of the BT into administrative activities		amendments to the legislation as to development of new BT-based registers, determination of the share of the public registers that can or need to be based on the BT development of necessary legal and normative acts or amendments to the effective acts on implementation of the BT and administrative activities, including revision of the mechanism for taking, implementing and controlling administrative decisions	Ministry of Digital Transformation other stakeholders Ministry of Digital Transformation other stakeholders	2023 2024–2025	the legislation has been amended acts of the Cabinet of Ministers of Ukraine have been adopted
Integration into the international structures implementing the BT (European Blockchain Partnership)		entry into interagency agreements or decision making at the level of the CMU, VRU	Ministry of Digital Transformation	2024	Ukraine joining the European institutions and standards
Development and introduction of the legal and normative regulation of the virtual asset market after the Law of Ukraine enters into force		Adoption of necessary legislative and subordinate acts	National Commission on Securities and Stock Market National Bank of Ukraine Ministry of Finance State Tax Service Ministry of Justice	2023	Amendments to the Tax Code and the Civil Code
Creation of conditions for including Ukraine into the European Digital Economy and Society Index (DESI): introduction of the European approaches to measurement and monitoring of progress of digital development of the state		draft Resolution of the Cabinet of Ministers of Ukraine on introduction of the national system of indicators of the digital economy and society	Ministry of Digital Transformation State Statistics Service	2023–2024	the national system of indicators of the digital economy and society has been harmonised with the European one

			National Commission for Electronic Communications Ministry of Economy		
Development of the cybersport industry	Conduct of sociological research of condition of cybersport, determination of risks and opportunities, which promotes development of cybersport Development of the cybersport development strategy in the state	Development of the act of the Cabinet of Ministers of Ukraine on approving the cybersport development strategy in the state	Ministry of Youth and Sport Ministry of Digital Transformation	2023–2025	A sociological study has been conducted An act of the Cabinet of Ministers of Ukraine has been adopted
Information support and assistance in development of specialised acceleration programmes	AgriFood Tech acceleration programme Sport Tech acceleration programme Industry 4.0 acceleration programme Military Tech acceleration programme		Ministry of Digital Transformation Ministry of Agrarian Policy Ministry of Youth and Sport Ministry of Strategic Industries Ukroboronprom SoE	2023–2025	More than 150 startups in the specialised fields have completed acceleration

9. Post-war reconstruction of Ukraine's infrastructure and economy is taking place with the help and on based on open data

Current situation (problems/challenges):

- In order to ensure the interests of national security the work of the Unified State Web Portal of Open Data has been temporarily suspended.
- In order to effectively and fully attract funds from donors and international organisations, it is necessary to develop an effective mechanism to control the distribution and use of funds during the process of gradual recovery and transformation of Ukraine's economy and infrastructure.
- Ukrainian legislation on access to public information and the free movement of non-personal data continues to borrow best rules and practices from European Union law.
- The process of improving skills, knowledge and abilities related to the possibilities of using open data for post-war reconstruction continues.

Risks related to the goal achievement:

- Continuation of the active phase of Russia's armed aggression
- No/insufficient funding for projects
- Reluctance of information managers to publish complete and reliable information in accordance with the approved requirements

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Open data are related to the activities of all subgroups, since they are the basis of policy-making and independent and objective analysis of policy effectiveness and achievement of these goals.			
Goal achievement indicator, unit of measurement	**2023 (target)**	**2024 (target)**	**2025 (target)**
number of data sets published on the Unified State Web Portal of open data with regard to information on post-war reconstruction of Ukraine (quantity)	100	300	350
the number of civil servants and officials of local self-government bodies whose responsibilities are directly related to the disclosure of open data, who have successfully completed the training programmes of the Diia Centre for Competences in the field of open data. Open data (persons)	3,000	5,000	7,000
number of unique users of the Unified State Web Portal of Open Data (thousand people)	1,000	2,500	4,000
number of monthly users of services based on open data (thousand people)	2,500	3,000	4,500
number of open data services operating in Ukraine (quantity)	50	90	140

Activities to achieve goal 9:

Activities	**Project**	**Necessary legal framework**	**Responsible**	**Timeframes**	**Performance indicator**
Harmonisation of the Ukrainian legislation on access to public information and open data with the European legislation on free movement and use of personal data	Conduct of research on conformity of the Ukrainian legislation on open data, access to public information, management of state data and the procedure for using them to the EU legislation	– Legal and normative acts on implementation of the standards and practices of the European legislation on free movement of non-personal data, work with open data and management of state data in the Ukrainian legislation	Ministry of Digital Transformation Ministry of Digital Transformation	June 2023 December 2023	two analytical reports on conformity of the Ukrainian legislation to the European one have been drawn up and presented to the public the applicable draft legal and normative

					acts have been prepared
Ensuring Ukraine's transition to a circular and low-carbon economy using open data	Development of requirements (standards) for publishing sets of data relating to the transition of Ukraine to the low-carbon and circular economy	Respective amendments to Resolution of the Cabinet of Ministers of Ukraine No. 835 of 21.10.2015	Ministry of Digital Transformation	December 2025	the applicable legal and normative act on approving the requirements (standards) for publication of respective information has been adopted
Development of a comprehensive post-war recovery monitoring system based on open data	Comprehensive system of post-war recovery monitoring system based on open data	– Respective amendments to Resolution of the Cabinet of Ministers of Ukraine No. 835 of 21.10.2015 –	Ministry of Digital Transformation Ministry of Digital Transformation Ministry of Digital Transformation	March 2023 June 2023 December 2023	the technical requirements for the functions and design of the integral post-war recovery monitoring system (PostWar Government BI) have been developed and the competition for development of the software product has been announced the applicable draft legal and normative act approving the requirements (standards) for publication of the data sets necessary for efficient post-ware recovery has been prepared the first stage (MVP) of the integral post-war recovery monitoring system based on open data has been put into pilot operation

Increase in the level of knowledge of open data use	Development and conduct of training programs for enhancement of knowledge and skills of work with open data	–	Ministry of Digital Transformation Ukrainian School of Governance National Agency for Civil Service	June 2023 September 2023 December 2023 July 2023	the open data training programme has been developed and conducted for the persons responsible for implementation of the state tax policy the training programme "Digitalization of economy" has been developed and conducted for students of the Kyiv National Economic University named after Vadym Hetman the training programme "Open data for post-war recovery for CDTO and heads of public authorities" has been developed and conducted the training programme on the analytics and visualisation of open data for anti-corruption organisations, journalists and researchers has been developed and conducted
Support of the existing socially important services (applications) based on open data and implementation of new ones	Holding a competition of grants for supporting the ecosystem of open data and implementing new projects, including those	–	Ministry of Digital Transformation	June 2023	the mini grant recovery competition has been conducted

	aimed at resolution of humanitarian and military issues (OD ecosystem resilience support)				

10. Development of the potential of the national cybersecurity ecosystem

Current situation (problems/challenges):

- Lack of the efficient cybersecurity management model at the level of numerous state-owned companies.
- Numerous vulnerabilities of the state information and communication systems, which results in hacking and leaks of personal data of citizens.
- No requirements for information security of contractors and vendors of IT services, software and equipment for public authorities, state-owned companies and critical infrastructure facilities.
- Shortage of qualified professors at higher educational establishments and resulting shortage of graduates with the knowledge that meets the present-day requirements.
- Low level of public awareness of information security and formation of the cybersecurity culture in the society.
- Insufficient focus on the matters of cybersecurity when new electronic services are introduced, public electronic services are developed, and on the risks associated with use of Diia infrastructure.
- Insufficient level of introduction of the protection measures and means in the public authorities, local self-government bodies and critical infrastructure facilities.
- Incomplete consistency of the information and cyber protection requirements in Ukraine with the EU and NATO requirements.

Risks related to the goal achievement:

- insufficient budget and donor funding

Links with other areas (subgroups on the list https://www.kmu.gov.ua/diyalnist/nacionalna-rada-z-vidnovlennya-ukrayini-vid-naslidkiv-vijni/robochi-grupi)

Goal achievement indicator, unit of measurement	2023 (target)	2024 (target)	2025 (target)
100% of the critical information infrastructure facilities have been covered with sensors	50%	75%	100%

Activities to achieve goal 10:

Activities	Project in the framework of the activity	Necessary legal framework	Responsible	Timeframes	Performance indicator
Modernisation of the cybersecurity legal framework		Guidelines on cybersecurity management for large, medium-sized and small state-owned organisations, which include: - standard recommended cyber protection architecture, organisational structures and	State Service of Special Communications and Information Protection State Service of Special Communications and	2023 2023 2023	The Guidelines have been developed and approved by the Order of the Administration of the State Service of Special Communications and Information Protection

		processes, requirements for competences of the key staff and professional certification, vulnerability management processes, response to cyberattacks; - role and responsibility of the senior executives and steering committees as to cybersecurity, requirements for competences/certification, cybersecurity training of the senior executives and steering committees; - metrics used to measure the cyber protection level of organisations, procedures for regular reporting on cybersecurity to the senior executives, steering committees and regulatory authority Guidelines on personal data protection based o the GDPR, which contain: - Compulsory recording of data transmission, storage and processing flows - Determination of risks and controls at each processing stage - Liability of organisations and senior executives for data leaks - Audit and certification of personal data protection Resolution of the Cabinet of Ministers of Ukraine on the cybersecurity requirements for vendors and contractors for the public authorities, state-owned companies and critical infrastructure facilities	Information Protection Parliamentary Commissioner for Human Rights State Service of Special Communications and Information Protection		The guidelines have been developed and approved The Cabinet of Ministers of Ukraine has adopted a resolution to that effect

Enhancement of the public-private partnership in cyber and information security	The project for strengthening cybersecurity of small and medium companies, enhancing stability and support of digitalization of the business sector (cybercredits)		State Service of Special Communications and Information Protection Ministry of Digital Transformation	2024	The project has been launched
Resolution of the problem of shortage of qualified staff and poor education in information security	Development of cybersecurity training programs for children Development of the cybersecurity training program for the population based on modern approaches (gamification, microlearning) and its promotion		Ministry of Education and Science Ministry of Digital Transformation State Service of Special Communications and Information Protection Ministry of Digital Transformation State Service of Special Communications and Information Protection	2024 2023	The training programs have been developed and implemented into the training process A programme has been developed
Strengthening the protection of the public information resources	Formation of the ISO 15408 conformity assessment laboratory	Normative act on introduction of frameworks for safe development and introduction of software for critical systems Resolution of the Cabinet of Ministers of Ukraine on implementation of the system for controlling the information security requirements in public procurement	State Service of Special Communications and Information Protection Ministry of Economy State Service of Special Communications and Information Protection State Service of Special Communications and Information Protection	2024 2023 2025	Legal and normative act has been adopted The Cabinet of Ministers of Ukraine has adopted a resolution to that effect A laboratory has been created

Development of the capacity of the national cybersecurity (cyber protection) system	Creation of the state cloud service cybersecurity platform Launch of a service of governmental safe DNS Creation of the governmental centre for traffic cleaning and counteraction to DDoS attacks Development of the active cybersecurity system (system for assessment of vulnerabilities and penetration testing, services for protection of web-resources (including Diia and public electronic registers) Launch of a service for protection of government employees' email Implementation of the complex protection of information resources and technological infrastructure Diia and e-governance services Completion of formation of the National Centre for Backup of State Information Resources Formation of the National Cyber Threat Monitoring System based on the sensor infrastructure Creation of the system of protection against malware on end user equipment Establishment of industry-specific and regional		State Service of Special Communications and Information Protection	2023 2024 2025	At least six basic cyber protection services have been launched The project of secure DNS-service for public authorities has been implemented Protection against DDOS-attacks for at least 100 organisations and institutions has been ensured The active cybersecurity system has been created based on the National Backup Centre 100% government employees have been ensured with secure mail service All e-governance services have been protected All facilities have been commissioned for the National Centre 100% of the critical information infrastructure facilities have been covered with sensors Protection against modern cyber threats for at least 50,000 termination points has been ensured At least seven regional and industry-specific centres have been created

	cybersecurity management centres				
Harmonisation of the national conceptual framework for implementation of the state policy for fighting cyber crimes against children with the European equivalents, in particular, the European strategy for a better internet for kids (BIK+)		Legal and normative act of the Cabinet of Ministers of Ukraine	Ministry of Digital Transformation Ministry of Internal Affairs	December 2023	The legal and normative act of the Cabinet of Ministers of Ukraine has been adopted

MODERNISATION STAGE "STRUCTURAL MODERNISATION AND COMPLETE INTEGRATION INTO THE EU"

(strategic goals for 2026–2032 * Terms of planning of the stage will be adjusted based on the results of 2022–2023)

1. Development of public e-services			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Trust in public data	MDT, MIP	2026	More than 60% of the population use and trust public data / services
Digitalization of public services	Central executive authorities		__ public services have been digitalised
Creation of comprehensive public e-services	Central executive authorities		__ comprehensive public e-services have been introduced
Non stop shop concept to replace one stop shop	MDT, central executive authorities	2032	__ public services are available in any services access point

Census	Ukrstat/ MDT	2027	reliable information on the size of the population of Ukraine in terms of its administrative and territorial structure is provided with the frequency established by the Cabinet of Ministers of Ukraine
Artificial intelligence in the provision of public services	MDT, central executive authorities	2032	e-public services are provided using artificial intelligence
Digitalization of archives + elimination of regulatory barriers to the introduction of electronic document management	Public Archival Service of Ukraine, Central Public Electronic Archive of Ukraine, MDT Ministry of Justice	2025	reduction of the list of documents that must be stored in paper form and reduction the period of their storage to avoid duplicating a number of documents in paper at the same time. Creation of an electronic archive for convenient storage of electronic documents. Online access to the National Archival Fund of Ukraine has been provided
Introduction of new qualified electronic trust services related to: ● electronic archiving of electronic documents; ● remote management of electronic signatures or seals; ● recording electronic data in electronic catalogues; ● use of an electronic identity wallet	MDT Public Archive Service	2027	Citizens use trust services in accordance with EU requirements and standards

2. Ukraine is a digital hub

Activities	**Responsible**	**Timeframes**	**Expected outcome**
Introduction of modern cloud solutions	MDT other stakeholders	01.12.2032	data centres have been built
Construction of a transport intercontinental network of electronic communications through the Black Sea	MDT NCEC Ministry of Economy Ministry of Finance Ministry of Infrastructure SSSCIP SPFU	01.12.2032	10 Gbps of transit traffic has been transmitted through Ukraine

3. Development and dissemination of modern Internet access technologies			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Public access to high-speed Internet	Ministry of Digital Transformation National Commission for Electronic Communications	01.12.2032	95% of the population
Improving the quality of mobile service (average downlink at least 50 Mbps, etc.)	MDT NCEC	01.06.2026	The Ministry of Digital Transformation has adopted an order “On approval of quality indicators for electronic communications services”
Joining European cross-border 5G corridors	MDT NCEC	01.12.2026	Ukraine has joined European cross-border 5G corridors
Providing settlements with the fifth generation mobile internet coverage	MDT NCEC	01.12.2032	95% of the population
Providing settlements with access to the fixed Internet coverage at a speed of 1 Gbps	MDT NCEC	01.12.2032	95% of the population

4. Public-private partnership			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Introduction of blockchain technology into national economy	MDT other stakeholders	2026–2032	Creation of a new mechanism for making management decisions, in particular, creation of new public registers using blockchain technology, “modernisation” of current public registers

5. The development of products of the defence sector of Ukraine is based on the use of the latest technologies			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Launch of the Military Industry Park in Ukraine, creation of a single centre for the development of the country's defence industry with a comfortable tax burden	Ministry of Defence General Staff of the Armed Forces of Ukraine Ministry of Finance STS MDT	2026–2032	Military Industry Park has been launched
Technical and financial support for the development and operation of robotics in the defence sector and the inclusion of artificial intelligence technologies in autonomous military equipment devices	Ministry of Defence General Staff of the Armed Forces of Ukraine MIA MDT	2026–2032	Technical and financial support for the development and operation of robotics in the defence sector is being provided

6. Country of innovations			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Start-up ecosystem development	MDT other stakeholders	2026–2035	There are 6,000 start-ups in Ukraine, including 250 defence start-ups, 250 spacetech start-ups, 250 deeptech start-ups, 250 hardware start-ups, 350 Agri & Food Tech start-ups
Promoting Ukraine as the best jurisdiction for the use and application of virtual assets	National Commission on Securities and Stock Market NBU MDT	on a permanent basis (since the entry into force of the Law of Ukraine "On Virtual Assets")	Annual increase in registrations of virtual asset service providers in Ukraine, filling the state budget

7. Ukraine is an international leader in the field of anti-corruption, development of civil society institutions and openness of public information			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Full implementation of European legislation on the free movement of personal data to the Ukrainian legislation	MDT other stakeholders	2026–2030	Ukrainian legislation in the field of access to public information is fully in line with European legislation
All statutory open data sets are published in accordance with approved requirements (standards)	MDT information managers	2026–2030	All sets of open data provided for by the Resolution of the Cabinet of Ministers of Ukraine No. 835 of 21.10.2016 are published on the Unified State Web Portal of Open Data and meet the established requirements.
Dissemination of open data literacy through training programmes and Diia Open Data portal	MDT	2026–2030	Training programmes of the Diia.Open data Centre for Competences in the field of open data is used by at least 10,000 people annually
8. Developed ecosystem of cybersecurity and capability of active cyber protection			
Activities	**Responsible**	**Timeframes**	**Expected outcome**
Introduction of mechanisms for assessing performance of the implemented cybersecurity projects for the public sector and critical infrastructure facilities	State Service of Special Communications and Information Protection	2026–2032	New efficient assessment mechanisms have been introduced
Introduction of the fundamentals of digital hygiene into the social culture: starting from relevant special subjects taught in schools and universities up to	State Service of Special Communications and Information	2026–2032	100% school and university graduates have digital hygiene skills

mandatory and regular certificate of staff of commercial and state institutions to check their understanding of such fundamentals.	Protection Ministry of Digital Transformation		
Transition to the industry-specific cybersecurity regulation model · Determination of the industry-specific cybersecurity regulatory authorities and their roles and powers · Determination of the industry-specific cybersecurity standards Introduction of the industry-specific standards and control over adherence thereto	State Service of Special Communications and Information Protection Ministry of Economy	2026–2032	Twelve industry-specific regulatory authorities, their powers and industry-specific standards have been determined
Maximum achievement of digital development and cybersecurity goals consistent with the EU and NATO in Ukraine	State Service of Special Communications and Information Protection Ministry of Digital Transformation	2026–2032	The cybersecurity laws of Ukraine have been harmonised with the EU and NATO standards

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Economic recovery and development” working group

July 2022

Contents

1. Key issues to be addressed in the Recovery Plan regarding the Economic Recovery and Development direction

1.1. Current status of the Ukrainian economy

1.2. Key challenges
1.3. Key Features

1.4. Key constraints of economic development

2. Tasks, objectives, and stages of the Recovery Plan for Economic Recovery and Development

2.1. Short-term tasks and activities of the stage "Wartime Economy: All for Victory!", June–December 2022.

2.2. Medium-term tasks and activities of the stage "Recovery, Restart of Economy and Institutions", 2023–2025.

2.3. Strategic tasks and activities of the stage "Structural Upgrading and Comprehensive Integration into the EU" 2026–2032.

3. Main expected results and key indicators of their measurement
3.1. Short-term expected results
3.2. Medium-term expected results
3.3. Strategic expected results
3.4. Key strategic target tasks accomplishment efficiency indices (by the task accomplishment periods)
3.5. Key performance indicators for achieving strategic tasks

Working Group for Economic Recovery and Development

Task: **Economic recovery and rapid economic growth**

Vision: **"We will rebuild Ukraine as a strong, rich, technologically advanced country and sign the European Union Membership Agreement in December 2024"**
(President of Ukraine Volodymyr Zelenskyy, 2022)

Key issues to be addressed in the Recovery Plan regarding the Economic Recovery and Development direction

1.1. Current status of the Ukrainian economy

Key indicators of the prewar economy
Ukraine's economy in recent years, despite the shortcomings of the commodity-based consumer model of development, has proven that it is able to withstand and adapt to significant force majeure circumstances.
Since 2014, Ukraine's economy has been operating in the environment of Russia's hybrid war against Ukraine and, having showed relative stability, quickly moved from the phase of crisis to the phase of recovery and growth.
Ukraine's GDP increased by 12 percent over 2016-2019 (after a 15.8 percent declined over 2014-2015).
During 2021 and in early 2022, the economy overcame the effects of the ongoing COVID-19 pandemic, and although not yet fully recovered from the shock of the hybrid war unleashed by the Russian Federation in 2014, and being further weakened by the pandemic, thanks to the anti-crisis and encouraging programs of the Government, the economy adapted to the constraints caused by quarantine measures and developed the ability to absorb shocks caused by rise in global energy and food prices, preserving its macro-stability and positive development dynamics.
The most effective Government solutions include:
business support programs *(business received UAH 65 billion under the Affordable Loans 5-7-9% program and UAH 6.5 billion under quarantine programs);*
financial support of job creation *(400,000 new jobs were created);*
efficient management of state property and privatization, in particular *the reform of corporate governance was introduced at the public economy sector, including in TOP-15 state-owned companies, from which the state received tens of billions hryvnias in dividends, and more than UAH 5 billion were credited to the state budget due to intensification of privatization processes.*
Therefore, Ukraine ended the year of 2021 with a record-setting GDP of $200 billion, $6.7 billion of foreign direct investment and a 34.7% increase in exports of goods and services. All this allowed improving the welfare of the population; the real growth of the average nominal wage of full-time employees was 10.5%, and the overall real income of the population increased by 4.3%.

War impact on the economy

The full-scale war unleashed by Russia has changed Ukraine's economy.

Cumulatively (according to Advanter Group survey as of June 10, 2022), almost a half of the enterprises stopped (18.7%) or almost stopped (28.1%) their operations, total direct losses of SME are estimated at $83 billion, business activity is reduced and exporters have scarce opportunities due to the blockade of ports, as the current logistics routes cover less than 20% of exports. More than 10 million Ukrainians (~25% of the population) have left their homes, including 7.5 million have gone abroad. Consequently, at least 3 million Ukrainians have already lost their jobs, and 53% of the population is at risk of losing their jobs (according to the UN). The unemployment rate is estimated to have risen above 30%. The level of wages according to expert estimates fell by 9 to 58% in various areas of economic activity, and the wage arrears exceeded UAH 3 billion.

The biggest losses are suffered:

- *due to the destruction of production facilities*: energy, housing and utilities, transport, metallurgy, oil refining, and defense industry enterprises;
- *due to the actual stoppage of investment projects* in view of the ultra-high investment risks – construction, machine-building industries;
- *due to the decrease in demand of the population,* which finds itself under occupation, in the area of active military operations or is forced to leave Ukraine (only because of the migration of more than 7.5 million citizens outside the country almost 20% of the demand is underdeveloped): economic activity in services and certain types of industrial activity (hotel and restaurant business, as well as economic areas related to creative industries, in particular the production and distribution of movies and video films, literature and publishing, art, architecture and design, advertising agencies, operation of theater and concert halls, museums, light industry);
- *due to the destroyed transport infrastructure, blocked ports, restrictions on cross-border currency payments* (except for payments for critical imports) more than 50% of exports were lost during the three months of war, which, given the significant share of agro-industrial products in Ukrainian exports, also largely threatens the global food security;
- *due to the narrowing of the range of domestic goods and the shortage of imported energy resources,* the pressure on inflation and the exchange rate is increasing.

The biggest shock of Russia's full-scale invasion of Ukraine occurred in March 2022. The Ministry of Economy, using the indirect calculation methods and simulation tools, estimated a 47-50% drop in GDP in March 2022 (vs March 2021), which entailed a 15.1% drop in the first quarter according to the State Statistics Committee.

However, as of mid-May 2022, we can already say that Ukraine's economy continued to function despite the large-scale hostilities in the country.

Certain sectors of the economy, such as public governance and defense, banking, information and communication technology, food industry, retail trade, healthcare and education continued to operate. Due to the deep penetration of digitalization processes, the temporary pause in the activity of these sectors was short or nonexistent.

Already in April, against the background of a change in the geography of combat actions, the gradual return of people to their homes and the formation of new logistics routes the list of industries, which began to restore their activity, started to expand to add at least agriculture, transport and construction.

Governmental support programs and actions to stabilize the socio-economic situation during martial law

The new wartime economic policy, the key elements of which were the following, also contributed to the business revival:

- a business relocation program;
- placement of a state order for products;
- implementation of a number of important deregulation decisions;
- a new tax policy aimed at reducing the fiscal burden on businesses;
- interest-free lending programs for all areas of business;
- the program of cash payments for internally displaced persons (IDPs) "e-Support".

To support the population, programs were introduced to compensate employers for the wages of internally displaced persons and assistance to internally displaced persons; compensation was provided to families sheltering the internally displaced persons; payment of all subsidies, benefits, and cash social allowances assigned to people was ensured; and the procedure for granting unemployment benefits and registering the unemployed with the State Employment Service under wartime conditions was simplified.

The support programs introduced by the Government mitigated the shock effects of the full-scale war on the economy. According to the survey of the SME in Ukraine carried out by Advanter Group, while 73.8% of the enterprises have stopped working completely on March 11-13, 2022, there were only 21.6% of them on April 11-13, 2022 (vs 53.9% at the beginning of the third decade of March), and 20.6% on May 05-07, 2022. At the same time, 15% of enterprises have not changed or expanded their operations vs February 23, 2022.

Therefore, according to estimates of the Ministry of Economy, the drop in GDP in April-May 2022 was less than in March, although, definitely, it is still quite significant given the ongoing war, i.e., 41-44%.

As for the prices, since the early days of the war the Government:

- has taken control of the issue of stabilizing the food supply, implemented the concept of a centralized order from producers of food and medicines, arranged funding through a reserve fund, and established international cooperation for the humanitarian supply of products;
- introduced regulation of prices for public utilities and a number of basic necessities for people, in particular, for basic foodstuffs (flour, pasta, bread, meat, milk, etc.) and certain groups of medicines. Moreover, the steps were taken to reduce the cost of fuel for cars, in particular, a new procedure for calculating marginal fuel prices was introduced, the excise duty on fuel was canceled and VAT rates were reduced from 20% to 7%, while the prices for premium fuel were capped.
- cancelled a significant portion of duties and VAT, and expanded the list of critical imports.

The above actions allowed avoiding systemic product shortages and unfolding of powerful inflationary processes during March. Further to that, the Government is responding to the current challenges:

in order to revive economic activity, the state regulation of prices has been relaxed since March 19, 2022 (the capping of trade markup on some food products was removed), and the procedure for declaring prices was simplified given the stabilization of the situation in the consumer market;

given the growing demand in the fuel market, in order to avoid imbalance, on April 29, 2022, it was decided to update the state regulation of prices for petroleum products and the capping of trade markups was increased, which will solve the current issue of fuel shortages in the market.

Such actions have created more room for price increases, but this is a price for the increased availability of goods in the market, which entered a stage of adaptation to the

new conditions, without the rigid intervention of the state, and this stage is quite successful. In April-May, the consumer inflation slowed down to 3.1% and 2.7% respectively vs 4.5% in March.

So, despite all the difficulties, Ukraine managed to maintain relative macroeconomic stability under the conditions of war and to overcome a large-scale stoppage of production and the outflow of labor resources caused by the relocation of people to safe places, having actually reversed these processes.

1.2. Key challenges

However, the war is not over, so businesses and our citizens will continue to experience its adverse impact. If the war continues until the end of 2022, 30% of Ukrainians may fall below the poverty line. According to forecasts, the fall of GDP by the end of the year may reach 30-35%. The budget deficit by the end of the year could exceed $35 billion. The total direct and indirect damage to the Ukrainian economy has already reached $600 billion and will continue to grow.

Military challenges Ukraine needs to respond to in the near future:

- *complete or partial shutdown or bankruptcy of commercial companies* due to destroyed facilities, loss and narrowing of the sales market in Ukraine, as well as abroad, and non-performed external contracts, including due to currency restrictions;
- *high unemployment rate, massive outflow of workforce abroad* and the risk of non-return of a significant part of Ukrainian citizens who went abroad in search of a temporary shelter from armed aggression;
- *changes in the workforce balance by region;*
- *blocked ports and narrow logistics*, which will continue to hinder the development of exports;
- *the destruction of supply chains* for raw materials and finished products;
- *decrease in the activity of banks* and freezing of investment projects

Challenges inherited from the flaws of the Ukrainian peacetime economy, which will also need to be responded to rebuilding and developing a new Ukrainian economy, which will have high characteristics of sustainability, European integration and economic independence:

- *commodity-based model of development*, which forms a non-parity foreign economic exchange and restrains economic growth;
- *outdated (underinvested) economy*, which reduces the competitiveness of industries due to the persistence of significant material and energy intensity of production;
- *low diversification of energy supplies* by country of origin;
- *excessive and outdated regulations* and burdensome procedures for businesses to obtain government services;
- *excessive fiscal burden on business and the population* (exceeding 45% of GDP);
- *limited access to credit and budgetary resources*, especially for SMEs;
- *low ability of small and medium-sized enterprises to export* products;
- *significant resistance of certain social institutions to economic reforms*;
- *archaic labor legislation,* formed based on the "Soviet" principles of the industrial economy, extremely ineffective in the realities of economic transformation and martial law;
- *a significant imbalance between supply and demand in the labor market*;
- *weak ability of state institutions* to enforce competitive conditions.

Challenges Ukraine must respond to on its way towards the EU integration, **internal:**

- *compliance with the Copenhagen Accession Criterion: "Effective Market Economy",* i.e., a reliably functioning market economy that is fully compliant with the economic governance system of the European Union;
- *creating conditions for deeper economic integration* with the European Union and accessing the EU Single Market;

external:

- *lack of the unanimous political support for Ukraine's European perspective among EU member states*. Skepticism requires additional political and diplomatic efforts on the bilateral track of relations;
- *the need to complete the pre-accession negotiations and to sign the Membership Agreement within the framework of the European Commission's current term of office* (until December 2024);
- *the length of the membership acquisition process,* about 10 years, which is unacceptable for Ukraine.

1.3. Key opportunities:

Ukraine has the potential to respond with dignity to all these challenges, both new and inherited, on the way towards EU integration. The whole period of our struggle for independence with the losses we have suffered: human, industrial, loss of markets and traditional partners, has not destroyed the economy of Ukraine. While losing some of our traditional advantages, we gained new ones.

Ukraine today has strong and still preserved traditional opportunities for development:

- *available own raw materials*, in particular ore and crop products (rich fertile black earth and a favorable climate), the increased processing of which will help change the commodity-based nature of the economy;
- *diversified production*, allowing to channel the growth energy of some industries towards the development and creation of others, and the upgrading of which in many sectors does not require the creation of production cycles from scratch; the re-equipment and expansion of certain production lines only will be needed;
- *geographical location*, contributing the arrangement of fast logistics and, respectively, realizing the potential of export to European countries;
- *rich intellectual capital of the country*, which in tight correlation with the creation can ensure the implementation of modern technical and technological innovation;
- *affordable electricity* at a lower price than in Europe, with a significant share of "green" energy.

In the process of post-war reconstruction, transformation and development, Ukraine has much to gain through the support of partner countries, namely:

- *accession to the EU*, which can guide post-war reconstruction efforts in Ukraine;
- *the extension of four freedoms (criteria of the European Economic Area) to Ukraine, i.e.,* free movement of goods; free movement of services; free movement of capital; free movement of labor;
- *full integration of Ukraine into the EU*, which could contribute to the EU's strategic dominance: security resilience (defense capabilities, cybersecurity, soft power are the political factors affecting the economy); a stronger economy (potential for Asian business to move to Ukraine, diversification of supply chains, reduced supply shoulder); collective know-how (innovation hub, human capital, European unity);
- *potential investment of significant resources by partner countries in the recovery of the economy of Ukraine*, which will contribute to addressing the issues of upgrading

the production facilities and reducing the material and energy intensity of production, as well as extension of value-added chains across Ukraine;

- *high level of IT development in a wide range of economic spheres and fast growth of creative industries* with a high value-added multiplier;
- *taking of certain niches in foreign markets formerly occupied by Russia and Belarus*;
- *development of logistic routes across the western border*, the development of alternative maritime transport logistics for exports of Ukrainian products;
- *elimination of technical barriers for Ukrainian products* through the implementation of the EU acquis and the conclusion of the Agreement on Conformity Assessment and Acceptability of Industrial Products (ACAA) with the EU;
- *intense industrial development in the territory of Western Ukraine*, including through the processes of relocation;
- *electricity exports to the EU* (via ENTSO-E);
- *achievement of energy independence* in terms of gas and light oil products;
- *expansion of Governmental and international programs to support business* (including the creation of microcredit and grant lines);
- *dissemination of modern and environmentally friendly technologies of production* and business practices, including among SMEs;
- *creation of conditions for the emergence of new business*, including through the realization of creative and entrepreneurial potential;
- *increased workforce mobility*;
- *development of entrepreneurial activity* and introduction of new active programs in the labor market;
- *increased access to labor markets* through the development of international cooperation in the field of employment;
- *development of the smart economy*, an inclusive labor market and the creation of ergonomic workplaces for people with disabilities

1.4 Key constraints on economic development:

The war has limited the potential of some conventional and novel capabilities.

First. High risks will persist in Ukraine for a long time, both because of the uncertain nature of the war – no one knows when and how the war will end – and because of the possibility of renewed military conflicts in the territory of Ukraine until a qualitatively new and reliable collective security system is in place. This will restrain the free inflow of capital into the Ukrainian economy.

Second. The inadequate rule of law and the associated excessively high country-specific risk significantly increase the required minimum expected rate of return on investment and, therefore, reduce the investment attractiveness.

Third. The excessive Governmental apparatus (the share of government spending as a percentage of GDP) inherited from the Soviet times limits economic growth. Still, the possibilities for significant fiscal maneuvers are limited by the historically unprecedented level of state expenditures caused by an unprovoked war of the Russian Federation against Ukraine.

Fourth. The immense financial expenditures incurred by the state of Ukraine, each citizen, and each entrepreneur further reduced the limited domestic financial capacity of both the banking system, the stock market, and the state budget that existed before the war. The impact of this factor will persist until the full economic renewal.

The following institutional constraints will also be significant:

low loyalty of workers *to the reforms* with an active position of resistance taken by trade unions, a lack of understanding of changes and needs of the modern labor market by

trade unions, limited employment opportunities for persons with disabilities, especially given an increased number of young persons with disabilities due to the war;

the need for strict compliance with the EU laws (EU acquis), comprehensive implementation of the EU acquis into national law during the pre-accession period, a complete constitutional embargo (constitutional prohibition) on decisions at the level of laws and regulations contradicting the EU legislation.

There is also a need for an "adapted" solution for Ukraine's EU accession process to address the specific challenges of post-war reconstruction, i.e., financial support and institutional innovation.

2. Tasks, objectives, and stages of the Recovery Plan for Economic Recovery and Development

The too high price that Ukraine pays for the right to be an independent state now forces everyone – both Ukrainians and the world – to change. By changing together, we will also change the Ukrainian economy.

Our task: **Economic recovery and rapid economic growth.**

Objectives:

1. **RECOVERY:** to restore a safe environment for people to live and do business comfortably in Ukraine within 12 months after the end of the war
2. **GROWTH:** to ensure that Ukraine's GDP grows from $200 billion in 2021 to $500 billion in 2032 and that the economy continues to be able to generate high rates of economic growth
3. **EUROPE:** to reach full compliance with the economic criterion of membership in the European Union and to become a full EU member. To maximize economic relations with the G7 states outside the EU.

Key reforms:

1. **Structural transformation of the economy through accelerated development of the processing industry** (attracting investment, increasing exports, import substitution)
2. **Revivification of SMEs due to deregulation**, reduced tax burden, increased access to knowledge, markets, capital, and the creation of a comfortable environment for doing business
3. **Reform of the labor market** through the introduction of market-based relations between employees and employers
4. **Implementation of the economic part of the Association Agreement between Ukraine and the EU**
5. **Reform of state-owned property management**: privatization and corporate governance
6. **Market reform**, reduced influence of monopolies and de-oligarchization of the economy
7. **Law enforcement system reform** in the field of economic crimes

2.1. Short-term tasks and activities of the stage "Wartime Economy: All for Victory!", June–December 2022.

Task 1.1. To resume the activities of enterprises as quickly as possible, ensuring the build-up of supply in the market.
Task 1.2. To simplify the regulatory environment and to expand business support programs with a focus on SMEs
Task 1.3. To support business in maintaining and expanding the employment, to encourage the return of citizens from abroad
Task 1.4. To launch the ESB as a key body to combat economic crime
Task 1.5. To start the negotiation process for Ukraine's membership in the EU and to pursue Ukraine's integration into the EU economic space

Task/Objectives/Activities
Strategic task: RECOVERY
Task 1.1 To resume the activities of enterprises as quickly as possible, ensuring the build-up of supply in the market
Activity 1.1.1 Provision of a state portfolio guarantee for 100% reimbursement of the loan for the restoration of fixed assets, including at the expense of international donors. ● The company restoring its assets shall be entitled to obtain an unsecured loan for the restoration of destroyed fixed assets ● The bank shall secure its own risks under the loan issued by the state portfolio guarantee for 100% of the amount issued
Activity 1.1.2 Leasing program for production equipment: ● Program of financing the production equipment leasing at 5% for 7 years (with 6 months of the grace period).
Activity 1.1.3 Relocation of enterprises to safe areas of Ukraine: compensation of transportation costs, priority settlement of employees, preferential lending at the expense of the state, local and regional budgets, grant assistance.
Activity 1.1.4 Abolition of critical import restrictions: abolition of currency restrictions on critical imports with simultaneous return of customs taxes to pre-war status
Activity 1.1.5 Implementation of the policy for the procurement of goods, works and services for recovery through Prozorro: ● All procurements for the recovery, including at the expense of donor funds, shall be made through the Prozorro system; ● In procurements at the expense of donors, it is recommended to apply a preferential correction of 15% to the bid price of Ukrainian bidders
Activity 1.1.6 Creation of the Prozorro.Aid platform for direct assistance to businesses from companies/entrepreneurs to restart business (similar to the peer2peer lending system).
Activity 1.1.7 State production order and preferential crediting for procurement of critical engineering products (construction equipment, agricultural, transport engineering, school buses, etc.), state order for production of light industry goods to meet the needs of the AFU.
Activity 1.1.8 Cancellation of import duties on raw materials and inventories that are not produced in Ukraine or are produced in quantities significantly smaller than needed by industries, according to the list defined by the CMU.
Activity 1.1.9 Provision of tax and customs privileges for the recovery of destroyed/damaged industrial enterprises, similar to the privileges for industrial park members: channeling the income tax to rehabilitation projects (for 10 years), cancellation of VAT and import duty on new foreign equipment and components,

reducing the cost of external financing through the provision of state guarantees; covering of a part of the interest paid on loans.

Activity 1.1.10 Extending the moratorium on the application of trade protection measures to the trade in Ukrainian products (including metal products) by reaching agreements with trading partners.

Activity 1.1.11 Organization of transparent work on the timber market: finalization (in view of the proposals made by specialized associations) and adoption of the draft Law of Ukraine on Timber Market in order to prioritize the provision of raw materials to domestic wood processors.

Activity 1.1.12 Confirmation of compliance of the logging in Ukraine with the EUTR regulations:

- negotiations with the European Commission (to guarantee that logging complies with the approved forest management plans, all logging processes are supervised, logging tickets are issued, etc.);
- development of a mechanism under which the State Forestry Agency will provide access to classified data for third parties (auditing organizations/company auditors) at the official request without the possibility of further dissemination of such data.

Activity 1.1.13 State guarantee and/or war risk insurance.

- The enterprise restoring the destroyed production facilities shall receive a state guarantee to cover expenses in the case of repeated destruction as a result of military operations. It is detailed in the section of the "Financial system operation, reform and development" group in paragraph 2.1.1.

Activity 1.1.14 Increased supply on the road freight transportation market. Increase Ukrposhta's own fleet by 700 trucks to overcome the shortage of supply in the intercity freight transportation market.

Activity 1.1.15 Introducing a rule on the sale of certain types of raw materials by extraction companies exclusively on organized commodity markets (exchanges) in Ukraine.

- Amending the Resolution of the Cabinet of Ministers of Ukraine on approval of the list of goods to be sold exclusively on organized commodity markets as appropriate

Activity 1.1.16 Setting quotas and banning the export of scarce raw materials from Ukraine, in particular:

- Introduction of a complete moratorium on the export of scrap metal from Ukraine (in all directions without exception for the duration of martial law in Ukraine) and for six months after its official termination
- Amending the Law of Ukraine on Peculiarities of State Regulation of Activities of Entrepreneurial Entities Related to the Sale and Export of Timber to prohibit the export of untreated timber (industrial timber (IT) and non-industrial timber (NIT) in the form of logs, cord woods) outside the customs territory of Ukraine in the customs export regime during martial law and for one year after its end or cancellation.

Activity 1.1.17 Reducing the market power of retail operators through the state regulation of retail sales by adopting a relevant law (in order to reduce the market power of retail chains in relation to suppliers). Regulation of the deadlines of payment for delivered products and basic delivery terms and conditions.

Activity 1.1.18 Preparation for privatization of state non-strategic assets. Approval of the list of state strategic assets. Simplification and acceleration of the procedure for transferring enterprise assets from the management bodies to the SPFU, based on clear criteria excluding ambiguous interpretations. Adoption of a quick procedure for selling all other assets with an obligation to resume the company's operations (with a 3-5 year commitment regarding the commodity output).
Activity 1.1.19 Centralized function of the owner of state strategic assets and consolidation of such assets to improve the efficiency of their management. Establishment of a business asset management company, which will be created in line with OECD requirements and will centralize the management of assets in accordance with individual industries/divisions. Depriving ministries and agencies of business management functions inappropriate to them by the end of 2022. Termination of the legal form of state-owned enterprise.
Activity 1.1.21 Introduction of the management of public sector entities in accordance with the OECD guidelines for corporate governance at enterprises where the state is a shareholder (founder, member). Adoption of amendments to the laws on management of state-owned property and improved corporate governance of legal entities where the state is a shareholder (founder, member).
Task 1.2 To simplify regulatory environment, expand business support programs focused on small and medium-sized businesses
Activity 1.2.1 Introduction of efficient regulation through deregulation based on the principles of a risk-oriented approach**:** ● Promotion of declaratory principle of business startup ● Introduction of a moratorium upon inspections, replacement of inspection activities with insurance and audit ● Transition to inspections based on risk-oriented approach only, with the usage of risk analysis program methods ● Launching a large-scale deregulation ● Establishing the foundation for business self-regulation development
Activity 1.2.2 Additional content for Diia.Business portal regarding support for businesses, increase of specialized consultation on activity licensing, supervision/control, disclosure of relevant information on the existing support from the government and international partners.
Activity 1.2.3 Introduction of the declaratory principle regarding permits for all types of construction works at production sites within their territory, as well as for construction of agricultural processing companies on agricultural lands.
Activity 1.2.4 Development of financial instruments upon demand: ● Affordable mortgage 7-10-20 (7% per annum with the 10% first deposit for 20 years), including mortgages aimed to stimulate hired workforce to return. ● Affordable financing to purchase commercial real estate (financial leasing)
Activity 1.2.5 Development of cross-interaction (twinning) between clusters, communities, and regions (inside Ukraine and with allied countries) via a cross-platform.
Activity 1.2.6 Provision of banking guarantees to Ukrainian manufacturers to participate in international procurements. Details in section of "Financial System Operation, Its Reformation and Development" group, clause 2.1.6.

Activity 1.2.7 Introduction of a micro grant program for small and medium-sized-businesses (nonrepayable) in two tranches:
- *first* – to cover urgent needs for business operation;
- *second* – in case of creating new jobs.

Activity 1.2.8 Expansion of the 5-7-9% program for small and medium-sized businesses:
- program to access cheap debt capital;
- long-term lending;
- simplified access for small and medium-sized businesses to governmental support through expansion of the list of business entities not restricted in governmental support provision;
- improvement of mechanisms to provide state guarantees to small and medium-sized businesses.

Activity 1.2.9 Introduction of a declaratory principle to register individual entrepreneurs through a special mode where an entrepreneur is registered under a declaratory principle and pays a fixed amount per month for patent only (taxi drivers, refurbishment services, caregivers etc.).

Task 1.3 To support businesses in preservation and increase of employment, stimulate citizens to return from abroad

Activity 1.3.1 e-Booking project
- Online application for booking
- Ministry of Defense approval within 24 hours
- Tacit consent principle
- Uniform database of booked employees
- Marginal conscription percentage per company
- Booking deficit military professions for managing positions (no more than 10% of the company staff)
- Booking option for individual entrepreneurs who paid taxes and single social tax in the last 6 months
- Expansion of the list of booking options to book legal entity employees regardless of form of ownership, not limited by mobilization task only (Article 25 of the Law of Ukraine "On Mobilizational Preparation and Mobilization")

Activity 1.3.2 e-Business Trip project
- Uniform database of individuals liable for military service who go on business trips abroad + online upload of business trip orders and other documents
- Fixed duration of business trips
- Cash collateral for an employee on a business trip (30 minimal salaries)
- Disqualification of company directors from executing business trip orders abroad in case of non-return
- Business trip duration no more than 14 days
- Number of employees on business trips – no more than 10% of the average-level company staff in the last 3 months (no more than 20 persons)

Activity 1.3.3 e-Job Vacancy Marketplace project
- Joint project of the State Employment Service and private employment agencies
- Fast staff selection by the State Employment Service
- Automated CV creation
- Mandatory publication of CVs for IDPs and other social beneficiaries

Activity 1.3.4 Liberalization of labor legislation through transition to contractual regulation of relations between employers and employees:
- For enterprises with up to 250 workers – on permanent basis;
- For enterprises with over 250 workers – for the period of post-war renovation.

Activity 1.3.5 Compensation for employer's labor costs in employing IDPs as a result of combat operations during martial law in Ukraine *(payment of compensation to employer in the amount of UAH 6,500 per month for 2 months of IDP employment).*

Activity 1.3.6 Introduction of short-term reskilling programs for IDPs, matching IDP work profile with vacancies available on the market.

Activity 1.3.7 Update of the state education process principles starting from 2023, considering the challenges of martial law economy. Approval of the Procedure of qualification certification and awarding qualification to persons acquiring professional (technical) education.

Activity 1.3.8 Introduction of grants for temporary accommodation rent for citizens with children who temporarily moved abroad due to military aggression, and who list housing in Ukraine, or whose housing requires major overhaul.

Activity 1.3.9 Introduction of paid public and community service works for unemployed, including those who returned from abroad.

Activity 1.3.10 Development of fast reskilling programs for employees to change occupation and forward talent to sectors with larger demand as a part of solution to ease unemployment caused by war.

Activity 1.3.11 Application of superficies to rebuild property of housing and non-housing fund, social infrastructure etc. with imperative conditions of land use, fast transfer of ownership rights to the whole work results of unscrupulous real estate developers.

Activity 1.3.12 Improvement of interaction between the State and IDPs through the Diia portal, including those remaining in the occupied territories and active combat zones.

- Improved registration procedure for unemployed and improved procedure of unemployment benefit payments.
- Change of approaches towards selection of suitable job for unemployed by considering commuting, accessibility, and salary depending on the unemployment duration.
- Introduction of the Career Guidance Institute, including career consulting, specialized career consulting, and employer advisers at the State Employment Service.
- Change of approaches in the work with employers, filling available vacancy data base based on the new modern form of information submission convenient for employers.
- Introduction of a uniform vacancy portal on the State Employment Service resources through expansion of permanent cooperation and vacancy exchange with private employment agencies.

Activity 1.3.13 Improvement of the system of collective contractual regulation of social and labor relations. Introduction of the system of promotion of branch (interbranch) contracts and its individual provisions to cover all employers regardless of their form of ownership, who operate in the respective branch(es) (type(s) of economic activity).

Activity 1.3.14 Reduction of load upon employers, including investors, through establishment of equal requirements to wages and simplified procedure to obtain permits to use foreign workforce.

Strategic task: EUROPE

Task 1.4 To initiate negotiation process regarding Ukraine's EU membership and continue integration of Ukraine in the EU economic space.

Activity 1.4.1 Special consultations with the European Commission (a special session of the Ukraine-EU Parliamentary Association Committee for trade) to define the amount of coverage within the frameworks of the future negotiation process in the following focus areas:

- Public procurement
- Free movement of goods

• Right of establishment and freedom to provide services • Corporate rights • Intellectual property rights • Competition policy
Activity 1.4.2 Special consultations with the European Commission and EU Member States (or the Presidency of the Czech Republic in the Council of the EU) regarding the future negotiation process in the following focus areas: ● Free movement of labor ● Economic and monetary policy ● Social policy and employment (in terms of employment) ● Entrepreneurship and industrial policy
Activity 1.4.3 Implementation of the economic part of the EU-Ukraine Association Agreement: ● Organization of Special Meeting of Ukraine-EU High Level Dialogue on horizontal matters and individual industrial sectors (Industrial Dialogue) to coordinate focus areas of EU support in re-launching relocated companies within a relocation program, remaining in the territory controlled by Ukraine. ● Commencement of negotiations on ACAA Agreement. Work with the European Commission to obtain positive opinion on implementation of Public Procurement Roadmap Phases I and II (recommendation of the Ukraine-EU Association Committee for trade).

2.2. Medium-term tasks and activities of the stage "Recovery, Restart of Economy and Institutions", 2023–2025.

Task 2.1. To reduce regulatory and administrative load upon businesses and introduce new instruments of support for small and medium-sized businesses.

Task 2.2. To rebuild destroyed and damaged production facilities, build new production facilities, particularly for local raw materials processing, thus expanding added value chains in Ukraine.

Task 2.3. To facilitate full effective employment and maximizing personal potential in labor activities.

Task 2.4. To expand access to markets for high added value products, particularly to ensure full access to G7 and EU markets.

Task 2.5. To host pre-membership negotiations, deepen economic integration in the EU and sign a membership agreement in December 2024.

Task 2.6 To review the level of market concentration in key economic branches with consideration of actual control structure.

Task/Objectives/Activities
Strategic task: RECOVERY
Task 2.1. To reduce regulatory and administrative load upon businesses and introduce new instruments of support for small and medium-sized businesses

Activity 2.1.1 Effective regulation of access to markets:
- Ensuring practical implementation of business self-regulation processes, delegation of state functions to self-regulating organizations.
- Introduction of an exclusive list of regulation tools for market access based on risk-oriented approach, unification and digitalization of tools.
- Complete digitalization of permit and license issuance procedures.
- Uniform mechanisms of regulatory activities, including by means of experimental AI application to create regulatory effect acts.

Activity 2.1.2 Transformation of state supervision:
- Refocusing the state supervision (control) system from punishment to service approach (consulting, prevention, voluntary insurance).
- Improvement of the uniform electronic interaction system – introduction of a new functionality of the Informational Automated System for State Supervision and Control.

Activity 2.1.3 Improvement of mechanism to protect businesses from the state:
- Institutionalization of the Business Ombudsperson Council
- Renewal of Annual Business Cost Assessment, polling by Regional State Administrations (Regional Military Administrations) and territorial communities on business development, needs and support programs, preparation of research of entrepreneurship and export development
- Ensuring equal tender conditions for VAT payers and non-payers

Activity 2.1.4 Expansion of business support programs:
- Extending the practice of supply chain financing (factoring, reverse factoring, loans against stock etc.).
- Development and adoption of legislative framework to create conditions for operation of alternative business financing sources (peer-to-peer, crowdfunding).
- Launching a program for banking institutions to finance exporters including through the mechanism of export credit agency.

Details in section "Financial System Operation, Its Reformation and Development", clauses 2.1.6, 2.1.7

Activity 2.1.5 Reduction of tax load upon businesses:
- Replacement of vast fiscalization (payment operations register and electronic payment operations register) with fiscalization by the criterion of limit excess risk-taking.

Strategic task: GROWTH

Task 2.2. To rebuild destroyed and damaged production facilities, build new production facilities, particularly for local raw materials processing, thus expanding added value chains in Ukraine.

Activity 2.2.1 Rapid development of new private industrial production facilities on the basis of investment menu offered by the State, within the frameworks of economic indicative planning. Planning demands, available production capacities and raw materials, calculation of the necessary new capacities and raw materials, shaping a set of incentives and

guarantees for investors[1] to transform the energy of growth of some branches into the development and emergence of new ones.

Activity 2.2.2 Development of industrial park networks, including:
- Design of production facilities in the territory of industrial parks.
- Extension of the list of features of entities where industrial parks could be established, including facilities of existing industrial sites (brownfield).
- Introduction of an option to register industrial parks by not only newly-founded legal entities but also those already in operation, on condition of establishing new production facilities to obtain a legal status of an industrial park.

Activity 2.2.3 Creating conditions for inflow of tech companies to Ukraine and cooperation of foreign customers with domestic entities:
- Proactive engagement of investments from international companies to establish R&D departments and offshoring of IT departments in Ukraine.
- Establishment of R&D tech parks that will provide a space for cooperation/collaboration and a supporting infrastructure for entrepreneurs.

Activity 2.2.4 Creating a national economy structural transformation fund (Reconstruction and Development Bank) to provide financial and credit support for new highly productive manufacturing facilities/modernization of existing facilities in processing industry.

Activity 2.2.5 Launching a program to support machine-building companies (railcar building, ship building, instrument engineering, car building etc.) to establish production of critical assembly branch of the machine-building (railcar building, ship building, instrument engineering, car building) industry, inter alia, to replace imported components produced in the Russian Federation.

Activity 2.2.6 Creating conditions for post-war renovation of steel industry:
- Increasing the share of "green production" of steel industry (focus on production of high-quality steel and metal to be exported to foreign markets).
- Extension of liberalization of metal and metal products trading with the G7 and EU countries for 10 years (specifically in the part of moratorium to apply anti-dumping duty and other trade protection measures).

Activity 2.2.7 Active integration of domestic software products in economic sectors and public administration:
- Implementation of smart technologies to restore and upgrade infrastructure branches.
- Grants and loans to stimulate introduction of digital technologies in public administration at community level.
- Creation of state sponsorship to develop innovative IT products (focused on military-tech and aggrotech)).

Activity 2.2.8 Reduction of fiscal load upon businesses and population to the level that stimulates economic growth, namely no more than 30% of GDP

[1] ***Tasks and measures of state policy aimed to stimulate and create favorable conditions for structural transformations and development of agricultural and industrial complex, construction, power engineering, mining industry, creative industries, as defined in the respective sections of this document***.

Activity 2.2.9 Ensuring individual companies from TOP 15 of state enterprises go public (non-controlling stock, no more than 49% of authorized capital)
Activity 2.2.10 Privatization of all state non-strategic assets
Activity 2.2.11 Completion of centralization of ownership role and consolidation of state strategic assets by increasing efficiency of management for such assets
Task 2.3. To facilitate full effective employment and maximizing personal potential in labor activities.
Activity 2.3.1 Introduction of new active employment programs and monitoring of their effective implementation as a tool to prevent job cutting and unemployment in case of production decline.
Activity 2.3.2 Introduction of a mobility program by providing support in moving to a job in another region. Extension of contractual frameworks with the EU Member States on mutual recognition of qualification and social security for mutual recognition of periods of insurance.
Activity 2.3.3 Opening of a national labor market for highly qualified foreign specialists.
Activity 2.3.4 Introduction of new instruments in the operation of the State Employment Service to stimulate (expand) cooperation with employers through the application of individual approaches and IT: ● Provision of employment online for the unemployed. ● Tracking the employment of unemployed for 2 years after hiring. ● Change of approaches in the operation and structure of the State Employment Service aimed at providing high-quality customer-oriented services (maximal digitalization of services provided by the State Employment Service).
Activity 2.3.5 Introduction of an economic reintegration program for citizens of Ukraine who worked abroad for a long time. Establishing an interactive informational resource to inform Ukrainian labor migrants on employment conditions, activities of private employment agencies, opportunities to return and find jobs, providing links to official foreign web resources in the respective subjects.
Activity 2.3.6 Establishment of a modern informational and analytical system of the State Labor Service of Ukraine. Automation of processes based on data of hosted control measures and review of applications from citizens and employers, preparation and automation of electronic document processing between departments of the State Labor Service of Ukraine and its territorial agencies, as well as digitalization of administrative service provision.
Activity 2.3.7 Settlement of operation of private employment agencies, introduction of international standards (transition from licensing to certification of all private employment agencies) by adoption of a respective draft law. Establishing a register of employment agencies (providing employment in Ukraine and abroad, and also providing out staffing services).

Activity 2.3.8 Development of a system of education and training for adults, provision for further development of informal education and professional qualification confirmation:

- Introduction of training in partial occupational qualifications.
- Development and introduction of occupational standards.
- Development of National Classifier DK 003 "Classifier of Occupations" according to the International Standard Classification of Occupations (ISCO-08).
- Revision of the list of occupations and specializations where a training voucher may be issued to maintain competitiveness on the labor market in conditions of post-war economy recovery.
- Introduction of remote and dual forms of occupational training for the unemployed.
- Introduction and implementation of an experimental project for using an informational labor market system in Ukraine to monitor the labor market development indicators.

Task 2.3.9 Regulation of household economic activities through development and approval of respective draft law.

Task 2.4 To increase access to the task markets for products with high added value, in particular, to provide for full access to the G7 and EU markets.

Activity 2.4.1 Enhancement of the innovative activity of the producers. Financial stimulation of cooperation with research institutions and higher education establishments, introduction of the research tax credit, support of participation in the EU programs, export crediting and insurance programs expansion. Detailed in the group section "Financing of the financial system, its reforming and development", items 2.1.6, 2.1.7

Activity 2.4.2 Carrying out of the "Trade with Ukraine" communication campaign, organization and financing of joint stands at the priority international exhibitions with branding of the "Trade with Ukraine".

Activity 2.4.3 Providing for transition to innovative economy with the use of digital technologies:

- development of innovation priorities for providing for transition to innovative economy;
- creation of conditions for development of export of products and innovative economy technologies;
- development of an innovative economy recovery stimulation system (realization of the relevant incentives in the budget and tax as well as monetary and credit policy, tasked (concessional) crediting of the innovative lines of development according to the innovation priorities, fiscal stimulation of the startups, innovative and pilot enterprises;
- improvement of the intellectual property protection system.

Activity 2.4.4 Improvement of export promotion services for Ukrainian producers through the SE (state enterprise) "Entrepreneurship and Export Development Office", in particular, in respect of carrying out export readiness assessment, foreign markets analysis, consulting for development of the export potential, looking for partners on the foreign markets, consultations in respect of participation in international public procurement etc.

Activity 2.4.5 Provision of exporters with financial resources:

- In the sphere of provision of services: partial state financing of the IT startups oriented towards foreign markets, through the Innovations Development Fund;
- In the sphere of production of goods: through the Export-Credit Agency which shall provide for financing through the mechanism of a quasi-state guarantee for realization of short-term and long-term projects.

Detailed in the group section " Financing of the financial system, its reforming and development", item 2.1.6

Activity 2.4.6 Providing for access to the product markets, in particular, full access to the G7 and EU markets:

- complete opening of the G7 and EU markets for Ukrainian goods;
- state support in goods certification abroad;
- filling with Ukrainian products of the G7 and EU market niches which were held by the products from RF (Russian Federation) and RB (Republic of Belarus);
- structured dialogue with the EU in respect of using an individual approach to the Ukrainian producers within the framework of implementation in the future of the Carbon Border Adjustment Mechanism (CBAM);
- removal of any technical barriers to integration of Ukrainian producers into the Single European Green Market, in particular, by expansion of the relevant certification and conformity confirmation procedures, improvement of the level of awareness of the producers in this sphere, support of the producers of more environmentally friendly products, improvement of the ability of the Ukrainian producers to take part in the green (power-efficient, sustainable) public procurement.

Activity 2.4.7 Improvement of the investment environment. Ratification of the Convention on Recognition and Enforcement of Foreign Court Judgments in Ukraine.

Activity 2.4.8 Stimulation of transition to biotechnological industrial methods and products. Carrying out monitoring and stimulation of enterprises using the biotechnologies and biochemical production.

Activity 2.4.9 Development of the Ukrainian forestry, reduction of the raw materials cost price:

- renewal of the State forests management strategy for up to 2035;
- implementation of the mechanism of transfer of forests title from communal property to public domain and approval of the unified rules of forestry management for all users of forests;
- development and implementation of the program of upgrading and reforming of the sector of forestry (with involvement of international financial aid) which will be aimed at: planting of new forests and their maintenance, reforming of the sphere of wood procurement, 100% wood certification, purchase of new equipment and machinery for planting, maintenance of forests and procurement of wood;
- change of approaches in the sphere of state regulation of the activity of the forestry enterprises for directing more of their own resources to sustainable forestry management and reduction of the wood cost price by: revision of the forestry activity taxation systems, cancellation of some tax and rent types, direction of 50% of the profit of the forestry enterprises to upgrading of the equipment, forests multiplication (planting).

Activity 2.4.11 Organization of transparent work of the wood market and providing for the cascade principle of wood sales:

- development of the Law of Ukraine "On wood market" in respect of support of the Ukrainian wood processors and furniture manufacturers;
- providing for finalization of the electronic wood stocktaking and its recognition by the EU monitoring companies in Ukraine (as the basis for confirmation of the "due bona fide system" EUTR);

- introduction of the Wood Sales Regulations in respect of implementation of open and transparent procedures of sales on the basis of Prozorro.Sales.

Activity 2.4.12 Development of the Ukrainian production of critical components required for woodworking and furniture manufacturing industries (chemical raw materials for the plates manufacturing industry, production of decorative paper, furniture fittings, packing materials, mirrors, furniture glues and other components not produced in Ukraine), also by development and approval of the bill "On support of woodworking and furniture manufacturing industries in Ukraine" as well as tasked financial support programs.

Activity 2.4.13 Creation of conditions for development of talents and export in the sphere of creative industries: implementation of creative industries support activities that will provide for enhancement of the export and production capacity of the creative industries, creation of favorable law and tax regime for the sphere of creative industries (under the Diia.City model), support of infrastructure projects in the sphere of creative industries.

Strategic task: EUROPE

Task 2.5 To conduct pre-joining negotiations, extend economic integration with the EU and sign the membership agreement in December of 2024

2.5.1 Initiation and conducting of the negotiation process in respect of the EU membership of Ukraine. Work within the framework of the structured negotiation process and conducting of the pre-joining negotiations along the following lines:
"Basic provisions" cluster
Chapter 5 – Public purchases
"Domestic market" cluster
Chapter 1 – Free movement of goods;
Chapter 2 – Freedom of workforce movement;
Chapter 3 – Right of establishment and freedom of provision of services;
Chapter 6 – Corporation law;
Chapter 7 – Intellectual property rights;
Chapter 8 – Competition policy;
"Competitiveness and inclusive growth" cluster
Chapter 17 – Economic and monetary policy;
Chapter 19 – Social policy and employment (in respect of employment);
Chapter 20 – Entrepreneurship and industrial policy.

2.5.2 Implementation of the economic part of the Association Agreement between Ukraine and EU:
- harmonization of the technical regulation system, mutual recognition of the conformity certificates (visa-free regime for the industry);
- creation of a mutually open public purchases market for Ukraine and EU.

2.5.3 Creation of a multi-cluster mechanism of economic Ukraine – EU partnership:
- conducting of the updated High level Ukraine – EU dialogue in respect of horizontal issues and separate sectors of industry;
- implementation of strategic partnership in the sphere of raw materials;
- Ukraine's joining the Accumulator and Hydrogen alliances of the EU.

Task 2.6 To carry out review of concentration level of the markets in the key sectors of economy taking into account the actual control structure

2.6.1 Development of the National strategy of development and protection of economic competitiveness in Ukraine
2.6.2 Improvement of the legislation on protection of economic competitiveness taking into account the standards and best European practices
2.6.3 Introduction of the system of dynamic indices and monitoring of the preconditions and the state of competitiveness environment in the national economy.

2.3. Strategic tasks and activities of the stage "Structural Upgrading and Comprehensive Integration into the EU" 2026–2032.

Task 3.1. To increase significantly export of processing industry products with a higher added value part

Task 3.2. To provide for transition of the economy to new innovative development trends

Task 3.3. To provide for functioning of a flexible and business-oriented regulatory system

Task 3.4. To provide for adaptation of the economy of Ukraine to the criteria required for integration with the EU, to gain full-fledged membership in the EU

Task/Objectives/Activities
Strategic task: GROWTH
Task 3.1 To increase significantly the export of processing industry products with higher added value part
Activity 3.1.1 Giving additional impetus for accelerated development of the processing industry: ● introduction of export duties for the critical raw materials gradually within 3 years for enhancement of processing capacity; ● cancellation of the VAT reimbursement for raw stock goods; ● introduction of an export promotion regime for the processing industry products depending on the stage of processing.
Activity 3.1.2 Building of a full cycle of furniture manufacturing. Upgrading and creation of enterprises engaged in production of components for woodworking and furniture manufacturing industries with deep raw materials processing and building of production chains for all components required for the industry. Simplification of the export of the Ukrainian woodworking industry products and furniture and systemic cooperation of the Government and the businesses with the key players on the furniture retail market (IKEA, JYSK etc.) for sustainable furniture manufacturing contacting growth in Ukraine.
Task 3.2 To provide for functioning of a flexible and business-oriented regulatory system
Activity 3.2.1 Introduction of efficient regulation on the basis of the risk-oriented approach and the principles of the Small Business Act for Europe in respect of regulation and support of the SMB (small and medium businesses): ● introduction of systemic monitoring of the efficiency of regulatory acts; ● review on the basis of the results of monitoring of the normative and legal acts, market access instruments on an on-going basis.

Task 3.3 To provide for transition of the economy to new innovative development trends
Activity 3.3.1 Increasing of the level of innovativeness of domestic products. Definition of the sectoral SMART-specialization in each region according to the EC methodology. Introduction of the mechanisms of realization of innovative industry and inter-industry priorities in the regions, also through a promotion system, in particular, on the 3S platform, and creation of the corresponding incentives
Activity 3.3.2 Building of the 4.0 industry ecosystem and clusterization. State support of the 4.0 industry sector development, acceleration of introduction of the 4.0 industry concept, support of development of cluster production chains and internationalization
Activity 3.3.3 Prioritization of the environmentally neutral production enterprises and closed cycle production enterprises. Development of mechanisms of stimulation of producers belonging to the "green" sector of export to the EU, stimulation of reconstruction of ruined industrial enterprises/infrastructure using environmentally neutral technical solutions
Activity 3.3.4 Full harmonization of the rules on the labor market with the EU standards ● introduction of analysis and forecasting of the need for workforce in the medium-term perspective; ● introduction of a system of analysis and forecasting of qualifications on the labor market on the basis of the BIGDATA program product; ● introduction of the National DK 003 "Classifier of professions" classifier according to the International standard classification of occupations (ISCO-08); ● harmonization of the occupational and education standards of Ukraine with the EU standards.
Activity 3.3.5 Creation of capabilities and building of cooperation of the SES (State Employment Service) with the employment services of the EU countries (exchange of information on labor migrants, access to vacancies, selection of workers for foreign employers on the basis of bilateral agreements between employment services).
Activity 3.3.6 Reduction of the number of permits, issue of a single document entitling foreigners and stateless persons to working and temporary residence in Ukraine.
Activity 3.3.7 Lessening of the state participation in the social dialogue ● non-interference of the state in the dialogue between the trade unions and the employers, departure from overregulation in the matter of regulation of collective labor contracts, lessening of involvement of the state; ● the state performs consulting on the issues of labor remuneration and labor relations exclusively in the budgetary sector.
Activity 3.3.8 Conclusion of agreements on mutual recognition of qualifications with all EU member-states as well as on social security for mutual acceptance of the insurance period.
Activity 3.3.9 Launching of a requalification (reskilling) program. Creation of a public-private marketplace platform for the labor market which will help to solve the main problems of the unemployed: ● finding a vacancy/profession corresponding to the skills or experience;

● understanding of the demand and supply trends and forecasts on the labor market; ● getting personalized vacancies; ● requalification for some other profession and, potentially, getting state financial aid for requalification training.
Strategic task: EUROPE
Task 3.4 To provide for adaptation of the economy of Ukraine to the criteria required for integration with the EU, to gain full-fledged EU membership
Activity 3.4.1 Realization of the pre-joining economic program taking into account the provisions of the Stability and Growth Pact as well as the EU economic management system which will be in effect during the period of preparation of the program of development/execution of the macroeconomic matrix. Preparation of the report on the progress in realization of the program.

3. Main expected results and key indicators of their measurement

3.1. Short-term expected results

"Wartime economy: Anything for victory!" stage, June – December of 2022.

- stopping the drop in goods production and provision of services
- urgent reconstruction of the partially or fully ruined industrial/infrastructure facilities
- restoration of the disrupted product supply chains
- maintenance of the control over inflationary processes
- transparency and openness of the process of purchases for the account of the donors in case of restoration projects
- prompt simplification of the existing regulatory environment
- better access of the persons remaining in the occupied territory and persons staying in the territory of military action to the services of the SESIDP (state employment service for internally displaced persons)
- preserving jobs

3.2. Medium-term expected results

"Recovery, restarting of the economy and institutions" stage, 2023-2025.

- increasing of the volumes of goods production (in the processing industry in the first place) and services, construction of new innovative enterprises
- development of the raw material base
- enhancement of the logistics capacity
- export development
- carrying out upgrading of the production facilities
- increasing of the science intensiveness of production
- employment growth
- foreign investments growth
- improvement of access to the "cheap and long" money for the SMB
- legalization of labor relations
- implementation of the norms of the European legislation in the sphere of economy
- fulfillment of all economic prerequisites for opening of the four freedoms for Ukraine in respect of free movement of goods, free movement of services, free movement of capitals, free movement of workforce and signing of the agreement on Ukraine's joining the EU (December of 2024).

3.3 Strategic expected results

"Structural Upgrading and Comprehensive Integration into the EU" 2026–2032

- jump from transition economy to developing economy
- full-fledged EU membership of Ukraine and completion of the European economic integration of Ukraine
- entry to the top-10 world metal, agricultural products and IT services exporters
- reduction of the resource intensity of the economy
- innovations development
- import substitution in the sphere of equipment and defense technology
- maximum digitalization of the interaction between the state and the economic entities
- completion of the Green Transition by Ukraine
- creation of a developed small and medium business ecosystem
- achievement of full employment of population
- improvement of the population welfare level
- reduction of the shadow economy down to an economically safe level

3.4. Key strategic target tasks accomplishment efficiency indices (by the task accomplishment periods)

Strategic targets/task	Task accomplishment periods			Key efficiency indices
	07.2022-12.2022	*2023-2025*	*2026-2032*	
Strategic task 1. RESTORATION				
To restore as promptly as possible the activities of enterprises providing for increase of proposition on the market				● Number of enterprises that were transferred and resumed activity in the safe regions ● Industrial production index ● Rate of change in the GDP volume ● Business activity index ● CPI
To simplify the regulatory environment, extend the existing business support programs with the focus on the SMB				● Additional volume of financial resources accessible for the SMB, billion UAH
To support the businesses in the issues of jobs preservation and employment growth, stimulate the return of citizens from abroad				● Number of persons employed through the SES ● Number of IDPs (internally displaced persons) employed with the use of the program of compensation to the employer of a part of labor remuneration costs ● Level of satisfaction with the SES services ● Positive requalification (reskilling) program conversion factor

To lessen the regulatory and administrative load on the business and to implement new support instruments for small and medium businesses				● Average level of competitiveness in the purchases relating to restoration ● Total estimated economy calculated according to the costs monetization method (economy for the business)
Strategic task 2. GROWTH				
To reconstruct the ruined and damaged facilities, construct new production enterprises, in particular, for processing of local raw materials, expansion of the added value creation chains in Ukraine				● Processing industry production index, including: production indices in the mechanical engineering industry; metallurgical production, finished metallic articles production apart from machinery and equipment; foodstuffs, drinks and tobacco products; wood processing and production of articles from wood and cork apart from furniture; production of articles from straw and vegetable materials for weaving, manufacturing of furniture ● GAV ICT index (gross added value in the information and communication technologies) ● Share of the GAV ICT in the GDP ● Share of the processing industry in the GDP ● Share of the GFAA (gross fixed assets accumulation) in the GDP ● Fixed assets depreciation ● Complexity Index
To provide for full employment in production, realization of the individual abilities in the labor activity				● Informally employed population by the end of the period ● Level of unemployment ● Number of employed aged 15-70 ● Level of participation in the workforce of population aged 15-70

To improve the access to the markets of products with high added value, in particular, to provide for full access to the G7 and EU markets				● Rate of change in the goods export volumes ● Share of the foodstuffs, drinks and tobacco products in the export. Share of the mechanical engineering industry products in the goods export ● Share of the metallurgy products in the goods export ● Share of the furniture manufacturing industry products in the goods export ● Share of the ICT services in the export ● Volume of direct foreign investments ● Share of the scientific research and development costs in the GDP ● Share of the number of industrial enterprises that implemented innovations (products and/or technological processes) in the total number of industrial enterprises
To increase significantly the export of processing industry products with higher added value part				● Place in the world producers rating (agro/metallurgy/furniture industry, ICT, DIS (defense-industrial sector)
To provide for transition of the economy to new innovative development trends				● GDP per capita (in fixed prices), US dollar ● Share of the import in interim consumption ● Level of the DGP digitalization ● Place of Ukraine in the rating according to the Global innovation index ● Work productivity in the industry ● Human development index
To provide for functioning of a flexible and business-oriented regulatory system				● Share of the SME in the export ● Percentage of the surviving enterprises established 5 years ago
Strategic task 3. EUROPE				

To initiate the negotiation process in respect of EU membership of Ukraine and continue the integration of Ukraine with the economic space of the EU (or to provide for the most efficient implementation of the Association Agreement between Ukraine and the EU)				
To conduct pre-joining negotiations, extend economic integration with the EU and sign the membership agreement in December of 2024				● Official notification of the EU party about the progress in negotiations [Communication from the Commission to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions on EU Enlargement Policy regarding Ukraine]
To provide for adaptation of the economy of Ukraine to the criteria required for integration with the EU, to gain full-fledged EU membership				● Decision of the European Commission, recommendations of the EP and the EU Council in respect of conclusion of the European Agreement with Ukraine (decision that will cover compliance with all Copenhagen criteria is beyond the limits of this subgroup) ● Share of the EU countries in the goods and services export

Key challenges "Education and science"

Infrastructure challenges	Staffing challenges	Content challenges	Funding challenges
• Ruined/damaged infrastructure of the educational institutions; • Imperfect security infrastructure of the existing educational institutions; • Lack of access to computer equipment, software and high-quality Internet for many participants in the educational process, which hinders access to distance learning; • Lack of a network of qualification/certification centres, and underdevelopment of the network of adult education institutions; • Ruined/damaged research infrastructure, loss of scientific and technical information and data and collections and archives; threat to the operation of strategically important research infrastructure facilities.	• Human victims among employees of educational institutions, scientific institutions • Drain (migration abroad, movement within the country) of teaching and scientific personnel, shortage of qualified teaching staff; • Low level of personnel's conformity to the needs of the labour market, difficulties in employment for certain strata of the population; • A decrease in the number of people acquiring Vocational Education and Training as well as a dramatic change in the population's demographic composition because of to the war, with a simultaneous increase in the needs for qualified workers on the labour market; • Substantial changes in the contingent of students and teaching staff, caused by the war (IDPs, refugees, persons staying in the temporarily occupied territories).	• Outdated curricula; • The content of early childhood and preschool education and the educational environment do not comply with the European quality framework for ECEC, and the principles of inclusion; • Insufficient conformity of the competencies of graduates of VET institutions to the requirements of the modern labour market; • Loss of established, or lack of, partnerships with businesses in VET and higher education; • Lack of synchronisation of efforts and programmes of ministries and institutions involved in training/retraining of war veterans.	• Limited funding of the education system at all levels and inefficient use of budget funds; • Inefficient governance system and financing of educational institutions; • Too large an expensive network of educational institutions that needs optimisation. • Critically low research intensity as part of GDP due to limited financing of scientific, technical and innovative activities.

Key opportunities “Education and science”		
Possibilities of the system	Funding opportunities	Synergy and partnership opportunities
• Use of science and innovation as a driver of economic development; • Creating prerequisites for integration into the European Education Area by synchronising educational policies and practices; • Full integration into the European and global research space; • Development of flexible and alternative forms and models of training and grading systems; • Creation of a safe and comfortable environment for participants in the educational process, including the digital environment; • Children’s access to a wider range of higher-quality out-of-school education services/updating the content of education; • Use of early childhood and preschool education as a long-term investment in the country's human capital; • Public attitudes towards significant reforms and changes at all levels of education, as well as the introduction of life-long learning; • Retraining of people who have lost their jobs; • Use of the potential for renewal and modernisation of the field, together with the implementation of a scientific and evidence-based approach and European values and principles of continuous education.	• Improvement of the education financing system with a view to increase the efficiency of the use of funds; • Optimisation of the system of remuneration for teaching, scientific and pedagogical and scientific personnel; • Attracting additional international funds to finance the reconstruction and modernisation of educational institutions and research infrastructure; • Improving the quality of provision of educational services through more efficient use of budget funds; • Improving of the system of funding early childhood and preschool education; • Creation of preconditions for educational entrepreneurship; • Creation of tools and conditions for increasing the GDP research intensity at the expense of business funds and international cooperation.	• Strengthening capacity to respond to needs in war/post-war times; • Establishing a partnership between public institutions, non-governmental associations and business with a view to the development of a modern model of education; • Establishing communication and cooperation between science, businesses, government and public.

Key restrictions “Education and science”

System restrictions	Funding restrictions	Staffing restrictions
• War in Ukraine; • The lack of the opportunities to predict the development of events in the conditions of war; • Continued martial law in Ukraine for a long time; • Lack of quality data in the field of education and science or digital tools for their collection and analysis, which are necessary for making reasonable management decisions; • Unstable communication with the general secondary education institutions in the occupied territories and in the zones of active hostilities; • Lack of synergy between public authorities and local self-governments, and between authorities and businesses; • Reduction of the share of youth aged 15–24 in the total permanent population; lack of prestige as regards obtaining professional (vocational and technical) education; • Absence of a government strategy for the development of science, which would determine the role of science in the national economic strategy, and its expected contribution to the creation of innovations and technologies, and provide for resource, institutional and regulatory support corresponding to this place and contribution; • The low-tech structure of the economy has a limited need for science, and it results in low	• Limited public financing; • Low priority as regards financing out-of-school education in wartime; • Non-optimal and wasteful network of general secondary education institutions; • Inadequacy of the available tools for competitive funding of science and grant support for scientific research and their low share in the total amounts of funding; • Insufficient use of budget funds allocated to research activities (only a small part of these funds is actually spent on research itself; lack of a system for evaluating the effectiveness of financial instruments of public funding of science); • The status of a budgetary institution does not provide an adequate financial flexibility for scientific institutions and fails to stimulate the mobilisation of extra-budgetary funds • No observed dependence between the basic funding of research institutions and higher education institutions, nor dependence between the level of remuneration of their employees and their performance.	• Low attractiveness of the teachers’ work of in the system of out-of-school education; • Limited human potential due to war and evacuation; • Insufficient staffing of educational institutions; • Lack of state support for professional development and professional training of adults through retraining and advanced training. • Personnel training at all levels is insufficient to meet the demand in the field in quantitative and qualitative terms; • The lack of qualified personnel leads to the insufficient capacity of the public administration bodies in the scientific field prior to development and implementation of policies; • There are no conditions in place for attracting or retaining researchers from Ukraine and from the foreign markets, or for returning or attracting people from abroad; • A large number of displaced persons among scientists, the impossibility for them of continuing their scientific and R&D activities due to the lack of support for academic mobility and relocation; • Increased drain of older scientific personnel, and suspension of replenishment with young researchers during the war; increasing risks of non-return of scientists from abroad. • Low level of training of highly qualified scientific personnel (doctors of philosophy and doctors of

innovative activity of manufacturing enterprises and businesses; which encompasses the purchase of standard ready-made solutions instead of demand for research products, lack of significant financing of the scientific sphere by the private sector, and a low level of commercialisation of R&D ● Low efficiency of the state science management system (outdated, contradictory regulatory framework, inadequacy of available management tools, financing, assessment of the science's conformity to its goals, lack of a quality system for determining national priorities in scientific and innovative activities, lack of a favourable scientific and innovative climate in the country); ● Lack of the inter-agency coordination; ● Outdated and insufficient research and innovation infrastructure (from buildings up to equipment) whose modernisation requires significant funding; lack of infrastructure development strategy supported by the necessary resources.		sciences), imperfect system of academic certification of researchers. ● Violation of academic integrity as a systemic and common phenomenon. ● There is no systematic work with the academic diaspora; its potential is not used to influence the development of cooperation ● Low level of English language proficiency; English is not the main language relevant for obtaining and spreading knowledge among Ukrainian researchers.

Strategic steps to improve the quality of education and synchronisation with the educational area of the European Union

Early Childhood and Preschool Education	General secondary education	Professional education	Out-of-school education + Adult education
• Increasing the coverage of children with early childhood and preschool education • Promoting the development of private and alternative early development settings through a mechanism to compensate of part of the cost of one child's education to private providers (money follows the child) • Development of digital systems for preschool education institutions • Creation of simplified types of preschool educational institutions to reduce barriers to market entry • Ensuring the rights to pr-school education of internally displaced children by introducing compensation from the State Budget for part of the costs of institutions that provide services for preschool	• Acceleration of the NUS reform: transition to the 12-year general education programme with simultaneous implementation of the transitional/ orientation school year (10th grade) • Reform of the professional development system for education professionals (voucher = creating the market of such services) • Streamlining of the network of general secondary education institutions • Implementation of the State Final Examination in the form of EIA after the 9th (10th) grade • Improvement of the quality of education management (headmasters) • Changing the remuneration system (higher basic salary, less fringe benefits, higher	• Minimum period of training in the professional education sector is 1 to 1.5 years • Implementation of the mechanism for financing of training of professionals from the State Budget and retraining of adults for the recovery of Ukraine (response to the war challenge, the draft Law No. 7294) • Establishment of qualification centres for the recognition of non-formal qualifications and external evaluation of learning outcomes • Aligning post-school education with the EU education legislation standards and the needs of the economy of Ukraine • Training of professionals in the synergy with employers (preparation of the order, dual training, in-service training) • Potential corporatisation of professional education institutions,	• Implementation of the support for out-of-school education and adult education using a voucher for all children aged 6 to 18 and adults (on a selective basis) based on the "the money follows the person" principle • Establishment of educational and cultural hubs as centres of out-of-school education and adult education (especially in the premises vacated after lowering the school's grade) • Response to the war challenge: construction of educational and cultural hubs in the place of destroyed out-of-school education institutions • Recognition of non-formal qualifications in qualification centres • Establishment of mobile out-of-school education centres

education of IDPs (response to the war)	flexibility for school administrations) ● Review of the content of the educational and upbringing process (safety of living, defence of the fatherland, patriotic component, psychological and mental health, STEM education)	development of public-private partnerships	

Higher education	**Science**
● Transition to the 3-year bachelor's programme + the 2-year master's programme ● Uniting universities into powerful regional higher education centres ● Corporatisation and possible further selective privatisation of universities ● Creating of the endowment fund mechanism for educational institutions ● Changing the governance system and providing financial autonomy ● Aligning the tuition fee with the actual value coupled with implementation of interest-free loans (it is important to launch loans for fee-paying students now as a response to the war challenge) ● Establishment of the Europe's best Military University with practicing teaching staff for training of officers for the whole world (may be an extension of the Presidential University) ● Reset of the work with foreign students	● Establishment of the Defence and Security Research Agency (the DARPA equivalent) ● Separation of the policy development and implementation functions in the science and innovation sector ● Implementation of a multichannel target science funding system with gradual increase in the R&D/GDP intensity ● Establishment of the incentive system for the synergy in the development of science and economy ● Launching state target research funding programmes based on the priorities of science and technology development ● Full integration of Ukraine into the European research space

NATIONAL TOP PROJECTS “EDUCATION AND SCIENCE” 2032

1. TOTAL DIGITALISATION — SINGLE EDUCATION DATABASE Elimination of paperwork for education professionals Up-to-date information on the education in Ukraine for the State Education measurement and forecasting system Evidence-based policymaking	**2. EDID — ELECTRONIC EDUCATION ID CARD** Information on a full cycle of person’s education in the smartphone Your educational LinkedIn with verified information	**3. SUN — SCHOOL FOR THE UKRAINIAN NATION** Public distance education school in Uber format Real individual 24/7-trajectory for each student from the best teachers of Ukraine Categories: IDPs, expatriate community, TOT, professional education (school component), additional education for children, rural areas Expected number of full-time students: 100 thousand students. Number of attendees: unlimited.

NATIONAL PROJECTS "EDUCATION AND SCIENCE" 2032 BY AREAS

EARLY CHILDHOOD AND PRESCHOOL EDUCATION	SECONDARY EDUCATION
1. Creating a system for collecting and updating data on preschool children, teachers in the context of the country, regions, communities Operationally relevant and reliable data will provide quality solutions to expand access to early childhood and preschool education **2. Effective early childhood and preschool system** Introduction of mobile beds (instead of separate bedrooms in group rooms) and other innovative solutions for the educational environment to optimise space and expand the capacity of early childhood and preschool educational institutions to provide services **3. Early childhood and preschool education in an alternative form** (home-based centre) Grant support for the start of the first wave of home-based centres, which will provide access to preschool education, especially in rural areas and communities with a large number of IDPs **4. Installation of prefabricated temporary structures in areas with a large number of displaced children**	**1. SUN. School for the Ukrainian Nation** Public distance school in Uber format. There are no teachers in the schools at this rate. In this school, the teacher works with the student when the student needs it. Any child from anywhere in the world can study at this school. Peer-to-peer education - this is what the world is waiting for **2. Mobile Schools** Establishment of a network of mobile schools to ensure access to secondary education for children in cities where educational institutions have been destroyed (also relevant with a high number of IDPs and a lack of secondary education institutions) **3. Levelling schools** Targeted programme of transformation of schools with the lowest efficiency indicators **4. Transformation of libraries** Modernisation of school libraries and other vacated as a result of optimisation of premises, and creation on their basis of open spaces (hubs) for independent study

5. Educational and cultural hubs. Establishment of multifunctional centres where you can provide several types of services - early childhood and preschool education, out-of-school education, library, social services **6. Communication campaign** to raise awareness of the importance of preschool education **7. New Ukrainian Kindergarten** Updating the content of preschool education and approaches to the organisation of the educational environment **8. "Providing Educators of Ukraine with European level education"** Involvement of top foreign teachers to pilot a new programme of training educators in 3 universities (selected by competition), including completely new courses curriculum development, play-based learning, learning environment design etc. **9. Preschool online** Access to quality preschool education is part of the humanitarian response in crisis situations (pandemic, war, etc.) **10. Project of psychological support of children, educators and parents** **11. Hotline of psychological support of pedagogical workers** **12. Safety Education Programme** for civil and fire safety in preschool institutions	**5. New leaders for the New Ukrainian school** Creating a new progressive system of training and development of educational managers, their election to office and support in office **6. Digital educational passport.** Creating a digital educational ecosystem for collecting, processing and transmitting information on the individual educational trajectory of the learner. **7. Digital school** Ensuring continuous access to education by equipping all schools with the necessary digital tools - high-speed Internet, mobile digital classrooms and all teachers with laptops

13. Compensation from the state budget for part of the costs of IDPs that accept IDP children for education (response to the call for war)	

OUT-OF-SCHOOL EDUCATION	VOCATIONAL EDUCATION AND TRAINING
1. "Moving science" Construction of 75 mobile educational modules that will act as educational spaces, the filling of which will be formed at the request of educational institutions / teachers in the region in accordance with the needs of students. Mobile studio modules can be placed in each area for a period of 10-14 days and offer intensive educational programmes for teachers and students **2. "Spark! Lab" Innovative Space** An interactive space with a unique programme that encourages children and adolescents to create, develop their own inventions, acquire and disseminate knowledge about inventors, scientists and artists. **3. "Science in the classroom"** is a comprehensive scientific program on STEM education for grades 1-5 and kindergartens already developed and tested. The program builds on the latest results and best practices of research in the field of education with proven results **4. Museum of Mathematics** The third in Europe (the fourth in the world) interactive museum of mathematics. The first museum of mathematics, which aims to completely change the system of teaching mathematics and its use in social life. The first museum of mathematics, which is being built both as a stationary educational centre in the capital and a travelling exhibition that covers all regions and even the smallest settlements.	**1. Real financial autonomy of institutions of professional pre-higher education** Change of the status of institutions of professional pre-higher education from a budgetary institution to a business entity and their removal from the sphere of management of ministries **2. Creation of qualitatively new educational programmes on a modular basis** **3. Assignment of professional qualification through the qualification centre** A procedure for assigning professional qualifications through a network of qualification centres accredited by the National Agency of Qualifications has been introduced. **4. VET digital platform** Projects in the field of digital content **5. Creating a real register of VET qualifications** **6. An unified system of VET** Unification of vocational and professional pre-higher education **7. Improving economic and energy efficiency and reliability of heat supply systems of VET institutions** Carrying out a complex of measures for increase of energy efficiency of buildings of VET institutions.

5. "Innovative entrepreneurship" for young people Development and implementation of an educational programme of the interdisciplinary course "Innovative Entrepreneurship" to prevent the outflow of enterprising economically active youth abroad **6. "Psychological rehabilitation in the Nature"** Creation of centres on the basis of existing out-of-school establishments, public organisations for realisation of programs "Psychological rehabilitation in the Nature" **7. "Out-of-School"** Increasing the capacity of training participants (teachers, heads of institutions, centers, public figures, representatives of local self-government) to participate in grant programmes and projects	**8. Training of 700 VET teachers techniques for the formation of "soft" skills** **9. Training of 700 VET teachers of economic disciplines formation of entrepreneurship in students according to the method of business planning Start and Improve Your Business** **10. "Barometer of professions" - the creation of expert centres and their training** **11. Support for the return of young people to Ukraine** International academic mobility; opportunity to complete studies and internship abroad with a Ukrainian diploma; scholarship programs for those who may be employed in the nearest future **12. Integration of vocational guidance to primary and secondary school. Vocational guidance is introduced at the level of basic and profile education.** Introduction of holistic professional orientation in secondary education institutions consisting of 3 elements: 1) through professional orientation (5-9 classes) through subjects or integrated courses (in particular "Health, safety and well-being", "Entrepreneurship and financial literacy"), 2) separate career guidance course (grades 8-9 and 10-12), 3) practice and volunteering (particularly at the community level). **13. "VET weeks"** Creating career guidance programmes including WSU **14. Training of teachers in career guidance work** **15. Digital management of educational institutions and learning platforms;**

	electronic educational passport **16. An effective network of VET institutions** for the post-war needs of the individual, society, economy **17. Labour Market Observatory** Creating a platform equidistant from the main consumers of the data for accumulation the information on the labour market state for the analysis of national and regional labour markets based on the analysis of large data sets

HIGHER EDUCATION	ADULT EDUCATION	SCIENCE
1. Training laboratories updating Obtaining quality higher education is impossible without the necessary conditions, including the renewal of training laboratories. There will be 1,000 laboratories and classrooms, which will help train in-demand specialists for the real sector of the economy, increase the percentage of employed people with higher education **2. Creating appropriate living conditions for students in the higher schools dormitories** Implementation of the Concept of the State Targeted Social Programme for the Restoration and Development of a Network of Dormitories for Accommodation of Applicants for Higher Education Institutions for 2022-2026	**1. Creating a network of adult education** Project of building a network of educational institutions (state, communal, private forms of ownership) for the elderly: creating and promoting the expansion of the network, implementation of new relevant programs and approaches to learning 2. Implementation of a pilot **project on professional and social adaptation of veterans** and victims of armed aggression of russia, in particular in adult education centres " **3. Adult Education Platform** Creation of a single platform at the Ministry of Education and Science of Ukraine "Adult Education".	1. **Restoration and modernization of scientific infrastructure of Ukraine** is aimed at overcoming not only the problem of destruction of a significant part of scientific infrastructure, but also at its modernization to modern standards of world science **2. Establishment and maintenance of the body that will coordinate and finance scientific R&D in the interests of defence and security of the state and the development of strategic sectors of the economy.** The need for significant expansion of research in the interests of defence and security of the state and the development of strategic sectors of the economy. The aim of the project is the coordinated development and implementation of R&D focused on the needs of defence and security, as well as strategic sectors of the economy, with the provision of further commercialization of dual-use technologies.

3. Improving the energy efficiency of educational buildings and dormitories of higher education institutions Rising energy prices stimulate the optimization of expenditures for the maintenance of the material and technical base of higher education institutions without deteriorating the conditions of study, work and living. The project will reduce the energy costs of higher education institutions by 30% **4. New educational space - reconstruction of educational buildings of higher education institutions** Due to the destruction and damage of the infrastructure facilities of higher education institutions located on the territory of active military (combat) operations, the question of resumption of activity of these institutions after deoccupation arises. Renovation and construction of at least 10 educational buildings will increase the number of students and jobs		It is advisable to create such a body according to the DARPA model.

INTRODUCTION: Promoting the development of human resources, science and innovation

Situation before the full-scale war: The strategic priorities of the development of education and science systems before the full-scale war with the russian federation were:

- development of an inclusive, innovative and educated society in which citizens have equal rights and opportunities to develop their talent throughout life;

- increasing the share of science-intensive GDP, increasing the level of commercialization of developments and research results, full integration into the European Research Area.

Public policy in the field was aimed at solving a number of problems, including: (1) limited access to preschool education due to a lack of places in preschool education institutions; (2) the inability of school education to provide students with knowledge, skills and competencies essential for their further successful professional and personal development; (3) non-compliance of the content and quality of VET with the requirements of the labour market; (4) outdated infrastructure of educational institutions; systemic problems with the quality of higher education and limited opportunities for graduates to realise themselves in the Ukrainian labour market; (5) low knowledge intensity of GDP; (6) low level of commercialization of the results of scientific and technical developments and technology transfers.

The government had been systematically transforming the field to ensure a new quality of education at all levels: from early childhood and preschool education to higher education and adult education. In the field of science, the reform processes had been designed to stop the isolation and stagnation in research activities, reduce the gap between research publications and their implementation, integrate science of Ukraine into the European Research Area.

While implementing public policies in the pre-war period:

- **the network of early childhood and preschool institutions was expanded** in accordance with the needs of communities. In 2021 more than 15,000 additional places in preschool education institutions were created;
- during 2018-2021 **the reform of the "New Ukrainian School" was implemented** at the level of primary education; the content of basic secondary education was updated. **157 general secondary education institutions** were involved in piloting the new State Standard on Basic Secondary Education. In 2020 the program "Able school for better results" was introduced to update the educational environment and build new schools. By 2022, the number of children with special educational needs provided with quality education had increased. **648 inclusive resource centres** were established;

- **competency-based content of VET and higher education was updated; 156 new educational and practical centres** were established in 3 years; dual VET programs were introduced; VET schools network was decentralised**;**
- **licensing (at diverse levels) was simplified and e-licensing was introduced;** the best applicants received more opportunities to obtain higher education at the public expense at any higher education institution of Ukraine, including private ones; a dual form of education and a formula for funding universities based on their performance indicators were introduced;
- In order to develop instruments for grant science funding the National Research Foundation of Ukraine began its activities in 2018; Action plan for the implementation of the Strategy for the Innovation Development to 2030 and the Roadmap for Ukraine's Integration into the European Research Area were approved. **The introduction of innovations, their commercialization, development of innovation infrastructure contributed to the improvement of Ukraine's positions in the ranking "Global Innovation Index 2020".** Ukraine showed an overall increase in the innovation index and sub-indices and gained +10 in R&D. According to Bloomberg, Ukraine ranked 58th among the world's technologically advanced countries.

What are the consequences and challenges of the war? The large-scale aggression of the russian federation against Ukraine has caused a number of pressing issues in the field of education and science, including:

- **reduced number of students with possibilities for lifelong learning,** reduced availability of quality education and, as a consequence, reduced quality of education in general;
- **forced migration of participants of the educational process** to the regions of Ukraine and countries with a better security situation. According to the Office of the United Nations High Commissioner for Refugees, as of June 16, 2022, the number of Ukrainians who have crossed the border with EU countries since February 24, 2022 amounted to more than 7.70 million people. As of June 23, 2022, **670 133 students and 22.6 thousand** pedagogical workers went abroad. 2029 children with special educational needs were evacuated outside Ukraine, including **1 072** orphans and children deprived of parental care. **More than 130 professional and pre-higher education institutions and their units** were temporarily relocated.
- **threat to mental health of children and adults because of the war**. Under hostilities a significant number of students and teachers had traumatic experiences resulted in posttraumatic stress disorders;
- **damage and destruction of educational and scientific infrastructure**. As of June 23, 2022, as a result of shelling and bombing, **1 844** educational institutions were damaged, **212** institutions were completely destroyed, and about **15%** of the research infrastructure of higher education institutions and research institutions was significantly damaged. Some buildings need long-term renovation or complete reconstruction. Thousands of educational institutions are in urgent need of cosmetic repairs due to the placement of internally displaced persons, units of Territorial Defence Forces of Ukraine and the Armed Forces of Ukraine.

Equipment was destroyed, damaged or stolen at almost all educational institutions situated in the temporally occupied territories. Namely, in the classrooms of the New Ukrainian School - computers, laptops, projectors, as well as facilities of specialised classrooms and laboratories.

As of February 24, 2022, the school bus fleet amounted to **7 027** vehicles. As a result of the armed aggression of the russian federation, a significant number of school buses were lost; **488 school buses** were damaged, **1 624 buses** were used for special needs under martial law. This makes it impossible to transport rural students, and, accordingly, to ensure a full-fledged educational process in rural areas;

- significant **loss of links between VET schools and business** due to the suspension (termination) of enterprise activities;
- **the impossibility of carrying out scientific and innovative activities at a high level** both fully (in the temporarily occupied or affected by active hostilities regions) and partially (in other regions of Ukraine);
- **violation of the conditions for scientific activities of scientific and scientific-pedagogical workers**. The number of scientific and scientific-pedagogical workers who have left the country since the beginning of the war and moved to other countries is **1392**, **1026** of them continue to carry out scientific, technical, organisational, scientific-pedagogical activities.

What do we plan to do in the recovery process? Adult education, development and improvement of citizens' skills and abilities are key drivers of economic success, individual well-being and social cohesion.

Throughout the recovery period, it is vital to continue the ongoing reforms of education and science aimed at promoting the country's human resources (continuing the reform of the New Ukrainian School; building a modern, accessible and safe network of educational institutions; implementing the Strategy for Higher Education Development, etc). Setting favourable conditions for scientists and innovators will catalyse the development of the country's innovation economics.

The war provided new opportunities to accelerate Ukraine's membership in the European Union. Given the current EU support of Ukraine at the political, expert and institutional levels, it is possible to receive assistance both to ensure the sustainability of Ukrainian education and science during the war and in the post-war recovery period, and to promote implementation of European principles, approaches, practices and tools in the field of education and science.

Therefore, the policy of recovery and development of education, science and innovation in the post-war period will be aimed at **improving the quality and accessibility of education, science development, their synchronisation with the educational and research EU areas** through achieving strategic goals in the following priority areas:

Early childhood and Preschool education

- **Adoption of the new Law of Ukraine "On Early childhood and Preschool Education"** to improve legislation in the field of early childhood and preschool education, particularly in terms of identifying the basic requirements to ensure the quality preschool education, mechanisms to ensure its accessibility, introduction of financial autonomy of preschool education institutions, etc.
- **Support for private early childhood and preschool education institutions by partial compensation of the costs of early childhood and preschool education services provided to a child.** The introduction of compensation payments to private early childhood and preschool education institutions will provide additional opportunities for their development.
- **Development of digital systems for early childhood and preschool education institutions**: created conditions for the introduction of digital technologies in the management and educational process of early childhood and preschool education institutions, the organisation of teacher training on digital technologies, encouraging better results in order to summarise and promote the experience.
- **Ensured equal access to quality early childhood and preschool education for all children aged between 1 and 6 (7)** Through expanding the existing network of preschool education institutions (expanding the network of early development institutions, opening educational institutions on adapted premises, implementing a project to create a network of temporary buildings in regions with significant concentration of internally displaced children), introduction of alternative forms of preschool education (adaptation of international alternative services in the field of education and development of children aged between 1 and 6, implementation of the project on establishing multifunctional centres providing preschool, extracurricular education services, library and social services) and reducing barriers to entry of private preschool education institutions on the market.
- **A part compensation of the costs of early childhood and preschool education institutions (from the state budget)** that accept internally displaced children (response to the war challenge). Ensuring the timely meeting of the needs of internally displaced children for preschool education is the prerequisite to the effective integration of internally displaced persons into communities. Under martial law and in the post-war period, a part compensation of the costs of providing preschool education services to internally displaced children to territorial communities will provide an opportunity to develop a network of preschool education institutions in the community, to improve the infrastructure of existing preschool education institutions.
- **Provide early childhood and preschool education with a sufficient number of highly qualified and motivated teachers.** Through aligning the system of training, retraining and advanced training of pedagogical workers with European standards; development of mechanisms of social and financial motivation of pedagogical workers; development of digital systems for methodological support of preschool education institutions: created conditions for the introduction of digital technologies in the management and educational process of preschool education institutions, the organisation of teacher trainings on digital technologies, encouraging better results in order to summarise and promote the experience.
- **Update the content and system of scientific and methodological support of early childhood and preschool education in accordance with the European framework for the quality of preschool education.** Through the implementation of the project "New Ukrainian preschool education institution", which provides for the audit and updating of the content and system of scientific and

methodological support of preschool education in accordance with the European framework for the quality of preschool education; standardisation and provision of access, if needed, to a quality distance preschool education.

- **Ensure the effective functioning of the system of monitoring and evaluation of the quality of early childhood and preschool education and educational policy.** By developing tools for the internal education quality system in preschool education institutions based on evidence-based approach; development of tools for monitoring the quality of education in preschool education institutions of any type and form of ownership.
- **Ensure an effective system of management and funding of early childhood and preschool education at both regional and state levels.** By developing algorithms for inter-agency cooperation, reducing the bureaucratism and improving the professional training of educational managers at all levels**.**

General secondary education

- **Accelerate the reform of the New Ukrainian School.** The introduction of a transitional/indicative year of study in the 10th grade and the early transition to 12-year general secondary education will facilitate the conscious student choice of further educational trajectory, creating the basis required for continuing professional education. It will enable to achieve goals defined by the Concept of the New Ukrainian School aimed at creating quality, modern, accessible education ahead of schedule, given the new challenges related to the consequences of the war and the prospective integration into the European educational area.
- **Reform the system of professional development of teachers (vouchers and creation of the service market).** The voucher programme enables teachers to choose where and to what extent to improve their professional qualifications through signing individual training agreements indicating the required level of knowledge, and prepares teachers, heads of institutions to implement the reform of the New Ukrainian School and to work with children with special educational needs.
- **Development, recovery and modernization of an effective network of general secondary education institutions to ensure the quality of education.** The destroyed/damaged network of educational institutions is restored and provides equal access to quality education, systematic and continuous provision of educational services, efficient use of resources (human, infrastructure, financial, etc.). Access to quality education for people with special educational needs is provided. Educational institutions are provided with computer equipment and high-speed Internet access, as well as the necessary facilities, including laboratories for effective training in the digital professions of the future.
- **Introduction of external independent evaluation after 9th (10th) grade,** as a component of ensuring the quality of education and continuing the reform of general secondary education. The introduction of external independent evaluation after the completion of

the basic education **will contribute to the motivated choice of the educational trajectory of the student (**study in an academic/professional lyceum).

- **Functioning of a comprehensive system for assessing the quality of education** at all levels of general secondary education and an electronic system for collecting data on the quality of education and educational activities, which provides stakeholders with objective information for evidence-based management decisions and allows feedback for improving the quality of education and educational activities.
- **Modern educational management. Head of the education institution as a leader of educational change.** The reform of general secondary education defines a new understanding of the role of the head in school management and requires obtaining new knowledge and competencies. The establishment of the National School of Educational Managers will improve the professional qualifications of heads of general secondary education institutions.
- **Changing the remuneration system (higher base rate, less surcharges, more flexibility for school administration).** Transition to a new system of remuneration from a clearly standardised to a personalised within the autonomy of the educational institution and a flexible work schedule of teachers, namely in the organisation of distance learning - providing a fair reward for the teacher activities.
- **Review the content of the educational process.** Update of educational programmes, integration of health culture and national and patriotic component into the curriculum of educational subjects; introduction of STEM-education, implementation of projects aimed at psychological and mental health, and safety of life will allow students to develop necessary life competencies, including civic ones. The development and implementation of combined educational programmes will support students who are abroad.
- **Psychological support of participants of the educational process.** Implementation of programmes to provide psychological and emotional support, rehabilitation and adaptation under the war and the post-war period. Developing a training system for psychologists.

Vocational education and training

- **Reduction of VET periods to 1-1.5 years, and for partial qualifications - to a few weeks/6 months.**
- **Changing approaches to funding VET schools.** Adoption of the Law of Ukraine (7294 - amendments to the Budget Code of Ukraine), which will enable to co-finance the training of professionals and retraining of the adult population from the state budget (response to the war challenges).
- **Establishment of qualification centres for external evaluation and recognition of learning outcomes.** Such centres will assess the learning outcomes of people (including outcomes of non-formal and informal education), assign and validate professional qualifications, and recognize relevant professional qualifications obtained in other countries.
- **Alignment of post-school education with the standards of European educational legislation and the requirements of Ukraine's economics:** modernised national VET and professional education given the experience of the EU VET systems.
- **Training of specialists in cooperation with employers** (formation of state/regional order, dual training, internship programmes, on-the-job training). Introduction of a systematic analysis of labour market needs. Improving the efficiency of education through the active participation of enterprises in the educational process will contribute to quality educational services provided to students and ensure their mobility in the national labour market.
- **Possible corporatization of VET schools,** development of public-private partnership and social dialogue in the field of VET, economic incentives for businesses that invest in VET.
- **A radical change in the system of professional orientation** (comprehensive integration of professional orientation activities in educational programmes of diverse levels, from primary to general secondary education, mass dissemination of professional orientation testing, annual communication campaign to promote VET) will increase the number of school graduates choosing VET to **55%.**

Higher education

- **The transition to a 3-year bachelor's degree and a 2-year master's degree** will help reduce the average age of entry into the labour market for professionals with higher education.
- **Merging universities into powerful regional centres of higher education** will increase the institutional capacity of higher education institutions and the ability to conduct world-class research.
- **Corporatization and possible further privatisation of universities** to create opportunities to attract private investment in higher education and, as a result, to ensure its effective development.
- **Establishment of a mechanism of endowment funds for educational institutions** in order to strengthen the financial capacity and provide more opportunities for the development of HEIs, including by strengthening links with graduates and industry.
- **Changing the management system and providing financial autonomy** to create conditions for effective development of universities through the ability to manage funds and determine their own mechanisms to improve the quality of higher education.

- **Introduction of real tuition fees** for the provision of quality educational services with the **introduction of support in the form of interest-free loans for studies** (lending contract students as a response to the challenges of war).
- **Creation of the best Military University in Europe** with professors-practitioners for the training of officers for the whole world (development of the Presidential University project).
- **Restart work with foreign students** to ensure the attractiveness and competitiveness of Ukrainian higher education institutions in the global market of educational services. Convenient and transparent admissions of foreign citizens to higher education institutions, development of English-language educational programmes: **200 thousand foreign students** obtain higher education in Ukraine.

Out-of-school and adult education

- **Legislative support of the new architecture of out-of-school and adult education:** adoption of the laws of Ukraine "On Adult Education" and "On Amendments to the Law of Ukraine" On Out-of-school Education ", Regulations on Out-of-school Educational Institution (new edition) will enable lifelong learning as an important factor of personal and professional development.
- **Deepening the financial and organisational autonomy of out-of-school educational institutions** will allow expanding a list of extracurricular educational services and will increase the number of school-age children attending out-of-school educational institutions by up to 90%.
- **Modern management of state and municipal out-of-school educational institutions:** training on introduction to marketing and financial management for proper readiness to compete with private educational entities.
- **Changing approaches to the remuneration of teachers** with coefficients to the salary depending on the ability of the founder (territorial community, etc.).
- **Introduction of vouchers for out-of-school activities (6-18 years) and adult education (selectively) -** money follows the person - 1-2 thousand UAH per year (4-10 billion UAH).
- **Establishment of educational and cultural hubs** on the premises of out-of-school educational institutions as out-of-school and adult education centres (especially on free premises after institution demotion) as a response to the challenges of war: construction of educational and cultural hubs on the premises of destroyed educational institutions. Creation of flexible centres of extracurricular education**.**
- **Recognition of learning outcomes acquired through non-formal and informal education,** which will create favourable conditions for personal and professional development of each person, useful social activities, adaptation.

Science

- **Establishment of an agency based on the DARPA model,** which will be responsible for the formation of state orders for scientific developments in the field of defence and security, as well as for the formation of executing teams.
- **Separation of the function of policy development and implementation in the field of science and innovation** - MoES - policy development with enhanced analytical capacity; NRFU, other funds, agencies – funding allocation and evaluation of activities; public and private scientific institutions, HEIs, science-intensive enterprises - implementation.
- **Introduction of a multi-channel target system of science funding with a gradual increase in the science intensity of GDP** - basic - distribution according to the formula based on the evaluation results; competitive - initiative (NRFU, other funds, field competitions), thematic (state target programmes, key laboratories), individual (National system of researchers, scholarships / awards for scientists at different career stages); state order (defence, security, other strategic issues); co-financing with business; international funding for the development of joint research infrastructure.
- **Creating a system of incentives for the synergy of science and economics -** incentives for investors and beneficiaries; tax conditions for "scientific outsourcing" based on the experiences of IT field; increasing the financial autonomy of research institutions, new organisational forms (non-budget institution, flexibility in the use of funds), attractiveness for business.
- **Full integration of Ukraine into the European Research Area.**

Digital Transformation of education

The war demonstrated the urgent need for the use of digital technologies in the education system enabling sustainable access to education. The need for a high level of digital potential and professional training of employees in the field of education and science has become a challenge for Ukraine. Therefore, the system of education and science needs radical digital changes to meet global trends and contribute to the successful realisation of each person's potential.

The following national projects will be implemented during the recovery period:

- **Electronic educational passport (EDID) -** information about the educational trajectory and educational documents in a smartphone; educational LinkedIn with verified information. The main accounting systems are connected to the educational passport: "E-journal" and "E-documentation", E-extracurricular education, E-preschool education PAC AIKOM; VET module; platforms of sports competitions and achievements; E-student ticket in DIIA App; Unified State Electronic Database on Education (for the transformation of the process of ordering educational documents). **Display on the DIIA portal all information about the student** (achievements, performance, history of study).
- **Unified database of educational data -** reliable and up-to-date data in the field of education and educational analytics are used for policy development in certain areas at all levels of decision-making (data-based policy); all the educational and scientific data is

collected through key information and communication systems in the field of education and science, between which information interaction is established. The system will significantly **reduce the bureaucratic burden on the education system, simplify management processes and increase their efficiency.**

- **State Distance School - School for the Ukrainian Nation (SUN) -** students and pedagogical, scientific and pedagogical workers have **continuous access to quality education and work regardless of location and external circumstances**, including in rural areas and in the temporarily occupied territories (real individual trajectory for each student provided by the best teachers in the country 24/7. Categories: internally displaced persons, diaspora representatives, population of temporarily occupied territories, VET (school component), extracurricular education for children, rural children; number of students: unlimited).

The National Council for the Recovery of Ukraine from the Consequences of the War

Ukraine Recovery Plan: Energy

July 2022

UKRAINE RECOVERY PLAN: ENERGY

Executive summary: what energy sector are we building in Ukraine? 3

1 Recovery and development of Ukraine's energy sector: objectives, challenges, opportunities 4
1.1 Current state of the sector та impact of the war 7
1.2 Key challenges for the Ukrainian energy sector: 12
1.3 Key opportunities for Ukraine's energy sector 13
1.4 Key assumptions and framework of the plan 14

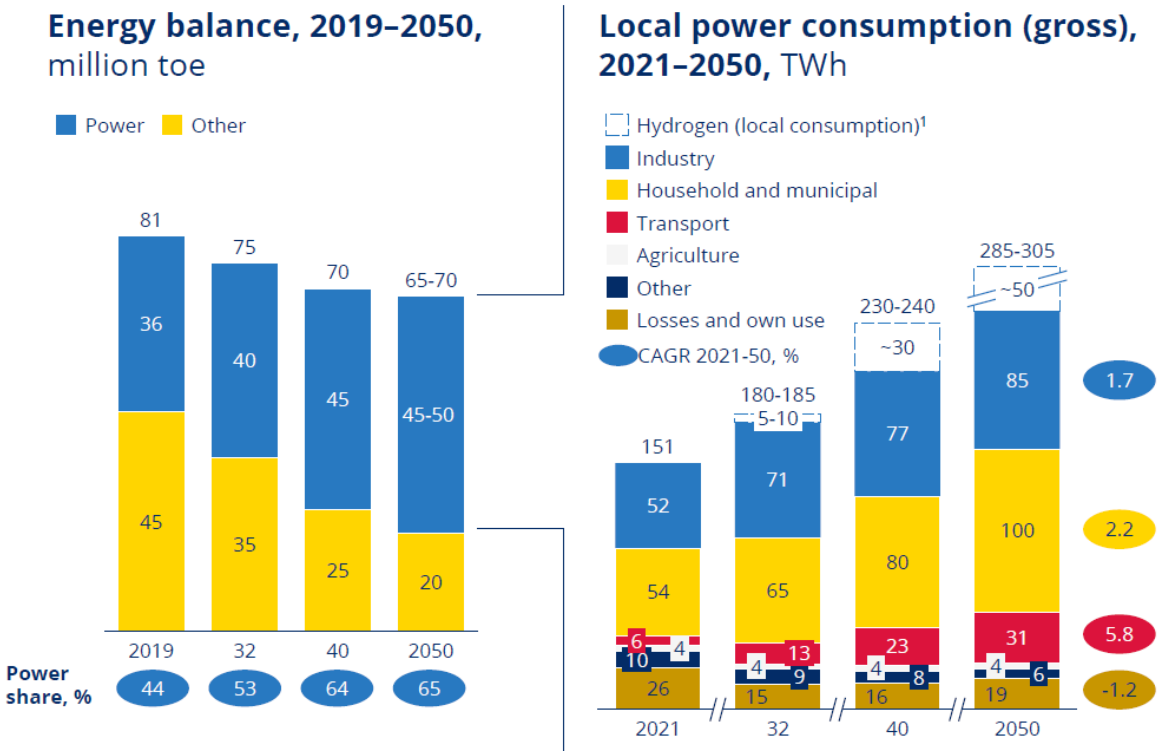
2 Electricity Sector 16
2.1 Analysis of the state of generating capacities of the IPS of Ukraine 16
Nuclear energy 17
Hydro energy 18
Thermal energy 18
CHP and cogeneration units 19
RES 20
2.2 Analysis of operating modes of generating capacities in the IPS of Ukraine 21
2.3 Demand development scenarios 26
2.4 Supply development scenarios 30
Nuclear energy 30
Large hydropower 31
Small hydropower 32
Thermal energy 32
RES 38
Technical means to support the integration of RES generating capacities 39
Interconnectors 44
2.4 Assessment of generation adequacy (flexibility) of Ukraine's IPS 51
2.5 Analysis of the external environment: challenges and opportunities 77
2.6 Generation development scenarios 78

3 Gas sector 85
3.1 Ukraine's gas balance before the invasion 85
3.2 Overview of hydrocarbon deposits in Ukraine 86
3.3 Current state of hydrocarbon production and growth potential 89
3.4 Demand structure and production forecast till 2032 90
3.5 RESP: Ukraine's gas transmission and storage infrastructure for European energy security 90

4 Oil and oil products 95
4.1 Structure of the oil products market 95
4.2 Securing fuel supplies for Ukraine during the war 95
4.3 European fuel market restructuring following the Russian aggression and Ukraine's future role 96

5 Power-to-X 98
5.1 Production of hydrogen from RES 98
5.2. Electrification of transport 99
5.3. Electrification of heating 100

6 Recovery and development: detailed plan of measures 101
Objective 1: European integration and ensuring efficient operation of energy markets 102
Objective 2: Energy security: diversification of energy supply sources, creating reserves, urgent re-energisation 105
Objective 3: Decarbonisation, optimisation of the energy mix and development of low-carbon generation 108
Objective 4: Modernisation and development of energy transportation, transmission, distribution and storage infrastructure 110
Objective 5: Improvement of energy efficiency and demand response 112



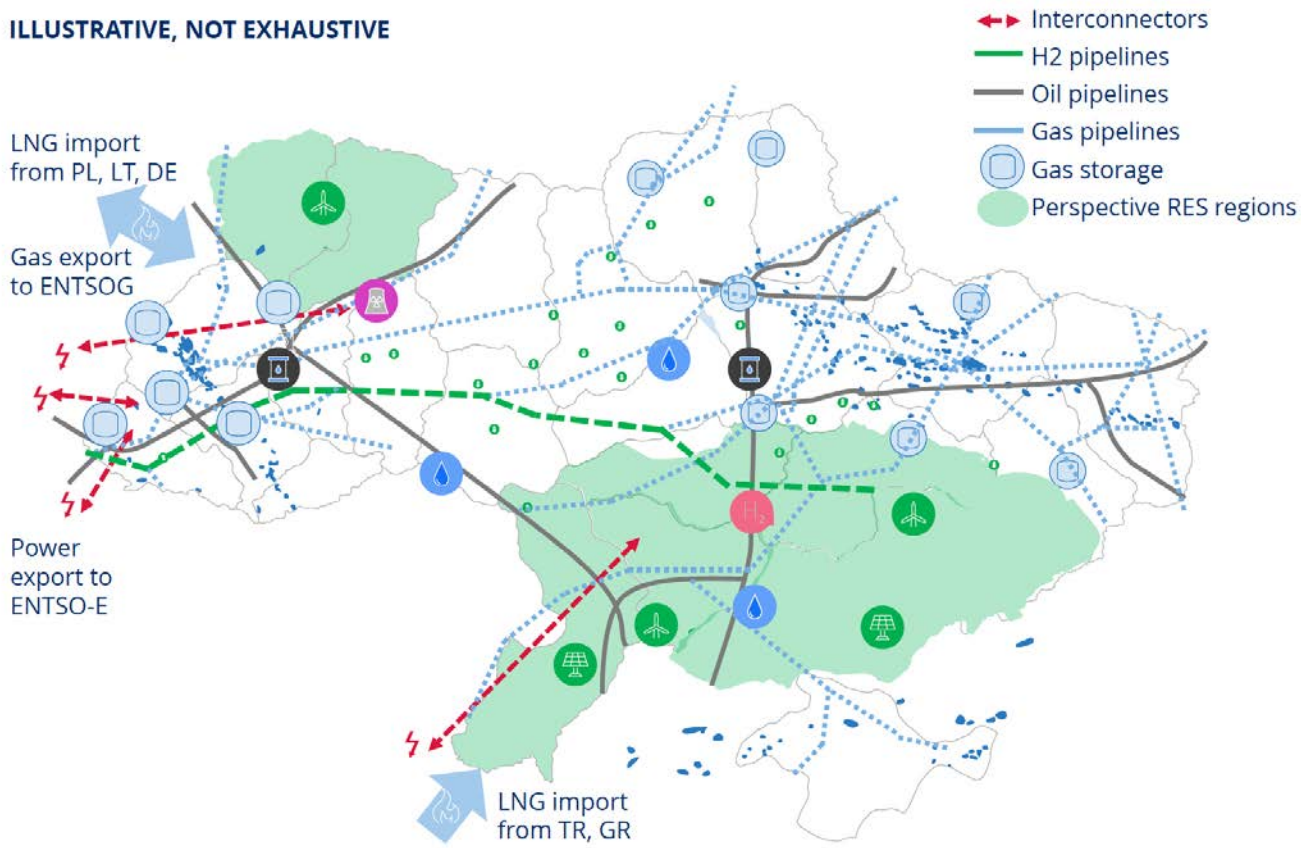
7 National projects 115

Executive summary: what kind of energy sector are we building in Ukraine?

This Recovery Plan is ambitious. For Ukraine to achieve its goals in the energy sector, the following pre-conditions are needed:

- Ukraine wins the war within the next 1–2 years, no major parts of the energy sector are lost or severely damaged
- Business environment and macro-financial stability that allow for major investments and healthy returns are restored within 2–4 years, „red tape“ and other barriers for swift realization of investment projects are removed
- There is a major funding and investment flow into Ukraine, both public and private

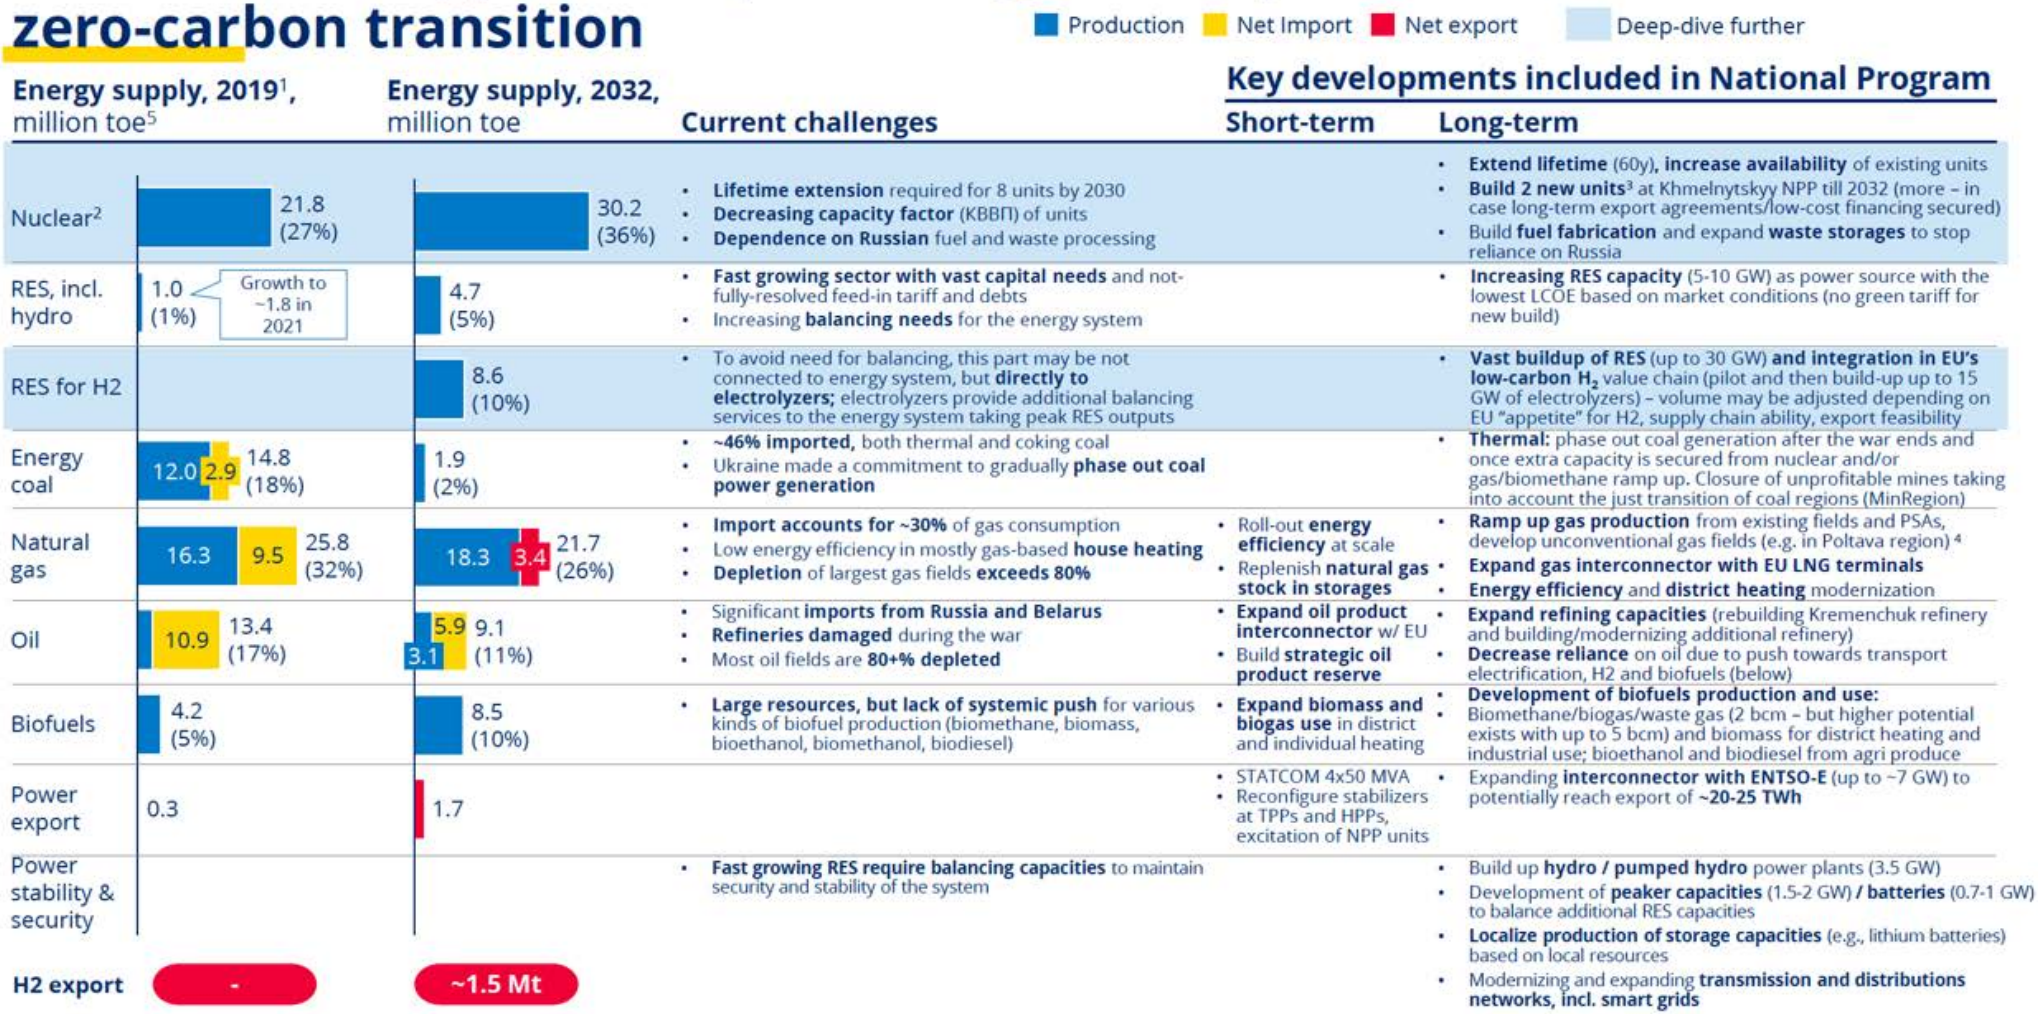
The main trend for the recovery of Ukraine in the energy sector is the rapid electrification of the economy due to the energy transition, as well as a significant increase in energy efficiency.



[1]Hydrogen produced for export is expected at the level of 1.5+ Mt by 2032.

Key assumptions by sector

Hydrogen	H2 domestic consumption of ~0.1–0.2 Mt in 2032, ~0.5+ Mt by 2050
Industry	Electrification of core sectors (e.g.metallurgy)
Housing	>50% of buildings thermo modernized by 2032, ~100% by 2050 Partial electrification of heating (electric boilers, heat pumps) ~90% of refugees return by 2024, stable population by 2050 1% CAGR of housing area per person
Transport	Railway transport electrification to 95+% Increase in share of EV cars to ~15% by 2032, ~80% by 2050 Municipal transport electrification/H2 to ~5% by 2032 and ~100% by 2050
Losses	Losses decrease to 8% by 2032 (as per National Economic Strategy)



Ukraine will support Europe's energy security and zero-carbon transition

Key catalytic projects:

	Expanding interconnectors with ENTSO-E to ~6 GW
	Increasing nuclear capacity (2 new units at Khmelnytskyi NPP, safety and prolongation, higher utilization)
	Build 30+ GW wind and solar
	Build ~3.5 GW pumped/reservoir hydro
	Build ~15 GW electrolyzer capacities and develop H2 infrastructure
	Natural gas: increase production from existing fields, develop unconventional gas fields
	EU natural gas hub: strategic stock replenishment and securing connection to EU/Turkish LNG supplies; modernizing gas transmission and distribution network
	Developing biofuels production (bioethanol, biodiesel, biogas/biomethane)
	Expanding oil refining capacity post war (rebuild, build or modernize 2 refinery facilities, build Brody-Adamova Zastava pipeline)

Ukraine will support Europe's energy security and zero-carbon transition

1. Base year is 2019, in order to conduct analysis without consideration of COVID lock-down disruptions
2. Nuclear energy is produced domestically; however, nuclear fuel is imported. Power output is 33% of input fuel
3. Extra units (up to 7) require additional cost-benefit consideration due to significant CAPEX, limited baseload requirements, and potential new units in CE countries
4. Extra upside (not included in base scenario): Black Sea shelf development
5. Conversion: 1 million toe = 11.6 TWh = 1.1 bcm of natural gas

List of national projects*

			CapEx, USD bln	**Time horizon for project start**
Low-carbon energy	Nuclear	Increasing nuclear capacity (prolongation, higher utilization of existing capacities, and 2 GW new units at KhmelnytskyiNPP)	~14	2023-25
		Localizing nuclear value chain (uranium mining, plant for fuel production, waste storage)	1,3	2023-25
	RES	Build out 5-10+ GW RES (depends on the export capacity)	~11,5	2026-32
	Balancing	Build out of 3.5 GW hydro and pumped hydro capacities	~3,5	2023-32
		Build 1.5–2 GW peaker and 0.7–1 GW of storage	~2,8	2023-25
	Supporting supply chain	Localize RES equipment production (towers, transformers, cables, solar panels, electrolyzers, Li batteries, etc.)	~2+	2026-32
	Biofuels	Developing biofuels (bioethanol, biodiesel, biomethane, biomass) production from agroproduce, residues and waste	~4,2	2022
	Infrastructure	Expanding interconnectors with ENTSO-E to ~7 GW (multiple projects)	0,6	2022
		Smart grids	~5-10	2026-32
		Re-build damaged / destroyed energy objects (CHPs, networks)	~0,4	2022-25
H2	RES	Build 30+ GW RES for H2 production	~38	2026-32
	Infrastructure	Build out ~15 GW electrolyzer capacities	~7	2026-32
		Test and develop H2 transport infrastructure	~2	2026-32
Gas	Production	Increase gas production from existing fields, develop unconventional gas fields (not including Black Sea shelf development~$11 bn)	~18	2023-32
	Infrastructure	Modernize gas transmission and distribution networks	~2,5	2023-32
		Securing gas supplies/storage for EU and Ukraine (e.g.,extension of Świnoujście/Gdansk LNG and/or interconnect or import from Turkey/Italy/Germany)	0,7	2023-27
	Stock	Natural gas stock replenishment	~5	2022
Oil	Infrastructure	Expanding oil refining capacity post-war (rebuild, build or modernize 2 facilities) + oil pipeline Brody-Adamova Zastava	~2,5	2023-25
		Expanding oil products interconnectors with EU refineries and ports	0,7	2022
	Stock	Oil, oil products emergency stock for 30+ days (protected storages)	1,2+	2022
Total			**>128**	

Full list of submitted projects can be accessed here https://bit.ly/3xQg4KB

* The list and terms of implementation of the projects significantly depends on security, regulatory and financial preconditions

1 Recovery and development of Ukraine's energy sector: objectives, challenges, opportunities

Energy security plays an important role in ensuring the economic functioning and growth of the state. It is also an integral component of the citizens' quality of life and one of the crucial criteria for returning temporarily displaced persons to their homes.

Moreover, in the process of Ukraine's recovery, energy should become one of the key sectors that provides export revenues and supports the state's financial stability.

An intelligent approach to the modernization of the Ukrainian energy sector will allow Ukraine to make a significant contribution to ensuring the strategic autonomy of the EU and reducing the dependence of the bloc on external energy resources. This mutually beneficial approach will speed Ukraine's integration into the EU.

The Energy Recovery and Development Plan aims to:

(A) identify the overall strategic directions for the renewal and modernization of the energy sector of Ukraine, taking into account the existing international commitments of the state, as well as new challenges and opportunities that have emerged in the energy markets of Ukraine and the EU as a result of the Russian aggression;

(B) define the list of reforms, legislative and regulatory initiatives necessary to ensure energy security of Ukrainian consumers and Ukraine's role as a reliable energy partner of the EU;

(C) form a list of key national projects that are most important for achieving the strategic goals of the renewal and modernization of the Ukrainian energy sector.

Given the security considerations and the NSDC (National Security and Defense Council of Ukraine) decisions, certain urgent actions and decisions, which are implemented by the government and market participants for the preparation for the heating season 2022/23 are not reflected in this plan.

1.1 Current state of the sector та impact of the war

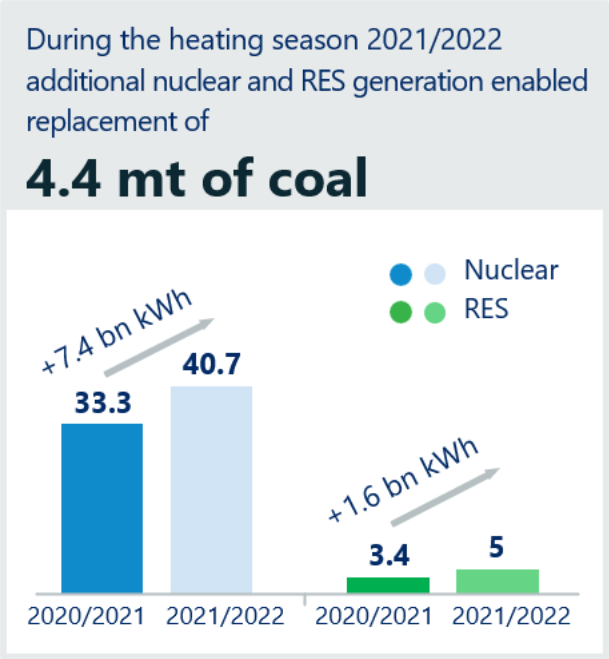
Powerful generation and transport infrastructure

As of February 2022, the Ukrainian energy sector was one of the most powerful in Europe, and remains so now, despite the significant damage caused by the Russian invasion. Ukraine has one of the largest electricity generation capacities in Europe, it is also among the top-3 gas producers and has the largest underground gas storage in Europe.

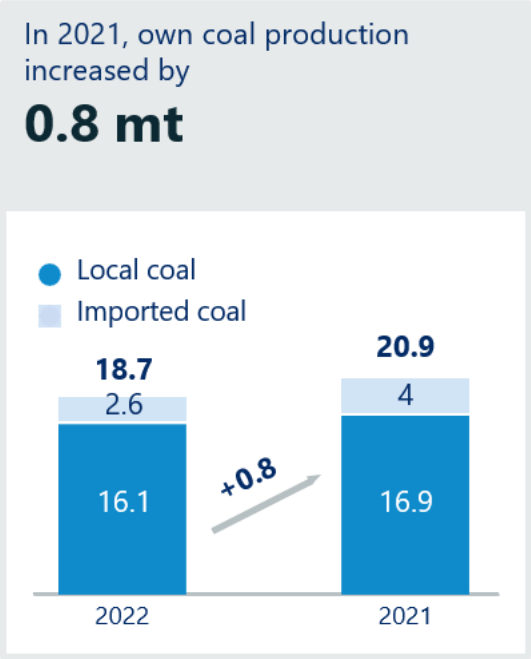
Branched and reliable transmission systems of gas, oil, petroleum products and electricity connect Ukraine with neighbouring EU member states and Moldova.

Ukraine has one of the highest parts of the coal-neutral generation in Europe. About 70% of electricity is produced by nuclear, hydro and renewable generation.

Energy security: diversification of one energy type and dependence on it



Compared to 2014, Ukraine has cut its dependence on Russian gas, but has maintained partial or full dependence on imports og most types of fuel.

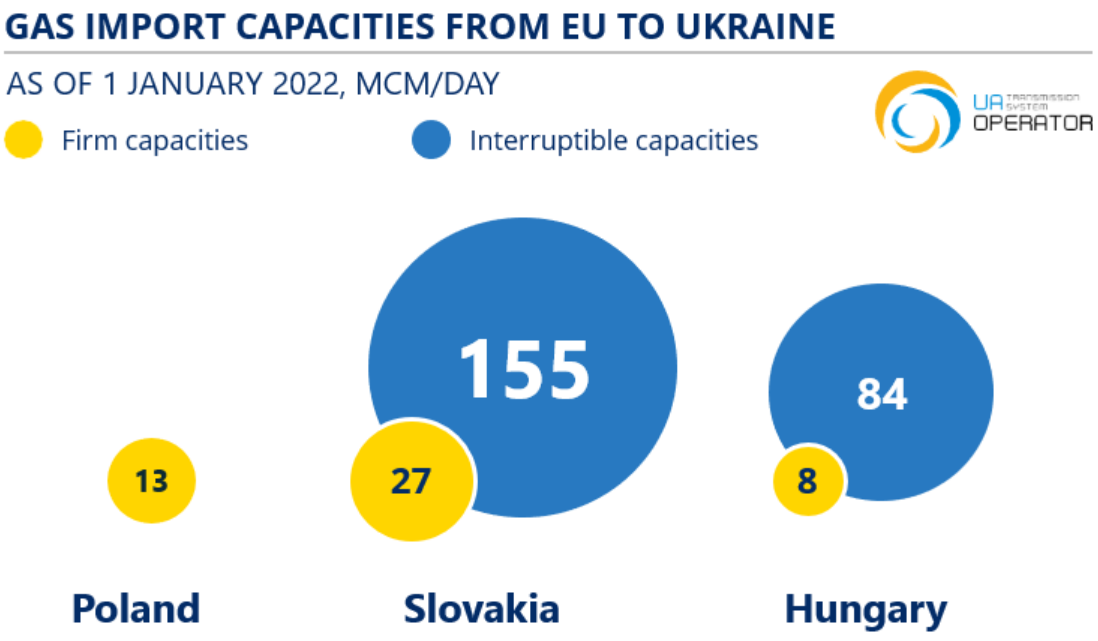


By the beginning of the full-scale invasion in February 2022, Ukraine provided its own coal resources by 75%. Imports of the remaining volumes were done on competitive terms in a diversified range of suppliers.

Despite the blockade of the supply of thermal coal by the russian federation, the heating period 2021/2022 passed steadily without any restrictions and disconnection of consumers. Ukraine diversified its coal supply sources as follows: 1,4 million tons of coal were delivered by sea (18 boats), while another 8 boats were expected from 0,6 million tons of coal (50% of all imports). As of 23.02.2022, there were

701 thousand tons of coal in the warehouses, which twice exceeded the volumes of 2021 as of the same date (330 thousand tons).

In addition, measures have been implemented to save coal by building up domestic coal production and using other fuels (NPP and RES). In 2021, 1,2 GW of new facilities were built from the VDE, which significantly reduced the need for coal.



As for the gas market, Ukraine provided its own resource by 67%, while the rest was imported from the EU from diversified suppliers.

Ukraine's energy security is significantly enhanced by large underground gas storage facilities. As of 23.02.2022, they had 10,2 billion cubic meters of gas – which at that time was enough to meet the needs of the Ukrainian market before the end of the heating season, even in the absence of imports.

At the same time, the operator of Ukraine's gas transportation system (GTS) provided sufficient capacity for gas imports from the EU.

As of the beginning of the invasion, the Ukrainian energy market largly depended on the imports of Russian and Belarusian oil products. These two countries accounted for the largest volume of imports, and Ukraine provided its own resources by only 30%.

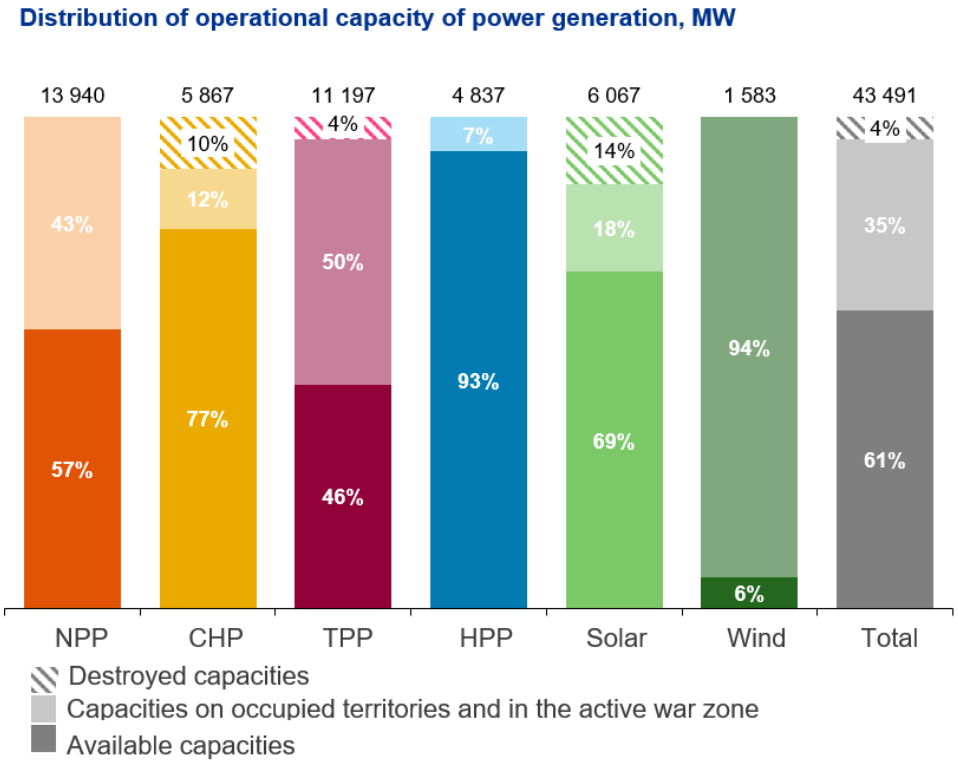
At the beginning of June 2022, Energoatom, the national company engaged in nuclear generation in Ukraine, signed agreements on nuclear fuel supply for all nuclear power plants of the country with the American company, Westinghouse Electric Company. Previously, fuel for Ukrainian NPPs was supplied from Russia.

Ukraine and Moldova have been disconnected from the energy systems of Russia and Belarus shortly before the invasion. Within a few weeks, the Ukrainian and Moldovan power systems were synchronized with the EU networks, and since the end of June 2022, Ukraine has started commercial electricity trade with the EU.

Progress in the energy sector reform

Ukraine has made significant progress in reforming the energy sector in line with EU legislation. In 2019-2021 Ukraine has successfully completed the unbundling of gas and electricity transmission system operators, which is proven by their certification.

Key structural changes in the gas and electricity markets were introduced. Corporate governance reform in the energy sector is also ongoing.



As a Ukrainian transfer system operator (TSO), Ukrenergo, has been carrying out activities to prepare our energy system for synchronization with ENTSO-E since 2017, when the Agreement on conditions of the future merger was signed.

During this time, the power units of Ukrainian NPPs, TPPs, TPPs and HPPs have been tested and a mathematical model of the power systems of Ukraine and Moldova has been developed, on the basis of which the ENTSO-E Consortium conducted a study of the static and dynamic stability of the energy systems of Ukraine and Moldova in the network of continental Europe. The results of the study proved the technical possibility of synchronization.

Ukraine joined the United energy system of continental Europe ENTSO-E a year earlier than planned. The energy systems of Ukraine and Moldova are fully synchronized with the energy network of continental Europe ENTSO-E.

Impact of the war on the sector

The war has a significant negative impact on the work of the Ukrainian energy sector. Because of its economic, humanitarian and geopolitical importance, energy infrastructure facilities are particularly frequent targets of Russian aggression. Nevertheless, the Ukrainian energy system shows high stability, and the workers of the energy sector show extraordinary professionalism in ensuring stable operation of the industry even in the conditions of war.

Source: Ukrenergo, working group analysis

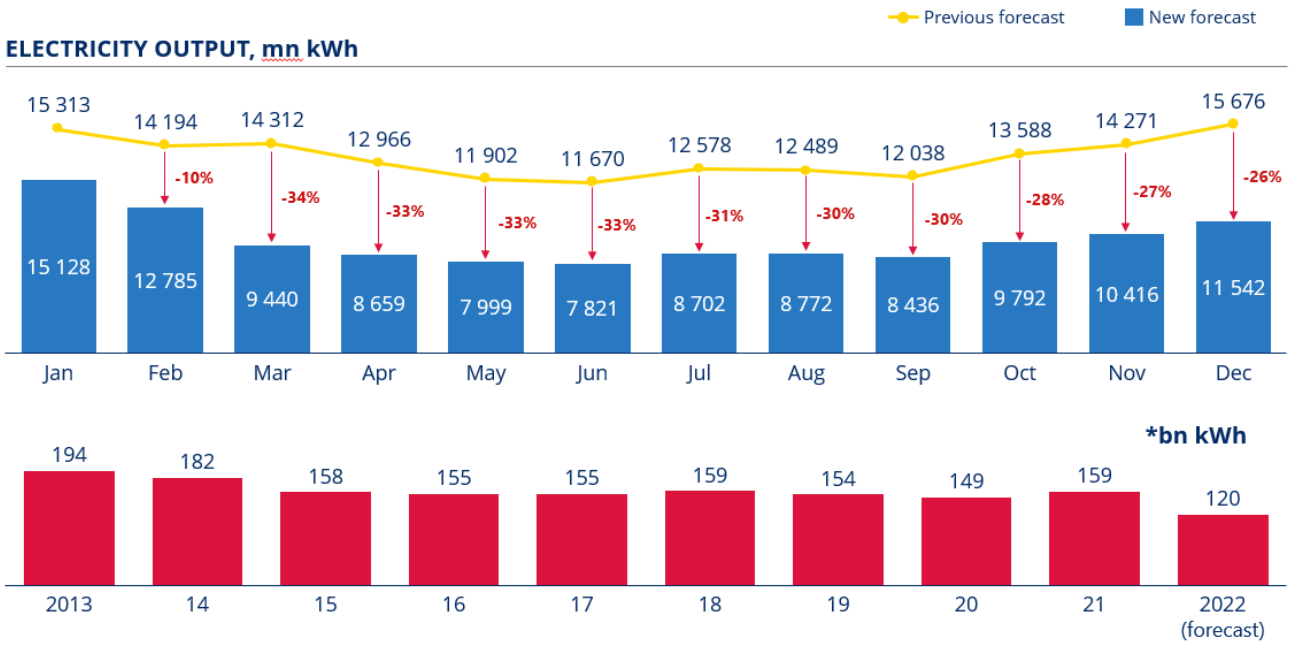
Around 4 percent of generation capacities are destroyed due to combat operations, and 35 percent of capacities are located in the occupied territories. In particular, the largest in Europe NPP (Zaporizhzhia NPP) operates within the Ukrainian energy system, but it is under continuous pressure from the Russian occupants.

The production capacity of this plant is 6000 MW, or 43% of the total capacity of all Ukrainian nuclear power plants.

Overall, Over 50 percent of thermal generation facilities, 30 percent of solar generation facilities and 90 percent of wind generation facilities are either destroyed or under Russian occupation.

Gas production reduced by approximately 10-12 percent.

None of oil refineries is in operation (domestic production provided approximately 30 percent of petroleum products); there are logistics difficulties with petroleum products supplies.



Preliminary, as of mid-June 2022, the direct losses caused to the infrastructure of the Ukrainian energy, oil and gas sector, amount to 47 billion UAH or 1,7 billion dollars.

Total indirect losses in the electricity sector since the beginning of the war are estimated at 341.8 billion UAH. In the sector of gas production, transit and distribution, the estimated losses amount to UAH 61 billion. For the oil production and oil refining sector – UAH 66 billion.

Contraction of internal market and payments

As a result of the military operations, demand decreased significantly (by 30-35 per cent compared to consumption in 2021), and consumption patterns changed significantly due to the movement of consumers to the western regions.

As of the end of June, almost 600 thousand consumers and about 180 thousand consumers are without electricity supply.

A significant rise in energy and fuel prices makes it difficult to supply demand and/or prepare for the autumn-winter season.

Energy prices and heat and transmission tariffs for a large part of consumers remain unchanged, increasing financial imbalances in the energy system. Thus, as of June 1, 2022, the expected deficit of funds in the electricity market is about 35 billion UAH. Because of Russian aggression, there is a high level of systemic restrictions on the generation of the RES, with its sources of compensation being currently uncertain.

The fall in the level of calculations and the aggravation of the debt problem, even at fixed prices, indicates a threat to energy poverty.

Loss of labor resources through military actions and departure from the country of the working population has a significant negative impact on the industry.

The impact of the war on the EU market

Russian military aggression against Ukraine is also accompanied by aggressive actions of russia against buyers of its energy resources in the EU. Thus, the Russian monopoly supplier has already stopped gas supply to Poland, Bulgaria, the Netherlands, Denmark, France and has significantly reduced gas supply to German and Italian contractors.

In response to energy risks, the EU has developed a RepowerEU plan, the main goal of which is to give up Russian energy resources by increasing energy efficiency, diversifying fuel supplies, creating a mechanism for joint gas purchase and accelerating the transition to renewable energy sources. The EU has also imposed sanctions on Russian coal and oil.

Some EU countries have announced anti-crisis measures such as the restoration of coal generation, increased investment in nuclear power, and stimulation of gas economy. In addition, Germany is discussing the possibility of extending the life of nuclear power units and allowing shale gas production.

These external changes significantly affect Ukraine’s energy security, but also create new opportunities for Ukrainian energy companies in the European market. Ukraine aims to use its significant capabilities in low-carbon electricity generation and a strong infrastructure in transportation and storage of gas to support the EU in reducing its dependence on external energy sources.

1.2 Key challenges for the Ukrainian energy sector:

Damage/occupation and risk of further destruction or loss of control

- Uncertainty of the war's duration
- Need for prompt elimination of damage to energy system facilities territorial imbalance regarding production and consumption of energy (especially thermal) as a result of military actions
- Regional increase on energy grids

Current approach to pricing and financing of the industry

- Energy prices in Ukraine do not include all expenditures in connection with state regulation and PSAs, this will have an additional negative impact in the conditions of armed aggression and loss of some production facilities
- Nuclear power is damaged by the imperfect PSA model and a number of regulatory obligations to sell electricity at fixed prices below market prices
- the Nuclear Safety Action Plan and the Nuclear Safety Decommissioning Foundation are underfunded, lack of funds for handling spent nuclear fuel and radioactive waste
- changes in the legislation governing the work of the industry, due to the introduction of the military situation, are unpredictable, which complicates long-term planning

Difficulty in attracting financial resources and non-payment

- limited financial resources of the state budget and Ukrainian companies
- rising cost of capital
- the problem of debt accumulation and consumer solvency reduction
- the problem of repayment of debts formed on the wholesale electricity market of Ukraine has not been solved

Dependence of the power system on coal generation

- highly-commanded thermal generation is critical for the balance of the Ukrainian energy system.
- the main share of TPPs has physically worn out and outdated equipment (83% of TPPs have worked for more than 200 thousand hours).
- due to low environmental indicators, Ukraine is among the top 15 countries in the world in terms of SO2 emissions and is responsible for almost 75% of PM10 emissions in Europe.

Technological, technical and resource limitations

- stopping oil and oil imports from aggressor countries and blocked sea routes require the transition to supply from other sources, which requires time and resources to expand narrow places of logistics
- there is no possibility of rapid restoration of exploration and production in the oil and gas industry due to significant amount of landmines on the territories
- Reduction of gas and oil transit level, which increases the cost of the unit of transported products
- significant level of signs of long-term use of electrical and gas distribution networks
- the exhaustion level of gas deposits is more than 75%.

- the new gas deposits are difficult to develop because of significant depth of deposits and complicated geology; deposits on the shelf are blocked
- Integration of a large number of RES into the energy system, the need for balancing using peak capacities and energy storage systems
- Unexplored full infrastructural potential of Ukraine for transporting "green" hydrogen to the EU
- The need to provide the industry with qualified personnel
- The scientific and technical potential of energy enterprises and research centers in oil and gas production does not meet the challenges that face the industry

1.3 Key opportunities for Ukraine's energy sector

Integration with energy systems of EU countries

- The possibility of using the underground gas storage system by European companies
- Accelerated integration of the energy sector into European markets and use of the export potential of the electric power industry
- Significant scientific potential in nuclear energy and the possibility of providing scientific services to other countries

Decarbonization

- A significant share of renewable and carbon-neutral energy sources
- The potential for further development of renewable energy sources, with a multiplier effect on the economy due to the involvement of the national engineering sector in the production of equipment for RES facilities
- Considerable potential for the development of offshore wind energy in the Black Sea, provided security risks are resolved
- The potential to create a hydrogen ecosystem – from production to storage and transportation of hydrogen produced from renewable energy sources
- Replacement of natural gas with sustainable bioenergy, waste heat and low-potential energy of the external environment
- Developed regulatory framework for further large-scale development of distributed generation based on renewable energy sources
- Replacement of petroleum products with synthetic fuel

Optimizing the energy mix and balancing the energy system

- Optimizing the energy mix, taking into account decarbonization and cost minimization
- Powerful nuclear energy with the potential for development and the creation of a multiplier effect on the economy
- The possibility of balancing the energy system through the construction of hybrid RES stations and the development of distributed generation
- Additional opportunities for balancing energy networks in the case of using cogeneration plants based on sustainable bioenergetics, waste heat and low-potential energy of the external environment
- A significant resource base of the main types of energy resources with the potential to increase, especially in the oil and gas industry and nuclear energy

- Possibility of creating an incomplete fuel cycle (except for enrichment) in nuclear energy
- Possibility of creating a full production cycle of energy storage systems (due to significant lithium deposits)
- Possibility of production and export of hydrogen

Energy efficiency

- Stimulation of domestic enterprises to an efficient use of energy resources and production of energy-efficient equipment, accounting of energy resources
- Implementation and provision of continuous improvement of the energy management system at the state and municipal level, as well as at enterprises, in particular in accordance with the requirements of standards and international agreements.
- Stimulating the use of eco-transport (increasing the number of high-speed electric charging stations, increasing the use of biofuel in transport) and ensuring electrification for the development of the use of electric transport at both the national and regional levels, including urban transport.

Other

- Commercially attractive investment projects
- Potential for further privatization and increased competition in the industry
- Possibility of attracting foreign expertise, technologies and financing for exploration and development of hard-to-produce and offshore hydrocarbons

1.4 Key assumptions and framework of the plan

Security assumptions

- The calculations regarding the medium- and long-term development of the energy system given in this plan are based on data and forecasts that were relevant for the controlled territories as of February 23, 2022.
- Short-term forecasts, as well as demand estimates, consider the existing damage to energy facilities and large industrial consumers, as well as the current situation at the frontline as of the end of June 2022.
- Significant changes in these indicators are possible and may materially affect the given calculations. In case of significant changes, the plan will be revised accordingly.

In addition, this plan is designed with consideration of the following framework assumptions in mind:

- European integration is a strategic priority for the development of Ukraine and the Ukrainian energy industry
- The restoration and modernization of the energy industry will require significant funding, and Ukraine will create favorable conditions for attracting investment
- Ukrainian consumers should be provided with reliable access to energy resources, and vulnerable consumers should be protected from energy poverty
- Ukrainian energy industry should ensure the rapid recovery and development of the existing economy and the formation of a new economy
- Ukraine refuses to import any energy resources and components from the Russian Federation and seeks to increase the use of domestic resources

Accordingly, priority is given to initiatives which:

- speed up the European integration of Ukraine and the fulfillment of requirements for a candidate country for EU membership
- meet the requirements of the European Green Course, contribute to the fulfillment of Ukraine's international energy obligations, increase the share of carbon-neutral energy resources in the energy mix
- improve Ukrainian consumers' access to energy resources and facilitate the return of temporarily displaced citizens, including due to the creation of new jobs
- contribute to reducing the need for energy resources, do not require non-market approaches to pricing and contribute to reducing the need for budget expenditures to support vulnerable consumers
- are commercially attractive, contribute to investment attraction, export of goods and services and increase revenues to the state budget
- allow to replace Russian fuel/components and improve security of supply, increase the share of local energy resources in the energy mix and/or reduce dependence on imports

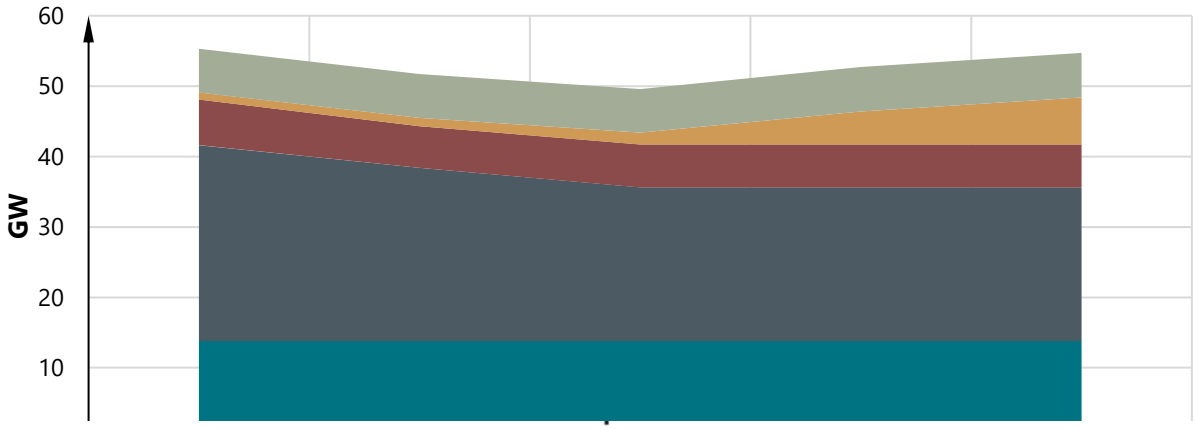
Taking into account the situation with the provision of the Ukrainian market with various types of fuel and other resource limitations, the following is also taken into account:

- The priority direction is the improvement of power system balancing capabilities (due to the opening of new highly maneuverable capacities, energy storage systems, electricity export to the EU market, demand management measures and incentives for balancing on the part of consumers), which paves the way for increasing RES production;
- It is expedient from the point of view of energy security to shift the demand from oil products in transport to gas and electricity, as well as in heating from gas to electricity, which requires, in particular, the corresponding renewal of networks;
- It is expedient to reduce the need for scarce types of energy resources through the improvement of energy efficiency;
- The maximum priority is given to the market solution excluding issues of energy security (creation of fuel reserves, reserve capacities);
- The choice between alternative market solutions and/or the share of each solution is determined based on economic feasibility and speed of implementation.

2 Electricity Sector

This section of the plan uses analytical data prepared by the operator of the Unified Energy System of Ukraine PJSC Ukrenergo as part of the Report on the Assessment of the Compliance (Sufficiency) of Generating Capacities to Cover the Forecast Demand for Electric Energy and Ensure the Necessary Reserve in 2021. The report is based on data on energy facilities in controlled territories as of the full-scale invasion.

As of the end of June 2022, Zaporizhzhia NPP and TPP, Kakhovka HPP and Kherson TPP are occupied by Russian invaders. In addition, the Luhansk and Kryvorizka TPPs, as well as Severodonetsk, Okhtyrska, Kremenchuk and Chernihiv TPPs suffered significant damage.



The plan for recovery and development of the energy sector will be regularly updated taking into account the current security situation.

2.1 Analysis of the state of generating capacities of the IPS of Ukraine

Generating capacities in the IPS of Ukraine

Total installed capacity of power plants in the IPS of Ukraine) as of 31.12.2021 (excluding energy generating units of the Crimean power system and temporarily uncontrolled territories of Donetsk and Luhansk regions) is 56.247 GW, of which 49.7% is taken by thermal power plants (in particular, TPPs, CHPs, modular plants), 24.6% – by nuclear power plants, 11.2% – by hydropower and pumped storage power plants, 14.5% – by power plants running on renewable energy sources – WPPs, SPPs, BioPPs.

Dynamics of the installed capacity mix of power plants in the IPS of Ukraine*

	2016	2017	2018	2019	2020	2021
HPP/PSP	6,2	6,2	6,2	6,3	6,3	6,3
RES	1	1,2	1,7	4,7	6,7	8,1
CHP	6,5	5,9	6,1	6,1	6,1	6,1
TPP GC	24,6	24,6	21,8	21,8	21,8	21,8
NPP	13,8	13,8	13,8	13,8	13,8	13,8
Total	52,1	51,7	49,6	52,7	54,7	56,2

*Note. *Excluding TNCT of AR of Crimea, Donetsk and Luhansk regions*

Major generating capacities of the IPS of Ukraine (as of 31.12.2021) are concentrated at:

- four nuclear power plants (15 power units, of which 13 units with capacity of 1,000 MW and 2 units with capacity of 415 MW and 420 MW, respectively);
- 10 hydro power plants on the Dnieper, Dniester and Pivdennyi Buh Rivers, as well as on the Tereblia and Rika Rivers (Tereble-Ritska hydropower plant) with the total installed capacity of about 4,729.5 MW, a total number of 101 units. As well as 3 pumped storage plants having the capacity of 1,487.8 MW and including 11 units (with unit capacity ranging from 33 MW to 324 MW);
- 12 TPPs with units having the unit capacity of 150, 200, 300 and 800 MW (75 power units, including: 150 MW – 6 units, 200 MW – 31 units, 300 MW – 32 units, 800 MW – 6 units) and 3 turbogenerators, as well as 3 large CHPs with 100 (120) MW – 4 units, and 250 (300) MW – 5 units;
- RES plants (including power plants running on bio fuels) with total capacity of 8,148 MW, including the largest in terms of installed capacity Syvaska WPP (245.7 MW but for a number of reasons its actual capacity is much lower), Pokrovska SPP (240 MW), Solar Pharm-1 (200 MW), Botievska WPP phases 1-65 (199,875 MW), Myrnenska WPP phases 1–6 (163 MW), as well as a number of power plants with lower capacity.

Nuclear power

Most NPP power units are equipped with WWER-1000 series reactors (Model B-320), which are similar in technical characteristics to foreign PWR reactors. As of the end of 2021, 12 power units have already used up their 30-year design life, the service life of 11 of them has already been extended for another 10–20 years, with a decision pending about extending the service life of one more power unit. The standard service life of 3 more nuclear power units will expire (ZNPP-6 in 2026, RNPP-4 and KhNPP-2 in 2035) in the medium term.

Service life of NPPs in Ukraine

Power plant	Unit No.	Capacity, MW	Type of reactor unit	Date of commissioning	Expiry date of design service life	Status of unit service life extension
Rivnenska NPP	1	420	B-213	22.12.1980	22.12.2010	Service life extended to 22.12.2030
	2	415	B-213	22.12.1981	22.12.2011	Service life extended to 22.12.2031
	3	1,000	B-320	21.12.1986	11.12.2017	Service life extended to 11.12.2037
	4	1,000	B-320	10.10.2004	07.06.2035	Planned
Yuzhno-Ukrainska NPP	1	1,000	B-302	31.12.1982	02.12.2013	Service life extended to 02.12.2023
	2	1,000	B-338	09.01.1985	12.05.2015	Service life extended to 31.12.2025
	3	1,000	B-320	20.09.1989	10.02.2020	Service life extended to 10.02.2030
Zaporizka NPP	1	1,000	B-320	10.12.1984	23.12.2015	Service life extended to 23.12.2025
	2	1,000	B-320	22.07.1985	19.02.2016	Service life extended to 19.02.2026
	3	1,000	B-320	10.12.1986	05.03.2017	Service life extended to 05.03.2027
	4	1,000	B-320	18.12.1987	04.04.2018	Service life extended to 04.04.2028
	5	1,000	B-320	14.08.1989	27.05.2020	Service life extended to 27.05.2030
	6	1,000	B-320	19.10.1995	21.10.2026	Planned
Khmelnytska NPP	1	1,000	B-320	22.12.1987	13.12.2018	Service life extended to 13.12.2028

Power plant	Unit No.	Capacity, MW	Type of reactor unit	Date of commissioning	Expiry date of design service life	Status of unit service life extension
	2	1,000	B-320	07.08.2004	07.09.2035	Planned

One of the priority tasks of the NPP operator—NNEGC Energoatom—is to extend the service life of existing power units. The extra service life of NPP units extended by the current licenses issued by the Regulating Agency is from 10 to 20 years and is determined in each case individually based on results of safety reassessment.

Hydro power

Hydropower plays an extremely important role in the functioning of the Ukrainian power system, as HPPs and PSPs are in fact the only source of its peaking capacity, besides, pumped storage power plants make a significant contribution to smoothing the night "gaps" of electricity consumption.

The largest hydropower generating company in Ukraine is PJSC Ukrhydroenergo. The company consists of nine power plants on the Dnieper River – Kyivska HPP (440 MW), Kanivska HPP (500 MW), Kremenchutska HPP (687.4 MW), Seredniodniprovska HPP (388 MW), Dniprovska HPP (1,563.1 MW), Kakhovska HPP (343.2 MW), Kyivska PSP (213.8 MW) and on the Dniester River – Dnistrovska HPP (702 MW) and Dnistrovska PSP (1,296 MW), the first (972 MW) and second (324 MW) phases of which have been commissioned and the third (972 MW) phase is planned for commissioning. Also the IPS of Ukraine includes Tashlytska PSP (302 MW, operated by NNEGC Energoatom). This power plant is under construction (it is expected that the second phase consisting of the third power unit having the capacity of 151 MW will be completed, and the power plant total capacity will reach 906 MW) and belongs to the South-Ukrainian power complex. Other HPPs operating as part of the IPS of Ukraine have a total installed capacity of 193 MW.

Thermal power

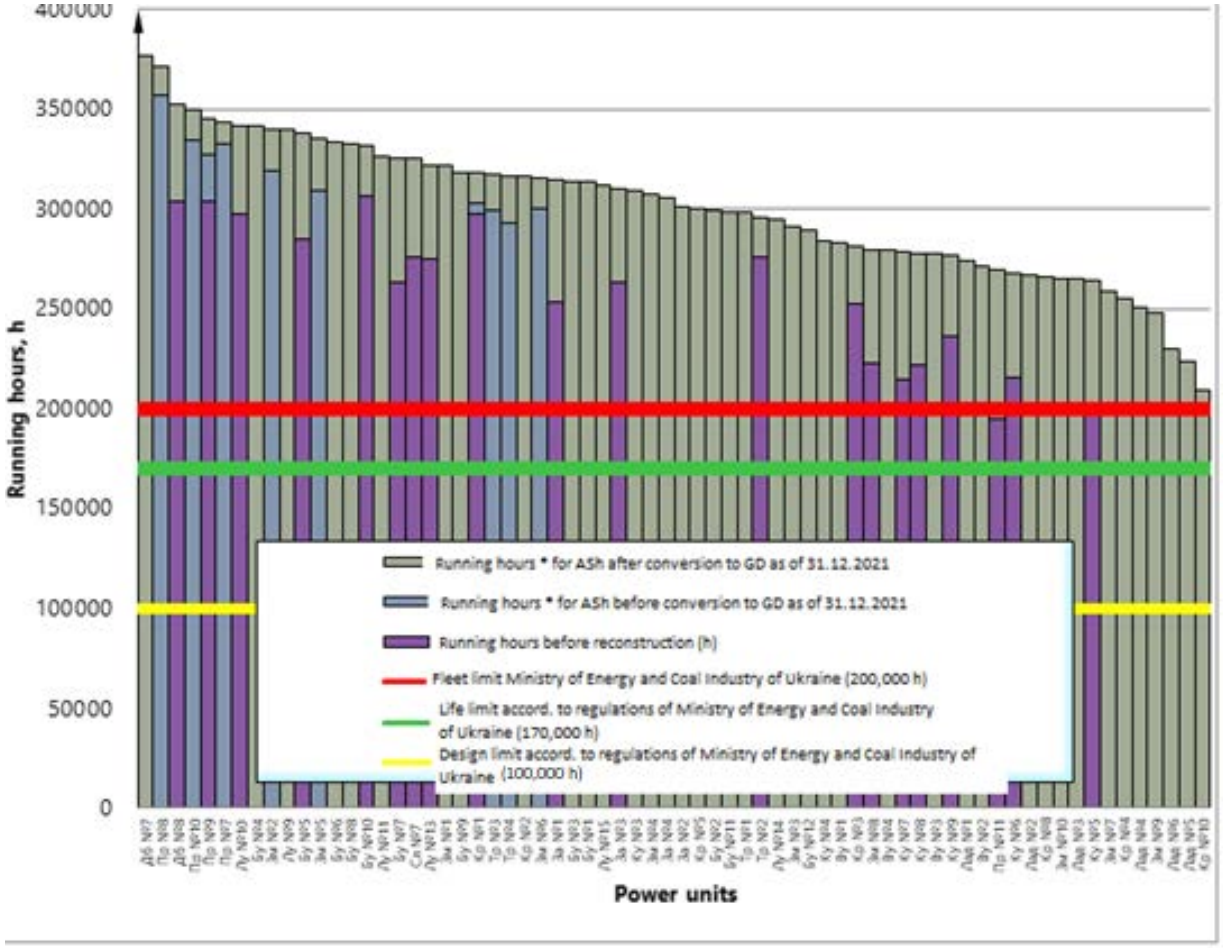
The technological basis of generating capacities in thermal power is formed by pulverized coal power units of critical steam parameters (13 Mpa, 545 °C) with a capacity of 150–200 MW and pulverized coal and gas-oil power units of supercritical parameters (24 Mpa, 545 °C) with a capacity of 300 MW and 800 MW at condensing power plants. Most power plants with 150 MW power units were built and put into operation in 1959–1964, units with capacity 200 MW – in 1960–1975, units with capacity 300 MW – in 1963–1988, and units with capacity 800 MW – in 1967–1977.

As of 31.12.2021, TPPs include 75 power units with a total installed capacity of 21,562 MW, of which (see retrospective dynamics of development of generating capacities of Ukraine's TPPs):

68 coal-fired units with a capacity of 16,962 MW, including: 6 mothballed units and 1 unit under reconstruction (below is a breakdown taking into account the conversion of units to GD-brend coal):

23 units firing A-brend and P-brend coal with a capacity of 6,439 MW (5 units with a capacity of 1,280 MW are mothballed);

45 units operating on GD-brend coal with a capacity of 10,523 MW (4 units with a capacity of 935 MW are mothballed);



7 gas-oil units with a capacity of 4,600 MW (1 unit of 800 MW is mothballed).

Over the last four years, gas-oil power plants have not been engaged in operation in the IPS of Ukraine (except for one unit of 300 MW at Trypilska TPP).

As of late 2021, about 20% of thermal power plants have been reconstructed, but the issue of bringing their environmental characteristics to modern requirements remains unresolved, and flexibility characteristics though slightly improved still remain inadequate for the current needs of the IPS of Ukraine. The absence of defined financing mechanisms for sustainable modernization set out by the NERP will in the short term lead to a significant reduction in the available capacity of TPPs.

The remainning units are maintained in working condition due to overhauls and current repairs, but their wear is constantly increasing and reaches the threatening limit in terms of the possibility of their further operation without reconstruction.

Running hours of TPP units in Ukraine (as of 31.12.2021)

CHP and cogeneration units

Ukraine's modular CHPs are represented by three power plants (Kyivska CHP-5, Kyivska CHP-6 and Kharkivska CHP-5), which are equipped with power units with cogeneration turbines T-100/120-130, T-110/120-130 and T-250/300-240 with a total capacity of 1,670 MW in the heating mode and 1,980 MW in the condensing mode.

The share of installed capacity of CHPs, 6,070 MW, is significant in Ukraine and most of it comes from CHPs running on natural gas.

Largest CHPs and cogeneration units in the IPS of Ukraine

CHPs and cogeneration units	Type of fuel	Installed capacity, MW
Kyivska CHP-5	Natural gas	700
Kyivska CHP-6	Natural gas	500
Kharkivska CHP-5	Natural gas	470
Myronivska TPP	Coal ranks Ash and P / G and D	275
Severodonetska CHP	Natural gas	260
Kremenchutska CHP	Natural gas	255
Chernihivska CHP	Coal ranks Ash and P/ Natural gas	210
Cherkaska CHP	Coal ranks G and D/ Natural gas	200
Kaluska CHP	Coal ranks G and D/ Natural gas	200
Darnytska CHP	Coal ranks Ash and P/ Natural gas	160
Kharkivska CHP-2 (ESHAR)	Coal ranks Ash and P/ Natural gas	150
Kramatorska CHP	Coal ranks Ash and P/ Natural gas	150
Bilotserkivska CHP	Natural gas	120
Shostkinska CHP	Natural gas	115
Khersonska CHP	Natural gas	80
Odeska CHP	Natural gas	68
Kharkivska CHP-3	Natural gas	62
Dniprovska CHP	Natural gas	61.6
Novorozdilska CHP	Natural gas	44
Novoyarivska CHP	Natural gas	42.69
Lvivska CHP-1	Natural gas	41.3
Sumska CHP	Coal ranks Ash and P/ Natural gas	40
Mykolayivska CHP	Natural gas	40
Kirovohradska CHP	Natural gas	15
Okhtyrkska CHP	Natural gas	12.75
Lokachi GTI	Natural gas	8.8
CHP of Uman Greenhouse Plant	Natural gas	6
CHP of Cherkasyteplokomunenergo	Natural gas	5.32
CHP of Pervukhinsky Sugar Factory	Natural gas	5

Most CHPs have physically worn out and obsolete equipment. Due to the loss of heat loads, in many cases CHP electricity output is not optimal in terms of the actual needs of consumers in thermal energy, which leads to high fuel costs for the production of electrical and thermal energy in the cogeneration mode.

RES

In recent years, trends in the development of renewable energy are going upward (the peak of investment in the construction of renewable energy facilities fell on 2019). According to available information, the capacity of power facilities that use renewable energy sources for electricity production in 2019 reached 4,722 GW. During 2020, renewable energy facilities with a capacity of 1.95 GW were additionally put into operation, and in 2021 – another 1.45 GW. However, because of quarantine restrictions due to the spread of COVID-19 pandemic and for a number of economic reasons, not all facilities scheduled for commissioning during the year were put into operation. As expected, renewable energy facilities with a total capacity of about 1.54 GW or more will be additionally put into operation in 2022.

The development of renewable energy shows a stable upward trend. In recent years, there has been a steady increase in the number of commissioned renewable energy facilities. This dynamics of renewable energy development leads to an increase in the forecast electricity output in the IPS of Ukraine from renewable energy sources (in 2019, electricity generation from RES in the overall production mix reached 3.6% or 5.5 billion kWh, and the overall export of electricity to countries of Eastern Europe from the IPS of Ukraine in 2019 made up close to 5.8 billion kWh; in 2020 generation reached 10.1 billion kWh or 6.8%, in 2021 – 12.5 billion kWh or 8%, and it is expected that in 2022 generation will reach about 14 billion kWh, which will make at least 9% of the total electricity output by all power plants in the IPS of Ukraine).

The steadily growing number of renewable energy facilities aggravates the price burden on Ukraine's electricity consumers, as well as exacerbates the problem of ensuring the operational security of Ukraine's IPS.

Dynamics of commissioning of RES generating capacities

RES technology	RES growth compared to the previous year for the period 2016-2021, MW					
	years					
	2016	2017	2016	2019	2016	2021
WPP	10.9	WPP	10.9	WPP	10.9	WPP
SPP	98.9	SPP	98.9	SPP	98.9	SPP
BioPP	10.2	BioPP	10.2	BioPP	10.2	BioPP
Micro-, mini- and small HPP	n/a	Micro-, mini- and small HPP	n/a	Micro-, mini- and small HPP	n/a	Micro-, mini- and small HPP

As of 31.12.2021, the installed capacity of RES plants in the IPS of Ukraine, which are directly connected to the grid and deliver electricity, is [50]:

- WPP – 1,529 MW;
- SPPs– 6,365.3 MW (including 1,205.3 MW of household SPP);
- BioPP – 254.2 MW;

Micro-, mini- and small HPP – 192.9 MW.

2.2 Analysis of operating modes of generating capacities in the IPS of Ukraine

The electricity production mix during 2016–2021 underwent significant changes.

Electricity production mix and volumes in the IPS of Ukraine* in 2016–2021, billion kWh

Year	Total	NPP	%	TPP	%	CHP and modular plants	%	HPP and PSP	%	WPP, SPP and BioPP	%
2016	154.8	80.9	52.3	49.9	32.2	13.3	8.6	9.1	5.9	1.5	1
2017	155.4	85.6	55.1	45	29	12.4	8	10.6	6.8	1.9	1.2
2018	159.3	84.4	53	47.8	30	12.5	7.8	12	7.5	2.6	1.6
2019	153.96	83	53.9	44.9	29.2	12.6	8.2	7.9	5.1	5.5	3.6
2020	148.85	76.2	51.2	39.6	26.6	14.6	9.8	7.6	5.1	10.9	7.3
2021	156.6	86.2	55.0	37.2	23.8	8.6	5.5	10.45	6.7	12.5	8.0

*Note. *Excluding TNCT of AR of Crimea, Donetsk and Luhansk regions.*

This production mix is predicated on the specifics of generating capacities of Ukraine's energy sector, which is overloaded with baseload capacities (NPPs and most of the thermal generation units) and characterized by an acute shortage of flexible capacities.

As a result, TPP power units designed for operation in baseload modes are used instead for flexibility, and many of them operate in non-design peaking and load following modes.

Under such conditions, the main capacities for load coverage are coal fired TPP units of 150–200–300 MW. Due to the unfavourable capacity structure (low specific weight of flexible capacity, limited regulation range of TPP), the power system practices daily stops of 7–10 units for the period of night offpeaks with their subsequent starts for morning peaks, stops in the daytime zone (to compensate for the increased production by SPPs) and starts during evening peaks. Such modes lead to additional exhaustion of equipment service life, more accidents and higher fuel consumption, which directly affects the adequacy of generating capacities, as well as the increase in fixed and variable costs and, consequently, a higher price bid.

Taking into account the above factors, as well as the base mode of HPPs during floods, more and more TPP units are engaged in daily stops/starts during the spring/summer season.

The total number of starts/stops of TPP power units (unit groups) of 150–300 MW remains at a fairly high level, and for 12 months in 2017 amounted to 1,943, for 12 months in 2018 – 2,255, for 12 months in 2019 – 2,478, for 12 months in 2020 – 2,622, and in 2021 – 2,900 [50].

It should be noted separately that following the events of 2014, when nearly all Ukrainian coalmines that supplied anthracite and lean coal (A-brend and P-brend) ended up in TNCTs, the country's energy sector faced a new problem — a permanent shortage of coal of these brends. To reduce dependence on coal imports, the generating companies converted TPP units running on anthracite coal to gas/steam coal (10 units having a total capacity of 2,060 MW were converted in 2016–2019).

For this reason the use of anthracite coal has decreased significantly in Ukraine over the last years: from 9.2 million tons in 2016 to 1.62 million tons in 2021 (for information: 4.9 million tons in 2017, 4.1 million tons in 2018, 3.4 million tons in 2019, 3.0 million tons in 2020) and was replaced with domestic coal of gas/steam coal. Power units running on coal of G and D brends managed though to maintain fairly high levels of their available operating capacity to cover the electricity load of Ukraine's IPS.

At the same time, the costs borne by TPPs to keep their power units operational are increasing, given further worsening of their operating conditions. In such circumstances, of special importance for TPPs are repairs aimed at retrofitting (improvement) of technical and economic performance of their power units compared to the actual values.

During 2021, as in some preceding years, NPPs experienced balancing curtailments, which caused the reduction of NPP capacities in the daily ELC coverage. Such curtailments were stemming, in particular, from the post-effects of the spread of the COVID-19 pandemic, which caused a reduction in electricity consumption and, as a consequence, other technologies of electricity production forced out certain share of nuclear energy from the daily curve. It all points to the need to engage NPP units to the weekly and daily load control, which in turn would increase the flexibility of the entire power system but requires in-depth studies, tests and modernization, if such option proves to be viable.

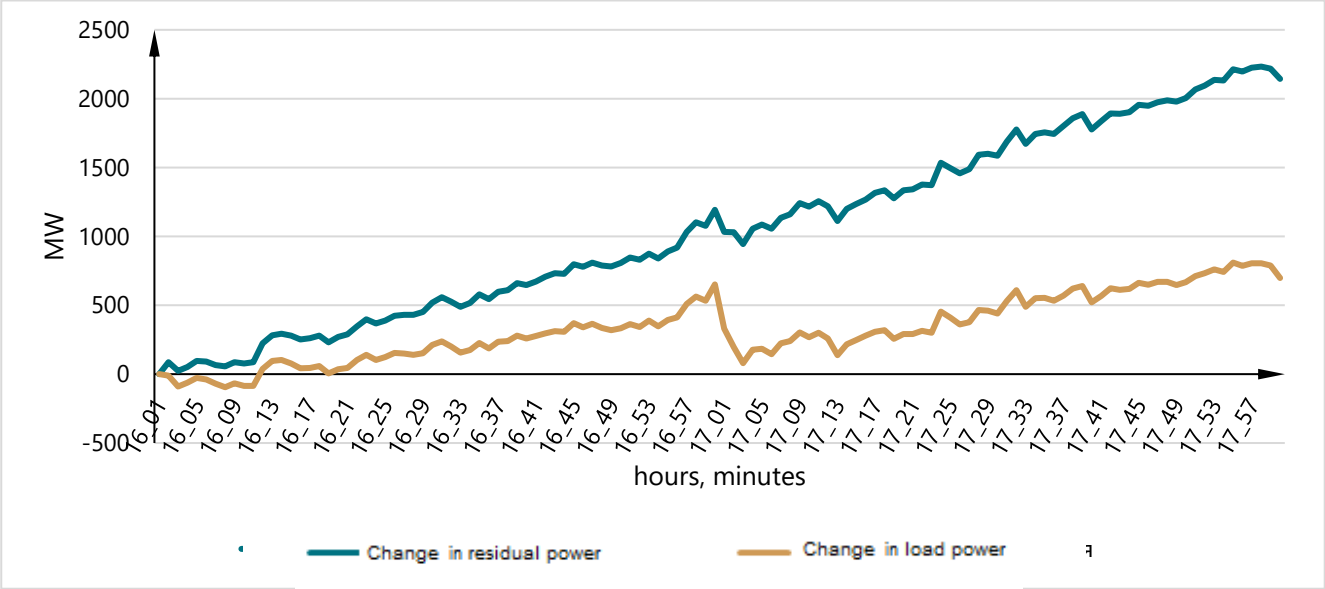
Analysis of operating modes of domestic CHPs shows that due to heat load loss most of them have a very low ICUF, which on average in Ukraine in recent years has not exceeded 24% (and shows the downward trend), and maximum capacity during the period of maximum electricity production does not exceed 50% of the installed capacity.

At the same time, electricity produced even by the most efficient gas fired CHPs operating on steam parameters of 13 Mpa and 24 Mpa, given the high cost of natural gas, is uncompetitive relative to electricity produced by TPPs, the same applies to electricity produced by coal fired CHPs with steam parameters of 9 Mpa and less.

Thus, domestic CHPs should be considered primarily as a source of thermal energy, as there is no other alternative to cover heat loads, especially in periods of very low temperatures, when their power output to cover electric load curves can reach 3 GW.

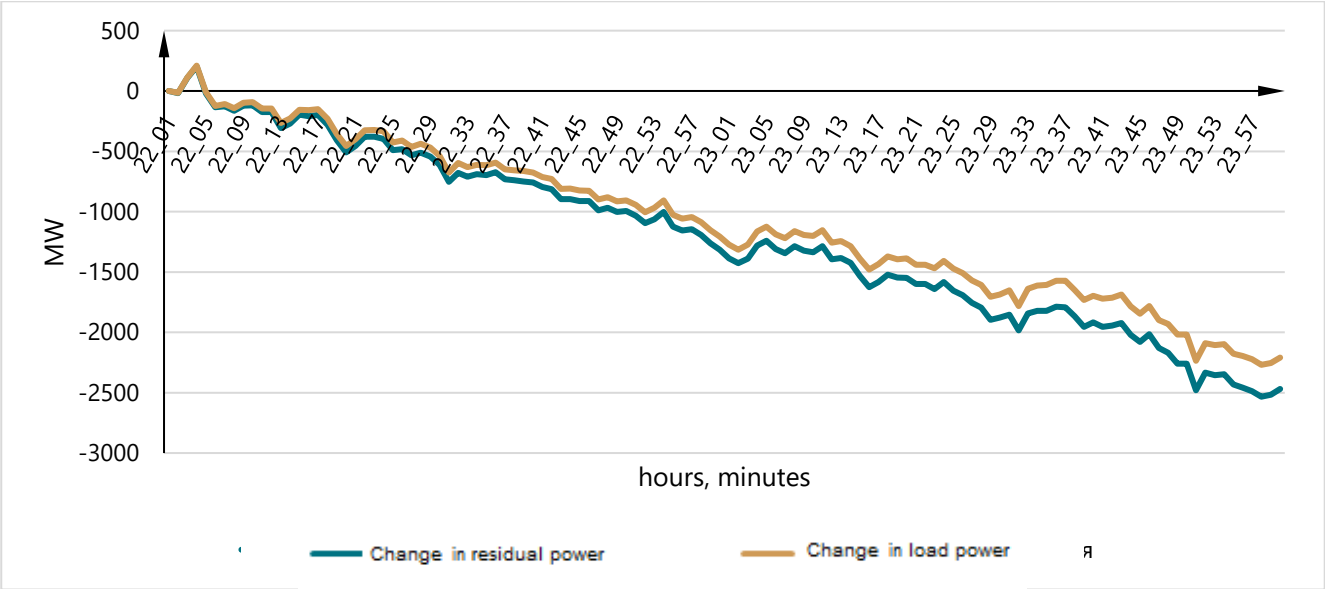
The most mobile peaking producers of electricity are HPPs and PSPs. However, their installed capacity is not covered by hydro resources to control daily load curves to the full extent, especially in recent low-water years. In particular, electricity generation by HPPs in 2020 was the lowest across the study horizon, nevertheless, in 2021, HPP generation returned to the normal average level compared to recent years. This being said, weather conditions in autumn and winter are characterised by abnormally high temperatures and low precipitation affecting the availability of hydro resources and operating modes of HPPs (as observed in late 2019 – early 2020). In addition, the constraints of the existing grid infrastructure affect the normal operation of Dnistrovska PSP (operation of power units in the pumping mode). Constraints are also present in the operation of Tashlytska PSP, which can operate at the downstream water levels of 15.50–16.50 m and upstream water levels of 92–101.50 m in turbine mode with one power unit only for 3 hours 33 minutes or with two power units for 1 hour 47 minutes. And in

the pumping mode with one power unit – up to 3 hours 51 minutes or with two power units for 1 hour 56 minutes.



When the downstream water level drops from 15.5 m to 14.5 m (the main factor is the dry microclimate in the vicinity of the basin of the Pivdennyi Buh River) the duration of Tashlytska PSP operation in the pumping and turbine mode will drop by 20%. Operating conditions of the Tashlytska PSP are also affected by upstream water conditions, when at water levels of 93–94.5 m it is partially prohibited to start power units in turbine mode (not more than once a week), and at 94.5-110.5 m it is prohibited to start power units in the pump mode too.

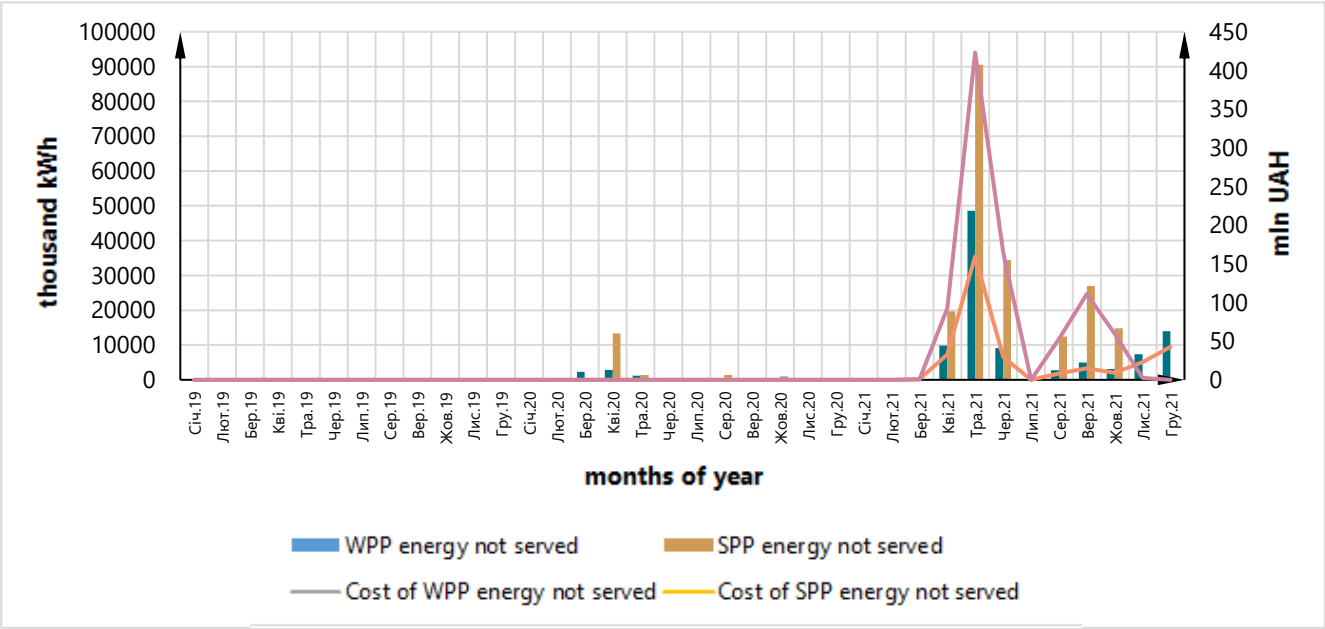
Commissioning the third power unit at Tashlytska PSP under the above listed conditions, indicators and constraints caused by downstream and upstream water levels (there are no new projects presented to increase them) de facto has no influence on the operating modes of the power system.



Under such conditions the third power unit will be used as a backup unit when the first and second power units are under repair, which is factored in this Report.

With the start of the new electricity market, the new model practically all the time is experiencing significant discrepancies between trading schedules and physical units commitment schedules (which has almost never happened in the previous model) affecting most the operating modes of HPPs and PSPs. In addition, the operation of most PSPs is focused mainly on the segment of the balancing market. Accordingly, there are more dispatch instructions for HPPs and PSPs to change capacity in order to maintain balance in the power system. At the same time, HPPs continue to participate in automatic and manual load and frequency control, as well as in voltage and reactive power control, ensuring balancing of the IPS of Ukraine, including to compensate for imbalances created by IPPs - Intermittent Power Plant.

Change in the load of consumers excluding the impact of IPP necessitating the change of conventional generation capacity, and including such impact (data for the hour from 16:00 to 17:00 on 16.08.2020)



Change in the load of consumers excluding the impact of IPP necessitating the change of conventional generation capacity, and including such impact (data for the hour from 22:00 to 23:00 on 16.08.2020)

Per instructions of NPC Ukrenergo's dispatchers (mainly in periods when generating units running on RES are provided with primary energy sources to the fullest extent), after all balancing options have been exhausted, in 2021 (see Figure 3.7) there were 90 curtailments on RES generation (having the capacity from 365 to 2,385 MW), while in 2020 and 2019 there were 20 curtailments (212 MW to 1,656 MW) and only two curtailments (250–300 MW), respectively. In the coming years, until shortages of flexibility and/or demand-side management are resolved, this tendency will continue.

Dynamics of volumes and cost of curtailments on RES generation in 2019–2021

Analysis of operating modes of the generating capacities indicates that the power system has insufficient level of generating capacities to cover its own peak loads, as a major part of generating capacities cannot be used for intended purposes. For example, during the period of peak loads (based on the results of statistical observations):

- 1-1.5 GW of coal fired generation capacities are unavailable due to scheduled repairs/maintenances;

- 3.5-4 GW of NPP capacities are unavailable due to scheduled repairs/maintenances;
- about 1 GW (and in some periods up to 3 GW) of coal fired generation capacities are unavailable due to unscheduled emergency repairs/outages;
- 2.2 GW of coal fired generation capacities are unavailable because the units are mothballed (pending decommissioning);
- 4.6 GW of gas-oil TPP units are unavailable due to the shortage and/or high cost of natural gas, and power units with a unit capacity of 800 MW have not been put in operation for more than 9 years and have no personnel;
- 3.1-3.6 GW of CHP capacities are unavailable due to lacking heat load;
- a number of capacities at HPPs and RES are unavailable due to the absence of sufficient volumes of primary energy sources (in particular, water resources);
- 2-2.5 GW of coal fired generation capacities are unavailable due to unsatisfactory fuel supply, which has a cyclic nature (which, obviously, requires a change in the fuel accumulation algorithm and enhancing the responsibility for not ensuring the guaranteed coal reserve).

For these reasons, the available operating installed capacity in the IPS of Ukraine is close to the maximum of electric load in the power system, while over the last 5 years in the periods of maximum load:

1) TPP capacity has not exceeded 7.2 GW (at the installed capacity of 21,842 GW at the end of 2021);
2) NPP capacity has rarely reached 12.6 GW and never exceeded it (at the installed capacity of 13,835 GW at the end of 2021);
3) HPP capacity has not exceeded 3.3 GW and is mostly short-term (at the installed capacity of 4,83 GW at the end of 2021);
4) SPP and WPP capacity sometimes dropped to 0 MW and occasionally reached 4.5 GW (at the installed capacity of 8.15 GW at the end of 2021);
5) capacity of CHP and other cogeneration units has not exceed 2.9 GW (at the installed capacity of 6.1 GW at the end of 2021).

A contingency at electricity generation facilities would be threatening to the security of supply during periods when the available operating capacity in the IPS of Ukraine is close to maximum electrical load, which can be avoided, first of all, by maintaining fuel reserves in the required volume because many thermal generating units (TPP)—which could have compensated for the loss of the operating capacity caused by such a contingency—are unavailable due to inadequate fuel supply.

As illustrated by results of the analysis of the state of generating capacities in Ukraine and their operating conditions, the IPS of Ukraine can be characterized as a system, which technically has adequate level of generating capacities (compared to the total load in the power system) but at the same is inflexible (i.e., characterized as a system in shortage of flexible capacities). The prerequisites for such a situation are as follows:

1) many capacities for a variety of reasons are not available during peak load periods;
2) a number of capacities are baseload and not intended for frequent and rapid change of their operating modes;
3) a number of capacities able to change their operating modes (mainly TPPs) have expired fleet resource.

2.3 Demand development scenarios

Based on the analysis of findings of studies on forecasting the coordinated development of the economy and energy, it was determined that the sustainable economic development with high GDP growth is possible only through the neoprotectionism policy implementation and the energy sector development according to the most effective scenario, which was taken as a basis for SMEE.

At the same time, it reflects the distribution of production as per the theory of globalization of the world economy, which prompted almost all advanced countries to reconsider relocating certain production abroad and manifested itself in the vulnerability of economy during COVID–19 pandemic and in future will only increase competition regarding export opportunities because of return of certain production previously relocated abroad due to the lower cost of production and because of the creation of non-tariff barriers to the possibility of exporting the products that countries can produce themselves, in particular the "tax" on the carbon "footprint" on imports.

So, to achieve the goals set out by the European Green Deal, the Investment Plan provides for attracting at least 1 trillion euros in investment over the next decade, part of which via the Just Transition Mechanism will be allocated to a fair and just "green" transition, which opens up the possibility of attracting at least 100 billion euros of investment in the period from today to the end of 2027 to support workers and residents of the regions most affected by the transition. The European Green Deal Investment Plan (InvestEU or the Just Transition Fund) also provides individual funding for a wide range of projects, including both small projects (such as improving the energy efficiency of households) and larger ones (such as installing a network of electric car charging stations). Significant funds will also be allocated for the implementation of individual projects of pilot technologies, in particular for the use of surplus "green" energy, development of hydrogen technologies etc.

The scenarios formed for the projected coordinated development of economy and energy are used for the implementation of the "Green Transition" concept in Ukraine. Such scenarios , first of all, envisage economically justified modernization of the domestic economy taking into account its existing potential and the use of targeted refinancing by the National Bank of Ukraine for relevant institutions to support economic development on long-term privileged conditions for large-scale national infrastructure projects (energy, transport, housing and utility services, etc.), as well as programmes for adaptation to climate change, with the priority on participation of domestic producers, and the use of existing industrial potential, creating a system of effective support to mortgaging, support to export-oriented domestic producers, and policies to substitute imports with domestic products.

According to these scenarios SMEE sets out the following main drivers of the economic growth and rising electricity demand in the medium term:

climate change, which causes an increase in electricity consumption for air conditioning and cooling, land reclamation, etc.; utilization of existing production capacities of real sectors of Ukraine's economy through the implementation of targeted state investment programmes for the development of infrastructure sectors of the economy (energy, transport, housing and communal services, etc.), support policy for import substitution, and maximum support for exports; development of automated and robotic productions (in particular, under import substitution projects); development of agro-industrial complex and defence industry; electrification of transport; development of information technologies (in particular DATA-centres).

In the future, with the improvement of the socio-economic situation in the country, major contributors to growing electricity consumption in these scenarios will be:

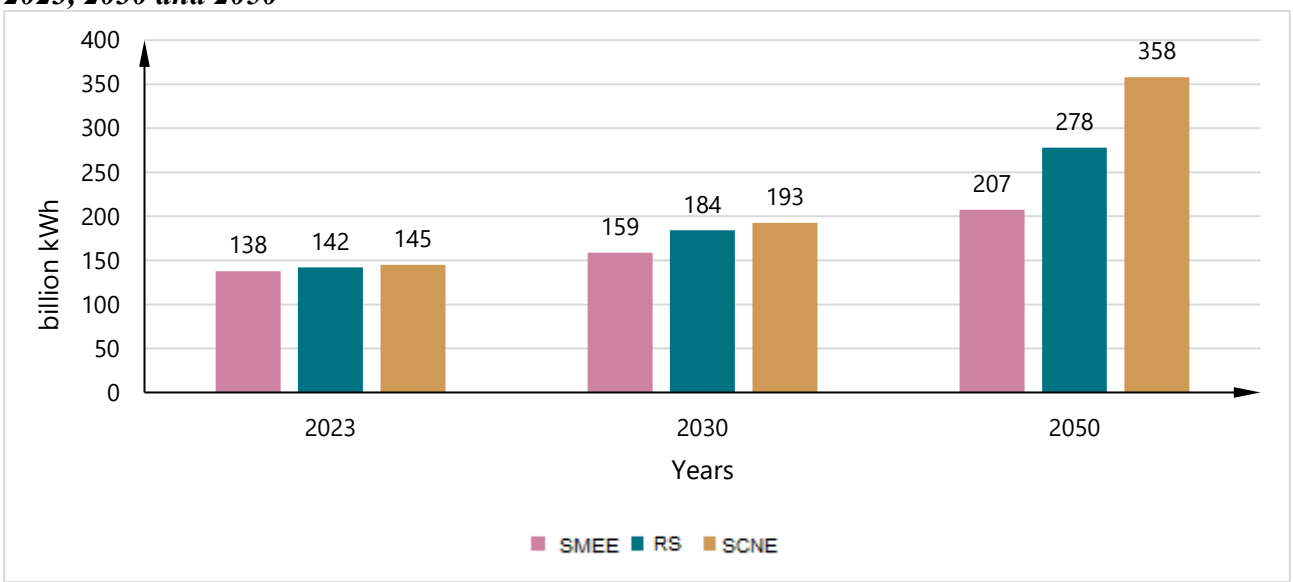
growth of households income (more household appliances, electric cars, etc.);

accelerated pace of development of the services sector.

Main factors reducing the electricity consumption relative to the current level in this scenario are:

- conducting an active policy to reduce energy intensity and increase energy efficiency in all sectors of the economy through their technological and structural retrofitting;
- formation of appropriate incentives for households in order to implement solutions to minimize and optimize electricity consumption (replacement of household appliances, lighting systems, hot water supply and heating running on electricity with more efficient solutions in terms of electricity consumption);
- minimizing consumption at maximum price levels of the electric load curve, and maximizing consumption at minimum price levels of the electric load curve.

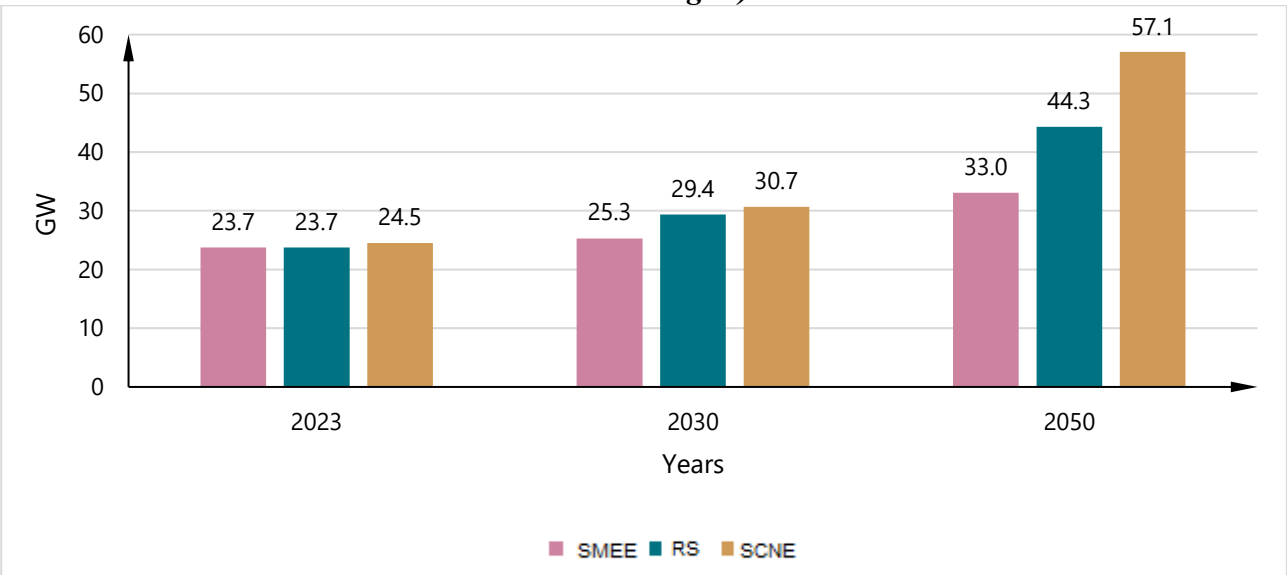
It should be noted that with the existing practice of cross-subsidization and maintaining low prices for households at the expense of other consumers, the households are not motivated to respond to price signals of the electricity market in terms of minimizing and optimizing overall electricity consumption in response to the changing price for electricity. On the other hand, such payment distribution under conditions of growing prices promotes the implementation of energy saving technologies as well as the introduction of decentralized power supply systems for consumers in real sectors of economy (industrial enterprises, services, etc..), as well as for a certain category of high-income households), which eventually reduces the need for electricity centralized production (for the IPS of Ukraine it is actually a decrease in consumption).



It should also be noted that a higher pace of economic development is accompanied by a higher pace of energy efficiency, which to some extent equalizes the forecast electricity demand.

Also the future demand for electricity is largely affected by its price, which depends on the structure of electricity production and the presence of compensators in the economy in terms of the price impact on the GDP, income of households and the national budget.

The scenarios focused on significant imports of electricity generation technologies, primary energy sources, and technologies ensuring balance reliability and operational security, do not have such compensators, which negatively affects the product demand and services in the domestic market as well as reduces the competitiveness of domestic producers in both domestic and foreign markets. These factors reduce the forecast electricity demand, as they negatively affect the opportunities for economic growth.

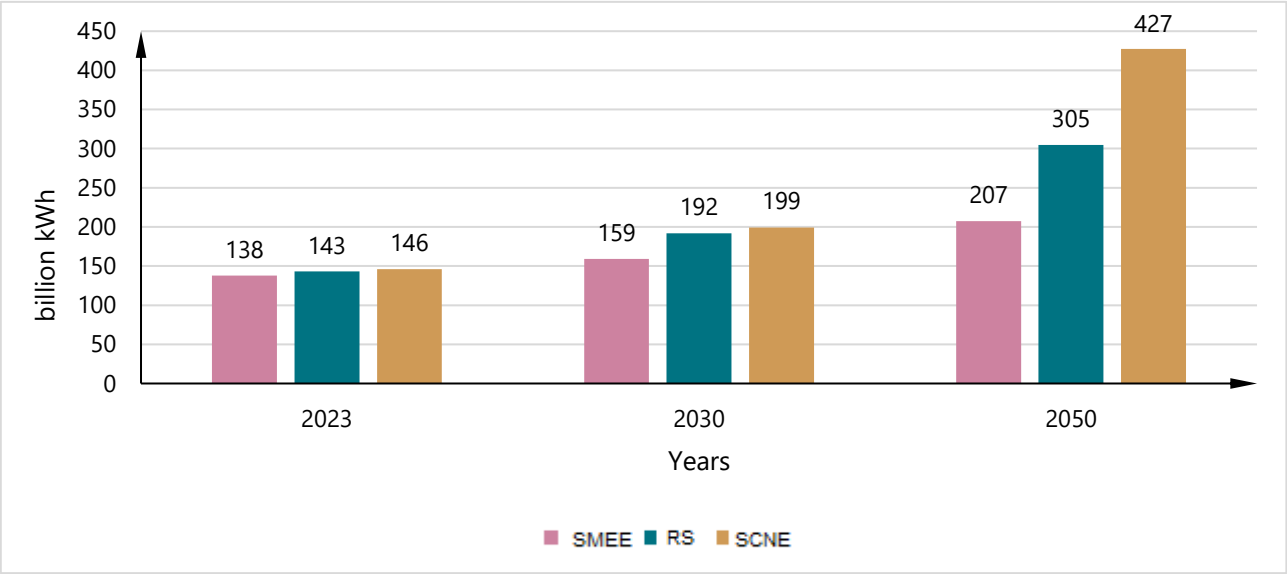


Demand under the low-carbon development scenarios is accepted in accordance with the adjusted levels given in the Modelling Report prepared by the Institute for Economics and Forecasting of the National Academy of Sciences of Ukraine (hereinafter the IEF Report) under the EBRD project "Support to the Government of Ukraine on updating NDC of Ukraine under the Paris Agreement

Electricity demand forecast in the IPS of Ukraine according to SMEE, RS and SCNE scenarios in 2023, 2030 and 2050

Transformations of daily electric load curves under different strategies of economic development have certain specifics, but all strategies have one common feature: density of the electric load curve is rising due to increasing electricity demand at the minimum price levels of the electric load curve and falling at the maximum price levels of the electric load curve, which is compensated in some way by the demand growth in the services sector and households.

Consumer load peak forecasts according to the scenarios (excluding the capacity of Power to X technologies)

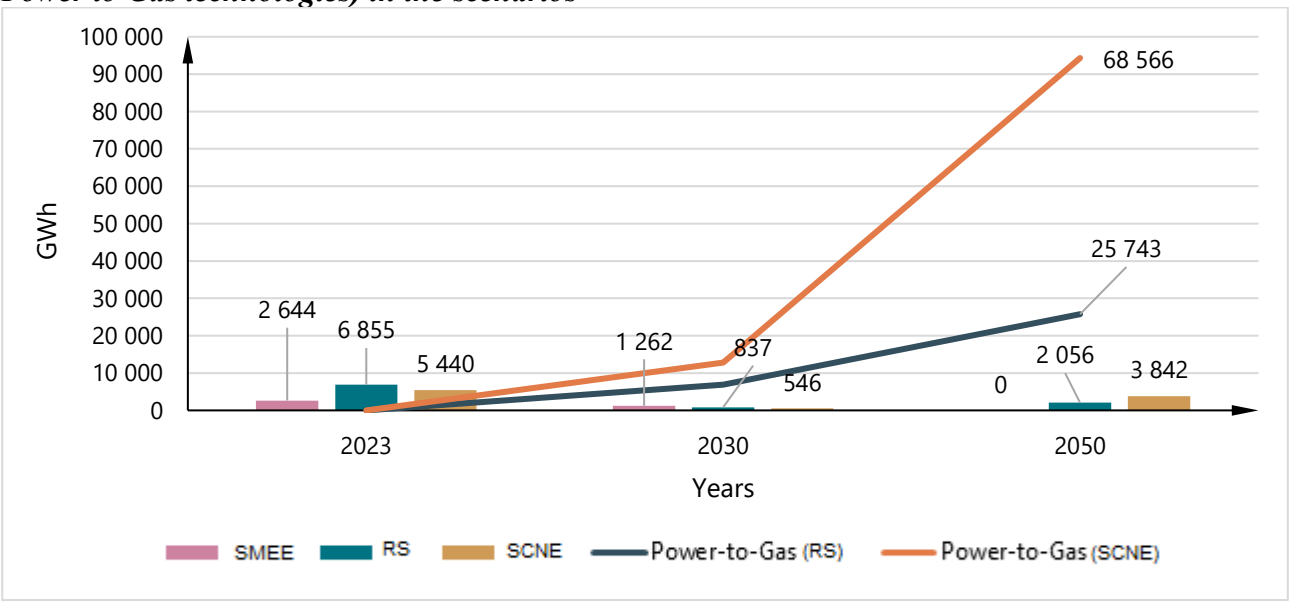


At the same time, one should understand that the growth of IPP capacity to values higher than the demand necessitates the implementation of one of the three options:

1) curtailment of their energy (this possibility is already substantiated at the legislative level);
2) power conversion (occasionally there is a situation it is feasible to use power conversion systems to smooth the electric load curve, i.e. minimise "power fluctuations during a day" within the corresponding electric load curve, and to convert power from the period of its surplus to periods of its shortage);
3) introduction of Power to X technologies for the use of surplus electricity produced by IPPs.

Therefore, if these options are implemented, electricity generation can significantly exceed demand, which is illustrated in detail by the scenarios of low-carbon development.

This is due to the fact that in the preparation of IEF Report the possibility was identified of covering the electricity balances, mainly by power plants operating using RES, primarily WPPs and SPPs, as well as by nuclear power plants operating with high ICUF (85% for existing and at least 90% for new plants). Therefore, based on calculations, the required capacity of WPPs and SPPs is too high due to the fact that they have a low ICUF (36% and 14%, respectively). But this is the ICUF rate averaged for the year, because the profiles of electricity production by wind farms and SPPs, firstly, have very pronounced seasonal features, in particular, the SPP generation in winter is much lower than in summer, and secondly, can vary greatly, even on adjacent days depending on specific weather conditions.



Electricity production forecast according to the scenarios

The transition to simulation using power balances to cover daily electric load curves takes into account annual, seasonal, weekly and daily irregularities of electricity consumption, as well as the impact of weather conditions on the possibility of participation of power plants using RES (primarily WPPs and SPPs) in covering the electric load curves.

At high and typical levels of WPP and SPP generation there is a surplus of power at certain levels of electric load curves, but when they reach the installed capacity (the level is comparable to the average maximum load of consumers in daily electric load curves) the surplus will occur at all levels of electric load curves in most days. This makes it impractical to use Power to Power technologies (technologies such as PSP, Energy Storages and similar), and the only way to eliminate power surpluses is to either curtail RES, or to introduce such technologies as Power to X. Therefore, most of these "surpluses" in these scenarios are used to produce "green" hydrogen (see Figure **Помилка! Джерело посилання не знайдено.**), which, according to accepted assumptions, is used to produce electricity.

Calculated volumes of electricity generation by WPPs and SPPs and use of electricity surplus (using Power to Gas technologies) in the scenarios

It should be noted that according to SMEE it will be necessary to curtail WPPs and SPPs because their capacity has increased considerably in recent years, but electricity surpluses in these cases are significantly lower than in RS and SCNE. At the same time, as the simulation results show, the complete elimination of electricity surpluses in RS and SCNE at the level of 2050 in the volumes of 2,056 GWh and 3,842 GWh would not be economically practical because it would necessitate a

significant increase in capacities of the technologies of "green" hydrogen production, which will entail their price escalation due to a significant reduction in the ICUF of such technologies.

SMEE for the period of 2031–2032 assumes the absence of such surpluses due to the balanced deployment of RES capacities and higher demand.

In RS and SCNE the situation is opposite: surpluses of the capacity are growing. This leads to a situation when with the introduction and operation of Power to X technologies and due to their operation the total maximum capacity of the IPS of Ukraine is shifted to spring, when conditions are most favourable for WPP and SPP but at the same time the electric load curve levels are low.

A specific component of the overall electricity demand is its export. This is the reason why this component is given a lot of attention. Therefore, in accordance with the Transmission Network Development Plan for 2022–2031 approved by the NEURC Resolution (hereinafter TYNDP-UA), this Report sets out the implementation of the following infrastructure projects, which will considerably improve the transfer capacity of domestic and cross-border networks:

- modernization of Mukacheve–Veľké Kapušany (Slovakia) overhead line by retrofitting the existing OHL into a two-circuit line. Construction of a new two-circuit OHL Veľké Kapušany–Mukacheve instead of the existing one-circuit line in the current state of the grid will increase the transit capacity of the 400 kV Mukacheve substation, i.e., the power transfer between countries of Eastern Europe. It is assumed that the 400 kV OHL will be made of AC-400/51 wire and suspension of three wires in phase. As the result, the transfer capacity of each circuit under normal conditions will be 2,500 A;
- construction of the 400 kV "wing" at the 750/400 kV Prymorska substation with a 400 kV Prymorska-Isaccea (Romania) two-circuit line and the installation of a 750/400 kV AT. Implementation of the project will increase the capacity of the interconnector with Romania to 1,000-1,200 MW after 2026.

2.4 Supply development scenarios

Nuclear energy

The nuclear energy development is perceived in many countries today as an essential element of the decarbonization policy. Ukraine also considers the further development of nuclear generation to be an important component of the Fuel and Energy Balance (FEB) formation without the use of fossil fuel.

Today, SE NNEGC Energoatom has very ambitious plans of own development by 2040:

- extend the service life of existing power units to 60 years for most units, with the only exception that 1 unit with WWER-1000 at YUNPP and 2 units with WWER-400 at RNPP may be decommissioned by 2035;
- build 6 new power units having the total capacity of 6.5 GW (1 unit with WWER-1000 and 5 units with AP-1000 reactor).

The company is also considering the possibility of building new capacities at NPPs with 8 power units (having the total capacity of 12 GW) after 2035.

In view of the above, the upper bound restriction was formed in terms of the development and operation of nuclear energy as illustrated in Table 4.8.

The nuclear energy in Ukraine can maintain its position in the electricity market of Ukraine by extending the service life of existing power units and building new power units in the mid-term.

As of today, SE NNEGC Energoatom expects to extend the service life of existing power units at NPPs. Given the possible terms of the service life extension of the power units, this Report reviews two options: the term of 20 years and the term of 25–30 years (considering the experience gained in extending the term of operation).

The mid-term plans (by 2032) include the completion of construction of two power units at Khmelnytska NPP (with WWER-100 reactor at KhNPP Unit 3 and AP-1000 reactor at KhNPP Unit 4).

Given the above, the nuclear energy development was considered under two scenarios:

- optimistic scenario of nuclear energy development assuming that the service life of existing power units will be extended and new power units will be built;
- pessimistic scenario assuming that the service life of existing power units will be extended once they exhaust their extended service life.

In studies on the formation of coordinated forecasts of economy and energy development, the optimistic scenario forms the upper limit of the nuclear energy development and the pessimistic scenario forms the lower limit.

Development options of NPP generating capacities according to the scenarios, GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic	13.8	13.8	13.8	13.8	13.8	13.8
Optimistic	13.8	13.8	≥14.8	≥17	≥20.3	≥20.3
- **new capacities***	0	0	≥ 1	≥ 3.2	≥ 6.5	not limited

*Note. * Cumulatively for the period starting from 2023.*

Large hydropower

Hydropower plays a key role today in the context of ensuring the operational security of IPS of Ukraine's compensating for variable and difficult to predict fluctuations in electricity consumption and generation using RES, so its further development is extremely important, especially given the quick pace of deployment of generating capacities using RES. But when a certain level of capacity at power plants running on RES is exceeded, the reservoir capacity of domestic PSPs (as a technology of power conversion from ELC periods with surplus to ELC periods with shortage) becomes insufficient because big capacities of these RES plants and with their long operation during a year, the surplus volumes (caused by RES generation) will far exceed the possible pumping volumes at PSPs.

Also, when considering the development of hydropower, it was taken into account that the sources of planned investments have not been identified yet and there is significant opposition from the public and environmental organizations to the development of hydropower in Ukraine.

In view of the above, the following two scenarios of hydropower development have been formed:

1) pessimistic scenario (minimum development of hydropower);
2) optimistic scenario (maximum development of hydropower).

According to the optimistic scenario of hydropower development, the supply of electricity generated by large HPPs and PSPs is based on the results of the meeting [60] with adjusted terms of the implementation of capacities at HPPs and PSPs in accordance with the Hydropower Development Programme up to 2026 (given the existing plans and timelines for the necessary development of networks on the basis of proposals and taking into account the progress of the Programme implementation, as noted by PJSC Ukrhydroenergo), as well as the completion of construction of Tashlytska PSP.

According to the baseline scenario of hydropower development, it is assumed that the following projects for its development will be implemented:

1) completing the rehabilitation of HPPs of the Dnieper cascade;
2) increasing the capacity of Dnistrovska PSP due to commissioning of the 4th and 5th units (without constraints on generation and pumping modes);
3) increasing the capacity of Tashlytska PSP due to commissioning of the 3rd unit.

In addition to the above-listed projects, in the longer term (by 2050) it is planned to finish the construction of the third phase at Dnistrovska PSP, build and commission Kanivska PSP, which will

increase significantly the installed capacity of PSPs in Ukraine. These assumptions give grounds to form the optimistic scenario of PSP development.

Development options of generating capacities of large hydropower according to scenarios, GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic, including:	6.75	6.85	6.85	7.25	7.25	7.25
- **HPP**	4.8	4.9	4.9	5.0	5.0	5.0
- **PSP**	1.99	1.99	1.99	2.25	2.25	2.25
Optimistic, including:	6.75	7.15	8.6	9.82	10.24	10.37
- **HPP**	4.8	4.9	5.2	5.45	5.87	6.0
- **PSP**	1.99	2.25	3.4	4.37	4.37	4.37

The optimistic scenario was considered as maximum possible volumes of capacities deployment in the hydropower sector in the studies on the formation of coordinated forecasts of economy and energy development (upper bound), and the baseline scenario – as the scenario in which hydropower capacity will definitely change (lower bound).

Under all scenarios, the HPP development (with different volumes and timelines) requires the construction of Kakhovska HPP-2 and modernization of many existing capacities. PSP development, given the readiness for operation of the 4th unit at Dnistrovska PSP and the 3rd unit at Tashlytska PSP and the plans to commence the third construction phase at Dnistrovska PSP, is based only on the existing power plants, as it has been assumed in these scenarios.

Thus, the hydropower development according to RS and SCNE is very close to the pessimistic scenario of hydropower development (including for PSP). In addition, many scenarios assume that existing HPPs at the Dnieper River and the Dniester River operating since 2024 as part of hybrid systems having the total install power of 212 MW and the electric capacity of 212 MWh serve primarily for expanding the regulation range of existing HPP capacities and rapid response during operation in all segments of the market.

Small hydropower

The development of small hydropower, under conditions of reduced water resources and high investment costs, makes it unlikely that it will have a significant increase in capacity. For this reason, in SMEE and SCNE the scenario of its development is close to optimistic and in RS it is less optimistic and close to pessimistic.

Small hydropower development options according to scenarios, GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic	198	202	212	217	227	237
Optimistic	198	207	227	247	257	297

Thermal energy

The development of electricity supply offer in the market by the existing TPPs will be predicated on the availability, levels and mechanisms of support to the implementation of NERP, the feasibility of keeping in operation the power plants with low ICUF, as well as state energy policy, in particular, mechanisms for limiting GHG emission and their severity, including emission fees, etc.

In this context, the NERP implementation through decommissioning of power units in absence of new peaking and load-following generation will make it impossible to meet the requirements of flexibility, which will entail consumer constraints due to rapidly deteriorating TPP capacities.

In view of the above, the optimal required capacity of TPPs and CHPs was determined by modelling, where maximum levels of their capacity were determined as follows.

RS and SCNE scenarios were based on the following data.

1. Possibility to use some of these capacities in RS during the entire period of modelling. It means that the assumption was that the NERP would be implemented through decommissioning of power units and replacing some of their capacities with new load-following capacities running of natural gas in the volumes sufficient to meet adequacy requirements.
2. SCNE assumed that (due to the NERP fulfilment through power units decommissioning and due to the non-compliance of these power units with ecological standards) most coal fired generation will be decommissioned by 2035 and all coal fired generation will be fully decommissioned by 2050.

SCNE reviewed potential keeping of existing TPP capacities in operation in accordance with proposals on the NERP revision issued by the working group of the Ministry of Energy of Ukraine. Such revision is necessitated by the following factors.

The current version of the NERP provides for major eco-modernization in the period up to 2025 (Annex 3 of the NERP). However, in the absence of funding sources and taking into account the time required for such effort (given that the installation of electrostatic precipitators requires at least 4 years, and sulphur oxide abatement systems – 6 years), implementation of these measures in a timely manner is unrealistic.

Taking into account these factors and the time required for projects preparation, the eco-modernization will not begin before 2024–2025.

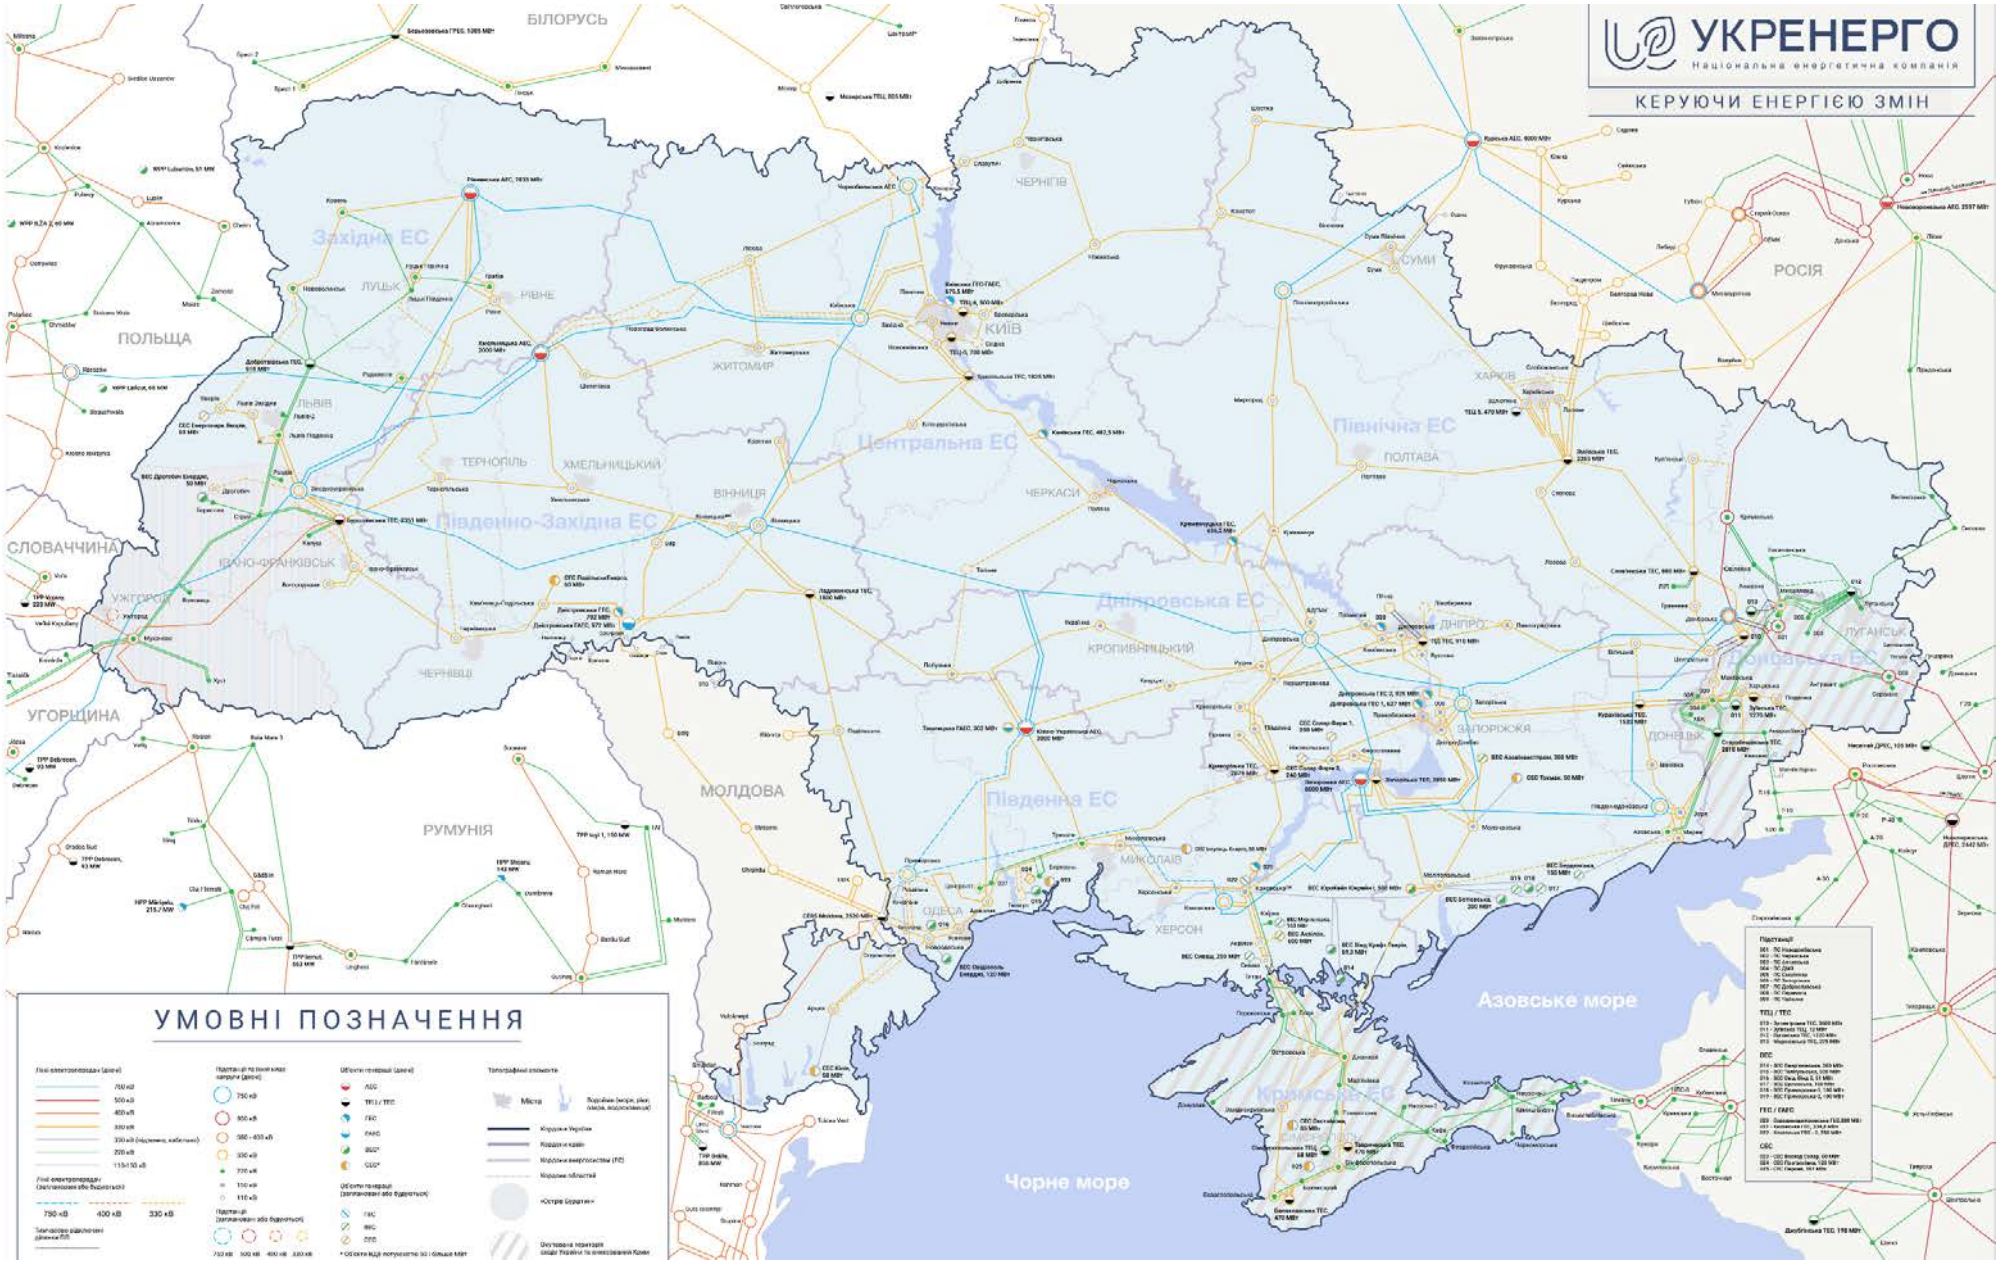
Therefore, if the NERP timelines are not revised and reliable sources of funding for eco-modernization are not identified, already in 2025 the capacity of coal-fired power units may drop to a level at which the generation in the IPS of Ukraine will be unable to meet adequacy requirements, i.e., to cover the electrical demand in the reliable and uninterrupted manner.

Since the NERP includes multiple measures, postponed start will lead to postponed completion. At the same time, postponed start of the NERP implementation until 2025 without NERP extension to 2038 with a corresponding change in the slope of the curves for reducing emissions of pollutants into the air, would not resolve the problem of ensuring overall limits on their emissions while keeping the NERP existing deadline. This primarily applies to emissions of sulphur oxides and dust, which in line with Directive 2010/75/EU shall be reduced according to the current version of the NERP by 2028. It means that these limits will be significantly exceeded already in 2025.

Given that the construction of new generation or the introduction of sulphur oxide gas treatment systems requires at least 6–7 years, if the NERP timelines are not adjusted, the security of supply and operational security will have to be ensured through the use of existing TPPs running on natural gas.

That is, practically the only option to be able to fulfil these limits is replacing coal with natural gas, and in this case the volume of electricity production using natural gas will grow quickly. However, given that the cost of electricity generated by steam turbine power units running on natural gas will increase significantly – by at least twice – and the ICUF will be reduced due to non-competitiveness of electricity produced by steam turbine power units relative to its import, which despite the profile constraints has an impact on the price of electricity, the profitability will be unrealistic, and owners will not be interested in keeping these facilities in operation under such conditions.

Without the introduction of mechanisms to finance eco-modernization measures and ensure the profitable operation of power units after such modernization, the development of thermal generation in the optimistic scenario is practically impossible.



In view of the above, the TPP development in SMEE is predicated on the following:

1. Major ecological modernization activities for a number of power units start in 2024–2025 and should be completed no later than by the end of 2033. It is also foreseen that some existing power units will maintain the sufficient capacity level in the power system by

running on natural gas, which will be a prerequisite for ecological modernization considering that the implementation of emission treatment system will take from 4 to 7 years.

2. Emission permits are set by the new version of the NERP in accordance with the new deadlines for the implementation of measures to reduce emissions of pollutants into the air and the list of power units that must operate for a limited period of time.
3. Restrictions on air pollutant emissions are revised according to changes in the NERP timelines.
4. The expediency of ecological modernization, in relation to alternative options (reconstruction or new construction on the existing places), is determined for each power unit on the basis of the corresponding feasibility study.

Location of the facilities of IPS of Ukraine

Potential use of TPP capacities according to the scenarios, GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic*, including:	16.6	≥15.13	≥12.73	≥13	≥13	≥13
- **available load-following**	16.6	11.3	5.6	2.87	0	0
- **new load-following**	0	≥2.83	≥6.13	≥9.13	≥12	≥12
- **highly maneuverable with quick start**	≥0	≥1	≥1	≥1	≥1	≥1
Optimistic*, including:	17.6	≥17	≥15.1	≥15.1	≥13	≥13
- **available load-following**	17.6	≥13.17	≥4.57	≥2.1	≥0	≥0
- **available reconstructed or new load-following**	0	≥2.83	≥9.53	≥12	≥12	≥12
- **highly maneuverable with quick start**	≥0	≥1	≥1	≥1	≥1	≥1

*Note. * In the context of the coal fired generation development, the pessimistic scenario assumes rapid exit from coal, while the optimistic scenario assumes that the level of thermal generation will be maintained by keeping coal fired generation at the level not exceeding their capabilities as set out in the NERP through decommissioning of power units without their reconstruction and through developing the technologies that run on natural gas*

It should be noted that the scenarios, where one of key assumptions was the NERP implementation through decommissioning of power units, took into account the accelerated depletion of useful life of TPPs, which in the coming years may reach the limit of 20 and 40 thousand hours and will be decommissioned, and the reduced total actual capacity of the units over the years (see the Substantiating Materials).

The optimistic scenario corresponds to SCNE and partly SMEE, where the TPP capacity is approximately by 2 GW lower than in the optimistic scenario at the level of year 2050. The pessimistic scenario corresponds to SCNE where coal generation is quickly decommissioned and replaced with flexible power plants running on gaseous fuel.

CHPs are in special focus when forming long-term development scenarios for thermal power. As noted, CHPs are primarily heat supply facilities, and only the possibility of efficient operation in the cogeneration mode makes it practical to build and keep them in operation for economic reasons.

In this context, the operation of many existing CHPs is inefficient, which necessitates their reconstruction on the basis of highly efficient technologies of combined heat and power with the implementation of measures to ensure their participation in balancing of the IPS of Ukraine, in particular implementation of heat storages or generating capacities enabling quick start-up/shut-down of CHP equipment, the feasibility of which is predicated on the continued policy of stimulating the development of IPPs in Ukraine. Of course, decisions on the construction of new CHPs should be similar.

The feasibility of such vector of the country's energy sector development is predicated on a number of factors, in particular:

- Promoting the development of high-efficiency cogeneration and the creation of energy efficient patterns of district heat supply, one of the elements of which is the combined production of heat and electricity, which is Ukraine's commitment under the Association Agreement with the EU.
- Attracting International Funding Institutions (IFI) loans only for the projects implementing high-efficiency cogeneration and creating energy efficient schemes of district heat supply.
- Introducing high-efficiency cogeneration and creating energy efficient schemes of district heat supply is an important factor of decarbonizing the economy and reducing pollutant emissions into the air.

To date, certain preconditions have been created for the development of CHPs in Ukraine, in particular, regarding the possibility of providing state support for their reconstruction and modernization. Many such projects have been developed and approved in accordance with current legislation by the authorized commission, but the Government has not adopted the decision to provide state support to the reconstruction and modernization of CHPs.

The central executive body responsible for the development of district heat supply in the country (the Ministry of Development of Communities and Territories of Ukraine) supports the development of district heat supply based on the creation of energy efficient schemes, as well as projects for the reconstruction of existing schemes. For the development of high-efficiency cogeneration, the Verkhovna Rada adopted the draft Law on Amendments to the Law of Ukraine "On Combined Heat and Power (Cogeneration) and Use of Waste Energy Potential" for the Development of High-Efficiency Cogeneration).

Although, maintaining the "excess" capacities at the CHPs under the new model of the electricity market is impractical, and it is likely that such capacities will be phased out.

Given the above, SMEE envisages the optimization of the existing capacities at CHPs, their gradual reconstruction based on the latest gaseous fuel technologies and eco-modernization of coal-fired CHPs in accordance with the updated NERP.

According to SCNE, most existing coal-fired CHPs will be decommissioned by 2035. Some gas-oil power plants will be converted to biomethane and/or its equivalents by 2050. According to RS coal-fired CHPs will be gradually decommissioned with full decommissioning (except power plants converted to biomass) at a later date, i.e., by 2050. By 2050, gas-oil CHPs, similarly to SCNE, will be either decommissioned or converted to biomethane and/or its equivalents.

It should be noted when implementing the NERP through decommissioning of CHP power units, the CHPs included in it will also be decommissioned, which will further exacerbate the problem of insufficient capacity in the IPS of Ukraine, as well as in the absence of alternative heat sources will cause a shortage of heat. In this situation, the forced transition of consumers to the use of electricity for heat production will further aggravate the shortage of generating capacities.

Dynamics of CHP development according to scenarios, GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic:	6.04	4.89	2.84	2.09	1.74	0.49
- existing	5.8	4.6	2.5	1.7	1.3	0
- new and existing converted to biofuel	0.24	0.29	0.34	0.39	0.44	0.49
Optimistic:	6.14	4.89	3.89	3.79	3.73	5.23
- existing	5.9	4.6	3.1	2.5	2	2.6
- new and existing converted to biofuel	0.24	0.29	0.79	1.29	1.73	2.63

RES

The development of renewable energy is of key importance in terms of forming a promising mix of generating capacities of the IPS of Ukraine. At the same time, IPPs in Ukraine should be developed taking into account the economic potential of the country, the creation of technological prerequisites for the IPP integration, and natural and climatic resources.

Natural and climatic conditions of Ukraine exclude the practical possibility of implementing strategies to meet the needs of the country through nuclear and renewable energy, as the latter is characterized by unstable production of electricity: days of high generation from RES rarely coincide with days of high consumption, daily peaks of SPP production do not coincide with daily peaks of consumption, during peak hours only wind farms generation partially covers it. But in the conditions of Ukraine, in the days of maximum loads the capacity of wind farms will be minimal, because maximum loads occur in days of heavy frost accompanying anticyclones bringing a windless weather. Of course, in certain years winters will not be accompanied by heavy frosts and the capacity of wind farms during peak periods may reach 10–20% of their available capacity, but in the context of generation adequacy the assessment of load-following generation shall factor in the low capacity of wind farms during the assessment period (up to 2% of the installed capacity).

Therefore, the WPP and SPP development in Ukraine has minor influence on the required available capacity of load-following generation, and increasing the capacity of IPPs would not significantly minimize the need to maintain the available capacity of load-following power plants. At the same time, the low ICUF of conventional energy technologies (given that they are progressively replaced by IPPs in coverage of the electric load curve) causes a high cost of their electricity production, which is paid for by consumers, in order to meet the requirements for sufficiency of generating capacities in Ukraine and ensure reliable electricity supply.

Growing RES capacities lead to more investment needs and higher additional operating costs to meet consumer demand for electricity due to the need to introduce new balancing capacities and transform accordingly the existing structure of generating capacities.

At the same time, the technologies of electricity generation from RES, by the assessment of many international organizations studying this subject, are already quite competitive compared to the conventional generating power plants.

In consideration of the foregoing, the further state support to the development of power plants that use renewable energy sources is not practical. It is more practical if these power plants develop operating in the market environment. In this context, the Law of Ukraine “On the Electricity Market” needs to be amended in terms that only those electricity producers from RES who have obtained the state support should be entitled to priority dispatching.

In RS and SCNE the volume of RES penetration was determined based on the results of the Project modelling (see Annex A to the substantiating materials to the Report). In SMEE it was done at the level of the requirements of the National Economic Strategy up to 2030 (with data on the volume of electricity production).

The development of these energy sources provides for a slight increase in the capacity of IPPs in SMEE, mainly due to their deployment in individual power supply systems or adding them to centralized power supply systems.

Note that depending on the ICUF and power consumption levels the required capacity of SPPs and WPPs is in the range shown in Table, to ensure the volume of their electricity production in accordance with the NEcS-2030.

Renewable energy development options according to the scenarios, GW*

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic:						
- **SPP**	6.8	7.2	8.2	8.2	9.2	13
- **WPP**	2.8	3.3	4.3	4.7	4.4	7
- **BioPP**	0.25	0.3	0.35	0.4	0.45	0.5
Optimistic:						
- **SPP**	8.25	9.2	12	18.5	35.3	58.6
- **WPP**	3.5	5.2	8	11.7	20	32
- **BioPP**	0.3	0.9	2.4	3.9	5.2	7.9

*Note. * Scenarios of potential development of small hydropower, which also belongs to renewables, are provided in next paragraphs of this section.*

It should be noted that data in Table is not intended for the purposes of auctions for the allocation of support quotas within the meaning of the Law of Ukraine "On Alternative Energy Sources" until the removal of restrictions of the daily irregularity in the structure of electricity output created by RES.

Along with this, one of the most pressing problems facing the IPS of Ukraine today, in the context of ensuring real-time balancing, is the need to significantly increase the flexibility of the power system, which has long been described as insufficient. And under the current conditions of operation of the IPS of Ukraine, with the reduction of electricity consumption, the growing non-uniformity of electric load curves and the rapid penetration of renewables (without the introduction of technologies to support their integration), this problem is only aggravated.

The development of bioenergy in the long run will be largely determined by economic factors, as well as the adequacy of biomass that will be used for production to sustainability criteria. At the same time, low efficiency of biomass power plants in the condensing mode makes it potentially feasible to build only CHPs on biomass and operate at maximum ICUF, i.e., in the presence of a sufficient level of heat load during the year. Therefore, it is assumed that their capacities can potentially replace or supplement existing heat sources in regions with available biomass resources and with heat demand, in particular, through the use of organic waste in large cities and in production of the agro-industrial complex.

At the same time, the TPPs running on biogas are less promising in Ukraine compared to the power plants running on biomass because biogas has a wider range of application (it is practically equivalent to natural gas and has the same field of application) and therefore is more competitive, which will affect accordingly the price of this energy carrier, especially considering its insufficiency and high demand. For this reason, from the standpoint of economic feasibility biogas for electricity generation only slightly differs from natural gas. Therefore, the pessimistic scenarios (even notwithstanding amendments to the Law of Ukraine "On Alternative Fuels" for the development of production) consider the BioTPP deployment at a moderate pace and optimistic scenarios – at an accelerated pace, which brings the development of such power plants close to the maximum limit given the scarcity of necessary bioresources.

Technical means to support the integration of RES generating capacities

As noted, one of the most important tasks facing the country's energy sector today is to increase the flexibility of the IPS of Ukraine. The today's world offers a number of technologies providing the flexibility to the power system (including balancing) and enabling further integration of renewables into power systems. Such technologies include:

- highly flexible thermal generation (such as gas turbines or gas piston engines) with quick start-up possibility providing wide opportunities for power regulation and starts-up/shuts-down during a day, season and year;

- highly flexible PSPs and HPPs;

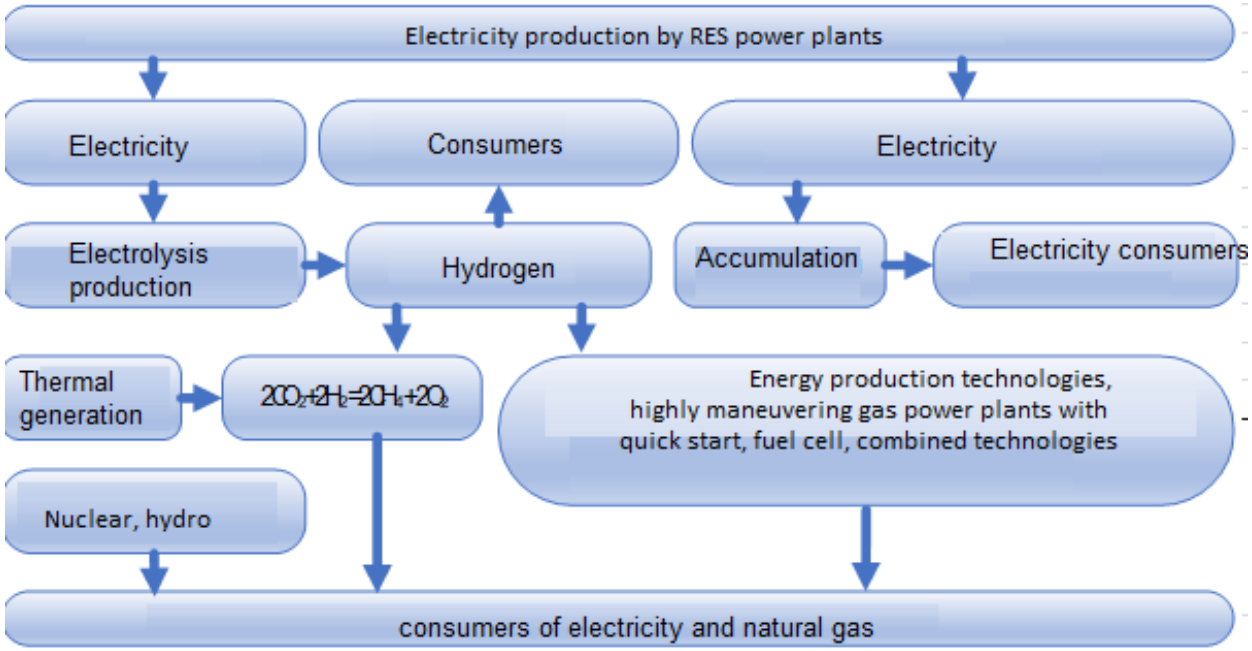
- energy storages for frequency control and containment (ES);

- consumer-controllers based on technologies of thermal energy accumulation;

- small modular nuclear reactors;

- technologies for elimination of surpluses in the power system (Power to X), which in Ukraine today are considered, first of all, as enterprises producing hydrogen on the basis of electrolysis (Power to Gas);

- energy storages for power conversion from surplus to shortage periods ("Power to Power"), which in essence are energy storage power plants;



- mechanical energy storages that use gravitation forces and a number of other less common technologies.

Drivers and sources of generation flexibility

The implementation of these technologies creates prerequisites for virtually unlimited development of the power plants running on RES and able to fully cover energy demand subject to the equal development of fuel and energy consumption technologies, i.e., hydrogen, but the cost of energy supplied by these technologies will be very high.

Concept of electricity generation without GHG emissions

Such a level of energy supply systems can be afforded only by the most advanced countries that use their own research and production enterprises (machine building and instrument engineering) to develop hydrogen production and consumption.

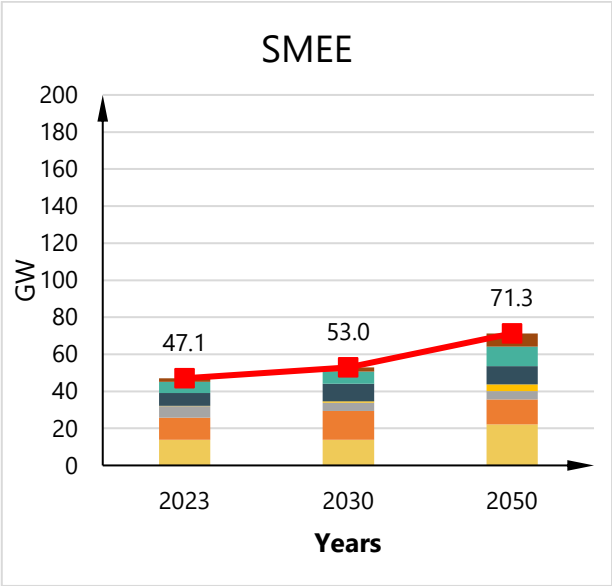
As any other technology, energy storages have limited service life of batteries, which need regular replacement, and their operation requires a lot of energy and is accompanied by energy losses. For this reason, especially taking into account rather high capital expenditures, the use of power conversion is possible only up to a certain capacity of power plants running on RES.

Special focus is on systems that use solar and wind energy for electrolysis production and implement the Power to Gas concept, which provides an opportunity to move to the electricity production that is not accompanied by GHG emissions.

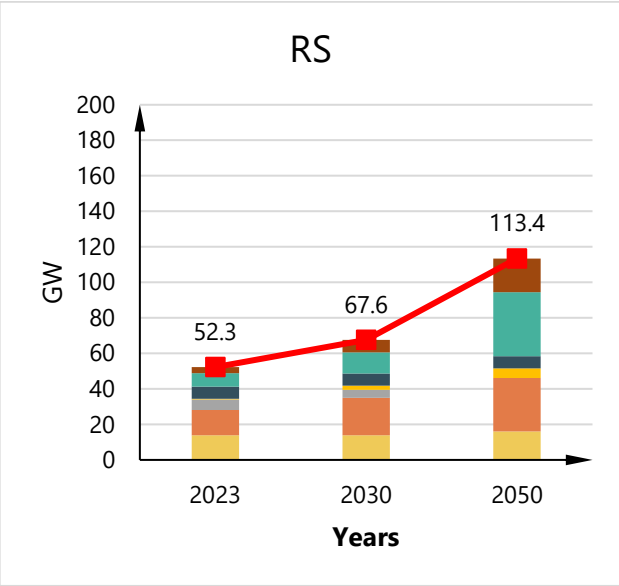
These technologies, with a significant increase in the capacity of wind farms and SPPs, provide an opportunity to solve the issue of limited use of Power to Power technologies, in particular, PSPs and energy storages, when total electricity production on a certain day exceeds its consumption at all levels of the electric load curve.

In addition, energy storages require large capacity batteries that have a limited service life and are quite expensive, which makes them inefficient in terms of power conversion tasks, especially in relation to PSPs.

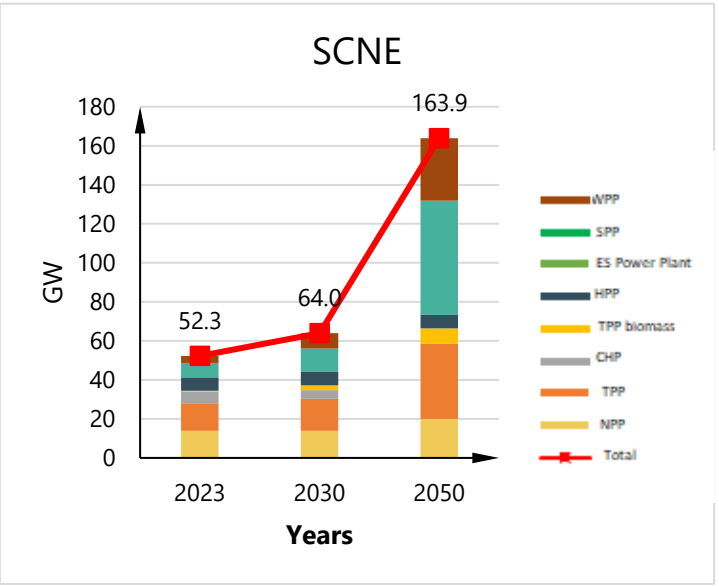
However, Power to Gas technologies have a number of demerits, in particular: the high cost of electrolysis product, which strongly depends on the level of load and electricity prices (in Ukraine, according to TSO, even at the price of electricity produced by wind farms and SPPs at the level of 5–5.5 eurocents and ICUF of electrolyzers at the level of 45%, which corresponds to the dedicated construction of electrolysis plants in parallel with the construction of wind farms exclusively for hydrogen production with utilization of surplus electricity produced using RES in the presence of free capacity of electrolyzers, the cost of hydrogen will be at least 5 euros per kg, which is equal to about 1 thousand euros per ton of fuel equivalent). They have a technical minimum of at least



20% of the rated power for expensive cells, and about 40% for cheaper cells, which to some extent limits their potential use, especially in the wintertime in Ukraine.

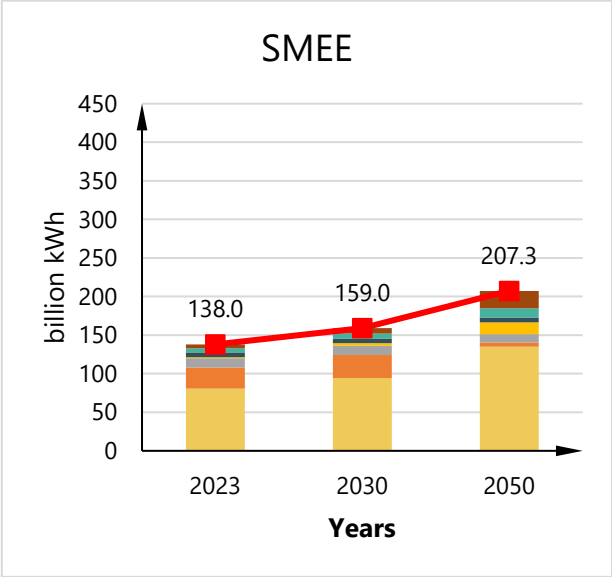


In view of the above, increasing the flexibility of Ukraine's power system has a limited influence on the possibility of integrating IPPs into the IPS of Ukraine, except for Power to X technologies, as IPP capacity growth is higher than demand at a certain level of the electric load curve, considering that its demand is covered by other types of power plants, in particular, CHPs operating on a district heating schedule and under a "feed-in" tariff, HPPs with water pumping into the lower pool, non-flexible NPPs incapable of fast ramping, etc., necessitates the implementation of one of the following options in the short term (4–5 years) and, most likely, in the medium term (up to 10 years):

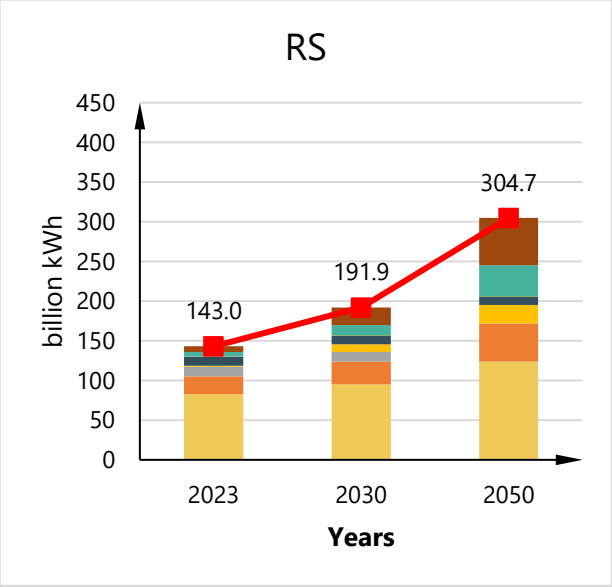


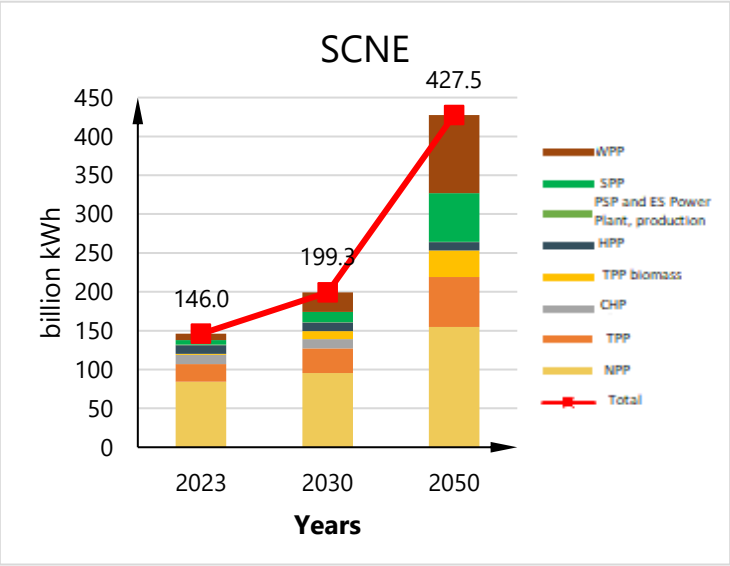
- Limit NPP capacity for a long-term (at least 24 hours) period in advance. Such decision is one of very few balancing instruments available to the TSO. But this decision is not always economically feasible because it entails payments for NPP load shedding as a balancing service and, on the other hand, it is not sustainable because in periods with no surplus instead of NPP energy without pollutants and GHG emissions the electricity demand is covered by thermal power plants running on fossil fuel.
- Introduction of Power to X technologies for the use of excess electricity produced by IPPs. With power surplus at all levels of the electric load curve, a situation may arise when it is practical to use power conversion systems to "level" the electric load curve, i.e., minimize "power fluctuations" within the corresponding electric load curve, as well as to reduce the power demand of Power to X technologies and increase the level of utilization of "excess" electricity, which is especially important for hydrogen production technologies.
- Power conversion from surplus zones of the electric load curve to zones with shortage. But such a possibility may sometimes be unavailable because with IPP significant capacities there is no such option – at all zones of the electric load curve there is a surplus, and at low levels there may be a reverse situation when there is no need for power conversion.

Therefore, electricity generated under options 2 and 3 above can highly exceed the demand for electricity.



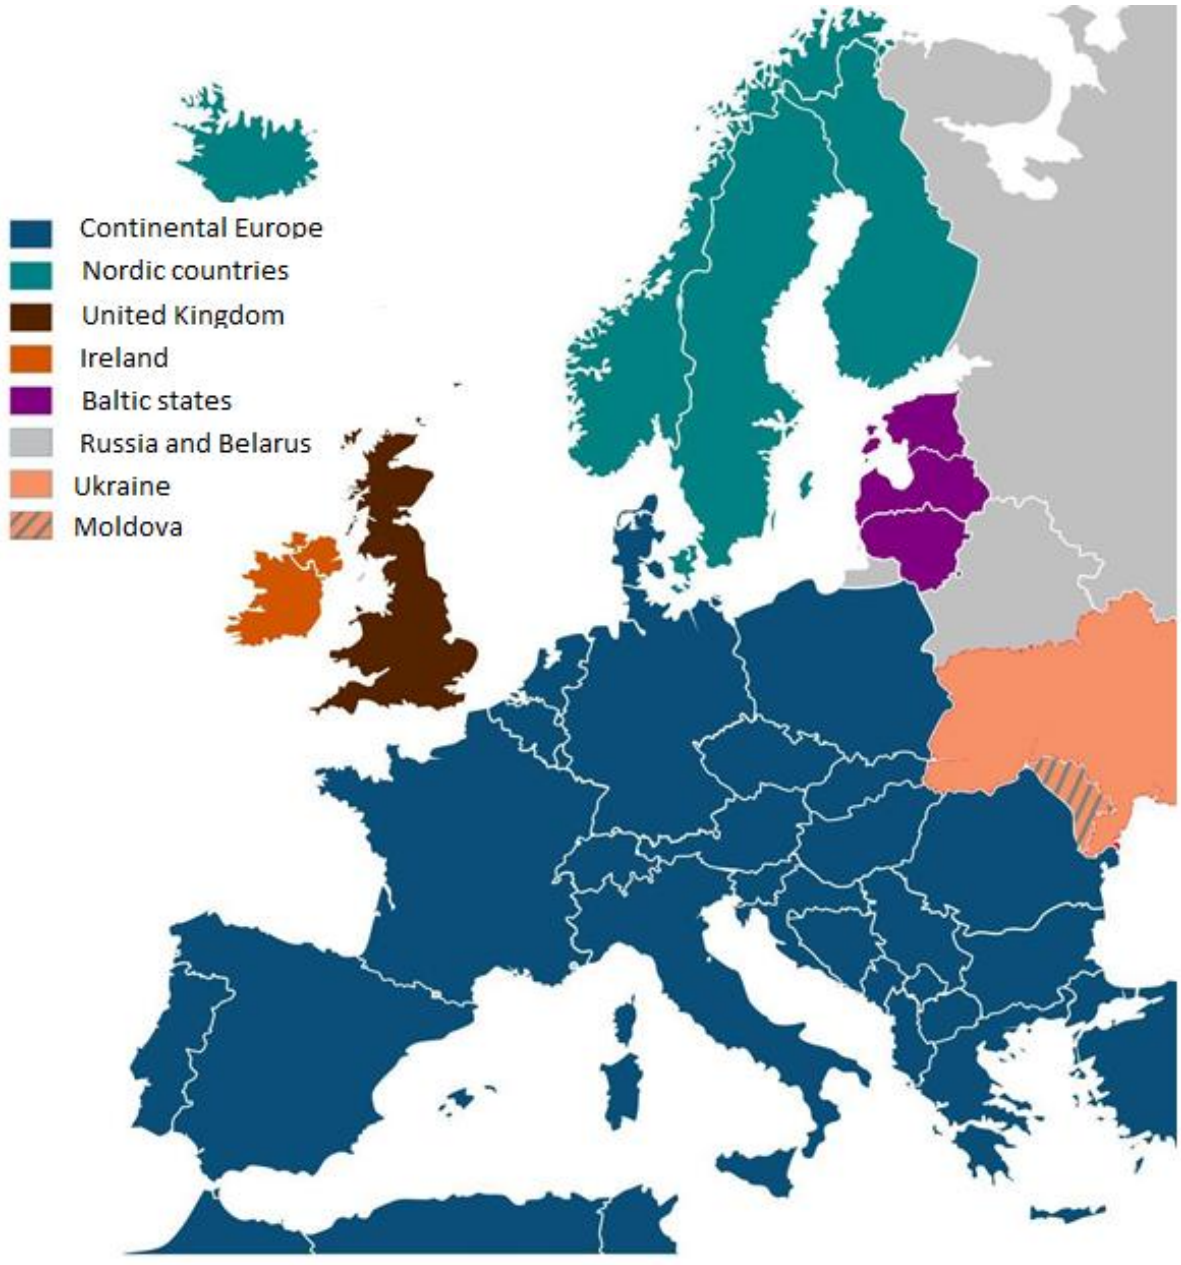
Modelling results were used to determine basic indicators of supply development scenarios for SMEE, RS and SCNE as shown in Figures.





Change in the generation mix according to scenarios by 2050

Dynamics of electricity output according to scenarios during the period up to 2050



Interconnectors

Given Ukraine's geographical location in the middle of the European continent, on the border with two major power systems (Continental Europe and the CIS), its scale and volume of flows, the model of the IPS of Ukraine includes a number of other power systems.

Model boundaries in this Report compared to its previous version are not limited to Moldova, Slovakia, Hungary and Poland, instead this Report models the interconnected operation mode of the IPS of Ukraine with the entire *ENTSO-E* system of 36 countries, which are modelled here explicitly. Therefore, power systems of many European countries are modelled simultaneously.

It provides an opportunity to correctly model the synchronous operation of power systems of different countries and assess the possibilities of imports as one of the means of ensuring adequacy of generating capacities in the IPS of Ukraine and exports/imports as one of the means of ensuring the flexibility of generating capacities in the IPS of Ukraine.

Geographical boundaries of modelling

Thus, the adequacy and flexibility of generating capacities was assessed taking into account the possibility of exchanging electricity flows with neighbouring countries, defined as a difference between the total operating capacity (equal to the total installed capacity less balance flows, reserves and capacities under repair and in mothballing, or subjected to other constraints) and the corresponding load curves for each country as well as constraints at interconnectors. This Report, as distinct from its previous version, uses the NTC (net transfer capacity) approach, which despite some demerits (it ignores the effect of two Kirchhoff Laws and the presence of process flows) enables a relatively simple, coordinated and bilateral planning of commercial flows.

For illustration purposes Figure shows a graphic method of determining the available operating capacity in one power system. In models built using stochastic methods, such graphs are formed dynamically for each neighbouring power system, and therefore they will differ depending on the time horizon. Given the above and taking into account constraints on the available transfer capacity of interconnectors, every time horizon will be characterized by a different value of the available transfer capacity in each direction.

Note that all scenarios of supply and demand development demonstrate a gradual increase in the transfer capacity of interconnectors through the modernization and restoration of many existing lines in the direction to Europe, which in the mid-term (by late 2032) will increase the transfer capacity in all directions to/from the IPS of Ukraine to the level of 3.6 GW of the total transfer capacity. At the same time, considering the development of generating capacities (primarily at nuclear power plants, high single-unit power) in Ukraine according to the optimistic scenario, it is necessary to envisage the development of domestic grids in order to remove internal constraints at interconnectors and unload already overloaded overhead lines.

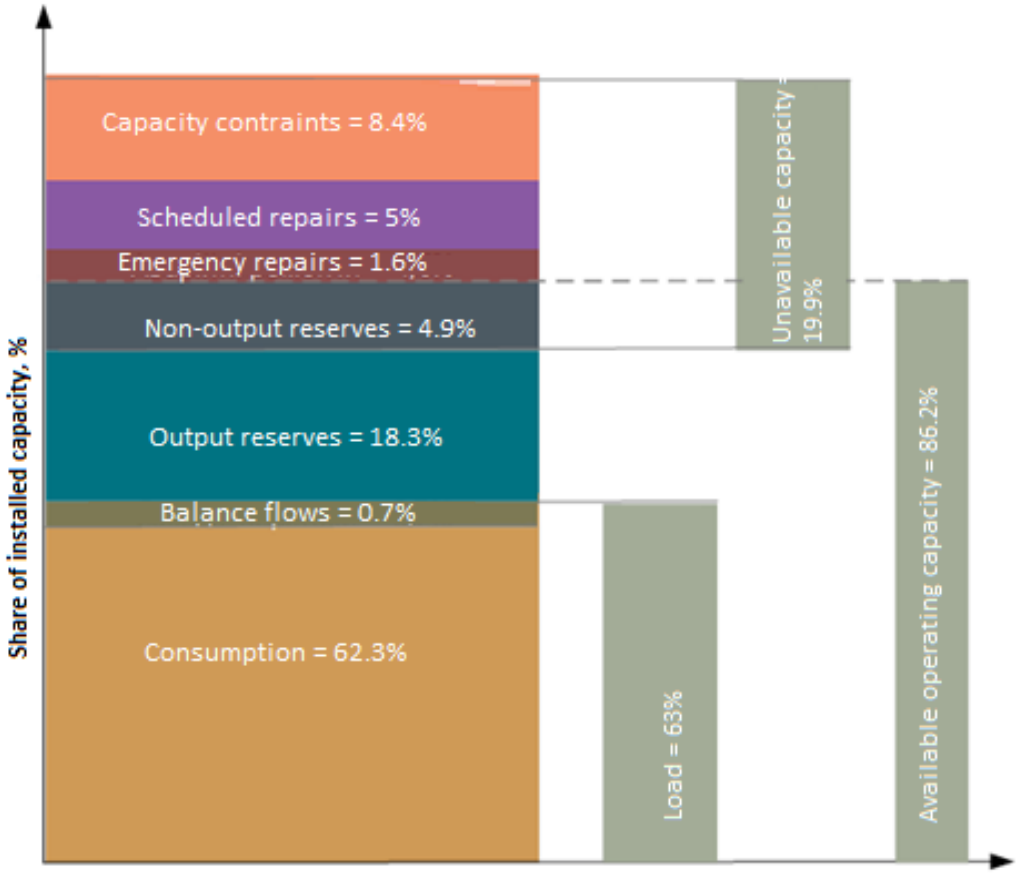
Interconnector development options (TTC), GW

Scenario	2023	2025	2030	2035	2040	2050
Pessimistic	2.4	2.4	3.6	3.6	3.7	4.0
Optimistic	3.6**	3.6	4.8**	4.9	6.2	8.0

Notes:

*** the growth under the optimistic scenario in 2023 is stemming from the line rehabilitation in the direction to Rzeszów substation and in 2030 – the line rehabilitation in the direction to Isaccea substation (start of operation is scheduled for early 2027).*

Graphic method for determining the available operating capacity in the power system



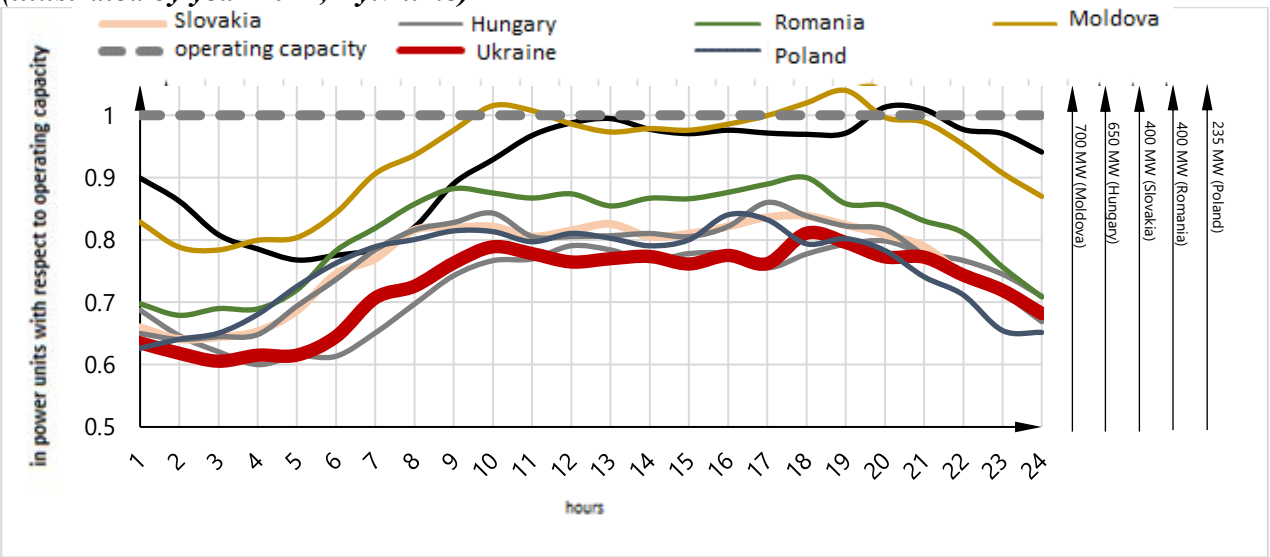


Figure provides summarised data for the year. Based on the analysed data presented in the relevant reports of adjacent power systems and partly provided in the context of future cooperation, Figure below illustrates the daily profile (on the example of a typical day) of electricity import/export options from each adjacent power system, taking into account the available capacity and the constraints on the available transfer capacity at interconnectors.

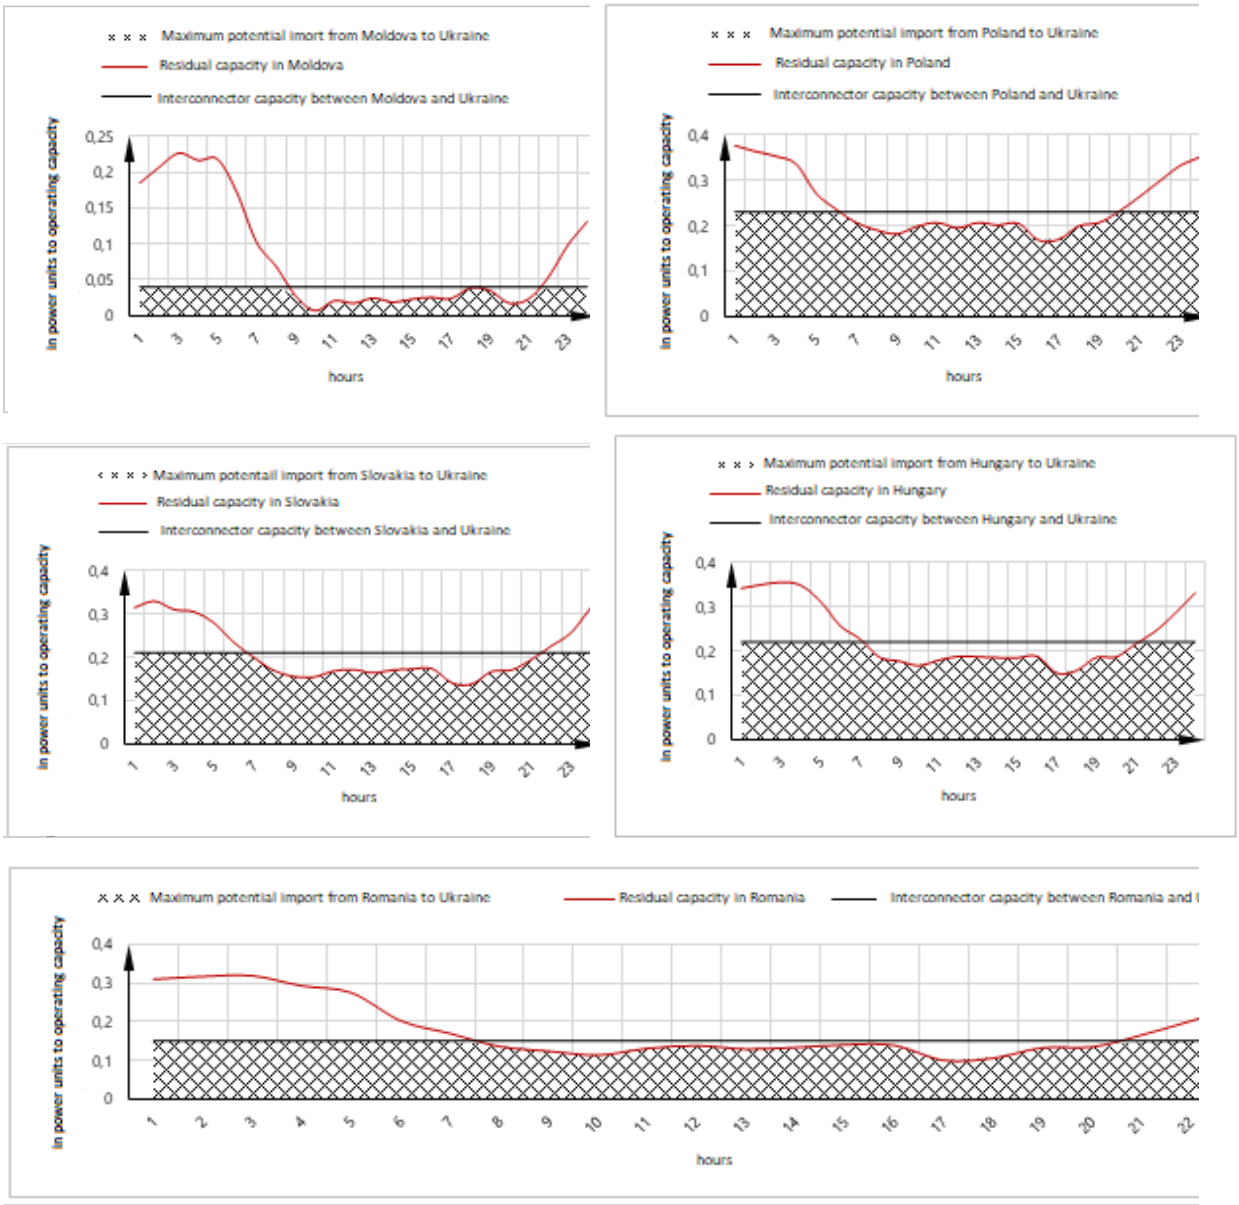
So, from Figure it follows that each neighbouring country is characterized by relatively different electric load curves, different degrees of utilization of their own capacities, and also shifts of consumption peaks/offpeaks.

Normalized typical electric load curves of the IPS of Ukraine and neighbouring countries (illustrated by year 2021, Kyiv time)



The maximum potential volume of imports to the IPS of Ukraine from neighbouring countries was determined in this way. It should be noted that during periods of maximum daily load in the IPS of Ukraine (i.e., during periods of probable shortage of capacity and reserves) there is a decrease in the maximum potential imports from neighbouring countries.

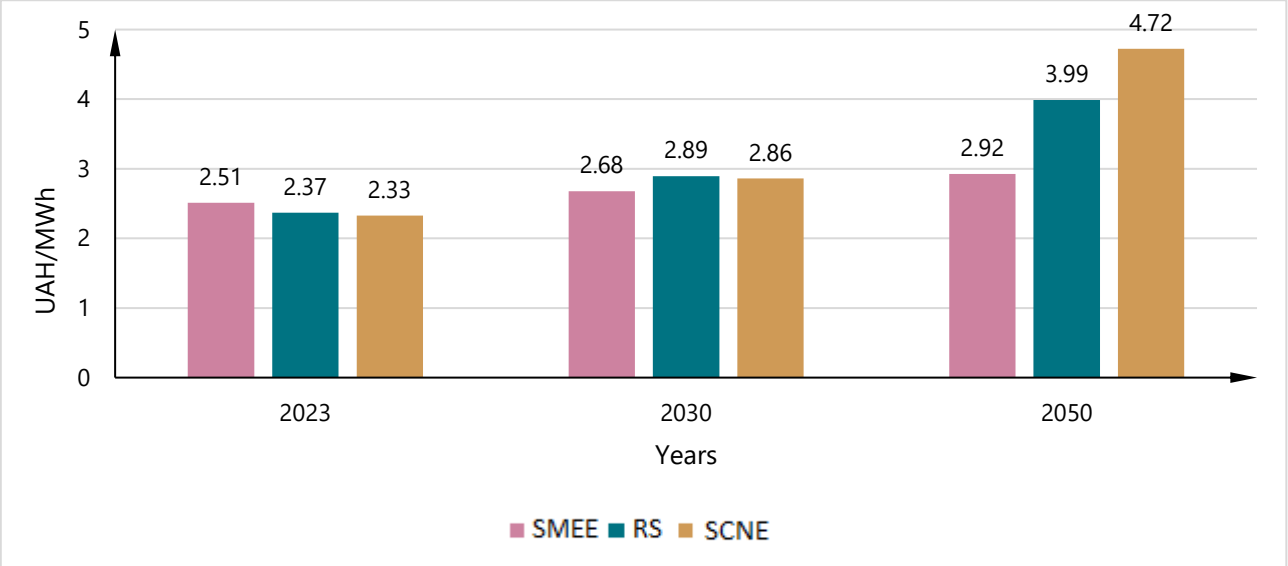
In this context, the formation of a long-term strategy reliably meeting the needs of electricity consumers in Ukraine, focusing on the possibility of importing electricity and reserves, primarily to cover combined maximum loads in the IPS of Ukraine and balancing the power system under normal operation, can jeopardize the fulfilment of energy security requirements of the country.

In the absence of sufficient capacities to cover electricity demand on the bilateral contracts market and the day-ahead market and with the insufficient flexibility of the country's power system, the decision to import electricity and reserves becomes a single-option decision.

Maximum potential volumes of import to the IPS of Ukraine taking into account the transfer capacity of interconnectors in neighbouring countries

These scenarios of demand and supply development were formed in a balanced way in terms of the ability to fully ensure the flexibility and adequacy of generating capacities, as well as demand-side management (by 2050 in all scenarios), since it was assumed that conditions will be created in the future when all the actions required for assuring supply security and operation security will be implemented in full and on time.

Key indicators of demand and supply scenarios are outlined in Table



Key indicators of demand and supply scenarios

Indicator	Unit of Measurement	Scenarios								
		SMEE			RS			SCNE		
		2023	2030	2050	2023	2030	2050	2023	2030	2050

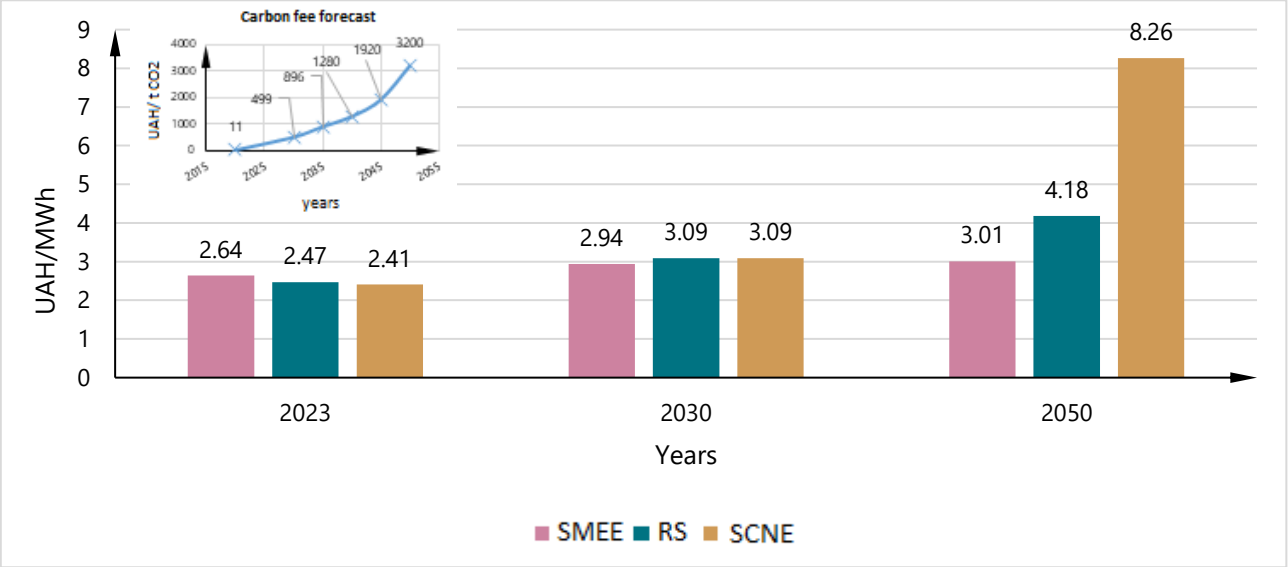
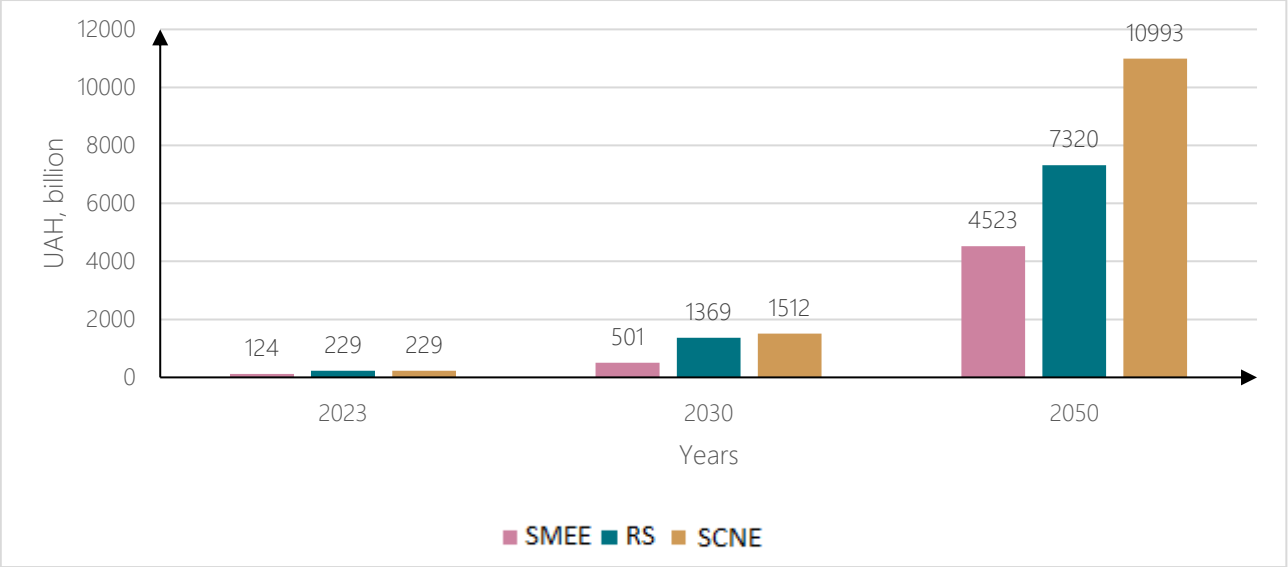
Capacity of electrolysis technology inverters	GW	0.00	0.00	0.00	0.00	4.71	25.33	0.00	5.23	46.56
Volume of investments in cumulative total (at the level of the corresponding year)	UAH, billion	124	501	4523	229	1369	7320	229	1512	10993
Average price of electricity supply excl. carbon tax	UAH/kW	2.49	2.68	2.92	2.37	2.89	3.99	2.33	2.86	4.72
Average price of electricity supply incl. carbon tax	UAH/kW	2.64	2.94	3.00	2.47	3.09	4.18	2.41	3.09	4.85
Fuel consumption, incl.:	mln toe	9.62	9.76	7.45	6.73	9.29	17.68	8.26	12.31	22.59
non-fossil fuel**	mln toe	0.33	0.90	4.34	0.33	3.19	8.32	0.33	3.24	14.16



Note. Running on biomass, water and other types of "green" fuel*

*** Biomass, hydrogen and other types of "green" fuel.*

It should be noted that the relatively small increase in the cost of electricity under SCNE and RS in 2030 stems from significantly higher volumes of electricity output than under SMEE, which reduces the share of investment and fixed costs in the cost price of electricity.



Price of electricity output according to the scenarios excl. carbon tax

Price of electricity output according to the scenarios incl. payments for GHG* emissions and the use of produced hydrogen for electricity generation under RS and SCNE scenarios, which under these scenarios reduces payments of carbon tax

Note. * According to forecast data about carbon tax, see IEF Report

In SCNE and RS, investment needs are much higher than in other scenarios due to higher installed capacity of generation and the need to implement balancing technologies based on energy storages (including investments to replace the capacity of wind farms and SPPs, which have exhausted their useful technical life).

Amount of required investments according to the scenarios (cumulative total at the level of the corresponding year)

The much higher cost of electricity and the need for larger investments lead to such results that the implementation of SCNE and RS, as well as similar scenarios, will not make economic sense in Ukraine for consumers and investors, because the deployment of SPP and WPP capacities in maximum volumes entails the need to curtail their capacity.

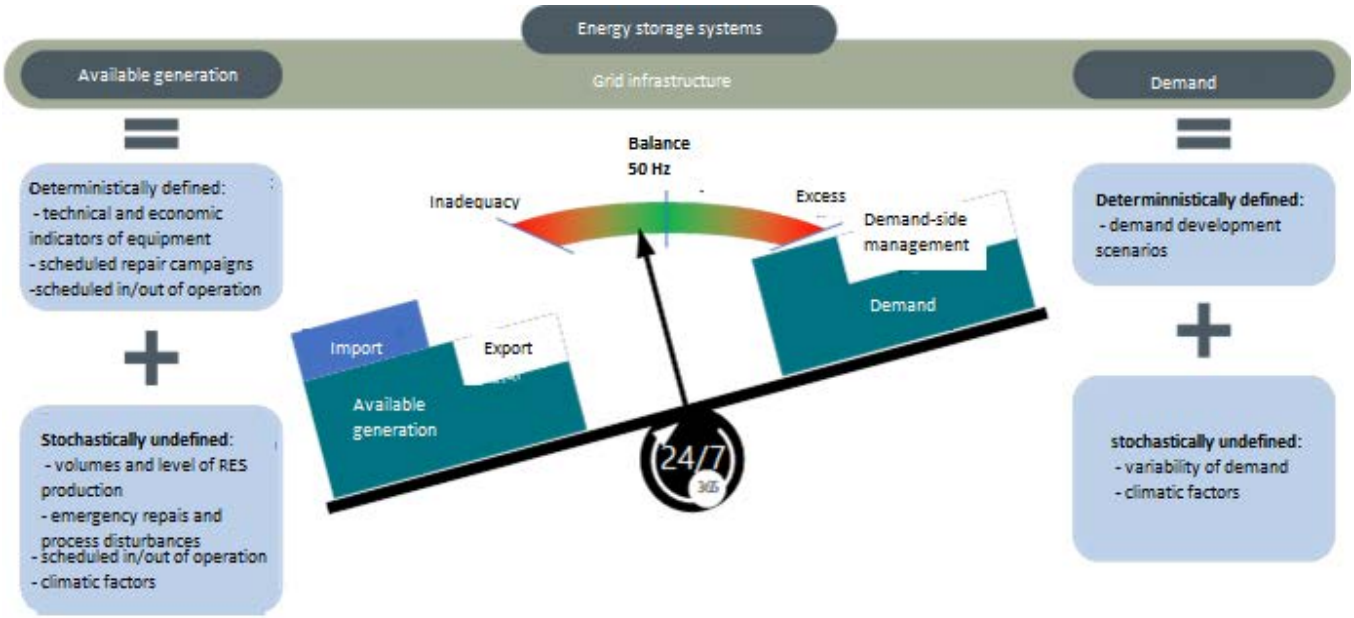
Taking into account these factors, the most effective from the TSO view point, in the context of minimizing risks to the reliability of electricity supply, is pursuing the scenarios for the development of generating capacities of the IPS of Ukraine in the long run, which implement the following strategy:

– maintaining and maximizing the use of existing NPP capacities in Ukraine (at least at the today's level and the further development of the nuclear energy by commissioning of new capacities (in the long run) as the most effective means of reducing GHG emissions at prices affordable for consumers (compared to other technologies that provide forecast supply). This provides for the commercial development of new types of power units with sufficiently high flexible characteristics, which are at least comparable to conventional power units running on fossil fuel;

– constructing new and reconstructing the existing power units at thermal power plants running on organic fuel with improvement of their technical and economic indicators, in particular, flexible capability, bringing ecological indicators to normative requirements and extension of service life to minimum 20 years. By estimates, to cover the combined load curve the available firm capacity of such power units shall be at least 8.5 GW in the long run, provided the above scenario of nuclear energy development is implemented. At the same time, using as fuel the domestic energy resources should be considered as an important aspect of ensuring the energy and economy security of the country, which is one of the key factors of ensuring the national security;

– further development of the country's hydropower in accordance with existing plans, in particular, completing the rehabilitation of HPPs at the Dnieper cascade and implementing new power units at PSPs, which is feasible only under condition of increasing the total volumes of water reservoirs. Because its curbing significantly complicates fulfilling the requirements of adequacy (flexibility) of generating capacities and leads to escalating electricity prices;

– supporting the development of RES in volumes that will not exceed the technological capabilities of the IPS of Ukraine for their full integration (without curtailments on RES power plants), in particular, taking into account the operating capabilities of the power system for their balancing;



– developing the country's heat supply system by increasing the capacity of biomass CHPs and reconstructing existing CHPs to implement technologies for the most efficient use of fossil fuel in the combined production of heat and electricity, as well as utilization of waste heat using heat pumps;

– implementing measures to increase the flexibility of the IPS of Ukraine, in particular:
  - introducing the minimum necessary volumes of highly flexible generating capacities (with quick start-up capability) and energy storages. At the same time, under equal conditions, it is advisable to give preference to "rapid" generation due to the much longer service life and the absence of restrictions on the capacity of storage systems;
  - replacing NPP power units being decommissioned with flexible power units, in particular, with small modular reactors;
  - increasing the flexibility of thermal power capacities during the reconstruction (modernization) of existing power units and during new construction.

2.4 Assessment of generation adequacy (flexibility) of Ukraine's IPS

Results of generation adequacy (flexibility) assessment under the baseline scenario of supply and demand development in the IPS of Ukraine demonstrate many problems in terms of adequacy and flexibility, which means that starting from 2025 own generation will not be sufficient to reliably cover the demand on electricity. To meet the needs of Ukrainian consumers in electricity according to this scenario, it will be necessary to keep increasing electricity imports but it is evident that building up the transfer capacity at interconnectors between the IPS of Ukraine and power systems of neighbouring countries serve as a reliable source of electricity supply.

Graphic representation of the mechanism for achieving generation adequacy (flexibility) of the power system

In the situation of shortage of generating capacities, i.e., non-fulfilment of generation adequacy requirements and insufficient implementation of measures to increase the flexibility of IPS of Ukraine, under the baseline scenario the flexibility requirements can be fulfilled only through the import of reserves, which stipulates further requirements to increase the capacity of interconnectors between the IPS of Ukraine and the power systems of neighbouring countries.

Probabilistic criteria for adequacy assessment showed the following.

Considering that on the legislative level in accordance with the latest methodologies of ACER (work is in progress) Ukraine has not yet determined the target values of the power system adequacy as per LOLE and/or LOLP, while in most countries that use these criteria such values differ, the Report establishes as acceptable the LOLP value that does not exceed 0.03%, and LOLE value that does not exceed 3 hours a year (matching the security requirements of European power systems that are equal in size, such as in Poland, France and a number of other countries.

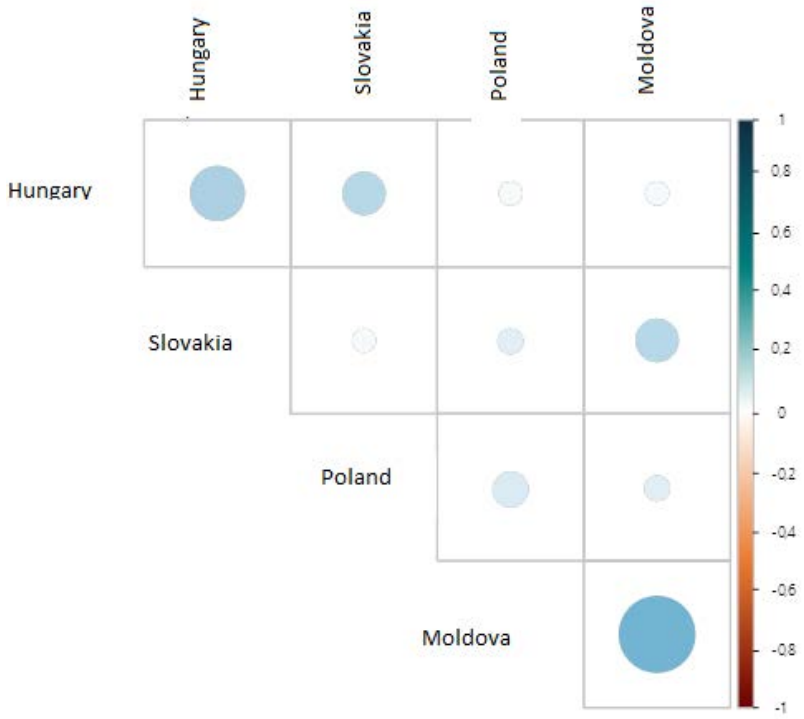
Adequacy indicators were calculated using stochastic modelling methods in combination with the Monte Carlo method. Thus, according to the Methodology, for each year of the 2023–2032 period, a number of Monte Carlo years were modelled (this way baseline scenario indicators factored in different probabilities of changes in the projected demand and supply, changes in weather conditions, unplanned shutdown of elements of the IPS of Ukraine, intermittent generation by WPP, SPP and HPP, etc.), which made it possible to achieve the convergence of results or the sufficient convergence in accordance with the probability theory.

Since other probabilistic indicators and criteria are derived or obtained by multiplying/dividing by the indicators of the EENS criterion, they are not shown, because they repeat the change frequency and form of the latter (see the Methodology).

Graphic representation of the convergence of results of stochastic modelling using the Monte Carlo method (on the example of the EENS indicator for 2032)

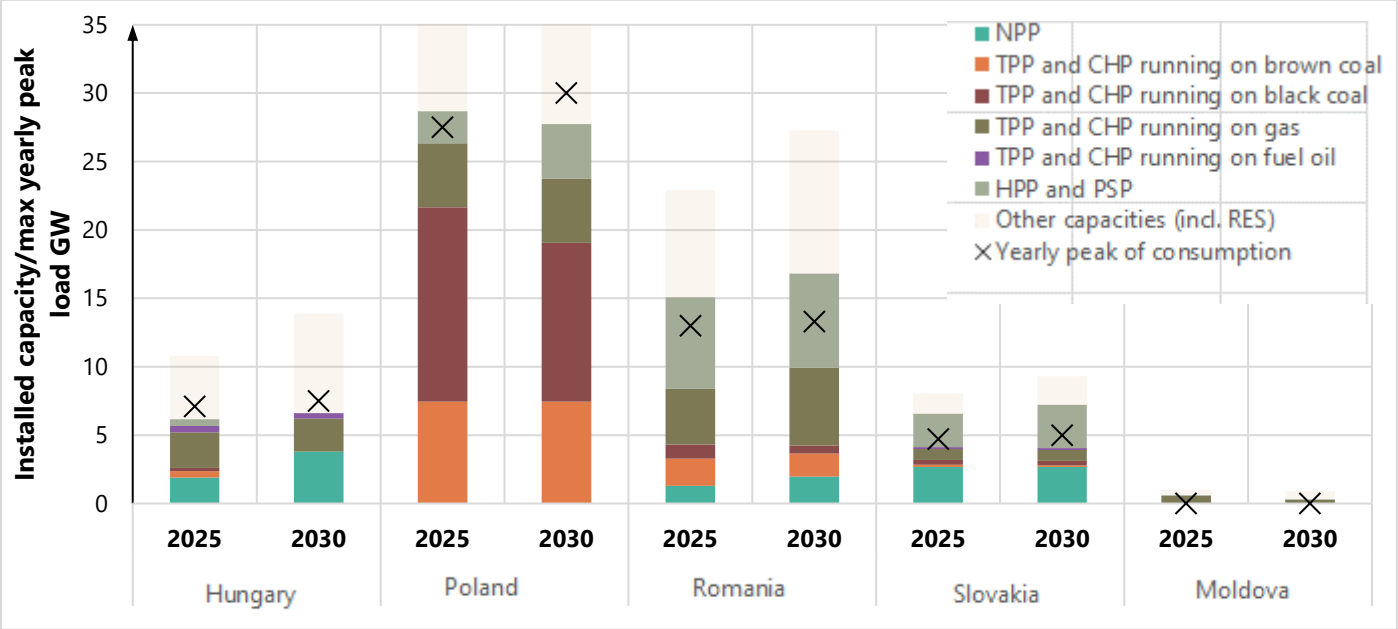
Results of the adequacy assessment according to the baseline scenario, taking into account the possibility of electricity imports/exports, are presented in Table (in addition, it should be emphasized that when assessing the adequacy of generating capacities it was taken into account that a number of coal-fired TPPs and CHPs in the Polish power system will be gradually decommissioned operating under conditions of the recently introduced mechanism of the capacity adequacy assurance. For this reason, using such capacities for market import/export operations (including for purposes of providing Ukrainian consumers with electric energy) is controversial.



Results of adequacy assessment of the IPS of Ukraine in the period of 2023–2032 according to the baseline scenario

Years	Indicators		
	***EENS*, MWh**	***LOLE*, h**	***LOLP*, %**
2023	289	0,61	0,010
2024	2 753	2,36	0,027
2025	422 055	286	6.3
2026	4 830 297	608	13.6
2027	5 036 935	1 831	40.6
2028	9 658 503	2 726	63.6
2029	10 108 895	2 733	66.6
2030	8 094 306	2 597	55.1
2031	8 278 358	2 361	64.5
2032	8 332 253	2 720	69.1

It should be noted that there is a close correlation (Figure **Помилка! Джерело посилання не знайдено.**) between the generation adequacy of the IPS of Ukraine and the neighboring power systems, where the latter act not only as the facilities with own generating capacities but also as the facilities transiting to other countries operating within the unified electricity market of Europe.



This indicates that in the event of a power shortage in Ukraine's IPS, a similar situation is very likely to occur in the power systems of neighbouring countries, especially in Moldova, as part of IPS of Ukraine's consumers are energized through Moldova's power system. This actually transforms the latter into a satellite of the IPS of Ukraine in the context of ensuring the generation adequacy. In the longer term, after the implementation of existing network development plans between the power systems of Moldova and Romania, the correlation between the adequacy of generating capacities in the power systems of Ukraine and Moldova will weaken and at the same time will strengthen between the power systems of Ukraine and Romania.

Correlation dependence (through the Pearson correlation factor) of the shortage of generating capacities between the IPS of Ukraine and neighbouring power systems (illustrated by year 2026)

As illustrated in Figure, power systems of such countries as Hungary are unable to cover their own yearly maximum consumption with their own generating capacities because they have in their generation mix many power plants with interruptible power. In this case, given that Figure shows the total installed capacity but not the available capacity to cover the maximum power consumption, the situation becomes even more pragmatic. It should also be stressed that nowadays almost all neighbouring countries (except Poland) are net importers, which in the event of power shortage in the IPS of Ukraine limits the use of imported capacities (it should be noted that only Poland's power system is commensurate with Ukraine's power system) and foreign transit transmission lines (most of their transfer capacity is used to cover domestic demand) to ensure adequacy in Ukraine.

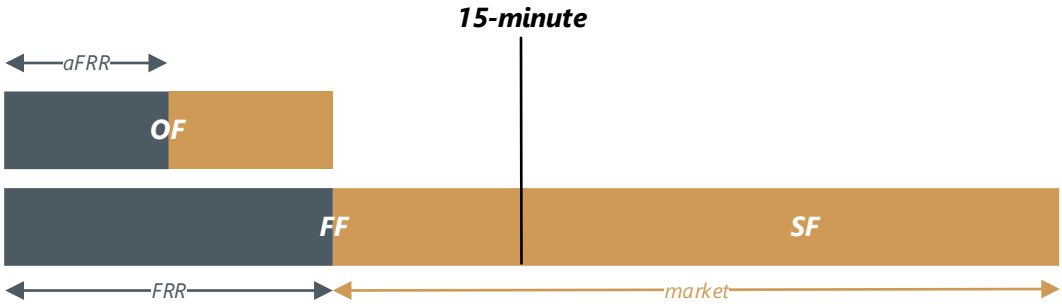
Generation mix and yearly maximum consumption in interfacing countries – ENTSO-E members, illustrated by years 2025 and 2030

The above data demonstrates that Ukraine's power system in the 2025–2032 horizon according to the scenario assumptions given above is characterized by the generation inadequacy. In other years of the study, IPS of Ukraine's is not facing the adequacy issues because as expected it will keep its baseload, load-following and peaking capacities in sufficient volumes. Subsequently, starting from 2025, a rapid reduction of capacity at existing TPPs and insufficient commissioning of new peaking capacities will entail a significant deterioration of indicators that characterize the generation adequacy and do not meet the adequacy criterion.

In terms of the flexibility assessment, it should be noted that in the context of the rapid deployment of generating capacities using RES and their effective integration (using such technologies such as flexible energy storages, demand-side management systems, etc.), some TSOs of Europe and ENTSO-E in particular alongside with the adequacy assess the flexibility of power systems. Approaches most frequently used for this purpose are:

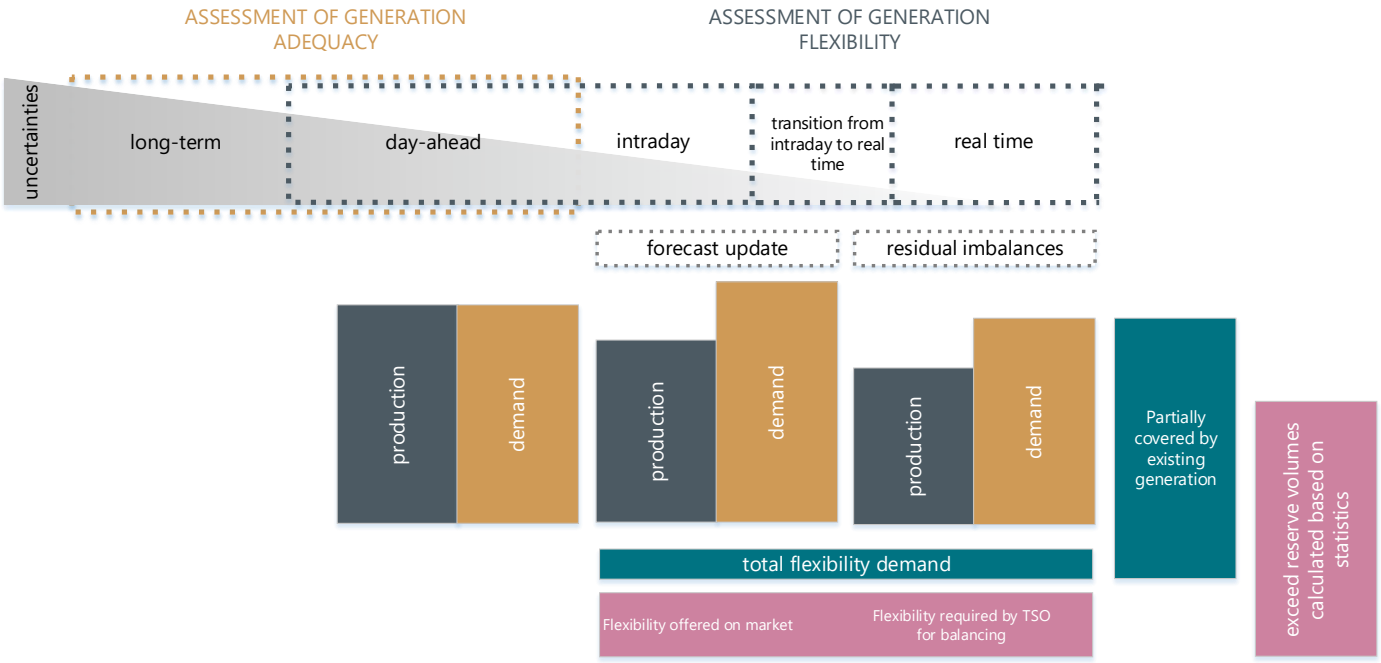
1) rapid analysis (based on technical data of demand-side management systems, capacity of conventional generation, and flow control);

2) analysis of residual imbalance (based on results of statistical analysis of data on the error of consumption/generation forecasts and their fluctuations);



3) modelling.

The report for the purposes of the generation flexibility assessment used modelling and the analysis of residual imbalance (approaches 2 and 3).



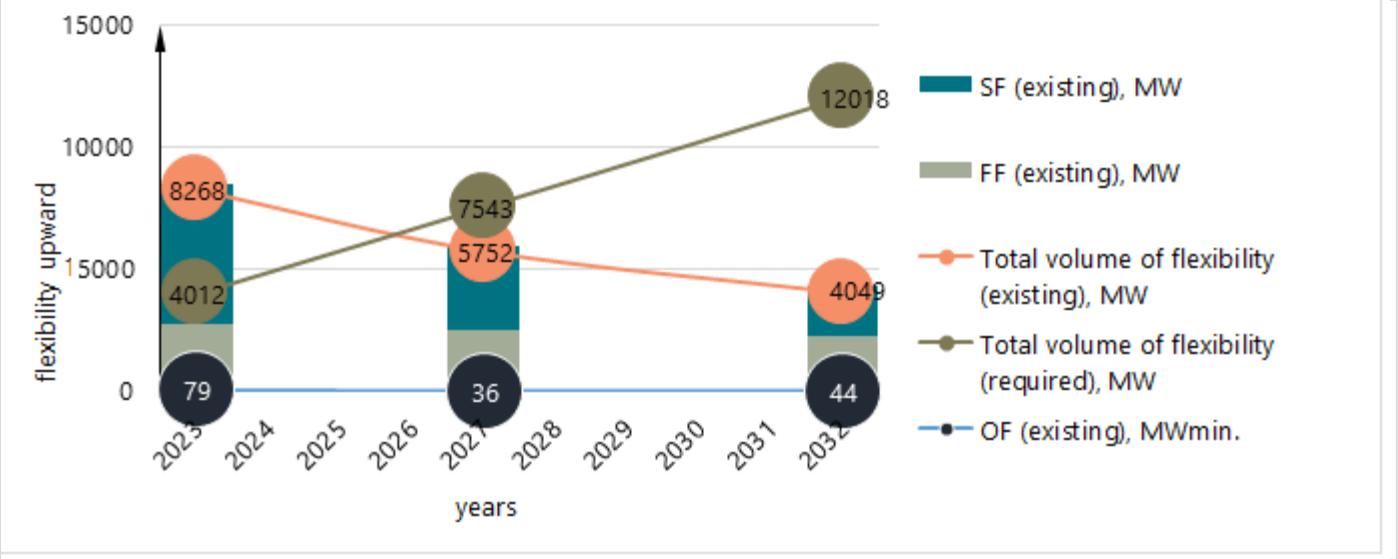
Since the flexibility may be required at different times and for different periods, it is proposed to conditionally divide it into the following types:

1) slow flexibility – SF, which is a capability to compensate for imbalances that have arisen due to the adjustment of demand/generation forecasts, which precedes opening of the trading gate in the day-ahead market. In addition, this flexibility applies to the scheduled or contingency loss of capacity (including transmission lines), which is reported before closing of the trading gate in the intraday market. This flexibility can be provided by most of the installed capacity, as there is time to ramp power of the engaged generating equipment, or even to start-up/shut-down it;
2) fast flexibility – FF, which is a capability to compensate for imbalances stemming from unexpected changes in generation/consumption in real time or during the time for which the last forecast arrives before closing the trading gate in the balancing market;
3) operational flexibility – OF, which is the capability to compensate for imbalances stemming from unexpected changes in generation/consumption in real time, but as distinct from the fast flexibility the time interval of this flexibility is within the 1–15 minute period (expressed in MW/minute). The flexibility of this type can be ensured by frequency containment reserves (solely by load-following technologies, such as running generation units, some HPPs/PSPs, energy storages and controlled flexible demand-side response systems), and its activation releases fast and slow flexibility.

Interrelation between flexibility and reserve capacities

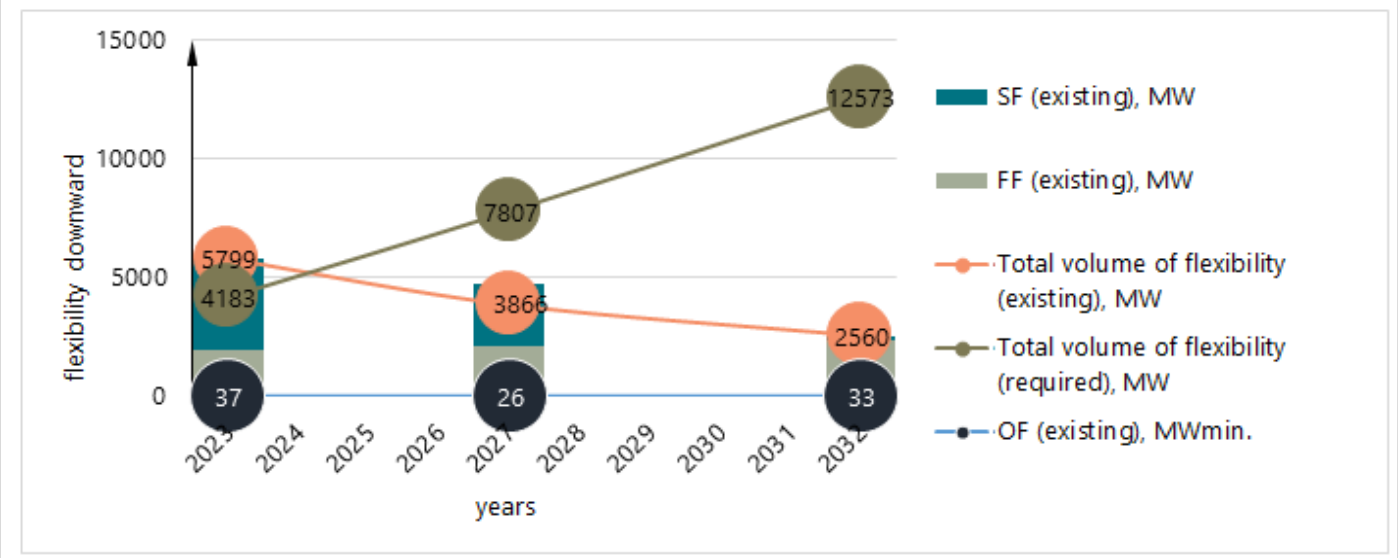
As shown in Figure, the analysis of flexibility means the assessment of the required flexibility of the equipment with which the IPS of Ukraine will operate with no residual imbalance (during the period from the start of gate closure in the intraday market until the occurrence of events in real time). In general, the capability to remove residual imbalances in a conditionally long term (one day and more) is also the flexibility, but such flexibility is covered by the assessment of adequacy because it is factored in modelling using the Monte Carlo method, resulting in preliminary hourly coverage of electric load curves. Boundaries of generation adequacy and flexibility assessment

The residual imbalance in this Report is determined as the electricity demand minus energy served (including from RES) in the market segments preceding the balancing market and based on the forecast (not actual) supply/demand data.



Therefore, based on the assessment of the residual imbalance, the future share of the flexibility demand to be provided by the TSO should be estimated, as such flexibility share depends on the flexibility, which the market can provide to the system. Then the required volumes of reserves and their characteristics are determined (taking into account the probability of imbalance as a result of actual fluctuations in supply/demand and incorrect demand/consumption forecasts).

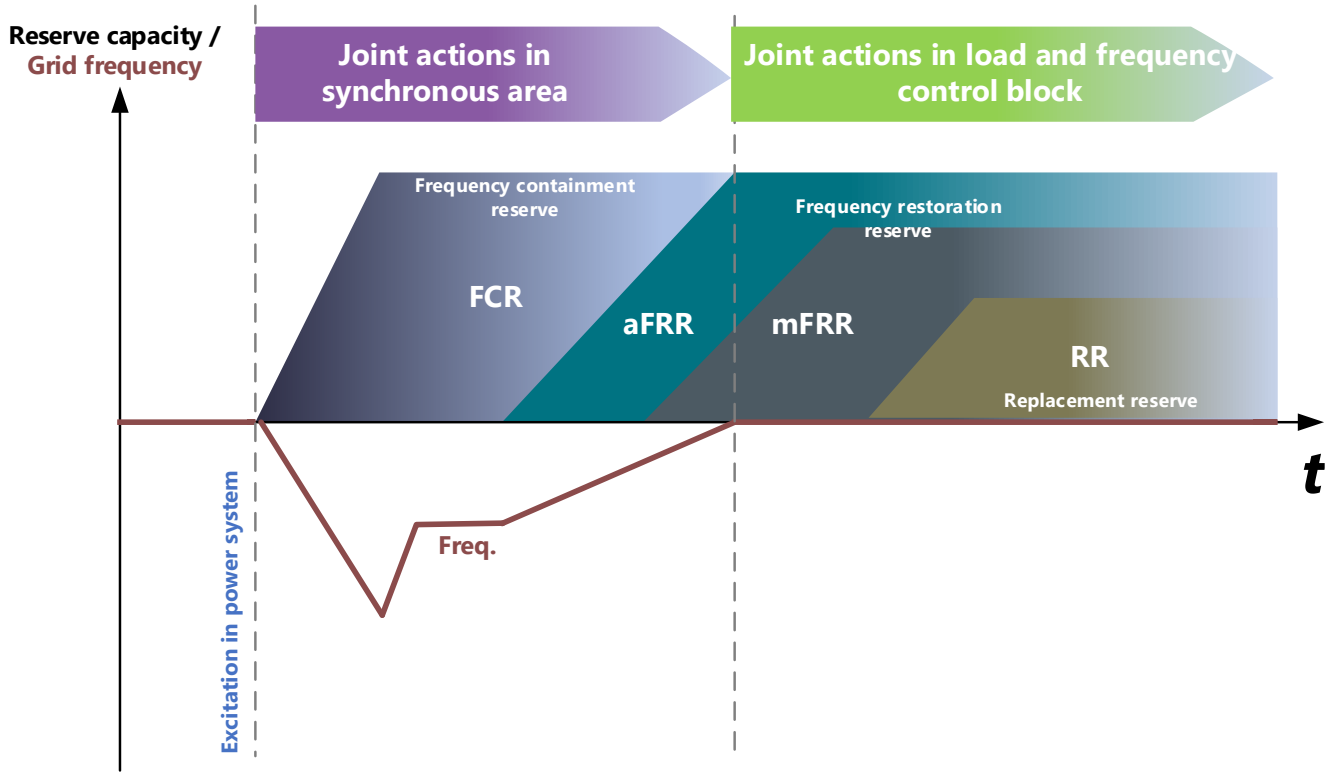
Thus, because of the insufficient flexibility, flexible or reserve capacities, from time to time there occur or may occur situations when with a too quick change in load or change in generation (including RES generation considering that there are many renewables) the dispatched capacities are unable to respond quickly and fully to such change (having relatively low speed of load gaining/shedding if compared to the speed of load change in the system or RES generation as shown in Figure), which eventually leads to partial non-coverage of the electric load curve. In turn, the presence of uncovered areas in the electric load curve (i.e., EENS) requires either an accelerated load gaining/shedding (including the speed of activation) of dispatched generating capacities (i.e., bringing existing generating capacities to the requirements of TNC), or early activation of generating equipment in the period preceding the expected peak load. It is difficult to implement the first option because it is necessary to upgrade existing generating equipment or to build a new equipment. It is difficult to implement the second option because there are no technical means in the IPS of Ukraine (such as energy storage, batteries or other technologies such as Power to X) that will be able absorb temporary aperiodic shortages/surpluses of electric energy.



In accordance with ENTSO-E clarifications, the approach is changed to the formation of the coverage curve, according to which emergency reserves (FCR, FRR, RR) can be used only for their intended purpose (i.e., to provide reserves in accordance with the N-1 criterion), and cannot be used to ensure the adequacy of generating capacities, which, in turn, leads to the situation when in the absence of at least one type of reserve at a given hour (even when the load curve is fully covered), the system is characterized by the generation inadequacy (inflexibility). Given the above and the growing impact of RES generation technologies that are difficult to forecast, the volumes of reserve capacities should grow too (except for constant volumes of reserves for contingency according to N–1 criterion), which is confirmed by modelling results (probability of occurrence of various situations in case of simultaneous activation of balancing capacities to compensate for unforeseen fluctuations of demand/supply, errors of forecasts of demand/supply, etc.), where the volume of currently required reserve capacity is determined, which will provide the required operational flexibility (OF) of the IPS of Ukraine.

It is worth noting that with the improvement of the quality of supply/demand forecasts, the development of competition in all market segments, the deployment of RES generating capacities, as well as the introduction of new technologies, the share of necessary flexibility (especially operational flexibility) will gradually decrease.

Figures illustrate the supply of IPS of Ukraine's with flexibility under the baseline scenario, which shows that the situation in the period 2023–2032 is steadily deteriorating.



IPS of Ukraine's supply with flexibility for upward loading according to the baseline scenario

IPS of Ukraine's supply with flexibility for downward loading according to the baseline scenario

Flexibility assessment under the baseline scenario for the parallel operation with power systems of neighbouring countries includes potential imports of electricity and reserves. Flexibility assessment results are provided in Table.

Graphic representation of the approach of shared capacity reservation by interfacing countries applied in the Report

Maximum shortage of reserve capacities and the total number of hours of such shortage according to the baseline scenario (generalized for all Monte Carlo years in stochastic simulation)

Years	Indicators					
	Reserve for upward loading, MW	**Average maximum shortage of reserves for upward loading, MW**	**Total number of hours of shortage of reserves for upward loading per year, h**	**Reserve for downward loading, MW**	**Average maximum shortage of reserves for downward loading, MW**	**Total number of hours of shortage of reserves for downward loading per year, h**
2023	1,000	360	552	500	301	409
2024	1,000	411	504	500	266	630
2025	1,000	419	557	500	310	259
2026	1,000	472	663	500	288	432
2027	1,000	589	650	500	315	425
2028	1,000	461	560	500	336	369
2029	1,000	539	636	500	369	558
2030	1,000	449	474	500	329	537
2031	1,000	348	604	500	368	616
2032	1,100	486	549	500	300	467

The calculations show that according to the baseline scenario it is impossible to ensure the generation adequacy nor flexibility in the IPS of Ukraine (it should be noted that the above values of the calculated indicators are averaged, and the range of these values is quite wide).

The curves of electric load coverage for weekdays and weekends of the typical periods of 2023, 2026, 2032 and yearly balances of power and capacity were calculated using modelling tools for this scenario. Balances reflect average values of SPP and WPP generation for the respective periods, hydro resources of low water year, NPP generation optimal for the IPS of Ukraine by months, PSP generation modes

(generation/pumping) optimal for IPS of Ukraine, curves of electric load coverage and curves of available reserves – probable values of generation and consumption. In addition, it should be noted that the above balances indicate averaged values of RES generation meaning that their generation in the given hours of the respective days can be both lower and higher than these values (by preliminary assessments the deviation can be ± 20%).

Electrical energy balance forecast in the IPS of Ukraine until 2032 according to the target scenario, bln MWh

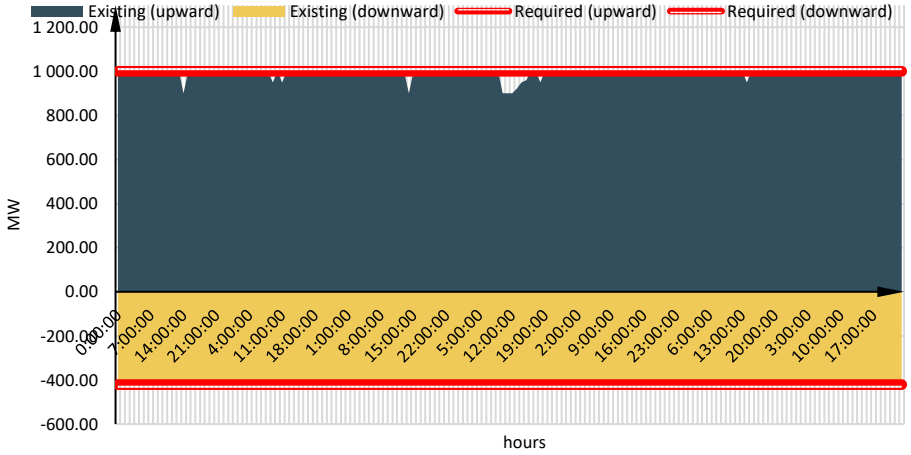
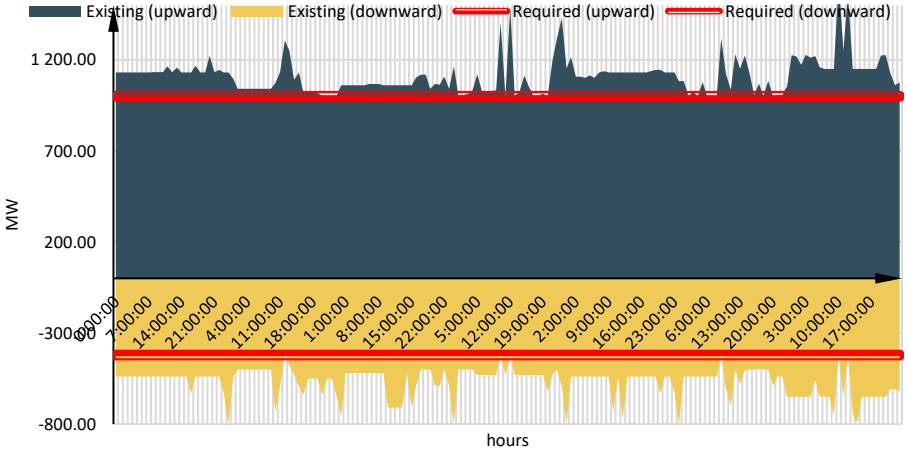
2031	1,000	16	7	500	16	10
2032	1,100	19	9	500	9	9

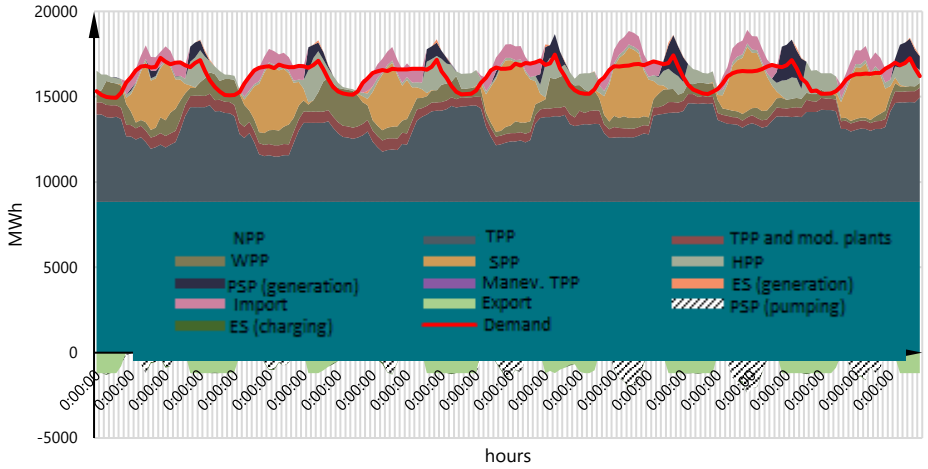
Data in Tables supports the conclusion that according to the TSO target scenario it will be possible to meet the generation adequacy and flexibility requirements throughout the entire period of 2023–2032.



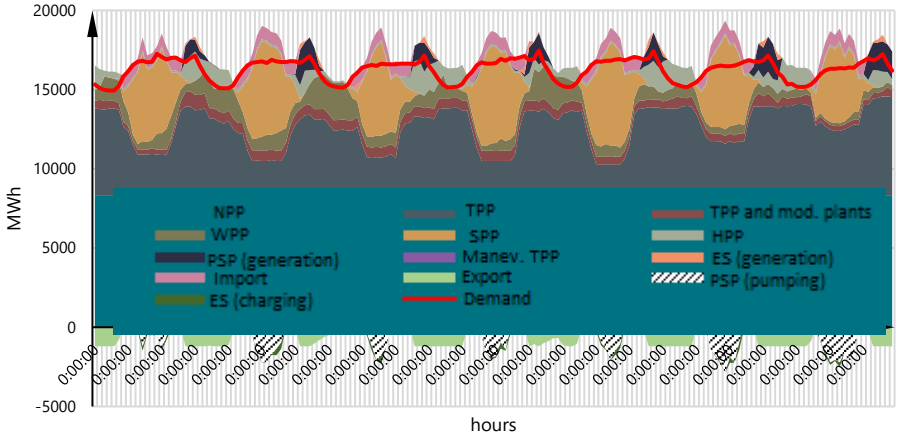
As an example, see the results of simulated coverage of the electric load curve in the IPS of Ukraine according to the baseline and target scenarios for the most typical days (yearly load peaks/off-peaks and spring flood) of 2023, 2026 and 2032 shown in Figures (example of a probable load curve and RES generation, which is randomly selected from all Monte Carlo years in stochastic modelling), which illustrate the calculation results shown above.



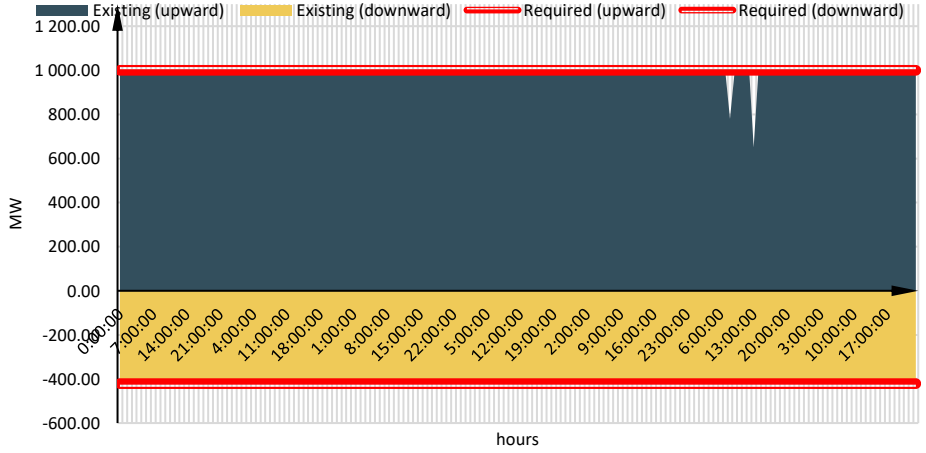
Probable coverage of load curve during flood period in 2023 in the IPS of Ukraine in baseline scenario



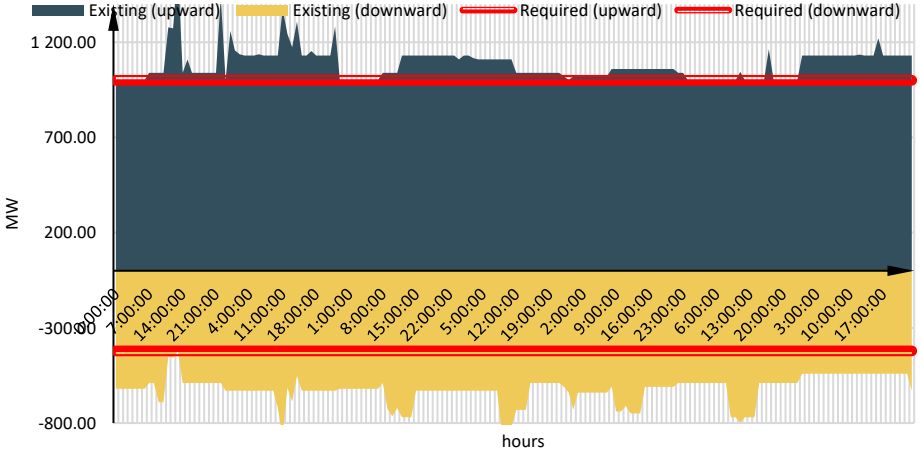
Probable coverage of load curve during flood period in 2023 in the IPS of Ukraine in TSO target scenario



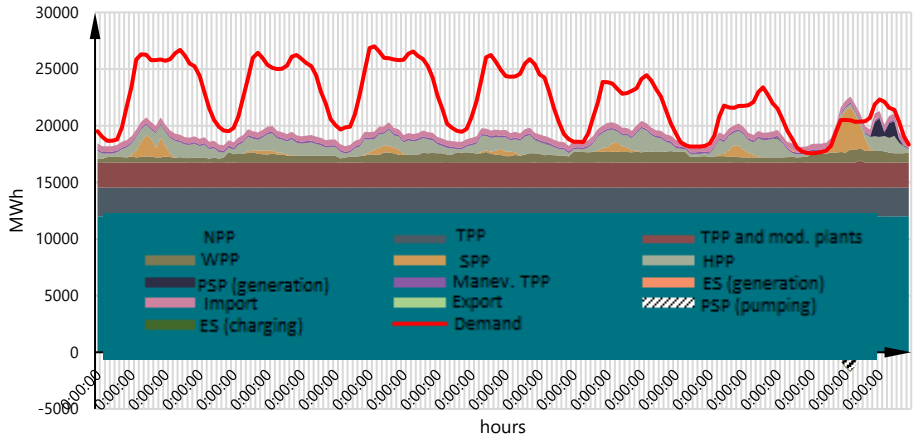
Supply of IPS of Ukraine with reserves in flood period according to the probable load schedule of 2023 in baseline scenario



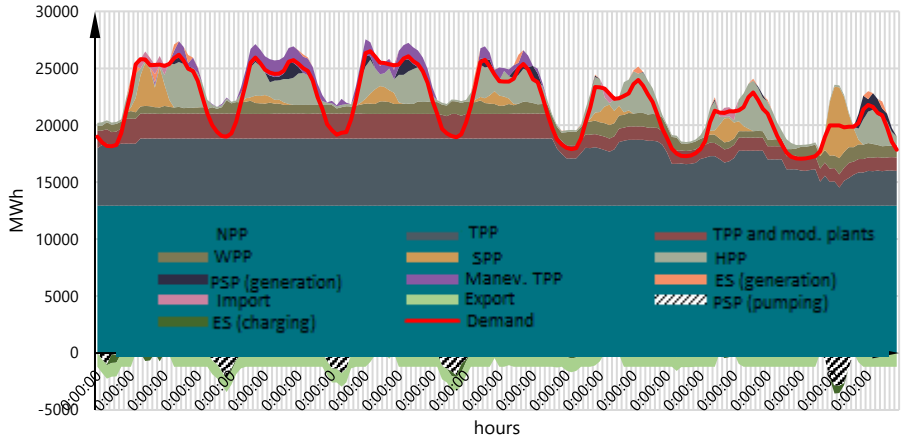
Supply of IPS of Ukraine with reserves in flood period according to the probable load schedule of 2023 in TSO target scenario



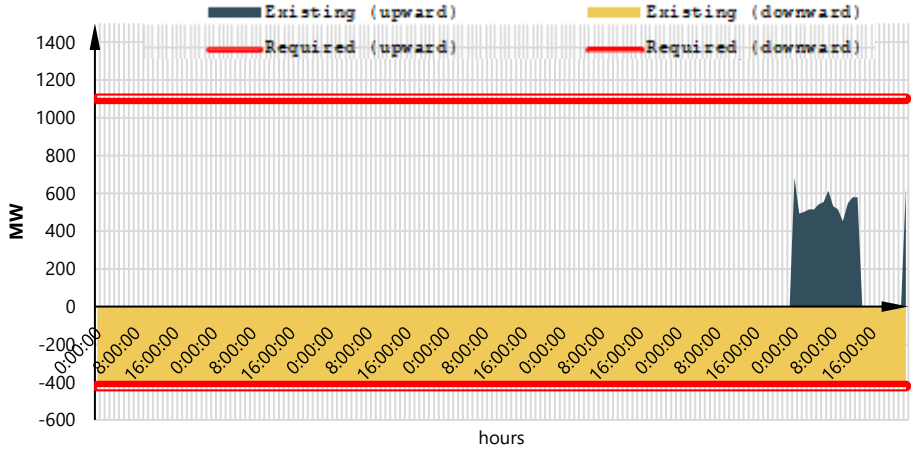
Probable coverage of load curve during summer period in 2027 in the IPS of Ukraine in baseline scenario



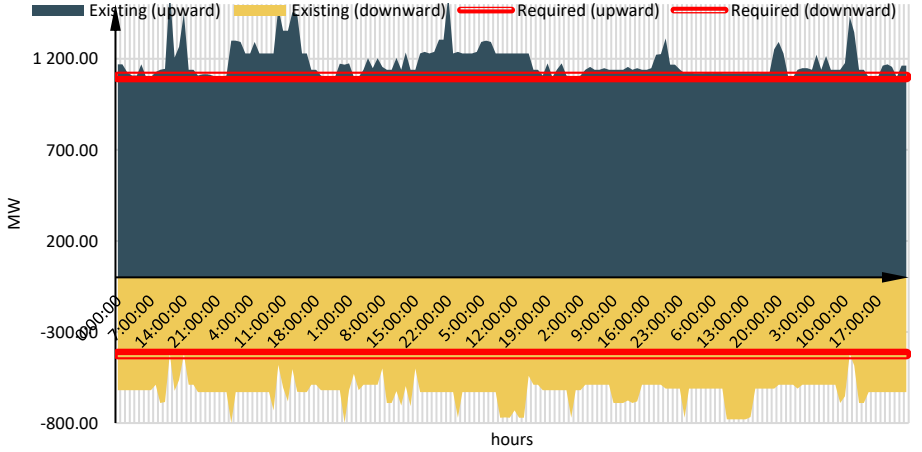
Probable coverage of load curve during summer period in 2027 in the IPS of Ukraine in TSO target scenario



Supply of IPS of Ukraine with reserves in summer period according to the probable load schedule of 2027 in baseline scenario



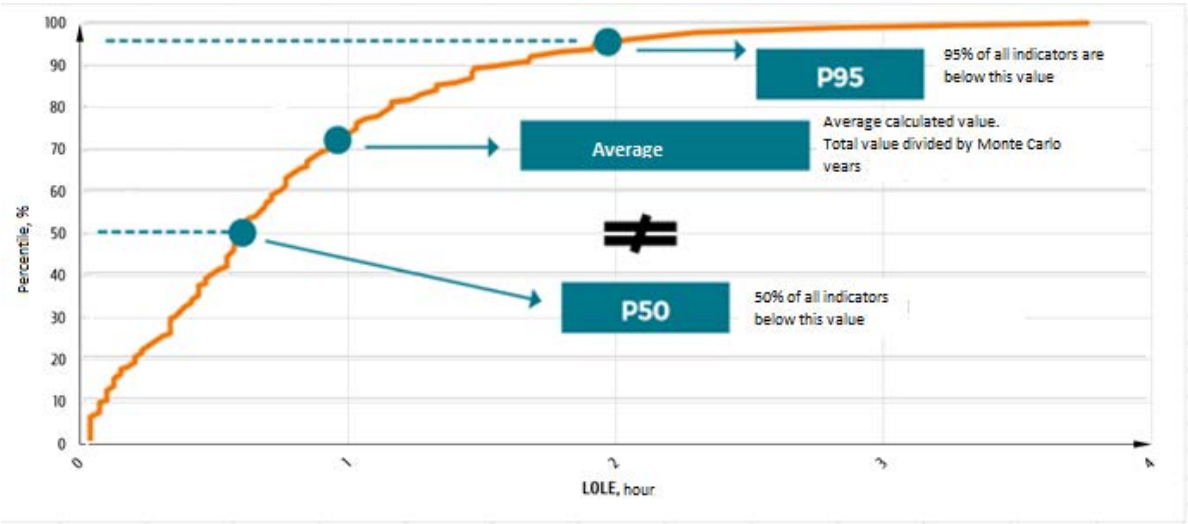
Supply of IPS of Ukraine with reserves in summer period according to the probable load schedule of 2027 in TSO target scenario



Probable coverage of load curve during winter period in 2032 in the IPS of Ukraine in baseline scenario

Probable coverage of load curve during winter period in 2032 in the IPS of Ukraine in TSO target scenario

Supply of IPS of Ukraine with reserves in winter period according to the probable load schedule of 2032 in baseline scenario



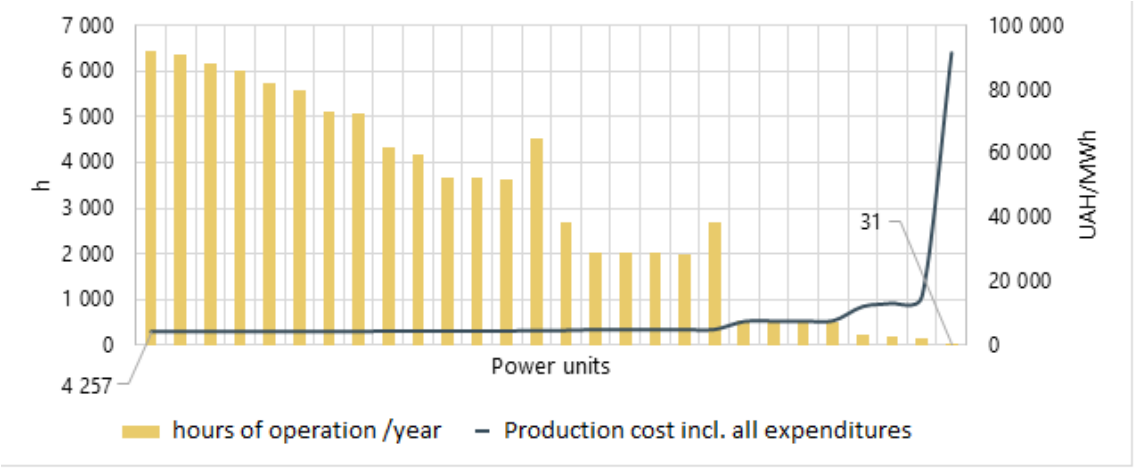
Supply of IPS of Ukraine with reserves in winter period according to the probable load schedule of 2032 in TSO target scenario

As illustrated above the baseline scenario provides a difficult situation regarding the future availability of generating capacities and reserves in the IPS of Ukraine (primarily the reserves for upward loading). However, as shown in Figures by means of supporting the RES integration (according to the TSO target scenario), problems of the shortage of reserves for downward loading, on one hand, can be avoided through the implementation of projects for construction of energy storages, which in addition would make it possible to partly resolve the balancing issues in the power system. On the other hand, the introduction of new balancing capacities with a wide range of control and the possibility of quick start-up/shut-down will make it possible to avoid problems with the power shortage and the shortage of reserves for upward loading and, as in the case of the construction of storage systems, will help resolve the balancing problems in the power system, providing additional flexibility to the IPS of Ukraine. In addition, these measures will provide surplus reserves in certain periods, which in turn will raise the power system flexibility to a new level in terms of quality, and will enable active commercial exports of reserves/capacity, i.e., *reserve sharing* according to the European terminology.

Mechanisms to ensure the generation adequacy

Since Tables provide average values of all criteria, not their statistic distribution, it should be borne in mind that there are different probabilities of occurrence of such shortages of generating capacities, which will significantly exceed the values in Tables. For example, 5% (once in 20 years) and 10% probability (once in 10 years) probability. Such probabilities are determined with LOLE P95 and LOLE P90 indicators (as recommended by ENTSO-E), their difference from the average indicator is illustrated below.

Percentile graph of the distribution of the LOLE criterion



For this reason, to ensure the adequacy of generating capacities, which will be used only in extreme conditions, more and more European countries are implementing various market and non-market mechanisms to ensure the generation adequacy. Such mechanisms and algorithms of their operation vary from country to country. However, they all have one thing in common – these mechanisms are not financed only with revenues from the sale of electricity in the electricity market.

ACER in its annual Market Monitoring Report) provides an overview of capacity mechanisms designed to ensure generation adequacy across Europe. The map below illustrates countries and mechanisms the use.

In addition, the possibility of developing the generation adequacy mechanisms (in case of failure of market mechanisms), in particular, through the use of strategic reserves and cross-border flows is provided for in the "Clean Energy for all Europeans Package", which Ukraine has acceded as a party of the Energy Community having committed to implement by 31 December 2023 Directive (EU) 2019/944 and Regulation (EU) 2091/941 in accordance with the decision of the Ministerial Council of the Energy Community No. 2021/13/MC-EnC.

At present, Ukraine does not have the legislative framework for such market or non-market mechanisms to ensure the generation adequacy in the future, which would provide for the introduction and use of capacity payments.

On the other hand, for very rare cases (i.e., cases of LOLE P95) when there is a need in generating capacities (which in other cases are not engaged in electricity generation or ancillary services) it would be practical to introduce in the country the demand-side response measures. So, Figure **Помилка! Джерело посилання не знайдено.** illustrates for year 2032 the dependency of the cost of electricity production (with all costs including fixed costs) on the hours in operation during the year.

Dependency of the cost of electricity production on the hours of operation, illustrated by year 2032

Based on the above, the operating time of the power units with highest production cost (over 12 thousand UAH/MWh) with a 5% probability (according to Monte Carlo method) will be from 31 to 229 hours per year, and in the remaining 95% they will be in operation for 0 hours, but their maintenance costs shall be compensated regardless of the operating time. Capacity of such power units in 2032 is 750 MW, therefore it would be more feasible (considering such values of the cost) to use demand-side management measures in those rare cases. It creates prerequisites for the demand-side management function on the industrial scale. Nevertheless, the terms of demand-side management services on one hand and the readiness of consumers to buy electricity at prices above market average on the other hand should make adjustments to scopes of such services. At present, the introduction of the European Methodology for calculating the value of lost load, the cost of new entry and the reliability standard in accordance with Article 23(6) of Regulation (EU) 2019/943 of the European Parliament and of the Council of 5 June 2019 on the internal market for electricity should provide some clarity. The purpose of the *Methodology* is to determine for consumers in the country the price threshold above which the consumers could refuse from electricity for a short time for various reasons. Results of the Methodology introduction in Ukraine are expected in 2022.

Nevertheless, based on the expert evaluation, the minimum price of 12 thousand UAH/MWh is the justified threshold subject to the introduction of demand-side response on an industrial scale. On the other hand, in the longer term, correct modelling of demand-side management measures will require a number of studies (according to the current Methodology) of their technical and economic indicators (in particular, maximum capacity of activation at each step, duration and cost of such activation, activation curves, seasonal and daily availability, cost dependency on duration and activation period, etc.).

The development of demand-side management measures in sufficient volumes (depending on the type and cost) in short and medium terms will potentially provide the possibility to partly reduce the need in a number of peaking and load-following capacities (specifically, including those capacities that require non-market mechanisms of generation adequacy assurance as they can compete directly in non-market segments).

As shown in this section, the IPS of Ukraine during the entire period studied in the baseline scenario will be characterized by generation inflexibility, and from 2025 – by generation inadequacy. The proposed TSO target scenario would make it possible to fully avoid this in future until 2032 (see Section **Помилка! Джерело посилання не знайдено.**) through the construction and soonest commissioning of up to 0.74 GW of energy storages and highly flexible quick start-up/shut-down generation (up to 1.45 GW), introduction of requirements for owners of new IPPs to provide energy storages, assurance of the optimal pace of renewables penetration, and a number of other actions.

The introduction of these capacities to ensure flexibility will guarantee:

1. Availability of rapid automatic reserve for upward/downward loading due to the introduction of energy storage systems, which makes it possible to quickly compensate for imbalances within ±740 MW, reduces the need to maintain corresponding reserves at conventional power plants because such reserves accelerate depletion of their fleet life and increase the likelihood of emergency failures. At the same time, it provides more possibilities to use RES to cover the electric load curve because, unlike conventional generation, energy storages do not have a technical minimum load (i.e., the minimum capacity they can work with).

2. Availability of firm capacity reserves for upward/downward loading in the volume of 1.45 GW due to the introduction of highly flexible with quick start-up/shut-down generation in accordance with the requirements of the current TNC.

3. Opportunity, even in low-water periods of the year, to compensate for the decreasing capacity of SPPs when the load is rising, and to reduce the need for TPP power units to cover the electric load curve because of maintaining the reserves for upward loading and the introduction of 1.45 GW of highly flexible with quick start-up/shut-down generation.

The need to build and commission energy storages (up to 0.5 GW) and highly flexible generation with quick start-up/shut-down (up to 1 GW) was stressed in the Report approved by NEURC Resolution No. 975 of 16 June 2021, but in view of the National Economic Strategy up to 2030 approved by the Cabinet of Ministers of Ukraine on 3 March 2021 and its declared target of increasing the renewables share in the total generation mix at the level of 25%, as well as a number of other less weighty but not least important factors, this Report calls for bigger volumes of flexible technologies (up to 1.45 GW of highly flexible generation and up to 0.74 GW of Energy Storages) to balance much higher capacities of renewables

2.5 Analysis of the external environment: challenges and opportunities

In the short term, the key challenges for Ukraine are the consequences of the Russian military aggression, both economic and social. Instead, integration into the EU markets is an opportunity to strengthen Ukraine's energy security. However, it will require significant additional efforts, particularly in the legal field.

Lowering the cost of technologies will promote the development of RES and hydrogen, which will be reinforced by environmental factors and requirements.

Political factors

- Corporate governance reform in the energy sector with the aim of bringing state-owned companies to international business standards, improving profitability and investment attractiveness
- Acceleration of Ukraine's integration into the EU, in particular, obtaining the status of a candidate for EU membership
- Deepening Ukraine's participation in international organizations (possibility of joining the International Energy Association, strengthening cooperation under the EU program)
- Deepening of the political isolation of the Russian Federation and strengthening of sanctions, in particular in the energy sector (for example, refusal of Russian energy carriers)

Economic factors

- Consequences of military aggression of the Russian Federation (more details in Section 1.1)
- Reduction in production volumes / fall in GDP
- Decrease in the purchasing power of the population and inflation
- Destruction of logistics chains (blockage of ports, supply of oil products)
- Occupation and destruction of energy facilities
- Increase in prices for primary energy resources (natural gas, coal, oil)
- Exchange rate fluctuations

Social factors

- Internal and external population migration and, as a result, loss of labor resources and reduction of energy consumption
- Increase in the level of unemployment and poverty of the population

Technological factors

- Development and cheapening of RES, SES, smart grids and demand response technologies, small modular reactors and hydrogen production
- A sharp increase in the share of renewable generation with a stochastic production schedule
- Strengthening the role of the consumer, who is both a producer and consumer of energy (Prosumer)
- Tendencies to increase energy efficiency

Environmental factors

- Increasing payment for greenhouse gas emissions, implementation of CBAM (Carbon Border Adjustment Mechanism)
- Commitment of Ukraine to abandon coal generation by 2035
- Strengthening the demands of investors on environmental issues
- Probable temporary inhibition of global decarbonization trends due to abandonment of Russian energy resources
- An environmental emergency caused by the military aggression of the Russian Federation

Legal factors

- Liberalization of energy markets and changes in the PSO model
- Accumulated debts on the market of gas, electricity, heat and water supply
- The need for further harmonization with EU legislation
- Settlement of legal issues of occupied/damaged energy facilities

2.6 Generation development scenarios

Based on the analysis of the demand and supply development scenarios across the 10-year horizon, the volume of electricity consumption by country's users will be within the range presented in Table below

Minimum and maximum assessment of electricity demand (gross), billion kWh

Indicator	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032
Electricity consumption (minimum assessment)	153	153.8	154.3	154.7	155.2	156.3	157.7	159.3	160.8	161.7
Electricity consumption (maximum assessment)	156	157.2	157.7	158.3	158.8	159.7	161.3	162.7	164.2	166.3

At the same time, the combined maximum load of the IPS of Ukraine in this period could vary from 24.5 GW to 27.8 GW

The baseline—the most probable—scenario addresses the risks discussed in subsection 4.4. Taking these risks into account, the baseline scenario envisages the following transformation of the generation mix in the period 2023–2032:

- maintaining the current level of NPP capacity during the entire period up to 2032 and commissioning new capacities: in particular, 1,000 MW in 2030 and 1,100 MW in 2032 on Units 3 and 4 at Khmelnytska NPP, which is provided for by all scenarios of NPP development up to 2032. According to information provided by NNEGC Energoatom, KhNPP Unit 3 will use WWER-1000 type reactor with characteristics similar to those already used in Ukraine (except that it has more fuel loading/unloading cycles), and Unit 4 will use the reactor of *AP-1000* type, which as distinct from the previous reactor can be engaged in the daily power regulation and is more flexible (50% stepwise regulation range and up to 300 cycles of fuel unloading/loading per year, rump-up/down 1-3% of the installed capacity per minute);

- reducing the TPP capacity to implement the NERP through decommissioning of power units after they reach the limit of running hours (see the Substantiating Materials for the detailed description of TPP units decommissioning), not feasible for owners to keep some generating capacities in working order due to low ICUF, lack of newly commissioned thermal generation and reconstruction of existing power units due to high risks of such projects for investors, which corresponds to the pessimistic scenario of their development;

- developing hydropower is envisaged according to the pessimistic scenario as described above, i.e., taking into account the capacity build-up by commissioning of Units 4 and 5 at Dnistrovska PSP (both units able to operate in pumping and generation modes) and Unit 3 at Tashlytska plant;

- developing the RES generation is envisaged in volumes ensuring the firm electricity production using renewable energy sources (including HPPs) in accordance with target indicators of the National Economic Strategy up to 2030 (NEcS-2030), among which the key indicator is to ensure the 25% share of renewables in the electricity generation, and the New Energy Strategy of Ukraine up to 2035: Security, Energy Efficiency, Competitiveness (NEnS-2035);

- developing of supporting RES penetration technologies in the IPS of Ukraine is envisaged according to the pessimistic scenario (see paragraph 4.2), where the capacities commissioned by late 2021 will be further operated (as of the end of 2021 there is one 1 MW facility of 1 MWh capacity) and new energy storages to be commissioned in the upcoming years (it is expected that energy storages having the total power of 1 MW and 1 MWh capacity will be commissioned in 2022, and starting from 2024 – additional 212 MW power of energy storages having 212 MWh capacity as part of hybrid systems deployed at existing HPPs at the Dnieper and Dniester Rivers designed to expand the regulation range of existing HPP capacities and their rapid response during operation in all segments of the market.

Generation mix in this scenario is illustrated in Tables. It is clear that the development of generating capacities in this scenario does not ensure the fulfilment of generation flexibility requirements after 2023 and adequacy requirements during the entire period of 2025–2032 (as described in detail in Section 6 and demonstrated by calculations of generation adequacy (flexibility) indicators), which is not acceptable from the standpoint of the energy security, balance reliability and operational security of Ukraine. Therefore, the TSO has formed the scenario of the power system development which will be most economically effective in ensuring the fulfilment of generation adequacy (flexibility) requirements and should, in the TSO opinion, be the target scenario (hereinafter referred to as the TSO target scenario). Nevertheless, even the TSO target scenario will require prompt closing out of risk mitigation actions described in subsection 4.4.

The TSO target scenario for the development of conventional generation was formed taking into account the results of assessing the generation adequacy (flexibility) for the baseline scenario and the results of the formation of long-term demand and supply scenarios. Its main economic indicators (investment needs and electricity prices) are based on SMEE indicators, as well as the forecast of the development of conventional generation. The TSO target scenario provides:

- keeping in operation the existing capacities at nuclear power plants and commissioning new 1,000 MW at Unit 3 and 1,110 MW at Unit 4 of Khmelnytska NPP, which is provided for by all scenarios of NPP development for the period up to 2032 (which as a result will increase the volumes of necessary upward loading reserves to 1,100 MW as per the existing TNC and Regulation (EU) 2017/1485 of 2 August 2017 “Establishing a guideline on electricity transmission system operation”);
- maintaining the available operating capacity of load-following TPPs at the level required to meet the adequacy requirements (not less than 7.3 GW in the period up to 2032 excl. demand-side management and flexible generation with quick start-up/shut-down capability), which corresponds to the optimistic scenario of their development;
- developing the hydropower under the scenario that is close to the pessimistic scenario (see paragraph 4.2), i.e., taking into account the total capacity build-up by commissioning Units 4 and 5 at Dnistrovska PSP (with both power units operating in the pumping and generation modes) and Unit 3 at Tashlytska plant;
- developing generation from renewable energy sources in the volumes ensuring the firm production of electricity from renewable energy sources (including HPPs) in accordance with target indicators of NEcS-2030 (25% share in generation mix by 2030) and NEnS-2035 similarly to the baseline scenario, with the exception that RES producers will be actively involved in the power system balancing under general market conditions (this way these producers can provide ancillary services, in particular, frequency restoration reserves for downward);

- system-wide measures to increase the flexibility of the IPS of Ukraine should be implemented as soon as possible, but realistic timeline – starting in 2023, and provide for the introduction of at least 1.45 GW of highly flexible with quick start-up capacities and up to 0.74 GW of *Energy Storages* in the period until 2032;

Figures below reflect the feasibility of projects of energy storages and highly flexible generation. It should be noted that the electricity surplus according to the target scenario in the long run decreases due to the introduction and use of quick-start reserves, new capacities at HPPs (including the operation of hybrid systems) and rising electricity consumption in the IPS of Ukraine (compared to RES deployment pace), but in order to be able to fully avoid RES curtailments under balance conditions, at least 2 GW of frequency containment and control systems and highly flexible generation need to be introduced.

The assessment of PSP capacities does not include commissioning of units at Kanivska PSP as such commissioning is ineffective and unlikely because first of all the ICUF of such power plant will be atypically low (it will use technologies of low flexibility), will require major capital investments and construction to ensure the normal operation of the grid for it to be able to reliably intake/offtake power in the turbine and pumping modes. To enable the normal operation of 5 power units of Dnistrovska PSP in pumping and generation modes, the Transmission Network Development Plan sets out the following actions for grid development:

commissioning of the 330 kV OHL Zakhidnoukrainska–Bohorodchany;

commissioning of the 330 kV OHL Ternopilska–Chernivetska;

commissioning of the 330 kV OHL Dnistrovska PSP–Vinnytska 750;

installation of the second AT 750/330 with a capacity of 1,000 MVA (3 × 333) at the 750/330 kV Vinnytska substation.

Based on the above, the operation of Unit 4 of Dnistrovska PSP in the generation mode will be taken into account starting from the beginning of the modelling horizon (2023), and the simultaneous operation of all four units in the pumping mode – starting from 2024 according to the latest approved TYNDP-UA. Commissioning of Unit 5 at Dnistrovska PSP is expected in 2032.

Also, given the high probability of Tashlytska PSP construction completion, it is assumed that the third unit will be commissioned in 2022 and will start operation in early 2023.

WPP, SPP, Frequency Containment and Control Systems development according to the baseline scenario

Indicator	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032

3 Gas sector

3.1 Ukraine's gas balance before the invasion

Before the start of full-scale Russian aggression, Ukraine invested in gas production, had sufficient volumes of gas in PSG for a stable heating season, imported and transported gas to EU countries and Moldova.

In 2021, Ukraine consumed 26.8 billion cubic meters (bcm) of gas, including:

- Households – 8.6 bcm (5% increase over 2020), 31.9% of the total consumption;
- District heating – 6.3 bcm (24% decrease compared to 2020), 23.5% of the total consumption;
- Industry, public sector and other non-household consumers – 11.9 bcm (3% less than in 2020), 44.6% of the total consumption.

Production related and technical losses amounted to 1.8 bcm.

Consumption was partially covered by domestic production, which amounted to 19.78 bcm in 2021, 2.2% less than in 2020. The main reason for the reduction in production volumes was low investment activity in 2020 due to the COVID-19 pandemic, which resulted in market prices hitting record low.

Despite this, according to the Association of Gas Producers of Ukraine (AGPU), the year 2021 ended with a stabilization of the production of the state JSC "Ukrgazvydobuvannya" in November-December, as well as a significant increase in the gas production of PJSC "Ukrnafta" and private producers. As a result, private gas producers managed to extract a record 5 bcm of gas, amounting to 25% of the total volume of gas production in Ukraine.

In 2021, 41.6 bcm were transported to Europe through the territory of Ukraine, a 25% reduction compared to 2020. The average daily transit volume was 114 million cubic meters (mcm) of gas per day, in some periods it decreased to 67 mcm per day.

The volume of gas transportation from Europe to Ukraine during the same period amounted to almost 2.6 bcm or six times less than in 2020. The volume of re-export to the EU was also about 2.6 bcm.

At the beginning of 2022, enterprises of all forms of ownership increased gas production. Thus, in January 2022, Ukraine produced 2.3% more gas than in the same period of 2021. Private companies increased production by 4.1%, PJSC "Ukrnafta" by 3.3%, and JSC " Ukrgazvydobuvannya" by 1.6%.

Gas reserves in Ukraine's underground gas storages (UGS) as of January 1, 2022 amounted to 13.5 bcm, of which:

- Residents stored in customs warehouse mode 0.53 bcm;
- Non-residents stored in customs warehouse mode 0.54 bcm.

Gas reserves in UGS as of February 1, 2022 amounted to 11.1 bcm, including:

- Residents storing in customs warehouse mode – 0.42 bcm
- Non-residents storing in customs warehouse mode – 0.2 bcm

Transit through the territory of Ukraine amounted to 1.66 bcm in January 2022. It is 57% lower than the in the same period in 2021. Gas transportation in the Balkan direction has resumed, but deliveries to Slovakia and Poland have significantly decreased. In February 2022, transit amounted to 2.07 bcm.

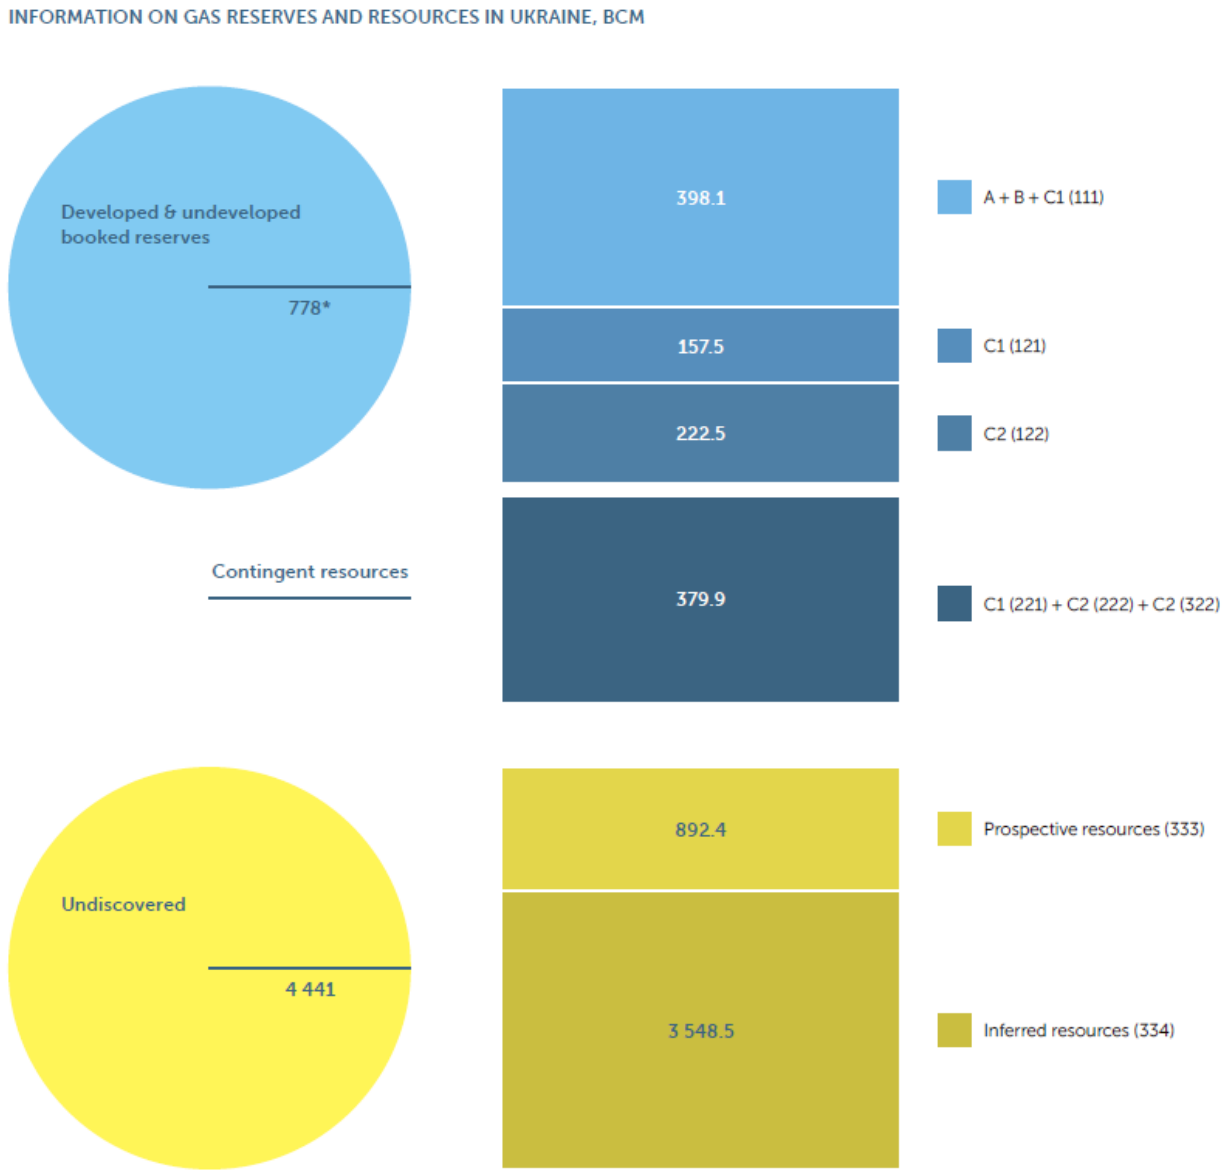
Imports in January 2022 amounted to 44.8 mcm from the EU, which is 90% lower than in January 2021, but three times more than in December 2021. Export and re-export amounted to 178 mcm, which is 25% less than in January 2021.

Ukraine's consumption in January 2022 amounted to 3.7 bcm, in February – 2.8 bcm. The volume of gas for production and technical losses for two months from the beginning of the year amounted to 318 mcms.

3.2 Overview of hydrocarbon deposits in Ukraine

Gas deposits

A significant share of Ukrainian hydrocarbon reserves is concentrated in three main regions:



- Dnipro-Donetsk basin (Eastern region) – 93% of production, 77% of reserves;
- Carpathian basin (Western region) – 7% of production, 14% of reserves;
- Northern Black Sea basin (Southern region) – less than 1% of production, 9% of reserves;

Prior to the full-scale invasion, Ukraine covered 2/3 of its gas consumption with its own gas. Ukraine has a significant potential for increasing gas production and can achieve self-sufficiency in gas.

As of January 1, 2021, there are 467 listed objects in Ukraine (natural gas deposits and prospective gas fields). Most of them are combined: 65 oil, 111 gas, 18 oil and gas and gas oil, 155 gas condensate, 3 gas condensate non-oil.

There are 285 industrially developed fields with balance (extractable) natural gas reserves of 619 bcm. 22 objects with balance (production) gas reserves of 26 bcm have been prepared for industrial development. Other deposits (areas) are subject to additional geological study, including exploratory, with the aim of preparing them for industrial development.

86% of the booked gas reserves are now used for industrial development. The gas reserves are depleted by 75%. In total, current potential resources amount to 5 506 bcm, of which 719 bcm are currently available for extraction, and the remaining 4 478 bcm need additional geological studies.

*Notes: *including gas of the central-basin type of the Sviatohirsky field*
Source: Association of Gas Producers of Ukraine

Oil and condensate deposits

Oil and condensate deposits are located in three geographical and geological regions on the territory of 10 administrative regions:

- Carpathian flexure, or Western region (Ivano-Frankivsk, Lviv, Chernivtsi regions);
- Dnipro-Donetsk basin, or Eastern region (Chernihiv, Sumy, Poltava, Kharkiv, Dnipropetrovsk regions);
- Black Sea-Crimean, or Southern region (Odesa region and Crimean AR).

The state mineral balance of Ukraine books 216 oil and 269 gas condensate objects. The main reserves and production of oil are located in the Eastern region, where 51% of the explored reserves are concentrated and 1,125 thousand tons of oil are produced per year (67% of the total production of Ukraine). Deposits of the Southern region account for 13% of explored reserves and 0% of production. The total booked (extractable) oil reserves of fields under industrial development amount to 69,949 thousand tons (82% of Ukraine's reserves); condensate – 27,430 thousand tons (87%). There are 145 oil and 191 condensate facilities under industrial development.

In 2020, oil production amounted to 1,671 thousand tons, and condensate production reached 758 thousand tons. Booked production reserves of oil are depleted by 80% and condensate by 53%.

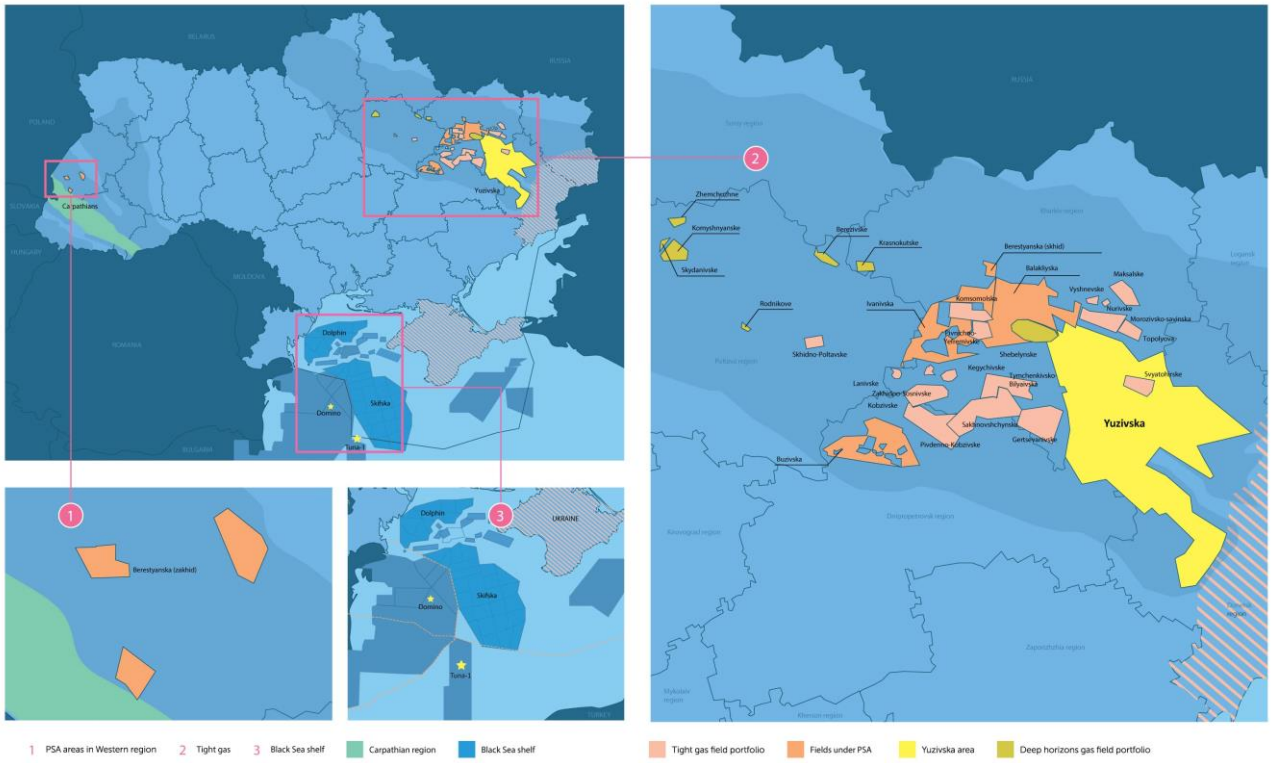
Unconventional gas deposits

Technically extractable reserves of unconventional hydrocarbons in Ukraine, in particular tight gas, are estimated at 1.2 trillion cubic meters. These reserves are currently not being developed. In particular, according to the State Mineral Balance Sheet, within the eastern hydrocarbons-bearing region of Ukraine gas reserves of tight collectors amount to about 100 bcm. Almost half of these reserves lie at a depth of more than 5,000 m.

Currently, there are no special incentives for gas extraction from tight gas reservoirs in Ukraine, in terms of the methodology for determining, booking and stimulating taxation for natural gas from tight gas reservoirs. Implementation of these steps is essential for attracting investment in the production of such natural gas and is recommended by this plan.

Shelf

The Ukrainian shelf of the Black and Azov Seas, having 133.7 thousand sq. km of area, has a potential to fully meet Ukraine's needs for gas and partly for oil.



According to the State Mineral Balance of Ukraine, as of 1 January 2021, there were 6 objects at the Black Sea shelf, 3 of which are being developed, and 9 objects in the Sea of Azov, 3 of which are being developed. In total, booked reserves at the Black Sea shelf amount to 37,506 mcm of gas, including those that are developed - 12,139 mcm. The booked (production) reserves on the shelf of the Sea of Azov amount to 9,332 bcm, including those under development – 2,396 mcm. In 2020, 8 mcm of gas were extracted on the shelf of the Sea of Azov.

According to the State Geology and Subsoil Service of Ukraine, the potential reserves of hydrocarbons on the Ukrainian shelf of the Black Sea are estimated at 2.3 billion tons of standard fuel (equivalent to 2.3 trillion cubic meters), which is about 40% of all energy reserves of Ukraine. These reserves are distributed as follows: North-western shelf – 604.1 million tons of oil equivalent (toe); the deep-sea basin of the Black Sea – 346.0 million toe; Kerch shelf – 257.0 million toe; the water area of the Sea of Azov – 324.8 million toe.

Remaining smaller reserves are discovered in other parts of the Ukrainian shelf of the Black and Azov Seas. Significant reserves of energy resources have been discovered in the Kilima area (250–485 bcm of gas), the Skifskaya field (35 bcm of gas and 25–60 mt of oil), the Nakhimov structure (29 bcm of gas), the Kornilov structure (35 bcmof gas), the Akhib structure (6.7 mt of oil).

Eight gas and gas condensate fields have been discovered in the area of the northwestern shelf of the Black Sea - Golitsynske, Yuzhno-Holytsynske, Shtormov, Arkhangelske, Schmidt, Krymske, Odesske, Bezimenne. The named fields have been explored at depths of up to 120 m, but the vast majority of hydrocarbon reserves lie in the deep-water part of the Black Sea shelf, starting at depths of more than 800 meters. According to experts, only 4-5% of the energy reserves on the Ukrainian part of the Black Sea shelf have been explored. Full exploration of at least a third of hydrocarbon deposits in the Black Sea will require 5-7 years and sufficient investments.

This plan includes production of traditional gas, tight gas and the development of the Black Sea shelf in the list of nationwide priority projects. Preconditions for the implementation of these projects are the stabilization of the security situation, attracting sufficient funding and creation of a favorable regulatory and fiscal regime.

3.3 Current state of hydrocarbon production and growth potential

The occupation forces of Russia advanced from the north, east and south, the main regions of oil and gas production and reserves in Ukraine. Active hostilities and proximity to the contact line led to a reduction in production volumes for objective reasons. So, subsoil users were forced to conserve wells and conduct work only on objects where it was physically possible.

Compared to 23 February 2022, on the following day production dropped by 8%, and on 11 April 2022 – by 12%. In the following months, thanks to retreat of the Russian forces and the localization of active hostilities, gas production rate has stabilized.

In the short term, the volume of gas production depends, first of all, on the security situation and damage to oil and gas infrastructure facilities directly at the production areas. This is especially relevant due to the approach of the heating season and the expected intentions of the occupier to disrupt it, not only in Ukraine, but also in the EU.

The industry requires constant capital investments. In Ukraine, developed oil and gas deposits are depleted by more than 80%. With the natural decline rate of 10-15% per year, drilling of new wells is necessary to cover the decrease in production volumes from the old fund and ensure growth.

The following steps are recommended for increasing gas production in Ukraine:

1. **Development of oil and gas projects.** Ukraine has the potential to become a gas exporter if its reserves are duly developed. The most promising projects are 13 Production Sharing Agreements (PSA), development of Black Sea deposits (especially considering the recent discoveries in Turkey and Romania), Carpathians, development of gas production of tight reservoirs, PEC contracts, projects of deep horizons, etc.
2. **Preservation of incentives.** Preservation of tax incentives and ensuring predictability of the regulatory regime is critical for increasing the volume of gas production in Ukraine.
3. **Conducting public e-auctions.** Since 2019, Ukraine has used transparent electronic online auctions, through which the subsoil use right was sold for 25 oil and gas plots with an area of more than 4,000 square km.

4. **Attracting sufficient capital.** The post-war investment needs of the industry are estimated at more than 25 billion dollars. To attract this capital, Ukraine needs to ensure favorable conditions, including simplification of bureaucratic procedures, preservation of a stimulating and predictable regulatory regime.
5. **Adoption of necessary legislative changes.** Recovery of the extraction industry requires a number of deregulation steps and stimula. In particular, such measures include launch of the license market, simplification of the environmental assessment procedure, aimed at reducing the duration of this procedure from 120 days to 50 days.

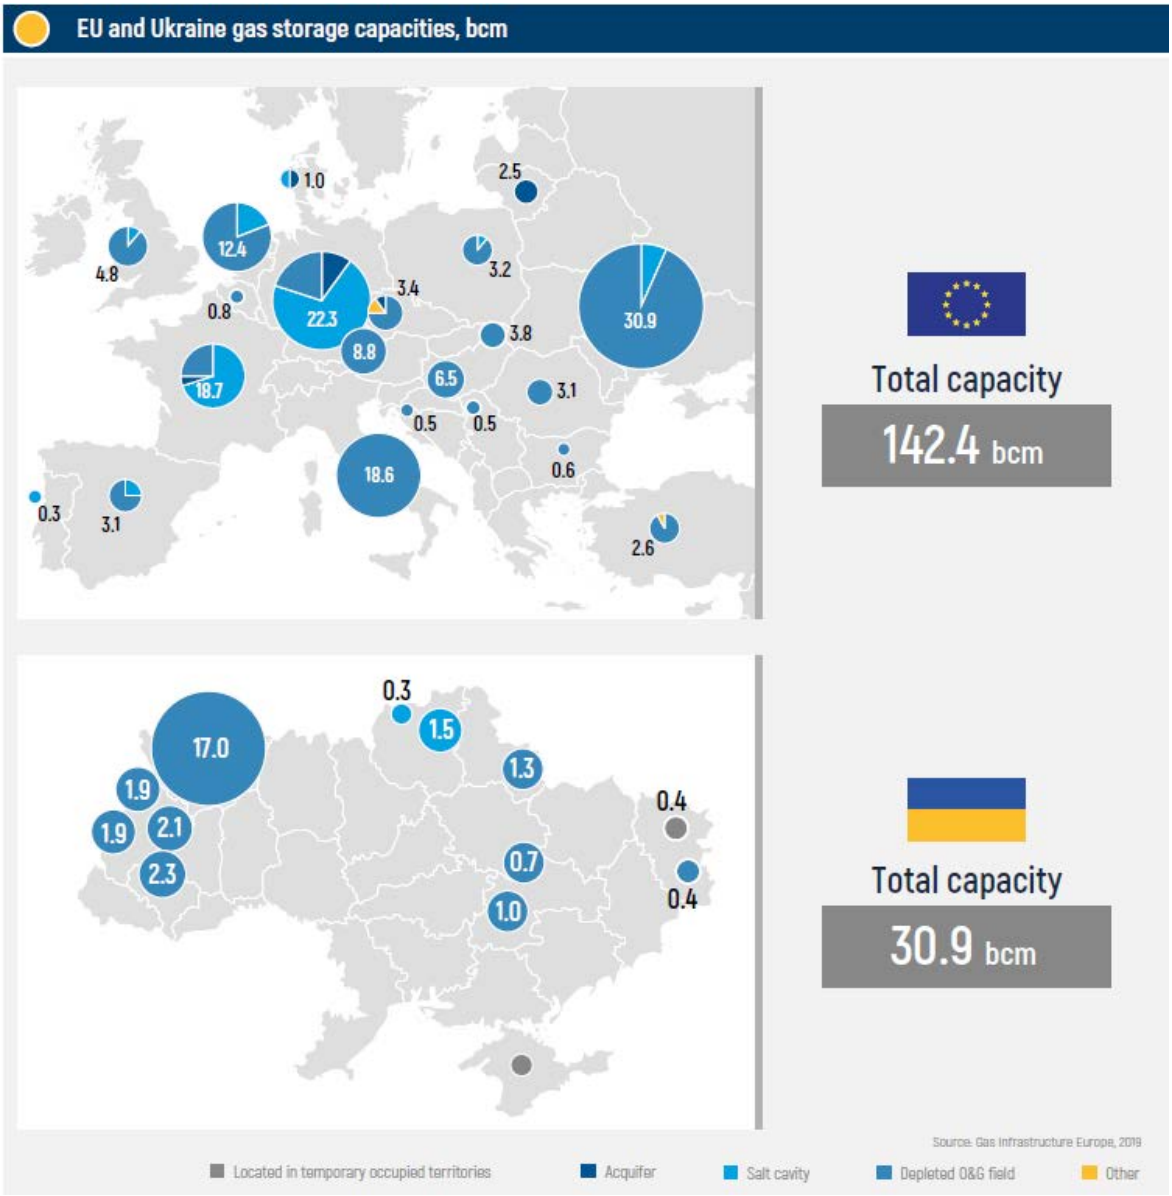
3.4 Demand structure and production forecast till 2032

Taking into account the decrease in gas consumption by industry, heat generation and the households, the increase in consumption is possible only in the post-war period and with the mass recovery of Ukraine's economy.

Several major industrial facilities are damaged, destroyed or located in the occupied territory. Several million Ukrainian consumers have left the country. Russia continues shelling civilian, industrial and industry infrastructure. Accordingly, consumption forecasts are based on certain assumptions about the duration of hostilities, the extent of damage and the pace of economic recovery.

According to the AGPU's estimates, provided that active hostilities stop by the end of the current year, a total of 21.4 bcm of gas will be consumed in Ukraine this year (a 20% reduction compared to 2021). In the following years, the energy sector recovery will be focused on electrification, energy efficiency programs and minimization of fossil fuels in the energy mix. Accordingly, the association forecasts the following level of demand for the coming years, bcm:

2023 – 21.8	2028 – 22.4
2024 – 22.2	2029 – 22.1
2025 – 22.6	2030 – 21.4
2026 – 23.0	2031 – 21.9
2027 – 22.7	2032 – 22.0



Decarbonization is the main strategic priority in energy for both Ukraine and the EU. Accordingly, gas will remain an important transitional fuel but its consumption will gradually decrease.

3.5 RESP: Ukraine's gas transmission and storage infrastructure for European energy security

Ukrainian gas trasnmission and storage infrastructure

Ukraine manages underground gas storage facilities with a total capacity of more than 30 bcm, which is the third highest level in the world. The Bilche-Volitsko-Ugerske storage is the largest in Europe with a capacity of nearly 17 bcm. Approximately 80% of Ukraine's gas storage capacity is located at the western border. The convenient logistics make storing natural gas attractive both for Ukrainian companies working with the EU and for foreign gas traders.

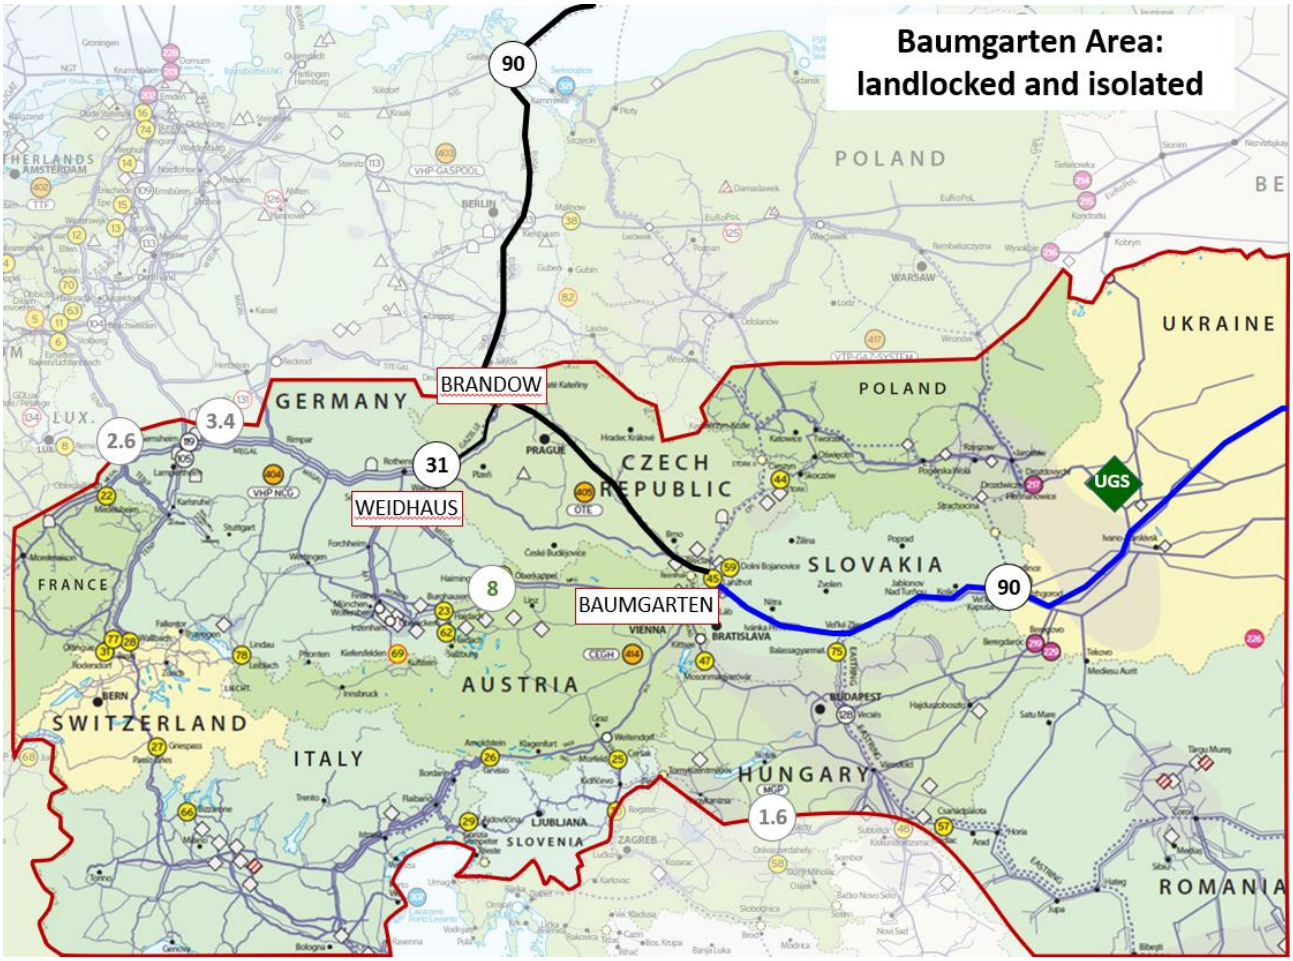
Over 100 foreign companies from 27 countries have already used Ukrainian underground gas storages. In 2020, at the beginning of the heating season, a record 28.3 bcm of gas were stored in Ukrainian storages. Of this volume, non-residents kept approximately 10 bcm.

Source: Naftogaz of Ukraine

Ukraine's gas transportation system is one of the largest in Europe. The maximum technical capacity at entry points is 281 bcm per year, and at the exit points – 146 bcm per year. It is connected to neighboring countries at the state interconnection points, and is thus integrated into the pan-European gas network.

EU gas transmission network limitations and dependence on gas from Russia

During the previous 12 years, the European Union implemented a number of steps to create an interconnected gas transport network and a liberalized gas market in Europe. These actions have significantly strengthened energy security and boosted competition in this market.



However, not all countries were able to ensure diversification of gas supplies. A significant part of the gas market, in particular, the land locked areas, remains dependent on supply of physical supplies of gas from Gazprom. Consumers in this region, with the center in the Austrian hub of Baumgarten, are virtually isolated from alternative gas suppliers.

Historically, the European gas network was built to transport gas from east to west, supplying Central European markets as gas transits them towards Western Europe. The capacity of the traditional transport corridors diminishes accordingly the farther west they reach. Due to this

design, it is difficult to ensure the transportation of significant volumes of gas in the reverse direction (from west to east) or from the sea to the central part of the continent.

Aside of the Baltic Pipe that ensured Poland's access to Norwegian gas, the largest gas pipeline projects in Europe in recent years were carried out by Gazprom (Nord Stream, Turkish Stream). The purpose of these projects financed by Russia was to bypass the restrictions of the Third EU Energy Package in order to preserve the fragmentation of the European market and its dependence on Russian gas.

Region of the European network that has limited access to alternative gas suppliers

To achieve this goal, Russia invested dozens of billions of dollars in the construction of redundant gas pipelines, which allowed Gazprom to bypass the countries of Eastern and Central Europe and supply Russian gas to most European countries independently from each other. At the same time, Gazprom avoided connecting new gas pipelines it built to the existing European network and sought to deliver its gas as close as possible to end consumers, without opening competitors' access to these markets.

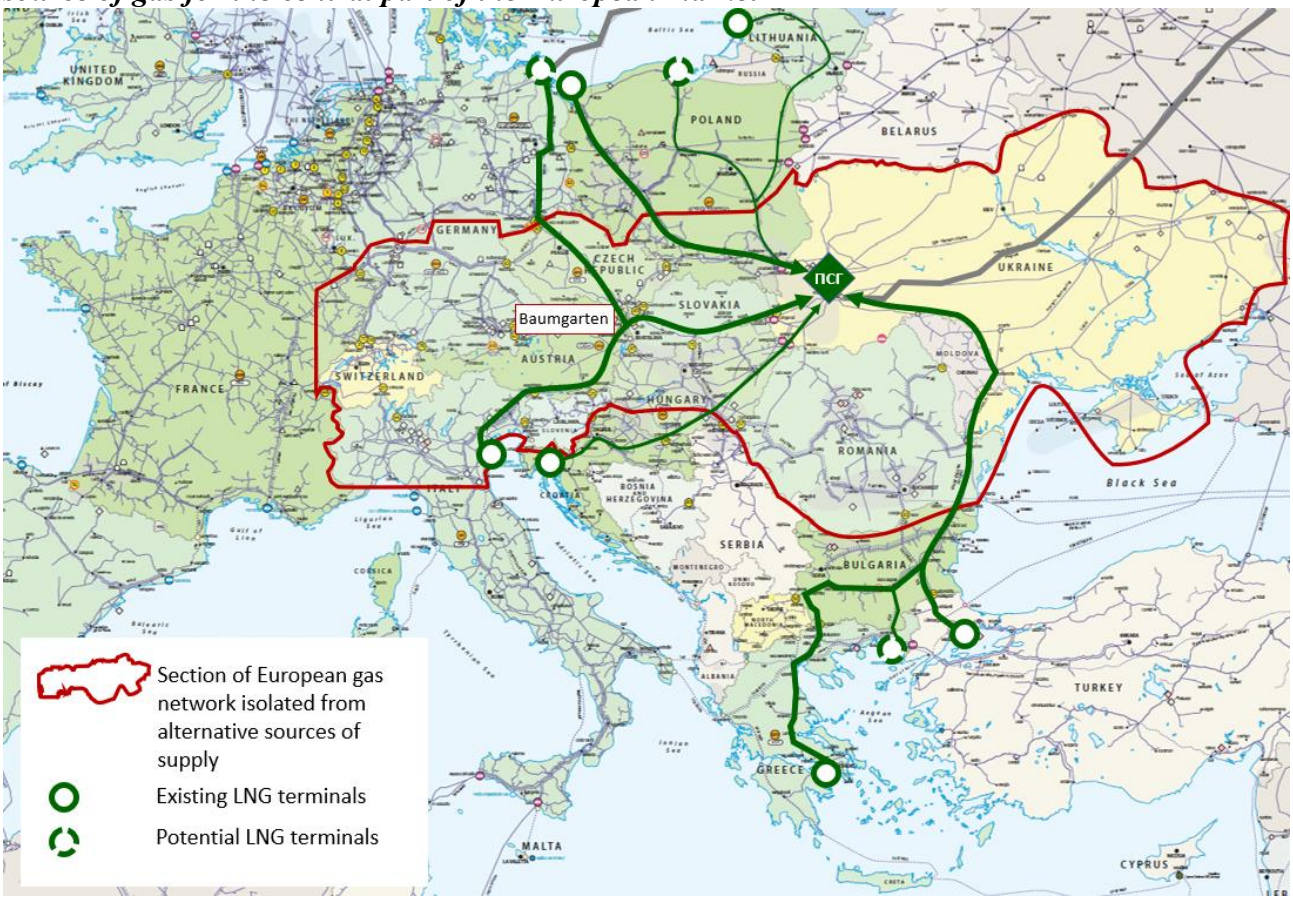
This policy has formed a fairly isolated landlocked region of the European gas network with the center in Baumgarten. The region consumes approximately 90 bcm of gas per year, which corresponds to 2/3 of Russian gas supplies to Europe. In addition to constructing pipelines to which it retained exclusive access, Gazprom acquired the major gas storage facilities in the region, thus limiting the ability to accumulate gas from alternative sources during the injection period.

Russia's energy aggression against the EU has demonstrated the flaws of this approach. With the launch of alternative gas pipelines, Russia received the opportunity to limit the supply of gas to certain EU countries and blackmail others by reducing supplies. Having exclusive access to gas

pipelines and underground storages serving this market, Gazprom did not ensure the accumulation of normal volumes of gas in storages during the summer of 2021, which resulted in a significant and unjustified increase of gas prices in the European market.

RESP: diversifying gas supply in the Baumgarten area

This part of the European gas transport network has two entry points with significant capacity: the traditional route through Ukraine and Slovakia and the new one through Nord Stream, Germany and the Czech Republic.



Provision of alternative sources of gas supply by the new route requires the connection of the OPAL and EUGAL onshore gas pipelines to a new LNG terminal instead of the Nord Stream gas pipeline.

The German government has already taken over Gazprom Germania, which controls a significant stake in the OPAL and EUGAL gas pipelines, as well as gas storage facilities in the area. However, ensuring access of alternative gas suppliers access to this infrastructure requires time and investment.

Instead, the traditional route in combination with Ukraine's powerful underground storage allows diversifying gas supplies for this market and strengthening its energy security already now.

Building on its powerful underground gas storages and an extensive system of gas pipelines, Ukraine has proposed the concept of a Regional Energy Security Partnership (RESP) to the European Commission in November 2021.

Use of Ukrainian underground gas storage facilities to store LNG and provide an alternative source of gas for the central part of the European market

The RESP concept includes a number of components:

A. Short-term steps: use available transmission capacity to access to LNG terminals in Poland, Italy, Croatia, Turkey and Greece to accumulate gas reserves in Ukraine's underground

storages during the summer when the consumption is low and the European LNG terminals have spare capacity. Reserves accumulated during the summer period should be used to meet the needs of the region in the winter period.

B. Medium-term steps: ensure financing to create a joint gas reserve for the countries of the Baumgarten area in the Ukrainian storages, which will act as an security reserve for the countries of the region and will be used by the participating countries under predetermined conditions in the event of gas shortages or significant fluctuations in wholesale gas prices due to sudden cold spells, technological issues or other emergency situations.

C. Long-term steps: expand interconnector capacity between European LNG terminals and Ukrainian storages, create special bundled tariff products for gas transportation from terminals to storages and from storages to consumers. The implementation of this part of the RESP will allow the EU to significantly reduce its dependence on Russian gas supplies, diversify its pool of suppliers. This structure can also ensure optimal prices and supply terms which are determined by competition, not political considerations.

Gas reserves for the EU which would use the Ukrainian storages and the EU gas pipelines would significantly improve energy security of the region. This project is therefore included in the list of nationwide projects recommended by this recovery plan. The development of the security situation in Ukraine has a significant impact on the implementation of this project.

4 Oil and oil products

4.1 Structure of the oil products market

Before the start of the full-scale aggression, the Ukrainian market consumed about 7.4 million tons of diesel, 2.1 million tons of gasoline, and almost 2 million tons of automobile gas and LPG per year. Approximately 30% of this demand was covered by the import of oil products.

At the same time, Ukraine had a significant dependence on the supply of oil products from Russia and Belarus. More than a third of oil product imports came from these two countries. This choice of Ukrainian suppliers was determined by the taxation policy of Russia and Belarus, as a result of which there were favorable regulatory conditions for the export of petroleum products, thanks to the export of crude oil.

Despite repeated threats of fuel supply interruptions by Russian and Belarusian authorities, Ukrainian market participants continued to rely on these sources of fuel due to the lower price and convenient logistics.

According to Naftogaz of Ukraine, before the full-scale aggression, Ukraine produced about 2.4 million tons and imported about 1.2 million tons of crude oil per year. The largest domestic enterprises engaged in the processing of oil and gas condensate were the Kremenchug Refinery and the Shebelinka Refinery. These facilities produced motor fuel of the Euro-5 standard. The activities of oil refineries in Lysychansk, Odesa, Nadvirnaya, Drohobych and Kherson had been stopped several years ago.

4.2 Securing fuel supplies for Ukraine during the war

As a result of the Russian armed aggression, an absolute majority of the Ukrainian oil refining capacities were put out of operation. The Russians also destroyed nearly 20 oil depots.

As of June 2022, the only working oil refining facilities in Ukraine are the so-called mini-refineries, which are estimated to be able to produce about 0.4 million tons of fuel per year. As an emergency measure, the government has allowed the production and sale of motor fuels of the Euro-3 and Euro-4 environmental standards. In addition, in order to stabilize the market, the government reduced the VAT from 20% to 7% and removed the excise tax on fuel. The government regulation of fuel prices was also lifted.

The import of oil products from the aggressor countries has halted. In addition, Belarus blocked the transit of oil products from Lithuania, which was the third largest country by supply of fuels to the Ukrainian market.

Due to Russia's blockade of Ukrainian ports, the only ways of supplying oil products to Ukraine are currently road and rail transport from EU. Due to limitations in the railway infrastructure and the number of tanks, the maximum capacity of rail imports from the four EU countries neighboring Ukraine is estimated at less than 2 million tons per year.

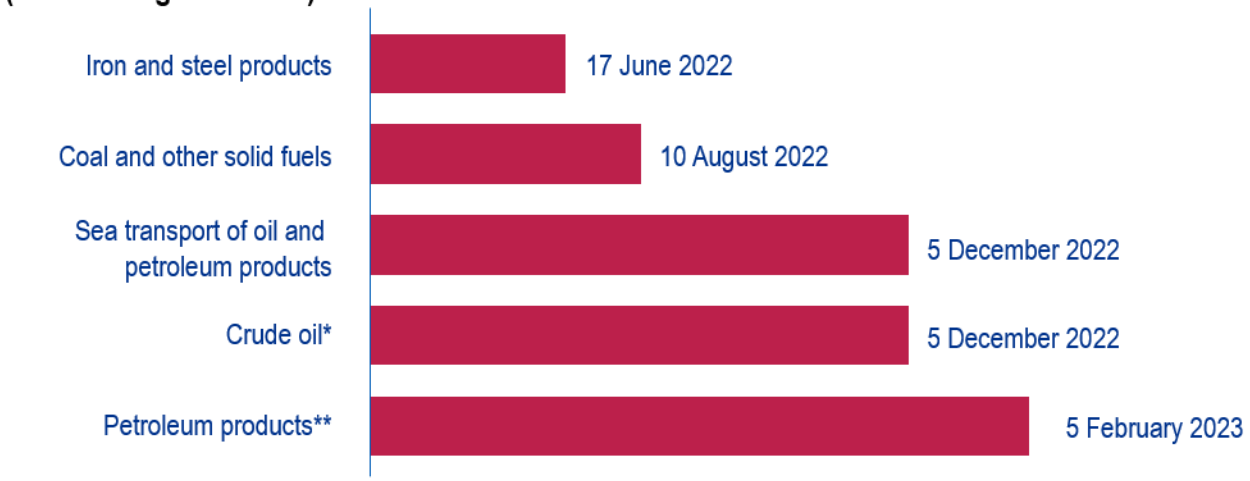
Another potential way to deliver fuel to Ukraine is the launch of the "Samara-Western Border" oil pipeline in the reverse mode from Hungary to Ukraine. According to experts, it is possible to supply up to 150,000 tons of oil products per month via this route. To implement this scenario, it is necessary to ensure the necessary volumes of oil products on the side of Hungary.

Demand for oil products, according to various industry estimates, has decreased by 30-50% compared to the pre-war level. However, due to the destruction of local production and the significant limitation of import sources and routes, providing the Ukrainian market with oil products remains a difficult task and an urgent issue of energy security.

The fuel shortage is particularly critical for the Ukrainian agricultural industry. Securing sufficient fuel supply for the Ukrainian market is an important step to preventing the global food crisis, which is being instigated by the Russian Federation.

4.3 European fuel market restructuring following the Russian aggression and Ukraine's future role

In the REpowerEU document, the European Union announced its intention to abandon Russian energy carriers as soon as possible. This strategy envisages significant changes in the entire European market of oil supply and processing, as well as the supply of petroleum products.



Existing and planned oil pipelines

In the sixth package of sanctions adopted by the EU in early June 2022, a ban was announced on the import of Russian oil, except for pipeline oil, from December 5, 2022, as well as on import of Russian petroleum products from February 5, 2023.

The main consumers of Russian oil in the EU were the Netherlands, Germany and Poland. Germany and Poland, which receive Russian oil through pipelines, have announced that they plan to voluntarily join the restrictions within the same time frame.

Since February, the EU has introduced a set of restrictions on supplies from Russia (date coming into effect):

* Bulgaria exempt till 31.12.2024; pipeline oil exempt for own use, resale prohibited

** Bulgaria exempt till 31.12.2024; Czechia allowed to import petroleum products made of RU oil till 5.12.2023; Croatia allowed to import VGO till 31.12.2023

At the same time, Slovakia, Hungary and the Czech Republic will continue to import Russian oil for their oil refining facilities via the territory of Ukraine. According to Platts, in 2021 Ukraine transited 11.9 million tons of Russian oil: 5.2 million tons for Slovakia, 3.4 million tons for Hungary and 3.4 million tons for the Czech Republic.

Ukraine remains an important partner of the EU in supplying the European market with oil and can support the EU's strategy to abandon Russian oil and oil products. The prospects for the restoration of oil refining in Ukraine depend significantly on the security situation.

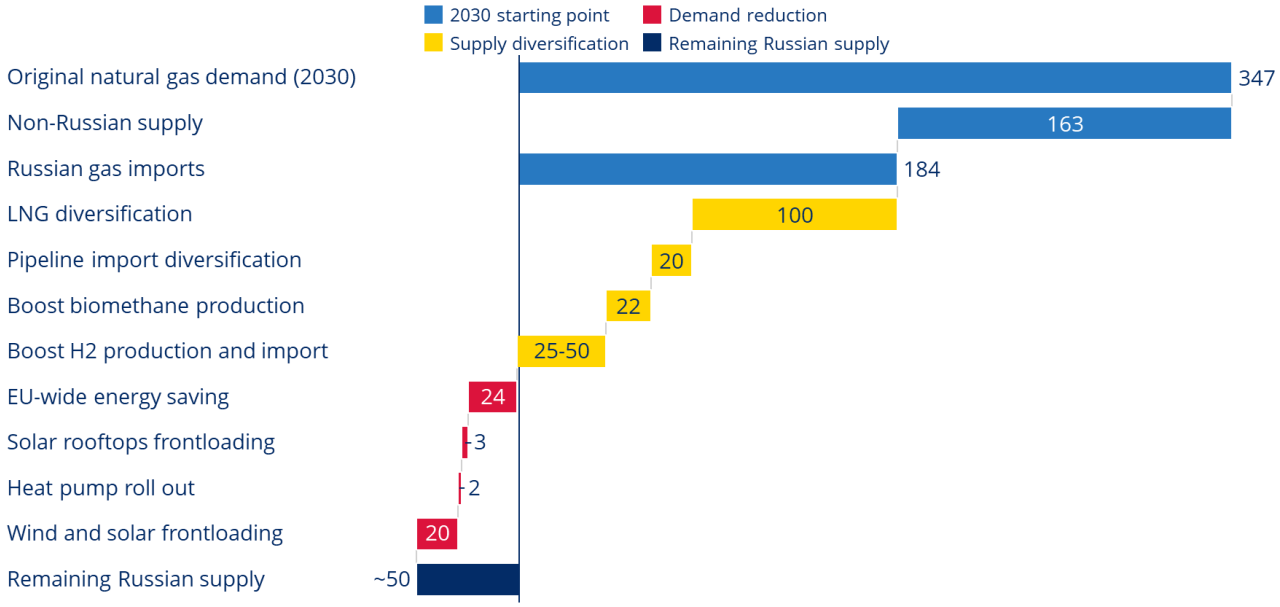
Based on the results of the expert discussion and analysis, the following steps are proposed in this plan regarding the market of oil and oil products of Ukraine:

- Expansion of interconnectors between Ukraine and European oil refineries for delivery of petroleum products to the Ukrainian market;
- Creation of stocks of oil and oil products in protected depots;
- Completion of the Brody (Ukraine) - Adamova Zastava (Poland) oil pipeline for bidirectional operation. This project will allow Ukraine to gain access to Baltic ports, and Poland, in its turn, to Ukrainian ports on the Black Sea. Planned project characteristics: capacity of 10 million tons of oil/year with the possibility of expansion to 20 million tons; pipeline lengths: 400 km (including 270 km on the territory of Poland); implementation period: up to 2 years, estimated cost: up to 400 million dollars
- During the post-war period:
    - restoration of oil refining capacity in Ukraine on the basis of one of the existing refineries and/or at new locations where it will be most economically justified.
    - restoration and expansion of LPG production capacity up to 200,000 tons/year and condensate up to 40,000 tons/year.
    - construction of a plant for the production of methanol from natural gas with the capacity of up to 30,000 tons/year.

5 Power-to-X

5.1 Production of hydrogen from RES

Hydrogen produced by electrolysis using low-carbon energy has one of the highest decarbonization potentials in the economy compared to other decarbonization tools. The potential for replacing natural gas is particularly significant, including usage in heavy industry processes (metallurgy, ammonia production, etc.).



This "fuel of the future" is a key component of "green" strategies in Europe and around the world. The candidate status for EU membership opens up opportunities for Ukraine's integration into European decarbonization processes.

The Green Deal was defined as one of the main strategic priorities of the EU. The ambitious Fit for 55 program was introduced in July 2021 with the aim of reducing carbon emissions by 55% by 2030. On June 29, 2022, the Council of the EU reached an agreement on the outline of the program and its implementation targets.

One of the key mechanisms presented in the program is the Carbon Border Adjustment Mechanism (CBAM). This mechanism will impose tariffs on imports to the EU, the production of which is associated with carbon emissions. The Council decided to gradually tighten CBAM rules over a 10-year period between 2026 and 2035.

Russia's attack on Ukraine has made the problem of the European states' energy dependence on traditional energy imports even more acute. In response to this escalation, the RePowerEU green program has been revamped, taking the ambitious Green Deal and Fit for 55 goals to the next level. The central goal of the program is to replace gas imports from russia.

Potential tools to meet EU gas demand in case of refusal to import gas from Russia until 2030, bcm

RePowerEU provides for the production and import of hydrogen from renewable energy sources in the amount of at least 20 Mt per year. At the same time, it is expected that EU countries will be able to cover only half of this goal through their own hydrogen production.

Ukraine has a significant potential for the production and export of hydrogen. By 2032, Ukraine can produce ~1.6-1.7 Mt of hydrogen, which will require up to 15 GW of electrolyzer capacity. The competitiveness of Ukrainian renewable energy offers a relatively low cost of electricity production (the LCOE of wind farms is about $40/MWh), which represents a significant share of the final price of hydrogen produced. The existing gas infrastructure can potentially be upgraded to export hydrogen to Europe.

However, direct export is not the only promising way to use the hydrogen potential of Ukraine. The development of “green” hydrogen-based metallurgy and potentially the production of “green” hydrogen-based ammonia and fertilizers are also promising options in terms of added value.

A "hydrogen cluster" can potentially be built in Zaporizhzhia and Dnipro Regions. The region has an optimal location in terms of access to natural resources (water, iron ore deposits, attractive renewable energy potential) for the development of hydrogen production and its use for the production of "green" DRI and steel.

Hydrogen can also be used as a means of storing excess electricity generated from renewable sources when its production exceeds demand. However, this use of hydrogen is unlikely to be cost-effective until at least 2030 due to the low efficiency of the process.

5.2. Electrification of transport

Reducing carbon emissions from transport is one of the key priorities of the EU's "green" programs. According to the agreed version of the Fit for 55 program, the goal is 55% reduction in emissions by new cars and 50% reduction in emissions by new trucks by 2030. The goal for 2035 is a 100% reduction in emissions from new vehicles.

In general, two alternative goals have been set for the transport sector: a 13% reduction in sector emissions by 2030 or a 29% share of renewable energy in the sector's energy consumption by 2030. These ambitious goals can only be achieved through a massive shift to alternative types of automobile fuels, including electrification of transport.

The number of cars in Ukraine is quite low compared to the developed European countries and amounts to 245 cars per 1000 people. In the EU, the given indicator reaches 560 cars per 1000 people. This demonstrates a significant growth potential of the Ukrainian automobile fleet soon.

Additionally, the need to reorient export and import flow from maritime to land transport in the short term can lead to a significant increase in the freight transport fleet (both railway and road).

This trend may pose a threat both in terms of carbon emissions and consumption of motor fuel based on petroleum products that are historically mainly imported from Russia and Belarus.

Transport electrification can prevent this. Ukrzaliznytsia is already one of the largest electricity consumers. The company's consumption amounted to 4 TWh in 2020. Large-scale electrification of railroad transportation (95% of total transportation) will increase electricity consumption by the transport sector and reduce diesel fuel consumption.

Also, the number of electric cars is increasing in Ukraine. In 2021, the number of registrations of electric cars reached 8,541, which is 14.2% of the total. By 2032, the share of electric cars may reach 10-12%.

In the longer term, it is possible to increase the share of hydrogen-powered vehicles. This option is especially attractive for freight transport.

5.3. Electrification of heating

Residential heating has a significant weight in the total energy consumption in the domestic household sector and accounts for 53%.

About 85% of the buildings in Ukraine were constructed before Ukraine's independence and have very low energy efficiency indicators. The average energy consumption per m^2 in Ukraine is much higher than in some European countries (for example Germany).

A large-scale program for thermal modernization of buildings (about 70% of buildings) has the potential to significantly reduce energy consumption for premises heating. However, without the simultaneous modernization of the district heating infrastructure and individual heating, the effect of such a program will be limited.

Modernization of heating infrastructure consists of several parts. Repair, modernization, or replacement of heating networks will significantly reduce heat losses during transportation. Modernization or replacement of existing boilers will reduce energy consumption by increasing efficiency output.

The transition from traditional gas boilers to alternative district and individual heating systems will have a significant additional effect on energy consumption (especially natural gas). The most promising areas of such transition are the use of biomass and electrification of heating.

The use of electricity from renewable sources in the domestic household sector is one of the main focuses of the EU's "green" programs. The European Council's version of the Fit for 55 program sets out targets for increasing the share of renewable electricity in domestic heating and cooling energy consumption: a gradual increase of at least 0.8% a year until 2026 and 1.1% a year from 2026 to 2030. There is a specific target to achieve 49% renewable energy share in the energy consumption of buildings by 2030.

One of the most promising ways to electrify heat supply is heat pump installation. Heat pumps can be used both for individual and district heating systems. The main advantage of heat pumps is their high efficiency (about 300%). However, heat pumps (especially large capacity systems used in district heating) are a relatively "immature" technology and require significant capital investment. The target share of heat pumps in heat production can be 2-5%.

In comparison, the other option, electric boilers, is less expensive in the short term. They can be installed relatively fast, which makes them one of the best options for replacing boilers that are in critical condition or have been damaged by war.

The cost-effectiveness of heat supply electrification depends substantially on the price of electricity. Relatively cheap energy from renewable sources is an important factor in the development of electricity-based heating systems.

6 Recovery and development: detailed plan of measures

The main goal of recovery is a stable, modern and investment-attractive energy industry that provides Ukrainian consumers with clean, affordable and reliable energy, relies on the responsible development of domestic energy resources, and also supports the EU in achieving its strategic autonomy.

The proposed recovery measures are outlined in the Plan for three time periods (short-term, mid-term and long-term) and are grouped under the following five objectives:

- Objective 1: European integration and ensuring efficient operation of energy markets
- Objective 2: Energy security: diversification of energy supply sources, creating reserves, cyber-security
- Objective 3: Decarbonisation, optimisation of the energy mix and development of low-carbon generation
- Objective 4: Modernisation and development of energy transportation, transmission, distribution and storage infrastructure
- Objective 5: Improvement of energy efficiency and demand response

Objective 1: European integration and ensuring efficient operation of energy markets

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measures to achieve the objective	1.1: Commercial flows with ENTSO-E are implemented to reduce the EU's energy deficit and support Ukraine in the crisis period 1.2: Analysis of current international obligations of Ukraine regarding reforms in the energy sector and creation of a map of reforms for negotiations on EU membership 1.3: Development of mechanisms for solving the problem of accumulated debts between participants of the gas, heat, water supply, and electricity markets 1.4: Launching the Energy Security Fund to meet urgent recovery needs 1.5: Ensuring the stable operation of the energy sector public administration bodies 1.6: Analysis of the situation and implementation of an action plan to simplify access to power grids – *crossectoral with the Ministry of Digital Transformation* 1.7: Digitalization of utility services for speed and transparency – *crossectoral with the Ministry of Digital Transformation*	1.1: Complete unification of the energy markets of Ukraine and the EU through the implementation of the necessary regulatory changes in Ukraine and the EU 1.2: Liberalization of electricity and gas markets, settlement of accumulated debts, improvement of the support system for vulnerable consumers 1.3. Development of mechanisms for solving the problem of accumulated debts between participants of the gas, heat, water supply, and electricity markets 1.4: Restoration/development of the infrastructure of exchange trading of energy resources 1.5: Completion of the corporate governance reform in state-owned energy companies and the reform of public administration authorities in the energy sector, preparation for placement of credit instruments, involvement of partners and/or privatization of state-owned companies in the energy sector, taking into account energy security 1.5: Reform of public administration bodies in the energy sector	1.1: Ensuring Ukraine's contribution to the strategic autonomy of the EU through the export of excess energy resources 1.2: Increased competition in the electricity and gas markets 1.3: Partnership/ coupling of energy trading sites between Ukraine and the EU 1.4: Involvement of strategic and/or financial investors in companies of the energy sector of Ukraine (preserving the influence of the state on natural monopolies for reasons of energy security and partial or full privatization of other companies) 1.5: Correspondence of the functions and powers of state management bodies in the energy sector to EU standards 1.6: Ensuring convenient access to energy infrastructure for business – *crossectoral with the Ministry of Digital Transformation*

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
		1.6: Improvement of the procedure for ordering connection to power grids – *crossectoral with the Ministry of Digital Transformation* 1.7: Development of a system that allows the state to provide subsidies/compensations for public utility services to the population quickly and according to flexible criteria – *crossectoral with the Ministry of Digital Transformation*	
Measurable indicators of objective achievement	- The possibility of commercial flows of electricity from the EU in the amount of at least 1.5 GW is ensured - An audit of international obligations was conducted, negotiations were initiated regarding their revision in connection with the military actions situation, if necessary - The Energy Security Fund is operating, at least $50 million of donor funds have been raised to finance the urgent repair of damages - Improved the procedure and scope of imposing fines on DNO in case of violations of the requirements of the law when connecting to networks	- An opportunity has been provided for Ukrainian energy companies to compete on the EU markets on an equal footing with European companies, the capacity of commercial flows has been increased to 3 GW - Timely calculations on the energy markets are ensured, with the exception of normal commercial debt - At least 5% of gas volume is traded on the stock exchange - All state-owned energy companies have supervisory boards and internal control systems, are independently audited, charters	- - Ukrainian companies are increasing their share in the EU markets (detailing requires additional research), the capacity of commercial flows has been increased to 6 GW - The Herfindahl–Hirschman Index (concentration) values in the gas and electricity market are below 0.18 - At least 15% of gas volumes are traded on the stock exchange - Involved international partners in gas and oil production and other sectors of the energy industry - Confirmation of the EC was received regarding the compliance of the powers of

	Stage 1: 06/2022 – 12/2022	*Stage 2: 2023 – 2025*	*Stage 3: 2026 – 2032*
	- An online map of business locations with available capacity to connect to networks has been developed, 50% of the territory has been digitalized - The Unified register of consumers of energy supply services was created, the service of changing the supplier in the "Diya" application was developed	and ownership policies are brought in line with OECD standards - Operators of distribution systems and gas distribution networks are obliged to purchase network connection services through transparent competitive procedures - - A simplified procedure for the construction of electric and gas networks for the supply of remote facilities, including at the expense of industrial consumers, with a fair consideration of the relevant costs in the tariff, has been developed and is being implemented - - An online map of business locations with available connection capacities has been developed, 100% of the territory has been digitilized - The comprehensive e-Support service has been expanded due to the possibility of submitting an application for assistance, based on the criteria of either vulnerability or participation in national energy efficiency projects	the state management bodies of the energy sector with EU standards - A simplified procedure for the construction of electric and gas grids for the supply of remote objects, including at the expense of industrial consumers, with fair consideration of the relevant costs in the tariff, is being implemented

Objective 2: Energy security: diversification of energy supply sources, creating reserves, cyber-security

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measures to achieve the objective	2.1: Ensuring the supply of petroleum products 2.2: Accumulation of reserves of energy resources for preparation for the autumn-winter season (financing of measures to create reserves; creation of reserves of gas, coal, oil products in accordance with the government plan) 2.3: Ensuring the operation and urgent restoration of damaged facilities of the energy sector 2.4: Assessment of losses and preparation for claims for damages in the energy sector – *cross-sectoral with the Ministry of Justice* 2.5: Creation of the Industry Cyber Security Center of the Energy Sector of Ukraine (Energy CSOC) and the Interdepartmental Operational Headquarters (IOS) – *cross-sectoral with the Ministry of Digital Transformation*	2.1: Creation of an oil refining cluster based on one of the existing refineries and/or new locations in Ukraine 2.2: Creation of strategic reserves of petroleum products (30+ days) protected from military action 2.3: Restoration of energy supply and operation of energy sector facilities in the de-occupied territories - *cross-sectoral with the Ministry of Regions* 2.4: Collection and systematization of the evidence base for submitting claims for compensation of damages - *cross-sectoral with the Ministry of Justice* 2.5: Construction of the sectoral system of protection of OKI of the energy sector - *cross-sectoral with the Ministry of Digital Transformation* 2.6: Liberalization of the process of issuing licenses for gas exploration and production; optimization of gas and oil production from existing fields using modern technologies 2.6.a Digitalization of the procedure for issuing decisions on environmental impact assessment - *cross-sectoral with the Ministry of Digital Transformation*	2.1: Development of the oil refining business in Ukraine considering the needs of the EU market 2.2: Creation of strategic reserves of oil and oil products in accordance with EU requirements 2.3: Optimizing the operation of energy sector facilities in the de-occupied territories - *cross-sectoral with the Ministry of Regions* 2.4: Submission of claims for compensation of damages - *cross-sectoral with the Ministry of Justice* 2.5: Expanding the cooperation of the sectoral system of protection of OKI of the energy sector with similar systems in the EU - *cross-sectoral with the Ministry of Digital Transformation* 2.6 Start of gas exploration and production on the Black Sea shelf; development of non-traditional types of gas and oil deposits (primarily in the Poltava region) 2.7: Development of nuclear fuel production business considering the needs of the EU market 2.8: Coal and coal-fired power generation: withdrawal of specified objects, implementation of programs for the

	Stage 1: 06/2022 – 12/2022	*Stage 2: 2023 – 2025*	*Stage 3: 2026 – 2032*
		2.7: Construction of a nuclear fuel production plant and nuclear fuel storage facilities in Ukraine to eliminate dependence on Russia, development of uranium mining 2.8: Coal and coal generation: provision of highly maneuverable generation, preparation for withdrawal of specified objects 2.9: Development of the construction project of 1.5-2 GW of highly maneuverable capacities to replace coal generation, including using idle compressor stations of the GTS	transformation of coal regions - *cross-sectoral with the Ministry of Regions* 2.9: Construction and launch of 1.5-2 GW of highly maneuverable capacities to replace coal generation, including using idle compressor stations of the GTS
Measurable indicators of objective achievement	- Needs and sources of supply, sources of financing were determined, diplomatic support and regulatory support for the import of 400,000 tons of oil products per month was provided - The attraction of donor funds to the Energy Security Fund in the amount of at least 10 million dollars was ensured, the urgent needs for the restoration of key energy infrastructure were financed to the amount of funds raised	- A project for the creation of an oil refining cluster was developed, a study of the optimal placement of the object/objects was carried out, investors and executors were identified - The volumes, placement options, organizational model and sources of financing for the purchase of strategic reserves of petroleum products for 30 days have been determined - Organized and systematized work on the preparation of lawsuits for damages from companies whose assets were damaged	- Investments were attracted for the oil refining cluster, diplomatic and regulatory assistance was provided for unhindered access to EU markets - The volumes, placement options, organizational model, and sources of financing for the purchase of strategic stocks of petroleum products were determined in accordance with the requirements of EU legislation - Support for filing lawsuits for damages by companies whose assets have been damaged is provided

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
	- The damage assessment methodology was developed and approved, the collection of data on actual damages and losses was organized, the legal path for filing claims for damages was determined - The concept of the Cyber Security Center has been approved - A project was developed for the color marking of the amount of consumption in the corresponding colors in the bills for energy services - (Consumption traffic light)	- 100% of critical energy infrastructure facilities are connected to the cyber security center - Issuance of an environmental assessment conclusion in electronic form and automation of post-project monitoring have been introduced, a single information module of EIA has been created, creation of a conclusion evaluation module, creation of EIA post-project monitoring systems - Identified sources of financing, provided organizational resources, diplomatic and regulatory support for the incomplete cycle of nuclear fuel production - Identified sources of funding, provided organizational resources, diplomatic and regulatory support for the construction of highly maneuverable capacities	- Full cooperation of the cyber security center with similar centers of the EU and the USA has been established - Provided organizational and financial resources, diplomatic and regulatory support for the incomplete cycle of nuclear fuel production - Programs for the transformation of coal regions have been implemented - Provided organizational and financial resources, diplomatic and regulatory support for the construction of highly maneuverable capabilities

Objective 3: Decarbonisation, optimisation of the energy mix and development of low-carbon generation

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measures to achieve the objective	3.1: Determining an optimal long-term generation mix taking account of international commitments, technical constraints of the system, minimisation of the cost for consumers and the requirements for stable system operation	3.1: Updating the estimation of the optimal generation structure, taking into account the state after the end of hostilities 3.2: Nuclear generation: Modernization and optimization of the use of installed nuclear capacities (increasing the net capacity factor), extension of the operating life of existing units, development of new capacities at the Khmelnytskyi NPP 3.3: Hydropower: Completion of the construction of a new hydropower plant (Kakhovska-2 HPP, Kanivska HPP, Dnistrovsk HPP - completion) 3.4: Solar and wind energy: restoration of capacities taking into account new conditions and opportunities due to integration with ENTSO-E 3.5: Increasing the production of biomethane (up to 1 billion cubic meters per year) and connecting the installations to the GDS/GTS 3.6: Hydrogen: analysis of demand, production possibilities and financing sources	3.1: Updating the assessment of the optimal generation structure taking into account the needs of the EU market 3.2: Nuclear generation: completion of construction of new capacities at the Khmelnytskyi NPP (2 GW) 3.3 Hydropower: Kakhovska-2 HPP, Kanivska HPP - completion 3.4: Solar and wind energy: Capacity building, including for hydrogen production 3.5: Biofuel: production of biomethane up to 2 billion cubic meters. m per year 3.6: Hydrogen: Launch of pilot projects for 1–2 GW with the prospect of building up to 15 GW in combination with RES (mostly at the expense of private investors)
Measurable indicators of	- Updated the Energy Strategy of Ukraine, the Report on the	- Updated the Energy Strategy of Ukraine, the Report on the	- Updated the Energy Strategy of Ukraine, the Report on the

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
objective achievement	Assessment of the Compliance (Sufficiency) of Generating Capacities to Cover the Forecast Demand for Electric Energy and Ensuring the Necessary Reserve, the Development Plan of the United Energy System of Ukraine and DNO, the Development Plan of the GTS and GDS, other strategic documents as of 2022 - Negotiations were held with donors, potential investors and market participants regarding attracting financing and creating favorable conditions for the construction of low-carbon generation facilities and energy infrastructure	Assessment of the Compliance (Sufficiency) of Generating Capacities to Cover the Forecast Demand for Electric Energy and Ensuring the Necessary Reserve, the Development Plan of the United Energy System of Ukraine and the DNO, the Development Plan of the GTS and GDS, other strategic documents as of the time end of hostilities - Funding sources were determined, organizational resources, diplomatic and regulatory support were provided for the implementation of the investment strategy of Energoatom NNEGC - The strategic and regulatory basis for the development of the hydrogen economy has been implemented	Assessment of the Compliance (Sufficiency) of Generating Capacities to Cover the Forecast Demand for Electric Energy and Ensuring the Necessary Reserve, the Development Plan for the United Energy System of Ukraine and the DNO, the Development Plan for GTS and GDS, other strategic documents taking into account obligations of EU candidate countries - Funding sources were determined, organizational resources, diplomatic and regulatory support were provided for the implementation of the investment strategy of Energoatom NNEGC - Production of biomethane up to 2 billion cubic meters. m per year

Objective 4: Modernisation and development of energy transportation, transmission, distribution and storage infrastructure

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measures to achieve the objective	4.1: Start-up of the 400-kV Khmelnytskyi NPP - Rzeszów power export line, providing capacity for exporting up to 1.5 GW of electricity to the EU 4.2: Ensuring the capacity of gas networks in the direction from Ukraine to the EU in volumes of at least 42 million cubic meters. m/day	4.1: Completion of new high-voltage transmission lines to connect new capacities (stations for the production of energy from renewable sources, hydroelectric power plants and nuclear power plants) and provide capacity for exporting up to 3 GW of electricity to the EU 4.2: Optimizing the operation of the gas transportation system (GTS), facilitating the creation of gas import routes from LNG terminals in Poland, Lithuania, Italy, Croatia and/or Turkey 4.2a: Optimizing the operation of gas distribution networks (GDN) 4.3: Construction of pilot energy storage projects with a capacity of 50-200 MW to ensure balancing of the system and fulfillment of climate obligations 4.4: Modernization and completion of oil pipelines (Brody – Adamova zastava, etc.) and product pipelines taking into account the needs of the Ukrainian market	4.1.: Expansion of transmission capacity from ENTSO-E to 6 GW, modernization of internal power grids taking into account the needs of the Ukrainian economy (smart grids) 4.2: Optimizing the operation of the gas transportation system (GTS) in accordance with the needs of the Ukrainian economy and the EU, potentially ensuring the transportation of hydrogen, promoting the creation of gas import routes from LNG terminals in Germany and other countries 4.2a: Optimizing the operation of gas distribution networks (GDN) ensuring the accounting of gas use at the level of the EU average 4.3: Increasing the capacity of energy storage systems to 750 MW – 1 GW to ensure balancing of the system and fulfillment of climate obligations 4.4: Modernization and completion of oil pipelines and product pipelines taking into account the needs of the Ukrainian and EU markets
Measurable indicators of objective achievement	- Launch of the 400 kV line Khmelnytskyi NPP-Rzeszów - Approval of export capacity at the level of 1.5 GW by ENTSO-E	- Launch of the modernized overhead line 400 kV Mukacheve – Velké Kapusany (Slovakia) with	- The expansion and creation of additional routes from European LNG terminals to Ukrainian underground gas storage has been

	Stage 1: 06/2022 – 12/2022	*Stage 2: 2023 – 2025*	*Stage 3: 2026 – 2032*
	- Availability of agreements between GTSOU and related operators regarding the creation of guaranteed capacities in the direction of Ukraine	the conversion of the existing PL into a two-wheeler - Design and construction of the 400 kV substation of -Isaccia (Romania) powerline - The creation of routes from European LNG terminals to Ukrainian underground gas storage is ensured through active participation in the relevant EU negotiation groups (Gas Coordination Group, Energy Security Group, etc.), as well as negotiations with transit countries and gas suppliers - Identified sources of funding, provided organizational resources, diplomatic and regulatory support for the construction of pilot projects of energy storage systems - Funding sources were identified, organizational resources, diplomatic and regulatory support were provided for the completion of the oil pipeline along the route Adamova Zastava - Brody	ensured through active participation in the relevant negotiating groups of the EU (Gas Coordination Group, Energy Security Group, etc.), as well as negotiations with transit countries and gas suppliers; placement of part of the gas reserves of the EU countries in underground storage facilities of Ukraine is ensured - Funding sources were identified, organizational resources, diplomatic and regulatory support were provided for the construction of additional projects of energy storage systems - Funding sources were identified, organizational resources, diplomatic and regulatory support were provided for the modernization or construction of oil pipelines and oil product pipelines necessary for trade with EU countries

Objective 5: Improvement of energy efficiency and demand response

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measures to achieve the objective	5.1: Determining the demand response and energy efficiency improvement strategy – *cross-sectoral with the Ministry of Regions and the Ministry of Infrastructure* 5.2: Development and implementation of secondary legislation in pursuance of the Law of Ukraine "On Energy Efficiency"	5.1: Updating the demand management strategy and increasing energy efficiency, taking into account the situation after the end of hostilities – *cross-sectoral with the Ministry of Regions and the Ministry of Infrastructure* 5.2: Development and implementation of by-laws for the implementation of the strategy and requirements within the framework of negotiations on EU membership 5.3: Ensuring the needs of the transport industry in access to power grids and electricity for the transfer of transport (railway, municipal, private) to electricity - *cross-sectoral with the Ministry of Infrastructure* 5.4: Provision of heat generation needs in access to power grids and electricity for switching heating (centralized or individual) to electricity where it is economically feasible - *cross-sectoral with the Ministry of Regions* 5.5: Promotion of energy modernization projects of district heating and household consumers - *cross-sectoral with the Ministry of Regions*	5.1: Updating the demand management strategy and increasing energy efficiency, taking into account the current state of the economy, the availability of technologies and financing - *cross-sectoral with the Ministry of Regions and the Ministry of Infrastructure* 5.2: Development and implementation of by-laws to fulfill the requirements for EU membership 5.3: Ensuring the needs of the transport industry in access to power grids and electricity for the transfer of transport (railway, municipal, private) to electricity - *cross-sectoral with the Ministry of Infrastructure* 5.4: Provision of heat generation needs in access to power grids and electricity for switching heating (centralized or individual) to electricity where it is economically feasible - *cross-sectoral with the Ministry of Regions* 5.5: Promotion of energy modernization projects of district heating and household consumers - *cross-sectoral with the Ministry of Regions*

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
Measurable indicators of objective achievement	- A plan for preparing legislature to meet the requirements of Annex XXVII to the Association Agreement in terms of energy efficiency and eco-design has been developed - Increasing energy efficiency in the building sector by 5% (by implementing low-cost measures in existing buildings and rebuilding destroyed buildings to a high energy efficiency class) - regulatory and diplomatic assistance in achieving the goal	- The legislature was developed and approved to meet the requirements of Annex XXVII to the Association Agreement in terms of energy efficiency and eco-design - Implementation and provision of continuous improvement of the energy management system at the state and municipal level, as well as at enterprises, in particular in accordance with the requirements of standards and international agreements - Increasing energy efficiency in the building sector by 13% (by rebuilding destroyed buildings to the NZEB level and thermal modernization of the most energy-consuming buildings) - regulatory and diplomatic assistance in achieving the goal - Conditions have been created for connecting heat generation facilities to power grids in accordance with the request of local self-government bodies and taking into account the economic feasibility of switching heating to electricity	- The legislature has been implemented to fulfill the requirements of Annex XXVII to the Association Agreement in terms of energy efficiency and eco-design, the development and implementation of the NPA continues in connection with the negotiations on the acquisition of membership in the EU - Increasing energy efficiency in the building sector by 35% (through mass thermal modernization of buildings and construction of buildings with close to zero energy consumption - NZEB) - regulatory and diplomatic assistance in achieving the goal - Conditions have been created for connecting heat generation facilities to power grids in accordance with the request of local self-government bodies and taking into account the economic feasibility of switching heating to electricity - Conditions have been created for connecting fast electric charging

	Stage 1: 06/2022 – 12/2022	***Stage 2: 2023 – 2025***	***Stage 3: 2026 – 2032***
		- Conditions have been created for connecting fast electric charging stations to the power grid in accordance with the request of the transport industry	stations to the power grid in accordance with the request of the transport industry

7 National projects

Key principles of project and initiative selection

Priority is given to projects and initiatives that correspond to the greatest extent and the greatest number of the following principles:

№	Principle	Description	Approximate criteria for measurement
1	Strengthening energy security	The measure contributes to ensuring access of Ukrainian consumers to energy resources, provides for the rejection of Russian fuel, diversification of suppliers and reduction of import needs	- % coverage of energy resource needs - 0% from Russia - Increase in the number of suppliers/ decrease in the average share of one supplier - % of substituted imports in total demand - % of local resources and components
2	Economic validity	The measure is economically feasible without state aid, promotes GDP growth, lowers the average cost of energy, increases exports, has a proven attractiveness for investments	- Expected indicators of IRR, NPV - The need for special conditions from the state - Lower LCOE - Increase in export volumes - Availability of financing/partner
3	European integration and achievement of climate goals	The measure contributes to the fulfillment of Ukraine's European integration obligations and requirements for the candidate country, including the fulfillment of climate goals	- List of obligations to be fulfilled - %/volume reduction of emissions of harmful substances - % reduction of energy losses - % increase in carbon-neutral types of energy in the energy mix
4	Marketability and promotion of competition	The measure contributes to increasing competition in energy markets and does not provide for special pricing conditions (with the exception of natural monopolies)	- Increase in the number of suppliers/ decrease in the average share of one supplier - Refusal of non-market restrictions and special pricing conditions
5	Socio-economic justice	The measure contributes to the reduction of energy poverty, the return of temporarily displaced persons, the creation of jobs and favorable living conditions	- Increase of the number of citizens who have access to the necessary energy resources - Expected number of temporarily displaced persons who will return - Expected number of new jobs

			- Expected number of consumers who will have access/more reliable access to energy resources
6	Technological availability and development	The measure involves the use of technological solutions that are available for purchase and can be delivered in time to meet the goal	- Waiting time for the delivery of the necessary technological solution % of substituted imports in the total demand - Involvement of the latest technology in Ukraine/localization of new production

List of national projects*

			CapEx, USD bln	**Time horizon for project start**
Low-carbon energy	Nuclear	Increasing nuclear capacity (prolongation, higher utilization of existing capacities, and 2 GW new units at KhmelnytskyiNPP)	~14	2023-25
		Localizing nuclear value chain (uranium mining, plant for fuel production, waste storage)	1,3	2023-25
	RES	Build out 5-10+ GW RES (depends on the export capacity)	~11,5	2026-32
	Balancing	Build out of 3.5 GW hydro and pumped hydro capacities	~3,5	2023-32
		Build 1.5–2 GW peaker and 0.7–1 GW of storage	~2,8	2023-25
	Supporting supply chain	Localize RES equipment production (towers, transformers, cables, solar panels, electrolyzers, Li batteries, etc.)	~2+	2026-32
	Biofuels	Developing biofuels (bioethanol, biodiesel, biomethane, biomass) production from agroproduce, residues and waste	~4,2	2022
	Infrastructure	Expanding interconnectors with ENTSO-E to ~7 GW (multiple projects)	0,6	2022
		Smart grids	~5-10	2026-32
		Re-build damaged / destroyed energy objects (CHPs, networks)	~0,4	2022-25
H2	RES	Build 30+ GW RES for H2 production	~38	2026-32
	Infrastructure	Build out ~15 GW electrolyzer capacities	~7	2026-32
		Test and develop H2 transport infrastructure	~2	2026-32
Gas	Production	Increase gas production from existing fields, develop unconventional gas fields (not including Black Sea shelf development~$11 bn)	~18	2023-32
	Infrastructure	Modernize gas transmission and distribution networks	~2,5	2023-32
		Securing gas supplies/storage for EU and Ukraine (e.g.,extension of Świnoujście/Gdansk LNG and/or interconnect or import from Turkey/Italy/Germany)	0,7	2023-27
	Stock	Natural gas stock replenishment	~5	2022
Oil	Infrastructure	Expanding oil refining capacity post-war (rebuild, build or modernize 2 facilities) + oil pipeline Brody-Adamova Zastava	~2,5	2023-25
		Expanding oil products interconnectors with EU refineries and ports	0,7	2022
	Stock	Oil, oil products emergency stock for 30+ days (protected storages)	1,2+	2022
Total			**>128**

* The list and terms of implementation of the projects significantly depends on security, regulatory and financial preconditions

List of current strategies/concepts/programs

- Program of activities of the Cabinet of Ministers of Ukraine, approved by Resolution No. 471 of the Cabinet of Ministers of Ukraine dated June 12, 2020;
- National economic strategy for the period until 2030, approved by the resolution of the Cabinet of Ministers of Ukraine dated 03.03.2021 No. 179;
- The state program to stimulate the economy to overcome the negative consequences caused by restrictive measures to prevent the emergence and spread of the acute respiratory disease COVID-19, caused by the SARS-CoV-2 coronavirus, for 2020-2022, approved by Resolution No. 534 of the Cabinet of Ministers of Ukraine dated 05/27/2020 ;
- Energy strategy of Ukraine for the period until 2035 "Security, energy efficiency, competitiveness", approved by the order of the Cabinet of Ministers of Ukraine dated 08.18.2017 No. 605-r;
- Energy security strategy, approved by the order of the Cabinet of Ministers of Ukraine dated August 4, 2021 No. 907;
- National action plan on energy efficiency for the period until 2030, approved by the order of the Cabinet of Ministers of Ukraine dated 12.29.2021 No. 1803-r;
- National plan for reduction of emissions from large incineration plants, approved by the order of the Cabinet of Ministers of Ukraine dated November 8, 2017 No. 796;
- The hydropower development program for the period until 2026, approved by the order of the Cabinet of Ministers of Ukraine dated July 13, 2016 No. 552;
- The state economic program for the management of spent nuclear fuel of domestic nuclear power plants for the period until 2025, approved by the resolution of the Cabinet of Ministers of Ukraine dated August 11, 2021 No. 847;
- Comprehensive (consolidated) program to increase the level of safety of power units of nuclear power plants, approved by the resolution of the Cabinet of Ministers of Ukraine dated 07.12.2011 No. 1270;
- State targeted environmental program of priority measures to bring the facilities and site of the former uranium production of the industrial association "Prydniprovsk Chemical Plant" into a safe state for 2019-2023, approved by the Resolution of the Cabinet of Ministers of Ukraine dated 21.06.2019 No. 756;
- National transport strategy of Ukraine for the period until 2030, approved by the order of the Cabinet of Ministers of Ukraine dated 05/30/2018 No. 430-r;
- The concept of the State target program for the fair transformation of the coal regions of Ukraine for the period until 2030, approved by the resolution of the Cabinet of Ministers of Ukraine dated September 22, 2021 No. 1024;
- The updated nationally determined contribution of Ukraine to the Paris Agreement, approved by the order of the Cabinet of Ministers of Ukraine dated July 30, 2021 No. 868;
- Plan for the development of the transmission system for 2022-2031, approved by the resolution of the NCRECP dated 10.12.2021 No. 2477

The National Council for the Recovery of Ukraine from the Consequences of the War

Draft Ukraine Recovery Plan

Materials of the “Environmental safety” working group

July 2022

Introduction

The situation before the full-scale war

In 2020, greenhouse gas emissions decreased to 33.7% from 1990 levels. Still, the energy intensity of Ukraine's GDP in 2018 was three times higher than in Poland. In 2021, an updated nationally determined contribution under the Paris Agreement was approved, setting the goal of achieving carbon neutrality no later than 2060. The environmental safety of Ukraine before the full-scale war was alarming while the impact of Russian military aggression is raising the risk of environmental disaster. In 2020, Ukraine ranked 4th in the world in terms of the level of economic losses from air pollution. The main polluters of air are enterprises of extractive and processing industries and energy, their emissions of pollutants amounted to more than 90% of the total volume. The situation with waste was also critical - due to the dominance of resource-intensive multi-waste technologies in the national economy, about 500 million tons of waste are generated per year, of which only up to 25% is disposed. The resource intensity of Ukraine's economy is also the cause of the depletion and deterioration of natural resources. The specific indicator of the use of natural resources per unit of output in Ukraine is much higher than in Western Europe. The total water resources are 94.1 km3, which makes Ukraine one of the countries with insufficient water supply. 30% of water bodies in Ukraine are highly polluted by chemicals. Forest cover in Ukraine is 15.9% of the total area, a similar indicator in Germany, for example, is about 32%. Territories and objects of the nature reserve fund, of which there are 8633 in Ukraine, occupy 6.8% of the country's area. From 2012 to 2018, due to the destruction of meadow-steppe ecosystems and self-seeding forests, the area of arable land increased from 53.8 to 56.8% of the country's territory. For comparison, in the EU arable lands account for roughly 25%.

The tasks and projects of the Recovery plan in the field of environmental safety will ensure the implementation of environmental policy following the European integration aspiration of Ukraine and the European Green Deal provisions, as well as integration of environmental component into all recovery projects and reforms.

Lack of effective systems of public administration, environmental control, monitoring, as well as inefficient integration of the environmental policy into the socio-economic development of Ukraine before the full-scale war impeded in achieving the objectives of environmental safety, sustainable use of natural resources, and European integration.

The signing of the Association Agreement in 2014 between Ukraine and the European Union gave impetus to solving environmental problems and launched the key reforms in the environment and climate sphere. The progress in these reforms gave Ukraine a chance to be one of the first to support the European Green Deal and to enter into a dialogue with the European Union on Ukraine's participation in it. Ukraine has begun a green transformation of its economic development.

Key challenges

- High carbon intensity of the economy, the low adaptive capacity of social, economic, and natural systems to climate change, lack of an effective system of green financing;
- High environmental risks caused by industrial pollution and alarming state of chemical, nuclear and radiation safety;
- Depletion and deterioration of natural resources due to their unsustainable use and inefficient management, which is exacerbated by the consequences of climate change and the destructive impact of russian aggression;
- Reduction and degradation of natural ecosystems, critical losses of biodiversity, the insufficient share of protected areas to balance the landscape structure.
- The demand to improve legal and institutional mechanisms for ensuring effective public administration in the field of environmental protection, including in the area of state environmental surveillance (control) and the environmental liability.

Key opportunities

- Reconstruction of destroyed infrastructure and structural economic recovery based on clean, low-carbon and energy-efficient technologies, integration into EU industrial alliances and participation in new production chains;
- Attracting international financial assistance, green financing and investments for measures to prevent and adapt to climate change, build a circular economy and preserve the environment;
- Transition to balanced natural resource management, conservation and restoration of natural heritage;
- Development of the market of critical mineral raw materials;
- Achieving conformity of environmental legislation with EU law;
- High level of political, financial and technical support from the EU.
- Public administration reform as a basis to ensure the implementation of further reforms in the sector, the integration of environmental policy in the economical and political life, as well as the green recovery course.

Key restrictions

- Low capacity to assess the extent of the adverse environmental impact of military activities;
- The need to coordinate the recovery with the preparation for accession to the EU and with the objectives of the European Green Deal, in particular, to attract investment funds;
- The need to adapt the time frame of achievement ecological to consequences of war;
- Low institutional capacity of the public administration, further reduced during the wartime.

Influence of war

As a result of the full-scale war, the environmental problems which existed in Ukraine before are much more complicated. Lack of access to the territories and facilities of environmental management, loss and destruction of infrastructure, loss of personnel and limited work opportunities, suspension of environmental inspections and cancellation of the duty to pay environmental taxes for the period of the state of war adversely affected the efficiency of public administration in the field of environmental protection.

During the war, a demand to assess the damage to the environment caused by the war and the restoration needs was raised. The scale of environmental crimes of russian invaders is shocking. Some ecosystems and unique natural objects are no longer subject to recovery. Although the environmental damage is evident, its assessment requires new approaches, and at present, the full amount of losses and damage to the environment remains unclarified, as environmental monitoring systems have been damaged or destroyed, and access to forests and other natural territories is restricted or absent. The recording of the facts of ecological damage caused by the russian invasion is carried out within the framework of the functioning of the application "Eco-Threat" and activities of the operational headquarters at the State Environmental Inspectorate. Until now 330 events that threaten the environment on the territory of Ukraine have been recorded.

As a result of the war, about 20% of the area of all protected areas of Ukraine are threatened, 17 Ramsar sites of a total area of 627,3 thousand hectares, approximately 160 territories of the Emerald network of an area of 2,5 million hectares and 4 biosphere reserves faced the risk of extinction. This poses a threat to the strategic objectives of biodiversity conservation, reduces the capacity for greenhouse gas absorption, and increases the process of desertification. The critical threat is posed to endemic species of plants and animals, which extinction would have catastrophic effects on biodiversity on the global scale. Almost 3 million hectares of forest in Ukraine were covered by military activities. Because of the war, more than 4,6 million people in Ukraine have problems with access to drinking water.

Environmental and security risks are increasing, dangerous waste from destruction and military waste is formed, and 160 thousand square kilometers of territory of Ukraine are contaminated with explosive objects. As a result of the destruction of buildings, a large amount of building waste, containing ozone-depleting substances, in

particular, insulation materials, insulation foam, etc. is generated. Pollution is caused by the destruction of transport and industrial infrastructure, which leads to large-scale oil products and other dangerous substances. More than 227 enterprises, and factories, including chemical enterprises, were damaged or destroyed by the war. The activity of several mining enterprises has stopped, which has led to a shortage of salt, coal, and other minerals, the condition of the deposits and the possibility of their further development remain in question.

There are significant threats to nuclear and radiation safety due to damage to nuclear and radiation-hazardous facilities (in particular, due to the temporary occupation of the Zaporizhzhia NPP and the Chornobyl Exclusion Zone). The radiation monitoring system has been destroyed in the exclusion zone.

The effects of armed invasion will have a long-term negative impact on the national economy's ability to prevent and adapt to climate change.

The strategic goal of post-war recovery - clean and safe environment:

- integration of climate goals into all sectors of economy and social life
- minimize risk for environmental safety (chemical and radiation)
- reduction and prevention of industrial pollution and introduction of the "polluder pays" principle
- efficient waste management
- balanced use of natural resources and ensuring their proper quality
- biodiversity conservation, restoration and development of protected areas
- achievement of the EU standards of public administration in the field of environmental protection

Key reforms needed to achieve the goals:

1. Integrated climate policy
2. Environmental safety (chemical and radiation)
3. Reform of industrial pollution regulation
4. Efficient waste management
5. Sustainable use of natural resources
6. Environmental management to preserve landscape and biological diversity
7. Effective public administration in the field of environmental protection
8. Environmental control and legal liability
9. Comprehensive environmental monitoring

Each stage of the recovery plan has its own operational goals in the area of "Environmental safety":

2022

- Development/adoption of the necessary legal framework in the field of environmental protection, nuclear and chemical safety, climate and sustainable use of natural resources in accordance with the requirements of EU legislation
- Audit and assessment of losses and damage to the environment
- Restoration of the work of registers (databases) in the field of environmental protection

- Integration of environmental and climatic policies into the process of post-war recovery

2023 - 2025

- Identifying the mechanisms of compensation for environmental damage and for the expenses required for restoration of environmental protection facilities affected by the war
- Strengthening the institutional capacity of public administration in the field of environmental protection and sustainable use of natural resources, in particular environmental monitoring and control, digitization of the sector
- Implementation of a new permitting system on prevention, reduction and control of industrial pollution
- Introduction of the extended liability systems of the manufacturer for packing waste, batteries and accumulators, electric and electronic equipment taken out of operation of vehicles
- Promoting prevention of generation, increase of volume of recycled and re-used wastes of the mining industry
- Restoration and development of the network of protected areas that are in compliance with the best EU practices.

2026 - 2032

- Development of environmental monitoring system
- Launch of the national emissions trading system
- Development of waste management infrastructure
- Implementation of the conclusions of the best available technologies and management methods (BATM) according to the EU regulation of industrial pollution
- Achieving "good status" of water for 9 areas of river basins
- Restoration of ecosystems in all protected areas of the nature reserve fund, damaged through the russian military aggression

The objectives of the Recovery Plan are expected to achieve these results:

- environmental and climate goals integrated into sectoral policies (synchronized with the European Green Deal);
- the level of chemical, radiation and nuclear safety increased;
- the waste management system improved; 142 waste management facilities created;
- reduced industrial pollution (quantification will be carried out after the end of hostilities);
- the damage caused by the harmful effects of water reduced by 20% as a result of the restoration of flood protection structures;
- sustainable forest management introduced; the forest cover of the country's territory increased to at least 18% by 2035;
- creation of 170 new recreational facilities;
- 15 eco-ducts built on animal migration paths (wildlife crossings);
- state environmental monitoring system created in accordance with EU standards;
- 10 nature conservation areas created, which correspond to the best EU practices;
- public administration reformed in accordance with the principles of SIGMA/OECD, digitization of the sector
- achieved >60+% trust level in environmental control.

Structure of the section "Environmental safety"

1. Climate policy: mitigation and adaptation to climate change

2. Environmental safety and effective waste management

2.1 Improvement of environmental safety, including chemical, nuclear and radiation

2.2 Waste management

2.3 Industrial pollution: reduction and prevention of pollution of atmospheric air, water and land

3. Sustainable use of nature resources in terms of increased demand and limited offer

3.1. Land resources

3.2. Forest resources

3.3. Water resources

3.4. Subsoil

4. Conservation of natural ecosystems and biological diversity, restoration and development of protected area system

5. Effective public administration in the field of environmental protection and use of natural resources

5.1. Reform of public administration in the field of environmental protection and natural resources

5.2. Improvement of instruments of the state environmental policy implementation

5.3. Environmental control and legal liability

5.4. Environmental monitoring, public access to environmental information and participation in decision-making

Direction 1: Climate policy: mitigation and adaptation to climate change

Implementation Status of Program Documents: In line with international obligations, objectives outlined by the Law of Ukraine "On the Key Principles (Strategy) of the State Environmental Policy of Ukraine for the Period till 2030", as well as by the approved action plan to implement the Concept of State Policy in Climate Change for the period till 2030 (CMU Order of 6.12.2017 № 878-r), as well as within the framework of the **EU-Ukraine Association Agreement,** the following documents were adopted:

- CMU Order of 30.07.2021 № 868 "On approval of the **Renewed Nationally Determined Contribution of Ukraine to the Paris Agreement**" (development of the Action Plan for its implementation is underway);
- CMU Order of 20.10.2021 № 1363-r "On approval of the Strategy of ecological safety and adaptation to climate change for the period till 2030";
- Law of Ukraine "On Principles of Monitoring, Reporting and Verification of Greenhouse Gas Emissions" and bylaws that allow to start the process of forming the framework of the national emissions trading system in accordance with the requirements of **Directive 2003/87/EU;**
- Law of Ukraine "On regulation of economic activity with ozone-depleting substances and fluorinated greenhouse gases" in accordance with **Regulation (EC) No 842/2006, Regulation (EC) No 2037/2000, Regulation (EU) No 517/2014, Regulation (EC) No 1005/2009.**

A draft law "On the Basic Principles of Low-Carbon Development of Ukraine till 2050" has been developed in line with the provisions of **Regulation (EU) 2018/1999**, which establishes a general framework for integrated climate and energy policy.

Objectives, tasks and stages of the Recovery Plan according to the direction "Climate policy: mitigation and adaptation to climate change":

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Problem: High carbon intensity of the economy and low adaptability and resilience of social, economic and natural systems to climate change. Insufficient potential to prevent ozone-depleting substances from releasing into the environment, gradual increase in consumption of fluorinated greenhouse gases as substitutes for ozone-depleting substances			
Strategic objective (Impact)	Integration of climate objectives into all sectors of the economy and public life: implementing effective and consistent policies to reduce greenhouse gas emissions, including ozone-depleting substances and fluorinated greenhouse gases, and policies to adapt to climate change in socio-economic response and recovery plan in line with EU climate goals		
Task to be achieved to at each stage	Analyze the impact of the war on the progress of climate policy and develop an implementation plan within the UNFCCC commitments, Paris Agreement and Montreal Protocol, including a methodology framework for taking into account adaptation to climate change as a cross-cutting theme in national socio-economic response and recovery plan.	Develop and implement a climate policy regulatory framework and financial instruments (ETS, green finances, the Climate Fund, mechanisms for the gradual reduction of consumption and emissions of ozone-depleting substances and fluorinated greenhouse gases), as well as launch pilot projects to mitigate and adapt to climate change.	Launch operations of the National Greenhouse Gas Emissions Trading System, continue implementation and monitoring of projects to mitigate and adapt to climate change, introduce full-fledged infrastructure for recovery, regeneration, recycling and utilization of ODS, including CFCs and HCFCs.
Implementation duration within each stage	June 2022 – end of the 2022	Jan. 2023 – Dec. 2025 p	Jan. 2026 – Dec. 2032 p.
Implementation risks	Lack of institutional capacity, need to attract technical assistance, delays in reviewing and adopting the necessary legal framework	Lack of institutional capacity, need to attract technical assistance, delays in reviewing and adopting the necessary legal framework	Lack of funding for the implementation of planned activities, delays in reviewing and adopting the necessary legal framework
Objective's qualitative indicator	GHG emissions; approved the Action Plan for the implementation of NDC2; developed guidelines for risk assessment and vulnerability to climate change; developed comprehensive programs /strategies /recovery projects at the regional and local level; list of approved BAT that can be used to restore destroyed facilities in line with the principles of Build Back Better.	Approved Law "On the Strategy of Low Carbon Development of Ukraine till 2050"; a single MRV GHGs register and the state register of operators of controlled substances (% of registered operators); # of implemented pilot projects to mitigate and adapt to climate change and reduce the use of ozone-depleting substances and fluorinated greenhouse gases; implemented financial climate policy mechanisms	GHG emissions; operational the national greenhouse gas emission allowance trading system (full legislative package approved and institutional structure established); ongoing climate change mitigation and adaptation projects; the amount of the ODS emissions reduction through its recovery or disposal.

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		(instruments of green finances (including green bonds), transposition of the EU Green Taxonomy, as well as an independent conformity assessment and reporting system in the legislative framework of Ukraine); conducted vulnerability assessments; prepared adaptation plans; pilot projects on adaptation to climate change; developed regulatory, analytical and institutional framework for the national greenhouse gas emission allowance trading system; adopted the Law "On Ratification of the Kigali Amendment to the Montreal Protocol on Substances that Deplete the Ozone Layer" and the Concept for Reducing the Consumption of Hydrofluorocarbons and Transition to Ozone and Climate-Safe Technologies.	
The total amount of financial resources required to achieve the Objective	23.45 million euros		
Objective crosscutting with other directions	This is a cross-cutting, cross-sectoral theme of public policy, in line with Ukraine's commitments within the Association Agreement with the EU, the UNFCCC and the Paris Agreement, the Montreal Protocol on Substances that Deplete the Ozone Layer, and the National Economic Strategy to 2030.		
Tasks to achieve objective	**Task 1.** Renewal of the Action Plan for the implementation of NDC2 taking into account the economic impact of the Russian military aggression and the Recovery Plan objectives **Task 2.** Establishment of the national climate fund, development of financial incentives for decarbonization of the country's economy	**Task 6.** Implementation of climate policy, including NDC2, measures and pilot projects **Task 7.** Development of regulatory, analytical and institutional framework for the national greenhouse gas emission allowance trading system	**Task 11.** Launch of the national greenhouse gas emission allowance trading system and consequently linking it with EU ETS, in particular ensuring compliance with relevant EU requirements **Task 12.** Implementation of the NDC2 Action Plan

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	Task 3. Analysis of the working progress of the system of monitoring, reporting and verification of greenhouse gas emissions and the accounting system of the controlled substances taking into the account the impact of Russian military aggression **Task 4.** Development of methodological recommendations for risk assessment and vulnerability of economic sectors and components of the natural environment to climate change **Task 5.** Inclusion of adaptation to climate change into the integrated recovery programs/ strategies / projects at regional and local level	**Task 8.** Implementation of measures to reduce the use of ozone-depleting substances and fluorinated greenhouse gases **Task 9.** Vulnerability assessment of economic sectors and components of the environment to climate change, and consequent development of the adaptation plans **Task 10.** Implementation of the pilot recovery projects at regional and local levels taking into account adaptation to climate change	**Task 13.** Ongoing implementation of the operational plan, monitoring the progress and preparation of the 2028-2030 operational plan for "Strategy of ecological safety and adaptation to climate change for the period till 2030"

Direction 2: Environmental safety and effective waste management

Implementation Status of Program Documents: On June 20, 2022, the Verkhovna Rada of Ukraine adopted the draft Law of Ukraine "On Waste Management" (reg. No. 2207-1-d dated June 4, 2020), and on June 21, 2022, it was sent to the President of Ukraine for signature. It should give a start to the waste management reform and ensure the organizational implementation of the National Waste Management Strategy in Ukraine until 2030 and the National Waste Management Plan until 2030, as well as the implementation of the provisions of EU Directives 2008/98/EC, 1999/31/EC and 2010/ 75/EU (in terms of waste incineration).

The Decree of the Cabinet of Ministers of Ukraine dated May 22, 2019 No. 402 approved the Concept of State Policy Implementation in the Field of Industrial Pollution. The Decree of the Cabinet of Ministers of Ukraine dated December 27, 2019, No. 1422 approved the Plan of measures for the implementation of the Concept. In order to implement a comprehensive system of prevention, reduction and control of industrial pollution in accordance with the Directive 2010/75/EU on industrial emissions, a number of legislative initiatives have been developed and registered in the VRU (reg. no. 6004, 6004-1, 6004-2).

The plan of measures for the implementation of the Concept of increasing the chemical safety until 2026 was approved by the order of the Cabinet of Ministers of Ukraine No. 314-r dated April 26, 2022. In accordance with the decision of the National Security and Defense Council of Ukraine "On measures to increase the chemical safety in the territory of Ukraine", put into effect by the Decree of the President of Ukraine No. 104 dated March 19, 2021, a framework draft law "On Chemical Safety and Management of Chemical Products" was developed. The draft law aims to ensure the approximation of EU Regulation No. 1907/2006.

The decision of the National Security and Defense Council of Ukraine dated January 29, 2021 "On measures to neutralize threats in the field of nuclear energy and industry", put into effect by Presidential Decree No. 5/202, foresees the need to approve a new nationwide targeted environmental program for the management of radioactive waste. Ensuring responsible and safe handling of radioactive waste is required by the provisions of Directive 2011/70/Euratom and according to the United Convention on the Safety of Spent Fuel Management and on the Safety of Radioactive Waste Management ratified by Ukraine.

Objectives, tasks and stages of the Recovery Plan according to the direction "Environmental safety and effective waste management":

	Stage 1: June 2022 – December 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
Problem: Alarming state of environmental safety in Ukraine, including due to russian aggression			
Strategic objective (Impact)	**Introduction of a risk-oriented approach to environmental safety in accordance with the requirements of EU legislation, aimed at preventing damage to the environment and human health:** ● minimization of environmental safety risks (chemical and radiation) ● reduction and prevention of industrial pollution and introduction of the "polluter pays" principle ● effective waste management		
Task to be achieved to at each stage	Adoption of key legislative acts in the field of improving environmental safety, creation of the necessary legal basis to eliminate threats to environmental safety.	Priority measures to improve environmental safety implemented, and the regulatory framework for the implementation of a risk-oriented approach developed.	Implementation of measures for transition to zero pollution and circular economy in accordance with the goals of the European Green Deal and reconstruction of waste management infrastructure.
Implementation duration within each stage	June 2022 – end of the 2022	Jan. 2023 – Dec. 2025 p	Jan. 2026 – Dec. 2032 p.
Implementation risks	● lack of political will for key environmental reforms; ● the influence of financial and industrial groups, delaying or preventing the adoption of regulation;	● low institutional capacity; ● reconstruction of industry based on outdated technologies; as a result - lack of opportunity to attract investments; ● large financial needs for upgrading the industry, improving chemical safety and implementing measures to stimulate recycling and waste disposal;	● Lack of investment in industry and waste management infrastructure, lack of development of new industries, general deindustrialization; ● Failure to maintain sustainable, environmentally safe economic development in the face of climate change and depletion of natural resources.
Objective's qualitative indicator	Approval of 3 draft laws on waste management, chemical safety, implementation of an integrated permit and approval of the National targeted	Development and adoption of necessary by-laws, digitization in the areas of chemical, nuclear and radiation safety. Waste management and industrial pollution reduction policies comply with EU legislation.	New waste management enterprises and infrastructure comply with EU standards, in particular the BAT. Ensuring the environmental safety of objects damaged as a result of russian aggression.

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	environmental program for the management of radioactive waste.		
The total amount of financial resources required to achieve the Objective	17721,446 million euros		
Objective crosscutting with other directions	All directions within the "Environmental Safety" group Other groups: European integration; audit of losses incurred as a result of the war; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;	All directions within the "Environmental Safety" group Other groups: European integration; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;	All directions within the "Environmental Safety" group Other groups: European integration; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;
Tasks to achieve objective	**Task 1.** Approximation of national legislation in the field of chemical safety with the requirements of EU legislation: approval of the draft law "On chemical safety and management of chemical products"; **Task 2.** Update of the National Environmental Program for the Management of Radioactive Waste, mechanisms for filling the State Fund for Management of Radioactive Waste, setting targets, increasing the efficiency of funds use; **Task 3.** Development and approval of the State environmental program for the	**Task 6.** Ensuring completion of tasks under the Plan of measures for the implementation of the Concept of increasing the level of chemical safety until 2026; **Task 7.** Establishing the regulation of the procedure for decommissioning and conservation of old reactors that will exhaust their resource by 2040, in accordance with international commitments; **Task 8.** Ensuring nuclear and radiation safety in the Chernobyl Exclusion Zone and transforming the "Shelter" facility into an environmentally safe system;	**Task 14.** Development and implementation of plans for the transition to zero pollution and circular economy in accordance with the goals of the European Green Deal. **Task 15.** Restoration of damaged and development of waste management infrastructure in accordance with EU standards, which will ensure at least 40% of waste recycling; **Task 16.** Creation of waste management facilities for the final removal of unprocessed waste generated as a result of military operations;

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	decommissioning of uranium facilities for the implementation of environmental protection measures in accordance with the Energy Strategy of Ukraine until 2035. **Task 4.** Adoption of the legislative framework for effective regulation in the field of waste management; **Task 5.** Establishing the principles of prevention and reduction of industrial pollution in Ukrainian legislation in accordance with Directive 2010/75/EU.	**Task 9.** Arranging of the collection of waste generated as a result of military actions, stored in unsuitable places, and stimulating the recycling and disposal of waste generated as a result of military actions; **Task 10.** Introducing the extended producer responsibility systems for packaging waste, batteries and accumulators, electrical and electronic equipment, decommissioned vehicles, etc. **Task 11.** Launch of the IT system of integrated permits, implementation of pilot projects for issuing integrated permits for economic entities, training on the operation of the IT system. **Task 12.** Implementation of a new permitting system for the prevention, reduction and control of industrial pollution. **Task 13:** Development and approval of the conclusions of the best available technologies and management methods (BATM) in accordance with the EU legislation on industrial pollution.	**Task 17.** Implementation of the conclusions on the best available technologies and management methods (BATM) in accordance with the EU legislation on industrial pollution.

Direction 3. Sustainable use of nature resources in terms of increased demand and limited offer

Status of program documents' implementation: Preservation and rational use of natural resources is ensured through the implementation of such legal acts - the Law of Ukraine "On the key principles (strategy) of state environmental policy of Ukraine for the period up to 2030" № 2697-VIII from 28.02.2019; Law of Ukraine "On approval of the All-National program on development of mineral & resources basis of Ukraine for the period up to 2030" № 3268-VI of 21.04.2011; National Economic Strategy for the period up to 2030, approved by the resolution of the Cabinet of Ministers of Ukraine dated 03.03.2021 № 179; National Action Plan for Environmental Protection for the period till 2025, approved by the order of the Cabinet of Ministers of Ukraine dated 21.04.2021 № 443; Marine Environmental Strategy, approved by the order of the Cabinet of Ministers of Ukraine from 11.10.2021 № 1240; State Forest Management Strategy of Ukraine until 2035, approved by the order of the Cabinet of Ministers of Ukraine from 29.12.2021 №

1777; Concepts of the National Targeted Program for Land Use and Protection, approved by the order of the Cabinet of Ministers of Ukraine from 19.01.2022 № 70 and other legal acts.

Objectives, tasks and stages of the Recovery Plan according to the direction of "Sustainable use of nature resources in terms of increased demand and limited offer ":

	Stage 1: Jun. 2022 – end of 2022	**Stage 2:** Jan. 2023 – Dec. 2025	**Stage 3:** Jan. 2026 – Dec. 2032
Problem: Depletion and deterioration of natural resources due to their unsustainable use and inefficient management, exacerbated by the effects of climate change and the destructive impact of russian aggression.			
Strategic objective: Sustainable use of natural resources and ensuring their proper quality			
The Objective that shall be achieved to solve the problem at every stage	Legal support to the sustainable use of natural resources	Development and start of implementation of state planning documents, taking into account measures to eliminate consequences of russian military aggression	Implementation of measures for the sustainable use of natural resources, monitoring, assessment, and reporting
Deadline within the stage	June 2022 – end of the 2022	Jan. 2023 – Dec. 2025 p	Jan. 2026 – Dec. 2032 p.
Risks of Objective's achievement	1) Inadequate level of environmental awareness of citizens and businesses regarding the importance of sustainable consumption and production; 2) Lack of legally defined background terminology for sustainable development and sustainable use of natural resources; 3) Low institutional, staff & professional capacity of public authorities to understand the needs for establishment of the legal framework of the sustainable use of natural resources.	1) Sectoral inconsistencies in understanding the programming principles of sustainable use of natural resources and lack of proper coordination of their efforts; 2) Lack of a clear strategic vision of approaches to sustainable development and the legal basis for the sustainable use of natural resources. 3) Low institutional, staff & professional capacity of public authorities to understand the necessary step by step sequence to implement the sustainable use of natural resources.	1) Significant delay in the process of preparation and approval of legal and programming basis for the sustainable use of natural resources; 2) Insufficiency or lack of necessary funding for the proper implementation of measures for the sustainable use of natural resources; 3) Inadequate institutional, technical and staff support for the implementation of measures for the sustainable use of natural resources.
Objective's qualitative indicators	Facts on approval by the Verkhovna Rada of Ukraine and the Cabinet of Ministers of Ukraine of legal acts to ensure the sustainable use of natural resources	The facts of approval at the appropriate level of state planning documents that take into account measures to eliminate consequences of russian military aggression.	Resource capacity of GDP (share of natural resources per unit of GDP), % to the level of 2015. Share of arable land in the total territory of the country, %. Forest cover of the country, %. Annual total water consumption, million cubic meters

The total amount of financial resources required to achieve the Objective	6421.25 million euros		
Relationships of the Objective and other directions	The Objective is directly related to other areas and significantly affects the socio-economic development of both regions and the state as a whole	The Objective is directly related to other areas and significantly affects the socio-economic development of both regions and the state as a whole	The Objective is directly related to other areas and significantly affects the socio-economic development of both regions and the state as a whole
Tasks aimed the Objective achievement	**Task 1**. Simplification and deregulation of land legislation concerning land conservation (including damaged by war), reproduction of natural ecosystems and creation and expansion of nature reserve facilities (NRF), including through participation of non-governmental institutions and individuals; **Task 2.** Organization of the process of inventory and classification of lands damaged as a result of russian military aggression; **Task 3**. Development and implementation of methods for determining the damage and losses caused by the destruction or damage of forest	**Task 9.** Adoption of the National target program on balancing of landscapes, updating and bringing into line with it the current regulations, development of relevant regional landscape programs; **Task 10**. Methodological and institutional support of measures for conservation, reclamation and improvement of lands; **Task 11.** Implementation of pilot projects aimed on clean up the areas affected by russian aggression; **Task 12.** Development of the Action Plan for the implementation of the State Forest Management Strategy of Ukraine until 2035,	**Task 19.** Implementation of measures for conservation, reclamation and improvement of lands affected by russian aggression; **Task 20**. Expanding the territory of the nature reserve fund by including preserved lands to achieve the EU targets; **Task 21.** Implementation of projects on adaptation of forests to climate change and the transition to nature's approximate methods of forestry with the formation of forests of natural composition and structure; **Task 22.** Implementation of measures to guarantee by the state the right of citizens of Ukraine to access safe and economically accessible water;

	resources, forest nurseries, forest crops, and damage of biological resources; **Task 4.** Creation of legal bases for ensuring equal access to safe and economically accessible water for all; **Task 5.** Prevention of reduction of water flow by ensuring observance of legal restrictions established for coastal protection strips and water protection zones, slopes; **Task 6.** Preparation of documents of state planning (management) aimed at improving the ecological and chemical condition of water bodies, taking into account the impact of russian military aggression; **Task 7.** Update of the Mineral Development Program until 2030and establishment of the State fund for development of the mineral resource base of Ukraine in connection with consequences of the Russia's military aggression; **Task 8.** Deregulation and simplification of access to subsoil with preserving environmental procedures and public participation in decision-making.	and the implementation of projects for the restoration of forests and forest areas affected by russian military aggression; **Task 13.** Development of ecological tourism, and recreational use of forests; **Task 14.** Preparation of public planning documents to guarantee the right of citizens of Ukraine to access safe and economically accessible water; **Task 15.** Ecological & economic analysis of expediency of implementation of drainage reclamation measures taking into account climate change and adaptation to these changes; **Task 16.** Update and approval by the Government of draft river basin management plans and flood risk management plans, taking into account measures to eliminate the consequences of russian military aggression; **Task 17.** Implementation of the updated Mineral Development Program until 2030 ; **Task 18.** Improving the legislation to stimulate and increase the amount of recycled and reused waste from the extractive industry.	**Task 23.** Implementation of measures for the restoration of small rivers and wetlands, as well as water conservation measures; **Task 24.** Implementation, updating of state planning documents aimed at improving the ecological and chemical status of water bodies; monitoring the effectiveness of their implementation; **Task 25.** Achieving sustainable subsoil use and monitoring the implementation of the updated Mineral Development Program until 2030; **Task 26.** Conducting an audit to determine the composition of resources and reserves of technogenic deposits; implementation of measures to increase the volume of recycled and reused extractive waste.

Direction 4: Conservation of natural ecosystems and biological diversity, restoration and development of protected area system

Implementation Status of Program Documents: The Law of Ukraine "On the Key Principles (Strategy) of the State Environmental Policy of Ukraine for the Period till 2030" frames the increase and expansion of nature reserves, including protected areas in national nature parks and regional landscape parks, as well as at the aquatorium and dry land of the Black Sea and the Sea of Azov. It also ensures the preservation and functioning of a representative and effectively managed protected area system of the nature protected fund (NPF), including transboundary and of European and international importance. The State Strategy for Regional Development for 2021-2027 provides for the expansion of the NPF area up to 15% of the total territory of the country in 2027. Currently, the area of the NPF is only 6.8% of the territory of Ukraine and should be significantly expanded.

Objectives, tasks and stages of the Recovery Plan according to the direction "Conservation of natural ecosystems and biological diversity, restoration and development of protected area system":

	Stage 1: June 2022 – December 2022	**Stage 2: January 2023 – December 2025**	**Stage 3: January 2026 – December 2032**
Problem: Reduction and degradation of natural ecosystems, critical biodiversity loss, inefficient management and insufficient share of protected areas to balance the structure of landscapes			
Strategic objective (Impact)	Biodiversity conservation, restoration and development of protected area system: balancing the structure of landscapes for the preservation of natural ecosystems and biodiversity, creating an effective system of management, restoration and development of protected area system.		
Task to be achieved to at each stage	To strengthen the institutional capacity to implement environmental policy and management of protected areas at both national and regional levels through the introduction of landscape planning.	To increase the effectiveness of public policy in the conservation and reproduction of landscape and biodiversity and their restoration.	To implement measures for conservation, restoration of biodiversity, development of protected area system and harmonize their management with EU standards.
Implementation duration within each stage	June 2022 – end of the 2022	Jan. 2023 – Dec. 2025 p	Jan. 2026 – Dec. 2032 p.
Implementation risks	Delays in reviewing and adopting the necessary legislative framework	Lack of institutional capacity, the need to engage technical assistance	Lack of funding for the implementation of planned activities

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Objective's qualitative indicator	Developed draft law of Ukraine "On Landscapes"; strengthened institutional capacity of the Ministry of Environment in the field of management of protected area system; adapted Law "On the Emerald Network".	Approved Law "On Landscapes", as well as the Landscape Program of Ukraine; updated the "General Plan of Spatial Planning of Ukraine", implemented pilot projects on landscape planning.	Approved regional landscape plans, implmented ecosystem restoration projects on the territory of NPF according to the principles of landscape planning.
The total amount of financial resources required to achieve the Objective	665.89 million euros		
Objective crosscutting with other directions	Sustainable use of natural resources, mitigation and adaptation to climate change	Sustainable use of natural resources, mitigation and adaptation to climate change	Sustainable use of natural resources, mitigation and adaptation to climate change
Tasks to achieve objective	**Task 1.** Establishment of a legislative framework for balancing the structure of landscapes and biodiversity conservation, as well as development of an effective management system for protected areas. **Task 2.** Inventory of losses within protected areas due to Russian aggression against Ukraine. **Task 3.** Development of a mechanism for assessing ecosystem services provided by natural areas, and taking into account their value in management decisions.	**Task 4.** Development of a Landscape Program for the preservation and restoration of areas that were damaged and transformed. **Task 5.** Development of methodological guidelines for the implementation of pilot projects on landscape planning in areas that have been destroyed by Russian aggression against Ukraine. **Task 6.** Establishment of an effective mechanism for the management of protected areas of international, European, national and local importance in Ukraine. **Task 7.** Setting up a network of exemplary protected areas aligned with European best practices. **Task 8.** Development of a system for monitoring the conservation status of species of	**Task 10.** Establishment of a representative and effectively managed network of protected areas, that are integrated into the network of protected areas of the EU (NATURA 2000). **Task 11.** Consistent and permanent monitoring of the conservation status of species of flora and fauna and natural habitats within protected areas. **Task 12.** Implementation of the Landscape Program for the preservation and restoration of areas that were damaged and transformed. **Task 13.** Continuation of setting up a network of exemplary protected areas aligned with European best practices. **Task 14.** Restoration of ecosystems on the territories and features of the nature protected fund, damaged as a result of the Russian aggression.

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		flora and fauna and natural habitats protected at the European level. **Task 9.** Implementation of pilot ecosystem restoration projects on the territory of protected areas, damaged by Russian aggression.	

Direction 5: Effective public administration in the field of environmental protection and use of natural resources

Status of program documents' implementation: The Law of Ukraine "On Basic Principles (Strategy) of the State Environmental Policy of Ukraine until 2030" envisages preparation of reports on the implementation of the state environmental policy in 2020, 2025 and 2030 as one of indicators of the policy implementation. The report on the state environmental policy implementation in 2020 is not available.

In order to fulfill the tasks set by the Law of Ukraine "On Basic Principles (Strategy) of State Environmental Policy of Ukraine until 2030", the Strategy of Public Administration Reform of Ukraine for 2022-2025, the Concept of reforming the system of state surveillance (control) in the field of environmental protection (order of the Cabinet of Ministers of Ukraine No.616-r of 31.05.2017), the draft legal acts were developed: draft law of Ukraine "On State Environmental Control" (registration No.3091 of 19.02.2020), draft laws on amendments to the Code of Ukraine on Administrative Offenses (registration No. 6175 of 13.10.2021) and to the Criminal Code of Ukraine (Reg. No.6148 of 07.10.2021), "On Amendments to Certain Legislative Acts of Ukraine Concerning the State Environmental Monitoring System" (Reg. № 7327 of 28.04.2022), "On the National Register of Emissions and Transfer of Pollutants"(Reg. № 6477 dated 28.12.2021), the Strategy for the Development of Hydrometeorological Activities (approved by the order of the Cabinet of Ministers of 24.11.2021 № 1501).

Progress has been made in implementing the EU - Ukraine Association Agreement (hereinafter - the AA) in the aspect of harmonizing legislation on environmental impact assessment, strategic environmental assessment, water and ambient air monitoring. However, no progress has been achieved on the implementation of the AA in the aspect of cooperation in the institutional capacity reform in the sector, in particular, on public administration reform, reform of environmental control system and liability for environmental offenses, as well as environmental monitoring system.

Objectives, tasks and stages of the Recovery Plan according to the direction "Effective public administration":

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Problem: Inefficient public administration in the field of environmental protection and use of natural resources			
Strategic objective (Impact)	Achieving the EU standards of public administration in the field of environmental protection		

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
Task to be achieved at each stage	Establishing the legal and institutional preconditions for the improvement of instruments of public administration	Strengthening institutional capacity, improving instruments of public administration	Integration of environmental policy into socio-economic, sectoral and regional development, further improvement of instruments of public administration
Implementation duration within each stage	June 2022 – end of the 2022	Jan. 2023 – Dec. 2025 p	Jan. 2026 – Dec. 2032 p.
Implementation risks	Delays in the consideration and adoption of regulations; Low institutional capacity or funding. Loss of highly qualified staff. Insufficient funding. Delay in HRMIS or wage reform on the national level. Low capacity to implement KPI assessment systems and follow the systems due to the permanent "urgent cases"	Delays in the consideration and adoption of legal acts during the Stage 1; Low institutional capacity or funding; Low political willingness to diverge the functions on policy formulation and implementation, and create the appropriate CBEPs; Unreformed institutional capacity of the authority (the Ministry and the State Environmental Inspectorate) is insufficient to ensure effective public administration according to the tasks set; Cancellation of SEA and EIA procedures for particular plans, programs of sectoral projects for the period of post-war recovery.	Low institutional capacity or funding; Transformation in the strategic goals of state environmental policy over the time
Objective's qualitative indicator	● The Ministry of the Environmental Protection carried out: the analysis of its functions, job position classification, all training activities, implementation of HRMIS, including a financial module, and a system of planning and evaluation in accordance with KPI ; ● amendments made to: the legislation on strategic environmental assessment (SEA), according to those the competent body for compliance with the legislation on SEA is identified; the Strategy on the Regional Development for 2021-2027 in the aspect of	● Policy implementation functions relocated from the Ministry to the competent CBEPs ● created and are functioning CBEPs: on the implementation of the state policy on nature reserve fund and biodiversity, on the permit /authorization documentation and on the EIA and SEA procedures; CBEP on subsoil resources use reformed; ● conducted 2 full cycles of evaluation based on KPI in the Ministry and central competent authorities	● Provisions of the EU Directive on Environmental Liability implemented by means of amendments to the national legislation; ● The share of conducted environmental inspections meeting the minimum criteria for environmental inspections in EU; ● 100% of plans and programs of state and local importance passed the strategic environmental assessment;

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	sustainable spatial planning development; ● Adopted: laws of Ukraine on state environmental control, on strengthening responsibility for criminal offenses against the environment, on strengthening administrative responsibility for violations of environmental legislation, legislation on improving the state system of environmental monitoring, exchange and dissemination of information on the state of the environment, the National Register of Emissions and Transfer of Pollutants (hereinafter – National PRTR) ● Developed and adopted the methodology for ensuring sustainable spatial planning development; ● Developed and adopted 10 methodologies on the assessment of damage to the environment caused by russian military aggression; ● Audit of damages and losses carried out for all subsystems of state environmental monitoring.	● Established a competencies development system in accordance with the requirements to the qualification and KPI ● 100% of plans and programs of state and local level, incl. those related to the post-war recovery, passed the SEA; ● Increase of the share of state and local plans and programs in which the results of SEA are taken into account and amended before their adoption ● Increase in the number of up-to-date tools for the assessment and forecasting of environmental risks (legal methodologies, standards, mathematical tools and IT-technologies) for SEA purposes; ● Provided open access to the state environmental monitoring data for the purposes of SEA and EIA; ● A new authority on the state environmental control created and competitions for positions held in accordance with the main principles of the Public Administrative Reform; ● High level (60+%) of trust of citizens and businesses in the reformed authority on the state environmental control, decrease in the number of appeals regarding the corruption and other offenses by the new authorrity; ● Stable functioning of the open IT-system for the state environmental control purposes, publishing of the environmental inspections made available to the public results of 100% of environmental inspections and within the prescribed timelines;	increase in the share of state and local plans and programs in which the results of SEA were taken into account and required amendments before their adoption made; ● Increase in the number of up-to-date tools for the assessment and forecasting of environmental risks (legal methodologies, standards, mathematical tools and IT-technologies) for SEA purposes; ● Laws and by-laws on ecosystem services, their inventory, valuation, conservation and sustainable management adopted; ● The number of projects on the restoration of ecosystem services including after their degradation caused by the war implemented; ● The system of ecological and economic accounts compliant with the SEEA of Eurostat, integrated into the state system of statistical observations; ● The number of modernized infrastructure units of the state environmental monitoring system; ● Number of new observation sites, laboratories of the state environmental monitoring system;

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		● Increase of the share of prevented environmental damage to the environment in comparison with the share of committed environmental offenses, and increase in the share of the solved environmental offenses which environmental damage was compensated ; ● Laboratories for the state environmental control are equipped in accordance with a adopted standard; ● Developed and adopted legal acts on the implementation of responsibility for criminal offenses against the environment; regarding the minimum criteria for environmental inspections in accordance with EU acquis; regarding amendments to the State Strategy for Regional Development 2021-2027; ● The share of recognized and compensated amount of losses and damage to the environment caused by the armed aggression, in comparison with the total amount of compensation calculated in accordance with adopted methodologies; ● Developed and adopted: legislative acts on improving the system of environmental taxation and payments for the use of natural resources; on the creation of an independent environmental fund and its financing mechanisms; on environmental insurance of activities that pose an increased environmental hazard; on improving the procedure for issuing a permit for emissions of pollutants into ambient air; methodological basis for subsystems of the state environmental monitoring .	

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		• IT systems for environmental monitoring, National PRTR, electronic service for issuing permits for emissions of pollutants into the air are created and functioning; • The number of restored/modernized infrastructure units of the state environmental monitoring system	
The total amount of financial resources required to achieve the Objective	EUR 573.34 million		
Objective crosscutting with other directions	All directions within the "Environmental Safety" group Other groups: European integration; audit of losses incurred as a result of the war; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;	All directions within the "Environmental Safety" group Other groups: European integration; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;	All directions within the "Environmental Safety" group Other groups: European integration; restoration and development of infrastructure; economic recovery and development; energy security; public administration; construction, urban planning, modernization of cities and regions; new agricultural policy; digitization; anti-corruption policy; health care;
Tasks to achieve objective	**Task 1.** Establishing legal framework for the reform of environmental control by adopting the Laws of Ukraine on state environmental control, on strengthening responsibility for criminal offenses against the environment, on strengthening administrative responsibility for violations of environmental legislation.	**Task 7.** Effective implementation of reforms and the Recovery Plan by means of incorporating the guidelines of SIGMA/OECD (divergence of the functions by means of the central competent authorities on the implementation of policy on nature reserve fund and biodiversity, delivering public administrative services, ensuring the implementation of environmental policy at the	**Task 15.** Implementation of the minimum criteria for environmental inspections in accordance with EU aquis **Task 16.** Implementation of the tool of economic valuation of ecosystem services for the sectoral and regional development

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
	Task 2. Calculations of needs on environmental restoration and the amount of compensation for damage to the environment caused by Russian aggression, by means of adopting particular methodologies. **Task 3.** Improvement of the Strategic Environmental Assessment and Environmental Impact Assessment procedures for the wartime **Task 4.** Development of a methodology for ensuring sustainable spatial planning development and amendments to the State Strategy of Regional Development for 2021-2027 **Task 5.** Adoption of the legislative framework for the improvement of the state system of environmental monitoring, information provision of state administration and informing the population, the procedure for issuing permits for emissions of pollutants into the atmosphere, the National Register of Emissions and Transfer of Pollutants. **Task 6.** Conducting an audit of the damage caused to the infrastructure of state environmental monitoring as a result of military operations, determining the need for restoration	regional level, relaunching the bodies of the state environmental control) **Task 8.** Screening and identification of the mechanisms of compensation for environmental damage **Task 9.** Integration of the environmental policy component into post-war recovery plans and projects by means of Strategic Environmental Assessment and Environmental Impact Assessment **Task 10.** Analysis of the system of environmental taxation and payments for the use of natural resources with the purpose of harmonizing it with the EU environmental taxation system. Development of the concept of reforming the state environmental fund with the purpose to finance environmental protection measures and green transformation **Task 11.** Assessment of challenges and threats to the sustainable development of regions of Ukraine caused by russian armed aggression **Task 12.** Development and approval of the methodological framework for state environmental monitoring subsystems **Task 13.** Restoration of the infrastructure of the state environmental monitoring system damaged by military actions **Task 14.** Digitization of the environmental protection sphere. Implementation of IT systems for: environmental monitoring, National PRTR, electronic service for issuing permits for emissions of pollutants into the air, state environmental control, updating the EIA register, creating the SEA register, creating a system of integrated	**Task 17.** Modernization and development of observation networks, laboratories of the environmental monitoring system

	Stage 1: June 2022 – December 2022	Stage 2: January 2023 – December 2025	Stage 3: January 2026 – December 2032
		permitting, digitizing the services of the State Geological Survey, the state register of operators of controlled substances, the unified register for monitoring, reporting and verification of greenhouse gas emissions, in the field of waste management, forestry, water and land resources, biodiversity and protected areas	

ANNEX 1

Necessary legal framework of the section Environmental safety

The scope of analysis (a separate component) within the scope of the direction: Climate policy: mitigation and adaptation to climate change

№	Legal act name	Content of development/amendments to legal act	The state authority responsible for the development/amendments of the legal act	Term of development	Deadline for entry into force
1	Draft Law «On the strategy of low-carbon development of Ukraine for the period up to 2050»	National goals and principles of state climate policy and low-carbon development of Ukraine, principles of proper climate governance in the sphere of regulation of negative anthropogenic influence on climate change and low-carbon development of Ukraine established	MEPNR	Dec 2022	Jun 2023
2		Setting national goals for the implementation of Ukraine's integrated climate policy (goals to reduce carbon intensity,	MEU	Jun 2023	Sept 2023

	CMU Order "On approving the National Energy and Climate Plan by 2030"	increase energy efficiency and develop renewable energy sources), fulfillment of the terms of the Energy Community Treaty.	MEPNR MCTD		
3	CMU Order "On approving the Action Plan on implementation of the updated nationally determined contribution of Ukraine to the Paris Agreement"	A plan of measures to reduce greenhouse gas emissions and achieve the goal of the renewed nationally determined contribution to the Paris Agreement approved	MEPNR	Dec 2022	2023
4	Law “On ratification of the Kigali Amendment to the Montreal Protocol on Substances that Deplete the Ozone Layer”	Ukrainian regulatory framework in the field of the circulation of fluorinated greenhouse gases complies with international requirements on the reduction of consumption of fluorinated gases	MEPNR	2023	2024
5	Amendments to the Resolution of the Cabinet of Ministers of Ukraine dated 17.09.1996 № 1147	Review the list of activities that belong to environmental protection measures and bring it into line with the EU classification.	MEPNR	Oct 2022	2023
6	Law "On the Ukrainian Climate Fund" and by-laws to implement the Law	An effective mechanism of environmental financing, accumulation of funds and their direction for long-term measures, which will help to reduce greenhouse gas emissions, introduced.	MEPNR MFU MECU other CBEP	2023	2024
7	Law “On amendments to certain laws concerning financial instruments, financial markets and capital markets”, legal acts on introduction of green bonds market in Ukraine,	Provision of mechanism of financing of measures on reduction of greenhouse gas emissions, determination of procedure of support of green projects. The classification of activities and projects corresponding to the EU Green course has been approved, as well as the system of confirmation of conformity and reporting formats	MEPNR MFU MECU	2023	2024

	the CMU Resolution "On Approval of the European Green Taxonomy", the NBU decree, decision of NSSMC		other CBEP		
8	CMU Order on Approval of the Regulation on the Innovative Technology Center for mitigating Climate Change impacts"	Creation of an analytical and technological support center for testing and dissemination of innovative and clean technologies, which are included in projects on implementation of climate policy	MEPNR	2023	2024
9	Order of the MEPNR on approval of "Methodical recommendations for assessment of risks and vulnerability of socio-economic sectors and natural components to climate change"	Implement unified approaches to risk assessment and climate change vulnerability in economic sectors and natural ecosystems	MEPNR MCTD MECU MAPF MIU MCIP SES MHS NAS NAAS NAMS	Dec 2022	2023
10	Order of the MEPNR on approval of "Methodical recommendations on inclusion of adaptation to climate change in the program of socio-economic development of administrative-territorial units, regional development strategies and plans of measures for their implementation"	The purpose of the document is to introduce a unified methodology for developing strategies for adaptation to climate change and plans for their implementation at regional and local levels.	MEPNR MCTD NISS	Dec 2022	2023

11	Legal acts to introduce the national emissions trading system	Establishment of legal and institutional framework for the functioning of the ETS, introduction of changes into the effective legal acts on monitoring, reporting and verification of greenhouse gas emissions	MEPNR	2023-2025	2026
12	Order of the MEPNR on approval of the procedure of keeping records and reporting by operators of controlled substances moving through the customs territory of Ukraine, placed on the market, used and handled controlled substances and goods	The mechanism of keeping records and reporting by operators of controlled substances as a component of the system of monitoring the circulation of controlled substances in the country and ensuring compliance with international obligations under the Montreal Protocol on Substances that Deplete the Ozone Laye established.	MEPNR	Dec 2022	2024
13	Order of the MEPNR on approval of the list of technologies for destruction of controlled substances and their use	Defines the list of technologies for destruction of controlled substances and their use	MEPNR	2022	2023
14	Order of the MEPNR on approval of the minimum requirements for training programs for individuals who claim to receive a qualification document (certificate) for the performance of works defined in part one of Article 10 of the Law of Ukraine "On Regulation of Economic Activity with	Minimum requirements for training programs for individuals who claim to receive a qualification document (certificate) for work with controlled substances and equipment established.	MEPNR	Dec 2022	2023

	Ozone-Depleting Substances and Fluorinated Greenhouse Gases"				

The scope of analysis (separate component) within the scope of the direction: Environmental safety and effective waste management

№	Legal act name	Content of development/amendments to legal act	The state authority responsible for the development/amendments of the legal act	Term of development	Deadline for entry into force
1	**Chemical safety.** Law of Ukraine "On Chemical Safety and Chemicals"	Definition of legal, organizational and economic principles in the field of chemical safety, aimed at prevention of negative influence of chemical products on environment and public health, establishment of relations arising in the sphere of chemical safety management, taking into account Ukraine's international obligations in this sphere.	MEPNR	Drafted	6 month after approval of the law
2	**Radiation safety.** Amendments to the Law of Ukraine on "National Target Environmental Program for Radioactive waste Management"	Update of the mechanisms of replenishment of the State Fund for the Management of Radioactive waste, setting target indicators and to increase the efficiency of funds use	MEPNR MEU	Drafted	
3	**Industrial pollution.** Draft law "On protection of the constitutional rights of Ukrainians on the safe environment for health and livelihoods" № 6004-2	Implementation of a new permitting system (integrated permits) to regulate industrial pollution in accordance with EU legislation	MEPNR, CEPNR	Drafted	6 month after approval of the law
4	**Industrial pollution.** Legal acts for draft Law №6004-2 implementation	List of 12 legal acts, which includes implementation of the mechanism of integrated permitting, including the register of integrated permits, as well as the procedure of approval and updating of conclusions of the best available technologies and methods of management and informing about them.	MEPNR	During 6 month after approval of the draft law; for 2 legal acts - 10 month after approval of the draft law	Not later than 6 month after approval of the draft law; for 2 legal acts - 10 month after approval of the draft law

5	**Industrial pollution.** MEPNR oders regarding approval of the NTM conclusions	Legal acts for branch regulation of industrial activities	MEPNR	To Jan 1, 2024	To Jan 1, 2024
6	**Waste management.** egal acts for Law of Ukraine "About waste management" implementation (cording to list in Annex 1)	Implementation of the Law of Ukraine "About waste Management", improvement of waste management system, definition of legal, organizational, economic principles and control mechanisms to ensure comprehensive protection of human health and the environment by means of measures to prevent or reduce waste generation, reduction of negative consequences from waste management, facilitation of waste preparation for reuse and recovery.	MEPNR, MCTD, MHC	2022	2023
7	**Waste management.** Draft Law "On waste of Electrical and Electronic Equipment"	This draft Law supplements the general legislation of Ukraine on waste management of electrical and electronic equipment (EEE) and is designed taking into account the some requirements of Framework Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste and repealing certain Directives and Directive 2012/19/EC of the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment.	MEPNR	2023	2024

8	**Waste management.** Draft Law "On batteries and accumulators"	Developed. The draft Law aims to introduce a system of extended responsibility of the manufacturer regarding batteries and accumulators, promote their sustainable production and create a system of management of batteries and accumulators waste, provide a high degree of recycling and return to economic circulation of secondary raw materials, reduce the removal of unnecessary waste batteries and accumulators. The draft law complements the general legislation of Ukraine on waste management in the part of waste management of batteries and accumulators and was developed taking into account the main requirements of (Framework) Directive No. 2008/98/EC of the European Parliament and the Council of November 19, 2008 "On waste and the repeal of certain directives" and Directive 2006/66/EC of the European Parliament and the Council of September 6, 2006 on batteries, batteries and accumulators and their waste and repealing Directive 91/157/EC.	MEPNR	2023	2024
9	**Waste management.** Draft Law "On packaging and packaging waste"	The draft law complements the general legislation of Ukraine in terms of packaging waste management and was developed taking into account the main requirements of the Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste and repealing certain Directives and the European Parliament and Council Directive 94/62/EC of 20 December 1994 on packaging and packaging waste, Directive (EU) 2018/852 of the European Parliament and of the Council of 30 May 2018 amending Directive 94/62/EC on packaging and packaging waste, in order to apply the provisions of the European Circular Economy Package, which is aimed at improving the circularity of the use of resources and the circularity of the EU economy.	MEPNR	2023, In the process of drafting	2024

10	**Waste management.** Draft Law "On extraction industry waste"	The draft law complements the general legislation of Ukraine in terms of creating an effective and safe system of waste management of the extractive industry. The tasks of the draft law are: creation of conditions for a safe environment life activities of citizens; prevention and reduction of negative impact on the natural environment; harmonization of European legislation; transition to a circular economy; responsible mining.	MEPNR	2023	2024

3. The scope of analysis (separate component) within the scope of the direction: Sustainable use of nature resources in terms of increased demand and limited offer

№	Legal act name	Content of development/amendments to legal act	The state authority responsible for the development/amendments of the legal act	Term of development	Deadline for entry into force
1	Draft Law “On amendments to some legislative acts of Ukraine regarding the simplification of land conservation procedures and the expansion of natural ecosystems"	Amendments to the following legal acts: Land Code of Ukraine Law of Ukraine "On Land Protection", Law of Ukraine "On Land Management", Law of Ukraine "On Protection of the Natural Environment", Law of Ukraine "On expropriation of land plots, other immovable property placed on them, which are in private ownership , for public needs or for reasons of public necessity."	MEPNR	Oct 2022	to Jan 2023
2	Draft Law “On amending some legislative acts of Ukraine regarding the creation of linear and other agroforestry plantings”	Amendments to the following legal acts: the Land Code of Ukraine, the Forest Code of Ukraine, the Law of Ukraine "On Land Protection", the Law of Ukraine "On Land Management", "On Land Reclamation" and the development of relevant by-laws, which will make it possible to create plantations necessary for land protection.	MEPNR MAPF MCTD	Jun 2023	Jan 2024
3	Preparation of a program of measures to restore and rehabilitate lands affected by the military aggression of the russian federation	Military actions caused by the invasion of the russian federation led to large-scale destruction of warehouses (containers) with agrochemicals, mineral fertilizers, tanks with lubricants, motor oils, motor fuel, etc. Such destruction led to the contamination of land resources with subsequent diffuse contamination of groundwater and hydrodynamically connected surface water bodies. It is necessary to develop a program of measures for cleaning and restoration of land plots for its further immediate implementation.	regional state administrations, local self-government bodies, MAPF, SSUGCC, MEPNR	May 2023	Dec 2023

4	CMU draft order "On approval of the plan of measures for the implementation of the State Forest Management Strategy of Ukraine until 2035"	Effective implementation of the State Forest Management Strategy of Ukraine until 2035	MEPNR	In the process of drafting	Jul 2022
5	Draft resolution "On approval of the Concept of the state target program "Large-scale afforestation of Ukraine"	Implementation of the Decree of the President of Ukraine No. 228/2021 "On some measures for the preservation and reproduction of forests" to ensure the expanded reproduction of forests and increase their area	MEPNR	Approved by CBEP	2022
6	The draft CMU resolution "On approving the rules for felling in the forests of Ukraine, amending the Procedure for the special use of forest resources and recognizing certain resolutions of the Cabinet of Ministers of Ukraine as invalid"	Establishment of the legal basis for conducting forestry based on the principles of forestry close to nature, by reducing the volume of continuous felling and transitioning forest management and forest use to the principles of sustainable development	MEPNR SFRA	Drafted, goes through negotiation with CBEP	2022
7	Draft CMU Resolution "Some issues of management of state-owned objects in the field of forestry"	The purpose of the draft resolution is to reform forestry, including improving the management system of state forestry enterprises, through the creation of a state unitary commercial enterprise "Forests of Ukraine"	MEPNR SFRA	Goes through negotiation with CBEP	2022
8	Draft CMU Resolution "On some issues of felling in the forests of Ukraine and forest inventory under martial law"	The purpose of the draft resolution of the CMU is to regulate the conduct of felling in the forests of Ukraine by all forest users and forest owners and to publish related data sets under martial law in order to ensure the stable functioning of the forestry industry, prevent irreversible ecological and economic losses and strengthen the state's defense capabilities, as well as establish requirements to the forest inventory cycle.	MEPNR SFRA	Goes through negotiation with CBEP	2022

9	Draft order of MEPNR on the approval of the Methodology for determining damage and losses caused to the forest fund	Approval of the relevant Methodology for the purpose of determining damage and losses to the lands of the forest fund	MEPNR	In the process of development	2022
10	Draft CMU order "On the approval of the State target ecological program for improving fire safety in the forests of state-owned enterprises and institutions belonging to the management sphere of the State Forest Resources Agency for 2021-2025"	Increasing the level of fire safety in natural ecosystems, reducing the area and number of forest fires, consistently reducing the risks of emergency situations related to forest fires, increasing the protection of the population and territories from natural and man-made threats	MEPNR SFRA		2022
11	Draft Law "On Amendments to Certain Legislative Acts on Forest Conservation" of June 11, 2021 No. 5650	The purpose of adopting the act is to establish the legal and organizational basis for the identification and preservation of self-seeded forests, to simplify and stimulate the afforestation procedure, to ensure the preservation of pastures and hayfields, to ensure the preservation of forests by complicating the procedure for changing the purpose of land plots for forestry purposes and other forested areas.	MEPNR SFRA	Adopted as a basis in the first reading in 2021 (15.07.2021)	2022

12	Draft Law "On the territories of the Emerald Network" registration No. 4461	The purpose of the adoption of the act is to establish the legal and organizational basis for defining the territories of the Emerald Network and their management in Ukraine for the preservation of natural habitats and species of fauna and flora subject to special protection, legal and organizational basis for assessing the impact on the territory of the Emerald Network in the process of making decisions on the implementation of economic activities that may have a significant impact on the territory of the Emerald Network, taking into account state, public and private interests, ecological and Emerald Networks, preservation of biodiversity, fulfillment of Ukraine's obligations under international treaties, the binding consent of which has been granted by the Verkhovna Rada of Ukraine.	MEPNR SFRA	The draft law is being considered by VRU	2022
13	Draft CMU Resolution "On Approval of the Procedure for Creating Protection Zones for the Preservation of Biodiversity in Forests"	Establishment procedure for creating protection zones for the preservation of biodiversity in forests	MEPNR SFRA	Needs to be developed	2022
14	Draft CMU order "On approval of the Concept of stabilization of the ecological situation and provision of ecological security in the territories where military operations took place".		MEPNR SFRA	Needs to be developed	2023
15	Water Strategy of Ukraine	The draft Strategy lays the foundations for strategic planning for water sector reform	MEPNR, MCTD, MIA, SAWR, UGS, SEI	Goes through final negotiation with CBEP	Jul. 2022

16	**Water and marine resources.** All-National targeted program for the development of water management and ecological rehabilitation of the Dnieper river basin for the period till 2030	This program is a logical continuation of the All-National Targeted Program for Water Management and Environmental Rehabilitation of the Dnieper River Basin for the period till 2021 and is the financial basis for the development and operation of water management in Ukraine.	MEPNR, SAWR	Dec. 2022	Jun. 2023
17	**Water and marine resources.** Amendments to the Law of Ukraine "On Drinking Water, Drinking Water Supply and Sewerage" (News of the Supreme Council of Ukraine, 2002, № 16, p.112), Water Code of Ukraine in parts of ensuring equal access to safe and affordable water for all	There is a shortage of fresh water of proper quality in 13 regions of Ukraine. This situation is exacerbated by the effects of climate change and hostilities, which have led to the destruction of water supply infrastructure. Today, only 30.1% of the rural population has access to centralized water supply and 824 settlements in 9 oblasts are supplied with transported water.	MCTD, MEPNR, MHC	Development is needed	Dec. 2023
18	**Water and marine resources.** Concept of the State Targeted Science Program on water resources management till 2030	Lays the financial basis for scientific support of the process of sustainable water management	MEPNR, NAS, NAAS, NAMS	Developed, goes through negotiation with CBEP	Dec. 2023.
19	**Water and marine resources.** State Targeted Science Program on water resources management till 2030	Lays the financial basis for scientific support of the process of sustainable water management	MEPNR, NAS, NAAS, NAMS	Jun. 2023	Dec. 2023

20	**Water and marine resources.** 9 River Basin Management Plans (RBMP)	RBMP are the basis for planning activities aimed on environmental water bodies rehabilitation	MEPNR, SAWR, UGS, SEI	Aug. 2024	Dec. 2024
21	**Water and marine resources** 9 Flooding Risk Management Plans (FRMP)	FRMP are the basis for planning activities aimed minimization of flooding risks	MIA, SES, SAWR	Developed, goes through final negotiation with CBEP	Dec. 2022
22	**Water and marine resources.** Action plan to achieve and maintain the "good" environmental status of the Azov and Black Seas for the period 2022-2027	The Action Plan is the basis of the planned activities for the ecological rehabilitation of the Azov and Black Seas and the main tool for the implementation of the Marine Environmental Strategy	MEPNR	Dec. 2022	May 2023
23	**Water and marine resources.** Guidelines for developing and approving plans for integrated coastal zone management	Forms the order of preparation, structure and level of approval of plans on integrated management of coastal territories	MEPNR	Dec. 2022	May 2023
24	**Water and marine resources.** The program of state ecological monitoring of the seas of Ukraine for 2022-2027	Identifies the locations, frequencies and ingredients that are monitored	MEPNR	Dec. 2022	May 2023
25	**Water and marine resources.** Plans for integrated coastal zone management (for Azov and Black Seas)	Forms approaches to sustainable use of coastal and marine resources	MEPNR	Dec. 2023	May 2024

26	**Water and marine resources.** The program of reserve supply of undegroundwater to the settlements of Ukraine, an alternative to this program may be to amend the National Program "Drinking Water of Ukraine for the period 2022 - 2026."	Provides priority needs of the population in drinking water in case of the destroyed water supply infrastructure as a result of military actions	MCTD, UGS	Dec. 2022	May 2023
27	**Water and marine resources.** Amendments to the legislation in order to solve the problems of reproduction and preservation of wetlands with their subsequent reservation	It aims to recreate and preserve wetlands with their subsequent reservation	MEPNR, MAPF, SAWR, SAAF	Dec. 2023	May 2024
28	**Water and marine resources.** Development of methods for classification of wetlands and determination of suitable and important for wetlands reservation	Aims to create scientific and methodological principles of reproduction and conservation of wetlands with their subsequent reservation	MEPNR, MAPF, SAWR, SAAF	Dec. 2025	Dec. 2026
29	**Subsoil.** Draft Law of Ukraine "On Amendments to the Mineral Development Program until 2030"	The draft law aims to improve the procedure of geological study of the subsoil. The draft law envisages concentration of geological exploration on priority areas of mineral development; concentration of state funding exclusively on exploration and prospecting in order to identify investment-attractive objects.	UGS	Draft Law registered in the Supreme Council of Ukraine on October 27, 2021, № 6227.	January 2023

30	**Subsoil.** Draft Law of Ukraine "On Amendments to the Budget Code of Ukraine to ensure the Mineral Development of Ukraine"	The draft law provides amendments to the Budget Code of Ukraine regarding creation of the State Fund for Mineral Development of Ukraine as part of the special fund of the State Budget of Ukraine, determination of sources and areas of usage of the State Fund for Mineral Development of Ukraine.	UGS	Draft Law registered in the Supreme Council of Ukraine on October 27, 2021, No. 6228	January 2023
31	**Subsoil.** Draft Law of Ukraine "On Amendments to Certain Legislative Acts of Ukraine Concerning the Improvement of Legislation in the Sphere of Subsoil Use" (redrafted), (No.4187 dated October 05, 2020)	The draft law aims to improve and unify requirements to various stages of the subsoil use and permission procedures.	UGS	Draft Law was adopted in the first hearing on June 01, 2021. It is currently being prepared for the second hearing.	January 2023
32	**Subsoil.** Acts of secondary legislation necessary for digitlization of services in the sphere of subsoil use	Digitalization of services of SE "Geoinform", other services of UGS (namely, incorporation of single state informational system regarding subsoil use which provides access to all information necessary for subsoil use; submission of documents and reporting exclusively in electronic form via e-cabinet of the subsoil user; digitalization of services of SE “Geoinform”; digital comparison of coordinates of deposits and protected areas with the aim to provide to potential subsoil users information about existing restrictions; digital comparison of coordinates of deposits and land plots).	UGS, MEPNR, CBEP	To be drafted	January 2023
33	**Subsoil.** Amendments to the Subsoil Code of Ukraine	Changes in the status of technogenic deposits, their definition as an object of subsoil use; changes to establish a mechanism for the use of technogenic deposits; changes	SCU, UGS, MEPNR, CBEP	To be drafted	December 2025

		on a simplified system of accounting and use of small wastes from the processing industry located on land plots.			
34	**Subsoil.** Acts of secondary legislation related to the adoption of amendments to the Subsoil Code of Ukraine concerning status of technogenic deposits	Changes to the specifics of accounting and use of technogenic deposits / small wastes of the processing industry.	UGS, MEPNR, CBEP	To be drafted	December 2025

4. =The scope of analysis (separate component) within the scope of the direction: Conservation of natural ecosystems and biological diversity, restoration and development of protected area system

№	Legal act name	Content of development/amendments to legal act	The state authority responsible for the development/amendments of the legal act	Term of development	Deadline for entry into force
1	Draft law “On landscapes"	Implementation of the European Landscape Convention in Ukraine	MEPNR	2022-2023	2024
2	Updated "General plan of the territory of Ukraine"	Provision and monitoring of the implementation of the landscape program in the process of planning documentation development	MEPNR	2022-2023	2025
3	Introduction of complex amendments to the Law of Ukraine "On Ecological Network"	Legal framework for expansion of eco-commerce, increase of institutional capacity of United Territorial Communities in issues of organization of protection of nature at the local level, ensuring proper fulfillment of international environmental obligations of the country.	MEPNR	2022-2023	2024
4	Draft Law “On Emerald Network”	Legal framework for fulfillment of obligations in accordance with the Berlin Convention in the part of preservation of valuable natural territories with international status	MEPNR	2022	2023
5	Amendments to the State Strategy for Regional Development for 2021-2027	Legal framework for issues of sustainable development and organization of environmental activities at the regional level	MEPNR	2023	2024

5. The area (the component) of analysis within the direction: Effective public administration in the field of environmental protection and use of natural resources

№	Legal act name	Content of development/amendments to legal act	The state authority responsible for the development/amendments of the legal act	Term of development	Deadline for entry into force
1	**Environmental control.** Draft Law "On state environmental control» (reg.. № 3091 dated 19.02.2020)	Draft law provides for reforming the state environmental control	MEPNR	Draft law ready to go through second reading	01.10.2022
2	**Environmental control.** Draft Law "On amendments to the Code of Ukraine on Administrative offenses (reg. № 6175 dated 13.10.2021) .	The draft law envisages increasing administrative responsibility in the sphere of nature protection, use of natural resources	MEPNR	Draft law registered in VRU	31.12.2022
3	**Environmental control.** Draft Law "On amendments to the Criminal Code of Ukraine (reg № 6148 від 07.10.2021)	The draft Law envisages increasing criminal responsibility in the field of nature protection, use of natural resources	MEPNR	Draft law registered in VRU	31.12.2022 p
4	**Environmental control.** Draft methodologies on the assessment of damage to the environment, and a set of by-laws to the adopted laws to provide the work of the newly established body on environmental control	Developing methodologies and adopt appropriate legal acts to provide theassessment of losses and damage to the environment and environmental infrastructure facilities caused by the armed aggression of the russian federation	MEPNR	2023	Dec 31, 2023
5	**Environmental control.** Draft Law on implementation of the provisions of the EU Directive 2004/35/CE on Environmental Liability with the purpose to prevent and compensate damage to the environment	Implementing the provisions of the EU Directive with the view to harmonize the mechanisms of compensation for damage to the environment	MEPNR	2026-2032	12.2032

6	**Environmental control.** The draft Law onamendments to the laws of Ukraine to implement the minimum criteria for environmental inspections, in accordance with the EU Recommendation 2001/331/EC	Harmonizing regulations for environmental inspections with EU standards	MEPNR	2026-2032	12.2032
7	**Improvement of instruments of the state environmental policy implementation.** Draft Law "On Amendments to the Tax Code", concerning the revision of the profit tax and environmental tax rates, and revision the base of environmental taxation in accordance with the classification requirements of the Eurostat;	Regulatory and legal changes prepared that provide transformation of energy and transport sector taxes to the category of environmental taxes, adjust the rates of environmental taxes, introduce adjusting coefficients with the lowering or raising effect	MEPNR	2022-2026	12.2032
8	**Improvement of instruments of the state environmental policy implementation.** Draft Law "On amendments to the Budget Code on the procedure of distribution of environmental taxation revenues", and on revision of the base of environmental taxation in accordance with the classification requirements of the Eurostat	Providing revenues to the special environmental fund in accordance with the adjusted base of environmental taxation, as well as the adjusted rates of environmental taxes	MEPNR	2022-2026	12.2032

9	**Improvement of instruments of the state environmental policy implementation.** Draft Law of Ukraine "On amendments to certain legislative acts concerning the implementation of the SEA (support in the Supreme Council of Ukraine of the draft Law of Ukraine "on amendments to certain Legislative acts concerning introduction of liability for violation of the procedure of the strategic environmental assessment implementation". (reg. No 5159 on 25.02.2021)	Establishing responsibility for violation of the legislation on SEA and granting powers to the State Inspectorate for State Supervision (control) for its observance; Simplification and optimization of the SEA procedure (refusal of "archaisms" of the type of printing of messages in newspapers, wider application of electronic means of communication, registers, etc.).	MEPNR	drafted	12.2022
10	**Improvement of instruments of the state environmental policy implementation.** Draft Law on amendments to the Code of Ukraine on Administrative offenses concerning the liability for non-compliance with the legislation on Strategic Environmental Assessment"	Administrative liability for violation of the strategic environmental assessment regulations should be introduced	MEPNR	12.2022	12.2023
11	**Improvement of instruments of the state environmental policy implementation.** Draft CMU Resolution "On approvement of the Procedure for maintaining the Unified Register on Strategic Environmental Assessment"	It is required to create an open digital tool and database for access to information on strategic environmental assessment of draft plans, programs and other documents of public planning, and also to regulate the functioning of the register	MEPNR	Within two months from the date of entry into force of the Law of Ukraine on amendments to certain Legislative acts concerning the implementation of the SEA	12.2025

12	**Improvement of instruments of the state environmental policy implementation.** Draft MEPNR order on amendments to the methodological recommendations on implementation of strategic environmental assessment of the documents on public planning approved by the order of the Ministry on 10.08.2018 No 296 with taking into account changes emerging in the environmental, urban planning and land use legislation, and also effects of aggression of the Russian Federation against Ukraine	It is required to adopt methodological approaches to strategic environmental assessment with taking into account the impact and effects of the war	MEPNR	12.2022	12.2022
13	**Improvement of instruments of the state environmental policy implementation.** Draft Law of Ukraine "On amendments to the Law of Ukraine "On Environmental Impact Assessment"	Approaching the EIA procedure to EU aquis, reforming the system of the EIA, drafting the law on the basis of a new approach to the EIA, which will be a compromise for all stakeholders; Simplifying the procedure of EIA and reduce the timelines required to issue a final decision on environmental impact assessment	MEPNR	12.2022	31.12.2025

14	**Improvement of instruments of the state environmental policy implementation.** Amendments to the CMU Resolution No. 1026 of 13.12.2017 "On approving the Procedure on submitting the Documentation for Issuing the conclusion on Environmental Impact Assessment and on Financing of Environmental Impact Assessment and the Procedure for maintaining the Unified Registry on Environmental Impact Assessment"	Simplifying the procedure of public consultations	MEPNR	09.2022	12.2022
15	**Improvement of instruments of the state environmental policy implementation.** Amendments to the CMU Resolution of 13/12/2017 No.989 "On approving the procedure of public hearings in the process of environmental impact assessment"	Providing multi-functional EIA Register	MEPNR	09.2022	12.2022
16	**Improvement of instruments of the state environmental policy implementation.** Methodological recommendations on the implementation of the post-project monitoring by the developers of public and private projects, approved by the order of the MEPNR	Methodological approaches to the managing and conducting the post-project monitoring which is set by the Law of Ukraine "On Environmental Impact Assessment"	MEPNR	12.2023	12.2023

17	**Improvement of instruments of the state environmental policy implementation.** Draft Law of Ukraine "On Ecosystem Services" and relevant by-laws to the Law	Describes the content and significance of ecosystem services, legal and institutional mechanisms for inventorying and evaluating ecosystem services, calculating their economic value, requirements for taking into account when making decisions, as well as for the use of ecosystem services by individuals and legal entities or influence on them. By-laws determine the list of ecosystem services, methods of their inventory and evaluation, other mechanisms for implementing the provisions of the Law	MEPNR	31.12.2023	31.12.2025
18	**Improvement of instruments of the state environmental policy implementation.** Draft Law "On Environmental Protection Fund", and also draft legal act on the procedure of using the Fund's finances , criteria forselection of projects and assessment of financing performance	The decision of the National Security and Defense Council on 23.03.2021 set the task to improve the economic mechanism on financing of environmental protection measures. The draft law will set egal, economic and institutional provisions concerning the Fund creation and functioning . The by-law will set the procedure of assessment and selection of environmental protection projects for further financing within the framework of the Fund's programs.	CMU SCU	01.12.2022	01.12.2025
19	**Improvement of instruments of the state environmental policy implementation.** Draft Law "On environmental insurance and guarantees of compensation for damage caused by activities with an increased environmental hazard"	Draft law is designed to ensure the realization of the constitutional right for compensation ofdamage caused by the violation of the right for the safe environment for life and health and due to activities that pose an increased environmental hazard	SCU	Drafted	draft law is under consideration of the environmental committee of the SCU

20	**Improvement of instruments of the state environmental policy implementation.** Draft CMU Resolution "On amendments to the State Strategy of Regional Development for 2021-2027"	Ensuring the adjustment of the goals and tasks of the State Strategy of Regional Development of 2021-2027 to the challenges and threats caused by Russian military aggression	MCTD	2022-2023	2024
21	**Improvement of instruments of the state environmental policy implementation.** Draft CMU Resolution "On Approval of the Strategy of Sustainable Spatial Development of Ukraine"	Providing the implementation of the concept of sustainable development in strategic state documents on spatial planning	MEPNR MCTD	2022-2026	2025
22	**Improvement of instruments of the state environmental policy implementation.** Draft CMU Resolution "On Approval of the Strategy of State Policy on Public Administration in the field of Environmental Protection"	Provisions on the system of public administration in the field of environmental protection in Ukraine	CMU MEPNR	2022-2023	2024
23	**Environmental monitoring.** Draft law on amendments to certain legislative acts of Ukraine concerning the state system of environmental monitoring	Definition of the relationship between the state system of environmental monitoring and information needs of state administration, establishment of legislative grounds for establishing/updating procedures for state environmental monitoring, creation and integration of information and analytical systems in the sphere of environmental monitoring, level and modes of operation of the system of environmental monitoring	MEPNR	Drafted	Dec 2022

24	**Environmental monitoring.** Draft CMU Resolution on amendments to CMU Resolution No. 391 of March 30, 1998 on Approval of the State Environmental Monitoring System Regulation	Clarification of the functions of the subjects of the state system of environmental monitoring, the order of their interaction and integration of monitoring sub-systems	MEPNR	Aug 2022	Dec 2022
25	**Environmental monitoring.** Draft Draft CMU Resolution on amendments to CMU Resolution No. 827 of August 14, 2019 on some issues of state monitoring in the field of air protection	Full harmonization of the Resolution with EU air quality legislation	MEPNR	Dec 2022	Sep 2023
26	**Environmental monitoring.** Draft CMU Resolution on Approval of the Procedure for implementing Biodiversity and Landscape Diversity	Establishment of a procedure for monitoring biological and landscape diversity	MEPNR	Dec 2022	Sep 2023
27	**Environmental monitoring.** Draft CMU Resolution on Approval of Procedure for Land Monitoring	Establishment of the procedure of land monitoring	MEPNR	Dec 2022	Sep 2023

28	**Environmental monitoring.** Draft MEPNR order "On approving the Procedure of creation and functioning of the Information and Analytical System of Data on the Quality of Atmospheric Air"	The draft order defines requirements to the information and analytical system of data on the quality of atmospheric air, intended for collection, storage, analysis and dissemination of information on the quality of atmospheric air to provide informational interaction between subjects of monitoring of atmospheric air and prompt disclosure of the results of monitoring of atmospheric air the order determines requirements to the information and analytical system of data on the quality of atmospheric air, intended for collection, storage, analysis and dissemination of information on the quality of atmospheric air to provide informational interaction between subjects of atmospheric air monitoring and prompt publication of results of atmospheric air monitoring	MEPNR	Drafted	Dec 2022
29	**Environmental monitoring.** Draft CMU Resolution on approval of the Regulations on establishment and functioning of the Central reference-laboratory in the sphere of state monitoring of atmospheric air	Definition of the principles of creation and functioning of the central reference laboratory in the sphere of state monitoring system in the field of atmospheric air protection.	MEPNR	Dec 2022	Jun 2023
30	**Environmental monitoring.** Draft CMU Resolution on approval of the Procedure of preparation of the National Report on the State of the Environment of Ukraine	Establishment of the procedure for preparation of the National Report on the state of the environment of Ukraine	MEPNR	Dec 2022	Jun2023

31	**Environmental monitoring.** Draft CMU Resolution on approving the Procedure of the State System of Environmental Monitoring and its Subsystems	Defining the basis of the functioning of the state-wide, automated information and analytical system of management decision making and access to environmental information, its network of the state environmental monitoring system and its sub-systems	MEPNR	Dec 2022	Jun 2023
32	**Environmental monitoring.** Draft CMU Resolution on Approval of Procedure for ensuring Technological Compatibility and Information interaction of the State Environmental Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network with the System of Monitoring and Forecasting of Emergencies in Ukraine	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system of providing decision making and access to environmental information and its network with the system of monitoring and forecasting of emergency situations in Ukraine	MEPNR	Dec 2022	Jun 2023
33	**Environmental monitoring.** Draft CMU Resolution on Approval of List of Information needs of Management in the Field of Environmental Protection"	Establishment of information needs of management in the field of environmental protection	MEPNR	Dec 2022	Jun 2023
34	**Environmental monitoring.** Draft CMU Resolution on approval of the Regulations on the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Defining the basis of the functioning of the state-wide, automated information and analytical system of management decision making and access to environmental information, its network of the state environmental monitoring system and its sub-systems	MEPNR	Dec 2022	Jun 2023

35	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for Monitoring of Biodiversity and Landscape Diversity	Establishment of a procedure for monitoring biological and landscape diversity	MEPNR	Dec 2022	Jun 2023
36	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the Field of Biodiversity and Landscape Diversity with the nationwide Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical systems in the area of biodiversity and landscape diversity with the state-wide automated information and analytical system of ensuring decision making and access to environmental information	MEPNR	Dec 2022	Jun 2023
37	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for Monitoring places of waste formation, Storage and Removal	Establishing procedure for monitoring of waste generation, storage and removal sites	MEPNR	Dec 2022	Jun 2023
38	**Environmental monitoring.** Draft CMU Resolution on Approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of waste Management with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system in the field of waste management with the state-wide ecological automated information and analytical system of providing of managerial decisions making and access to environmental information and its network	MEPNR	Dec 2022	Jun 2023

39	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the Field of use and Protection of the Plant World with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information	Definition of the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system in the field of use and protection of the plant world with the state-wide ecological automated information and analytical system of providing of administrative decisions making and access to environmental information"	MEPNR	Dec 2022	Jun 2023
40	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for Monitoring of the Geological Environment	Establishment of the procedure for monitoring the geological environment	MEPNR	Dec 2022	Jun 2023
41	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of Protection and rational use of facilities with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system of protection and rational use of the resources with the state-wide ecological automated information and analytical system of providing for decision making and access to environmental information	MEPNR	Dec 2022	Jun 2023

42	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Tech determination of levels of pollutants - concentration of pollutants in atmospheric air or axles at a specified time	Determination of the unified levels of pollutants - concentration of pollutants in atmospheric air or in precipitation at the specified time	MEPNR	Dec 2022	Jun 2023
43	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of Atmospheric Air Protection with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Definition of the basis of the functioning of technological compatibility and informational interaction of the state-wide ecological automated information and analytical system with the system in the sphere of atmospheric air protection with the state-wide ecological automated information and analytical system of providing of decision making and access to ecological information and its network	MEPNR	Dec 2022	Jun 2023
44	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of Protection, use and Reproduction of the Animal World with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Definition the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system in the sphere of protection, use and reproduction of the animal world with the state-wide ecological automated information and analytical system of providing of decision making and access to ecological information and its network	MEPNR	Dec 2022	Jun 2023

45	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of Land use and Protection with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system in the sphere of land use and protection with the information and analytical system of providing of administrative decisions making and access to ecological information and its network	MEPNR	Dec 2022	Jun 2023
46	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the sphere of use and Protection of the Eco-sector with the nationwide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system in the sphere of use and protection of eco-commerce with the state-wide ecological automated information and analytical system of providing of decision making and access to ecological information and its network	MEPNR	Dec 2022	Jun 2023

47	**Environmental monitoring.** Draft CMU Resolution on approval of Procedure for ensuring Technological Compatibility and Information interaction of Automated Information Systems in the Field of Genetic Engineering and GMO Management with the State-wide Ecological Automated Information and Analytical System for ensuring Management decision making and Access to Environmental Information and its Network	Defining the principles of the functioning of technological compatibility and information interaction of the state-wide ecological automated information and analytical system with the system in the field of genetic engineering activity and GMO management with the state-wide ecological automated information and analytical system of providing management decisions making and access to ecological information and its network	MEPNR	Dec 2022	Jun 2023
48	**Environmental monitoring.** Draft CMU Resolution on approval of the Procedure for establishing Regional Environmental Monitoring Centers	Definition of the mechanism of establishment and functioning of regional environmental monitoring centers	MEPNR	Dec 2022	Jun 2023
49	**Environmental monitoring.** Draft CMU Resolution on approval of the Decree on Regional Environmental Monitoring Centers"	Definition of basic principles, tasks, functioning of regional centers for environmental monitoring	MEPNR	Dec 2022	Jun 2023
50	**Environmental monitoring.** Draft order of the MEPNR "On approving the Procedure of Development and Approval of plans for improving the Quality of Atmospheric Air and short-term Action plans for zones and agglomerations"	Definition the mechanism of development and approval of plans for improvement of atmospheric air quality and short-term plan of actions for zone or agglomeration	MEPNR	Dec 2022	Jun 2023

51	**Environmental monitoring.** Draft Law on the National Register of emissions and Transfer of pollutants	Implementation of legal and organizational principles of creation and functioning of a national register of emissions and transfer of pollutants and creation of a single unified electronic system of access to environmental information for authorities and provision of access to such information for every citizen to improve the efficiency of e-governance in the field of environmental protection	MEPNR	drafted	Dec 2022
52	**Environmental monitoring.** Draft Law on amendments to certain laws of Ukraine concerning improvement of the mechanism of regulation of emissions of pollutants in the atmosphere	Creation of conditions for improvement of the procedure of emission of pollutants in atmospheric air	MEPNR	Apr 2023	Dec 2023
53	Draft CMU Order on approval of the Regulation on the functioning of the Coordination Center and National Contact Points of the EU Framework Program for Research and Innovation "Horizon Europe"	Creation of legal preconditions for the functioning of the Coordination Center and national contact points of the EU's Horizon Europe Framework Program for Research and Innovation	MESU	Apr 2023	Dec2023
54	Draft CMU Order on delegation of representatives and experts to the committees responsible for monitoring the implementation of the framework program of the European Union for research and innovation "Horizon Europe" and the "Euratom" Research and Training Program (2021-2025)	Creation of legal preconditions for the identification of representatives and experts to the committees responsible for monitoring the implementation of the EU's Horizon Europe Framework Program for Research and Innovation and the Euratom Program for the period 2021-2025	MESU	Apr 2023	Dec 2023

55	Draft CMU Resolution on amendments to the Procedure of using the funds provided in the State Budget for fulfillment of Ukraine's obligations in the field of international scientific and technical and educational cooperation	Introduction of provisions on specification of the mechanism of use of funds provided by the Ministry of Education in the state budget under the program "fulfillment of obligations of Ukraine in the field of international scientific, technical and educational cooperation; Participation in the framework program of the European Union for Research and Innovation" for the implementation of the framework program of the European Union for Research and Innovation "Horizon Europe" and the "Euratom" Research and Training Program	MESU	Apr 2023	Dec 2023

INTRODUCTION

Since 2014, Ukraine has been actively moving towards European integration, signing an Association Agreement with the European Union. Over the past 8 years, Ukraine has implemented a number of European integration reforms and has come significantly closer to the EU acquis, despite the actual state of war in which Ukraine has been all this time, which has reduced the state's ability to carry out reforms.

In February 2022, the Russian Federation launched an unprovoked full-scale attack on Ukraine, launching the first open military confrontation between states in Europe since World War II. Responding to the existential threat to the state, President of Ukraine Volodymyr Zelensky submitted an application for accession to the European Union on February 28, 2022, thus intensifying the process of European integration in the state. Already on June 15, the European Commission recommended granting Ukraine the status of a candidate for EU membership, and on June 24, the European Council granted Ukraine the status of a candidate for EU membership. These events determine the direction and pace of work in the field of European integration for the future and make European integration one of the most urgent tasks in the postwar reconstruction of Ukraine.

The purpose of this section of the Recovery Plan is to make Ukraine meet the criteria for full membership and readiness to join the EU.

It is important to note that the European Integration Group is cross-cutting to other groups of the National Council for Recovery of Ukraine from the effects of war (hereinafter – the National Council), and the content of the European Integration Group is relevant to each of the 23 National Council groups. Thus, in most working groups there were subgroups on European integration. At the same time, the European Integration Group sought not to duplicate the work of other groups in its planning, but to develop a general framework for European integration that would be relevant to all sectors. During its work, the European Integration Group has compared the work of all working groups with each other to avoid inconsistencies and duplication and ensured the inclusion of relevant European integration provisions in the work of the relevant sectoral groups.

No separate subgroups have been created within the working group on European integration, as the process of European integration is extremely complex. The section of the Recovery Plan on European Integration covers the implementation of European integration reforms and approximation to the EU acquis, increasing the institutional capacity of the authorities, implementation of the European Union principles and standards, and implementation of procedural measures to approach the EU.

This section of the recovery plan will address the current state of the industry, the impact of the war on the industry, the challenges and opportunities that exist in the field of European integration, the framework in which European integration will take place, and the operational goals, objectives and measures to be taken. used to successfully achieve the goal stated above. The section also contains a description of priority national projects in the field of European integration.

1. The main problems that need to be addressed in the Recovery Plan (in this area)

1.1. Current state of the industry / sector: key figures, the impact of the war on the industry, the state of implementation of program documents

- With the signing of the Association Agreement between Ukraine and the European Union, Ukraine has begun to actively move towards European integration. As of the end of 2021, the state of implementation of the Association Agreement was estimated by the Ukrainian side at 63%.
- On February 28, 2022, President of Ukraine Volodymyr Zelensky has submitted an application to join the European Union.
- At the same time, support for Ukraine's accession to the EU is steadily growing. Thus, in April 2014, support for Ukraine's membership in the EU among Ukrainians was 54%, and in March 2022 it rose to a record 91%.
- Moreover, support for Ukraine's accession to the EU is growing among European voters. Thus, as of April 2022, the level of support for citizens of EU member states is 66%. The highest level of support is shown by residents of Portugal (87%), and the lowest - Hungary (48%), which is the only EU member state where the level of support is less than 50%.
- In addition, the European Union abolished customs duties on imports of Ukrainian goods for a period of one year in support of Ukraine.
- Another important step was the connection of the unified energy system of Ukraine to the energy network of continental Europe (ENTSO-E), which took place on March 16, 2022, ahead of schedule.
- In April 2022, a report on the implementation of the Association Agreement between Ukraine and the European Union for 2021 was published. At the time of its preparation, in accordance with the government's Pulse Agreement Performance Appraisal System, Ukraine had completed 63% of all tasks set out in the 2024 Association Agreement with the EU. During the year, progress reached +9%, but in general during 2014-2021, the Cabinet of Ministers performed 62% of its tasks, the Verkhovna Rada performed 53% of tasks, other authorities performed 52% of tasks.
- On April 8, 2022, the President of the European Commission Ursula von der Leyen submitted to the President of Ukraine Volodymyr Zelensky a questionnaire for obtaining the status of a candidate for EU membership.
- On April 18, President of Ukraine Volodymyr Zelenskyi handed over to the Head of the European Union Delegation to Ukraine Matti Maasikas the completed first part of the questionnaire for Ukraine to receive the status of a candidate for EU membership.
- On May 9, the President of Ukraine presented the second part of the completed questionnaire for obtaining the status of a candidate for membership in the European Union.
- On 16 May, EU Commissioner for Neighborhood Policy and Enlargement Oliver Vargey confirmed that the European Commission had received Ukraine's replies to the questionnaire and announced that the European Commission was preparing an opinion on the application, which Ukraine received in June 2022 with a positive recommendation.
- European Council granted Ukraine candidate status on June 23-24.
- However, it should be noted that in 2022, due to the start of a full-scale war of the Russian Federation against Ukraine, the speed of adoption of bills and bylaws has decreased significantly compared to the plans approved by the Minutes of the 5th meeting of the

Commission the European Union, the European Atomic Energy Community and the Member States, of the other part, from 26 January 2022.

1.2. Key challenges

- A full-scale war and its consequences lead to significant losses of human, time and financial resources, has slowed down the pace of reforms, and made some impossible. There are also limited opportunities to assess the consequences of aggression in the current environment.
- Reduction of trade with the EU due to the war and disruption of logistics and production chains with the EU, and as a result - the loss of Ukrainian producers of European consumers who may reorient (temporarily or permanently) to other suppliers;
- Further opposition of the Russian Federation to Ukraine's European integration aspirations in all directions;
- The need to reach a consensus among EU member states on Ukraine's support for EU membership, including in the context of updating the discussion among EU countries on enlargement to the east and the Balkans, the fears of individual member states about the consequences of enlargement.
- The risk of a gradual decline in the European Union's interest in supporting Ukraine's European integration.
- The need to continue and make appropriate progress in reform in key areas, such as public administration, the rule of law (judiciary, law enforcement), the fight against corruption, etc. It is important to ensure that the success of reforms in these areas is communicated with the EU and its Member States.
- The need to retain existing European integration professionals working in the public sector with the necessary skills and sectoral competence, a gradual increase in the number of such professionals and an increase in their efficiency in the process of increasing the number of tasks related to Ukraine’s EU membership. Such professionals should be paid decently and have a high level of social protection.
- Weak involvement of local governments in the planning of national reforms, government programs, including aimed at European integration.
- Low awareness of the EU cohesion policy.

1.3. Key opportunities

- Significant support for European integration in parliament, reducing the influence of oligarchic interests in various sectors that hampered the adoption of European integration laws
- A key opportunity remains to expand access to the EU market for Ukrainian goods and services as a result of the implementation of the Association Agreement, its trade, economic and sectoral segments.
- New opportunities for Ukrainian exporters - sanctions on Russian goods and services create opportunities to replace these goods and services with Ukrainian ones in the EU markets and other markets of our trading partners. In addition, the EU has lifted all customs restrictions on goods from Ukraine, thus creating the conditions for further reduction of tariff and non-tariff barriers.

- Increasing the level of transparency of the public sector.
- Right now, with the support of both the EU Member States, the European institutions and the citizens of the Member States at such a high level, it is time for decisive reforms and a speedy conclusion of the European integration process.
- The countries of the European Union (including, but not limited to) are interested in investing in Ukraine and providing assistance in rebuilding the country from the effects of war. This is an opportunity for Ukraine to receive the necessary support and not just to rebuild the country, but to rebuild it on the principle of "build back better".
- Ukraine now has a chance to finally put an end to its colonial past and complete the process of formalizing its geopolitical choice, thus asserting its independence.
- Currently, the best conditions are being created for concluding the Agreement on Conformity Assessment and Acceptance of Industrial Products (ACAA Agreement), which will open access of Ukrainian industrial products to the EU market on the basis of mutual recognition of conformity assessment results.
- Sufficient implementation of the acquis and gaining candidate status gives Ukraine access to financial resources, including donor funds - the efficiency of their use is the key to economic growth
- Support for political leadership, the "single voice" of the coalition and the opposition on the need to develop and implement a reform of the administration of international aid by the EU.
- Ukraine's application for EU candidate status has intensified the political discourse on EU enlargement.
- Ukraine has a chance to rebuild its infrastructure immediately in line with the EU's environmental and energy efficiency approaches.
- Establishing cooperation with the European Parliament and the national parliaments of the EU member states.
- Thanks to the creation of "solidarity corridors" and the support of neighboring EU member states, there is an opportunity to modernize cross-border connections and logistics routes between the EU and Ukraine.
- Working together with the European energy system allows to reduce energy dependence on the Russian Federation and fully move to European standards in the electricity sector, as well as to start exporting electricity to ENTSO-E countries.
- Obtaining access to European markets through the standardization and certification of Ukrainian products in accordance with European rules.
- Gaining access to developed world markets after the introduction of EU standards, which are among the highest in the world and those that are accepted and valued in most developed economies.

1.4. Key limitations / framework

- It should be understood that the European Union's assistance for post-war reconstruction, and subsequently for European integration reforms, will in any case take place under certain conditions, with the specific aim of bringing Ukraine closer to European and international norms and standards (in particular, the judiciary), regulatory environment, etc.), and, most likely, taking into account the principle of “more for more”.

- Ukraine must realize that, despite the enormous support of the European Union, accession will not be immediate, and Ukraine still needs to go through all the stages as other candidates, carry out all the necessary reforms and meet the political and economic criteria for membership.
- During the period after the restoration of independence, domestic producers mainly focused on the market of the former Soviet Union, which led to the use of old Soviet standards, and the transition to European standards for most sectors of the economy will take some time.
- The transition to European standards will also mean that Ukraine will need specialists in various fields who will already be familiar with the new standards of work. This means that Ukraine should already start training specialists in relevant fields and retraining existing specialists. This process should be based on an in-depth analysis of which sectors of our economy are competitive and which professionals and how many we need.
- Ukraine needs to clearly define which sectors should be the drivers of the economy, and in order to restore or develop such sectors, targeted programs and necessary legislation need to be developed and implemented.
- Effective recovery of Ukraine's economy will be impossible without an active state policy and cooperation with business in the direction of return of citizens, development of human capital and assistance in determining the center of vital interests of citizens in Ukraine
- Insufficient institutional capacity of the Government, CEB to implement full-scale European integration processes.
- Decreased support for Ukraine's European integration by the EU is a plausible scenario, but public support for European integration, both internally and externally, will largely shape the framework of European integration.
- The image of a country with a high level of corruption has a negative impact on Ukraine's negotiating position on the path to EU accession.
- EU enlargement policy decisions are taken by consensus among member states, and one must be prepared for the fact that each EU country can veto and / or impose additional conditions at each stage of the membership negotiations.
- Ukraine's losses in infrastructure and human capital (including due to the threat of brain drain) create additional risks in terms of implementation of European integration priorities, tasks and qualitative transformations.
- The trade preferences granted by the EU are temporary, which makes it necessary to start negotiations on trade liberalization at the end of this period now.
- Russia continues to block Ukrainian seaports, however, there is insufficient capacity of rail and road transport infrastructure across the EU border, queues for freight at the border, insufficient number of road checkpoints with the EU, insufficient number of checkpoints with joint control with the EU.
- EU integration should be systematic and supported by high-quality analysis of the state of affairs.

2. Goals, objectives, stages of the Recovery Plan in this area

2.1. The goal (objectives) of the proposed changes

- Ensure support for the European Union's recovery plan by the European Union and its member states.
- Fully implement the Association Agreement between Ukraine and the EU, including by implementing reforms under the obligations under the Agreement and other conditions specified in the opinion of the European Commission on Ukraine's application to join the European Union .
- Ensure continuity and consistency of the European integration process.
- Carry out effective communication to maintain the level of support for Ukraine's membership in the EU both within the country and directly within the EU.
- Attracting the maximum possible amount of foreign direct investment by providing investors with risk insurance through the implementation of judicial and law enforcement reforms.
- Complete the reform of the management and audit system for raising / spending public funds in line with the EU acquis.
- Implement the EU acquis and perform tasks related to the process of Ukraine's membership in the EU.
- Ensure economic support and deepening sectoral ties with EU countries.
- Integrate into EU internal markets, ensure food security and the functioning of the logistics network with EU countries.
- Get the actual (real) opportunity for Ukraine to administer EU structural funds.
- Strengthen the institutional capacity of the Government, the CEB and the Parliament to implement the acquis communautaire in the field of European integration.
- Reaching a new level of trade liberalization and sectoral European integration, modernizing relations with the EU and the Association Agreement, including by removing tariff and non-tariff barriers to trade with the EU and promoting Ukrainian exports to the EU, including assistance to new exporters who want to enter the EU market.
- Introduction of an inclusive approach to decision-making, formation of road maps, development of normative and regulatory documents in order to receive feedback from the real sector of the economy.

2.2. Main tasks and necessary measures / steps (short-term)

stage "Economics of wartime: All for victory!", June - December 2022.

№	Task	Measure / Step
1.	Ensure the implementation of reforms in the framework of	1. Implementation of the schedule for submission of NPA projects in the field of European integration for 2022 to the Government and approval by the Parliament of the list of priority bills

	commitments under the Association Agreement between Ukraine and the EU, as well as plans for 2022	approved by the Commission for Coordination of Implementation of the EU-Ukraine Association Agreement (recommended list of bills as attached); 2. Formation of a plan-schedule for submission to the Government of NPA projects in the field of European integration for 2023; 3. Ensuring the cross-sectoral work of CEBs on the development, adoption, implementation of NPAs approved by the Recovery Plan; 4. Analysis of draft laws in the field of European integration for 2022, taking into account the following criteria: - whether they provide for the development of bylaws and which; - whether they envisage the creation of new bodies, the financing of which will be carried out at the expense of the state budget; - whether they provide for the establishment of additional regulatory requirements for business entities and which ones. 5. Providing support, including active work of members of the Government with the parliamentary corps, of bills in accordance with the above list of bills in the areas of European and Euro-Atlantic integration for 2022 (recommended list of bills as of… is attached); 6. Take urgent action by 1 July 2022 to implement the obligation to implement Regulation (EU) № 1227/201 in accordance with the decision of the Council of Ministers of the Energy Community № 2021/07 / MC-EnC of 30 November 2021.
2.	Ensure the institutional and administrative capacity of the Government, Parliament and the executive to carry out reforms, implement the EU acquis and carry out tasks related to Ukraine's EU membership process	1. Ensure effective coordination of the work of the Government, Parliament and executive bodies to perform tasks related to Ukraine's accession to the EU; 2. Increasing the institutional capacity of the executive branch and increasing the human capital involved in European integration reforms, implementing the EU acquis in order to fulfill the tasks related to the negotiations on Ukraine's membership in the EU and preventing the deterioration of working conditions; 3. Strengthening the administrative capacity of the Parliament in the field of European integration, in particular reforming the structure of the secretariats of parliamentary committees in order to introduce the position of deputies for European integration; 4. Carrying out a comparative analysis of administrative structures recommended by the EU for the implementation of the EU acquis with the relevant organization of such structures in Ukraine; 5. Prepare an “administrative capacity roadmap” to ensure the formation of an overall level of administrative capacity in line with EU best practices in order to assess the needs of public authorities and Parliament at national and subnational levels.

		6. Engage technical assistance projects to strengthen the institutional capacity of the Government and the Verkhovna Rada, including at the expert level, for the implementation of the EU acquis and proper screening of Ukrainian legislation for compliance with the EU acquis. 7. Involve technical assistance projects to strengthen the institutional capacity of the Government and the Verkhovna Rada, including at the expert level, to implement the EU acquis and to properly screen Ukrainian legislation for compliance with the EU acquis. 8. Introduce an accelerated procedure for consideration of draft laws aimed at fulfilling Ukraine's international legal obligations in the field of European integration, which must be submitted to the Parliament exclusively by the Government by: ○ Preparation and discussion of the concept of introduction of the accelerated procedure for bills aimed at fulfilling Ukraine's international legal obligations in the field of European integration, taking into account the Action Plan for the implementation of the Association Agreement ○ Preparation and registration of a draft law on amendments to the Rules of Procedure of the Verkhovna Rada on the introduction of an accelerated procedure for draft laws aimed at fulfilling Ukraine's international legal obligations in the field of European integration ○ Amendments to other regulations (CMU regulations, etc.) on the introduction of an accelerated procedure for bills aimed at fulfilling Ukraine's international legal obligations in the field of European integration.
3.	Implement cross-sectoral measures to support the economy and deepen sectoral ties with EU countries	1. Ukraine's accession to the EU's Digital Europe program by concluding an agreement; 2. Conclusion of the Agreement on Freight Transport by Road between Ukraine and the European Union; 3. Conclusion of the Trans-European Transport Network (TEN-T) Map Update Agreement; 4. Consultations with the European Payments Council on the conditions / criteria for Ukraine's accession to SEPA and analysis of compliance of Ukrainian legislation with EU law, which are necessary for the integration of participants in the Ukrainian payment services market to SEPA; 5. Ensuring the functioning of "solidarity corridors"; 6. Implementation of the “Schedule of Ukraine's accession to the EU / EFTA joint transit regime. 6.1. Adoption of the above-mentioned Law of the Verkhovna Rada - the first decade of June 2022; 6.2. Carrying out an evaluation mission of the EC and member states of the Convention on IT readiness and legislative components for Ukraine's participation in the EU / EFTA joint transit

		regime - mid-June 2022 in case of a high-level political decision or September 2022 in the absence of such a decision; 6.3. Invitation to Ukraine for membership in the Convention on the Regime of Joint Transit and the Convention on the Simplification of Formalities in Trade in Goods - the first decade of July 2022; 6.4. Submission to the government of draft laws on ratification of the above conventions and their adoption by the Verkhovna Rada - the second decade of July 2022; 6.5. Depositing ratification documents with the depositary of the Conventions and Ukraine's accession to the EU / EFTA joint transit regime - third decade of July 2022. 7. Ensuring support for Ukrainian exports to the EU and the world; 8. Criminalization of fraud with EU funds provided under projects (programs) to achieve the goals of the association; 9. Concluding administrative arrangements with the European Anti-Fraud Office; 10. Development and implementation of programs based on partnership between cities and regions of the European Union and Ukraine; 11. Analysis of the organizational structure and legal framework of the functioning of the system of protection of financial interests for compliance with the criteria of the acquis in order to prepare a roadmap of measures to gain access to the administration of EU structural funds; 12. Obtaining the results of the previous EU assessment mission on the readiness of Ukraine's quality infrastructure for the conclusion of the ACAA Agreement.
4.	Ensure coverage of the state budget deficit for the period before the end of the war from partner sources	1. Receiving approximately 5 billion dollars a month. 2. Raising funds within the framework of partnership initiatives for the reconstruction of Ukraine, including through preferential credit resources provided to cover the budget deficit and support macroeconomic stability.
7.	Create an international coordination "Platform for Reconstruction of Ukraine" as a single entry point for all actions for the reconstruction of Ukraine, under the joint leadership of the European Commission, which represents	1. Association of partners and organizations supporting Ukraine, including EU member states, other bilateral and multilateral partners, as well as international financial institutions, within the framework of the “Ukraine Reconstruction Platform”.

	the EU, and the Government of Ukraine	
8.	Implement the recommendations of the conclusion of the European Commission on Ukraine's application for membership in the European Union	1. Adoption and implementation of legislation on the selection procedure for judges of the Constitutional Court of Ukraine, which introduces preliminary selection of judges based on an assessment of their integrity and professional skills, in accordance with the recommendations of the Venice Commission 2. Completion of the integrity check by the Ethics Council of candidates for members of the High Council of Justice and selection of candidates for the establishment of the High Qualification Commission of Judges of Ukraine. 3. Further strengthen the fight against corruption, in particular at a high level, through the provision of a proactive and effective investigation and the establishment of a credible system of accounting for harassment and convictions; completion of the appointment of a new head of the Specialized Anti-Corruption Prosecutor's Office by approving the determined winner of the competition and launching and completing the process of selection and appointment of a new director of the National Anti-Corruption Bureau of Ukraine. 4. Ensuring compliance of anti-money laundering legislation with the standards of the Financial Action Task Force on Money Laundering (FATF) 5. Adoption of a comprehensive strategic plan to reform everything. law enforcement / law enforcement sector as part of the wider security bloc of Ukraine. 6. Introduction of anti-oligarchic legislation in order to limit the excessive influence of oligarchs on economic, political and social life; this should be done in a legally sound manner and should take into account the future conclusion of the Venice Commission on the relevant legislation. 7. Overcoming the influence of private interests by adopting a law that brings Ukrainian legislation in line with the EU Directive on audiovisual media services and gives the independent media regulator the appropriate powers. 8. Completion of the reform of the legal framework for national minorities, which is being prepared, in accordance with the recommendations of the Venice Commission, as well as the adoption of mechanisms for its immediate and effective implementation.

2.3. Main tasks and necessary measures / steps (medium-term)

stage "Recovery, restart of the economy and institutions", 2023-2025

№	Tasks	Measure / Step
1.	Ensure implementation of the Association Agreement	1. Implementation of the Action Plan for the implementation of the Association Agreement, approved by the resolution of the Cabinet of Ministers of October 25, 2017 № 1106 by the end of 2024; 2. Implementation of plans-schedules for submission to the Government of NPA projects in the field of European integration; 3. Formation by the Government together with the Verkhovna Rada of a list of bills in the field of European integration that require priority consideration by the Verkhovna Rada for 2024; 4. Support and adoption of draft laws necessary for the implementation of reforms in the field of European integration in accordance with the established lists. 5. Ensuring the full implementation of regulations adopted to implement the Association Agreement. 6. Update the government system Pulse of the Agreement for more efficient and convenient use.
2.	Ensure Ukraine's preparation for EU membership	1. Development and approval of the state program on implementation of the EU acquis and adoption of normative legal acts aimed at compliance with the Copenhagen criteria; 2. Carrying out proper screening of Ukrainian legislation for compliance with the EU acquis; 3. Implementation of the Declaration of Commitment and Cohesion of All Branches of Government in Ukraine on Reforms in the Sphere of the Rule of Law, First of All, the Fight against Corruption, as well as those Reforms Necessary for Ukraine's Accession to the EU; 4. Preparation and implementation of the Action Plan to support the EU / EU member states in the process of Ukraine's accession to the EU; 5. Strengthening the interaction of Ukrainian officials with EU officials / EU member states, Ukrainian MPs with members of the EU parliament / parliamentarians of EU member states, as well as deepening cooperation between Ukrainian business, NGOs and other associations with relevant EU representatives.

3.	Ensure the institutional capacity of the Government, Parliament and executive bodies to carry out tasks related to the process of Ukraine's membership in the EU	1. Establishment of administrative structures in the Government, Parliament and executive bodies in accordance with the recommendations of the EU and the "roadmap of administrative capacity" for proper support of the processes of implementation of the EU acquis; 2. Provision within the Natolin 4 Capacity Building project and other projects of formation and training of a pool of experts from among civil servants of Ukraine, for analytical support of the process of EU membership.
4.	Implement cross-sectoral measures to integrate into EU internal markets, ensure food security and operate a logistics network with EU countries	1. Ukraine's accession to the EU Connecting Europe Facility; 2. Ensuring the creation of a common space for international roaming between Ukraine and the EU. 3. Concluding an Agreement on conformity assessment and acceptability of industrial goods; 4. Conclusion of agreements on liberalization of transport transportation by rail and inland water transport; 5. Expanding mutual access to online markets and digital services, as well as Ukraine's accession to common rules, standards and procedures with the EU in the digital sphere; 6. Implementation of measures aimed at infrastructure rehabilitation, taking into account approaches to reducing harmful emissions, energy efficiency and energy transition within the framework of the EU initiative European Green Course; 7. Ensuring security of supply and operation of the energy sector for future trade in electricity and renewable hydrogen under the REPowerEU initiative; 8. Ensuring Ukraine's accession to SEPA by performing the necessary domestic and international procedures; 9. Ensuring national and world food security and minimizing the terrible losses from Russian aggression, in particular, in terms of broken food supply chains, by restoring, forming new economic chains and maintaining the competitiveness of enterprises; 10. Expansion of export potential of agricultural products of Ukraine by harmonization of normative documents and audits; 11. Liberalization of access of Ukrainian goods to the EU market by ensuring the preservation of zero import duty rates on all Ukrainian exports; 12. Inclusion of Ukraine in the list of beneficiaries for the purposes of Regulation (EU) 2021/1529 of 15.09.2021, which introduced the Instrument for Pre-Accession Assistance (IPA III) - Annex I of this Regulation;

		13. Creating a system for protecting the financial interests of Ukraine and the EU by implementing a roadmap of measures to gain access to the administration of EU structural funds, including strengthening the institutional component and determining the interaction of components of the financial protection system in accordance with the acquis; 14. Launch of a bilateral dialogue to assess Ukraine's ability to administer EU financial resources; 15. Advocacy for the extension of EU measures on unilateral abolition of tariff restrictions (zero rates and abolition of quotas and anti-dumping measures on Ukrainian exports) for a period longer than one year (at least until June 2024);
5.	Develop the institutional capacity of authorities at all levels and ensure their cooperation	1. Analysis and evaluation of the road map. 2. Development and approval of a plan for approximation to EU requirements in cohesion policy. 3. Building the administrative capacity of the bodies that will be involved in the policy of cohesion. 4. Creating a system of development institutions. 5. Preparation of special training programs for civil servants (at national and subnational levels) on the following topics: EU cohesion policy, principles of EU cohesion policy, work with EU structural funds (ERDF, ESF, CF, EAFRD, ESI), international assistance and MFIs, work with EU Pre-accession Assistance (IPA) instruments, strategic planning and programming in the context of cohesion policy, project management (project management), cross-border cooperation, etc. 6. Development of skills, experience, technical, managerial and strategic capacity by attracting international technical assistance, conducting short-term and long-term trainings, twinning, exchange of knowledge and experience, as well as involving relevant experts, peer-to-peer work 7. .

2.4. Main tasks and necessary measures / steps (strategic)

stage "Structural modernization and full integration into the EU", 2026-2032

№	Tasks	Measures / Steps
1.	Complete Ukraine's preparations for EU membership	1. Implementation of the state program for implementation of the EU acquis 2. Finalization of negotiations on EU membership;

		3. Gaining the support of the EU, its citizens and its Member States for Ukraine's accession to the EU.
2.	Restore Ukraine within the framework of the "Platform for Reconstruction of Ukraine"	1. Rebuilding the country, including infrastructure, health services, housing and schools, as well as digital and energy sustainability in line with the latest European policies and standards; 2. Continue to modernize the state and its institutions to ensure good governance and respect for the rule of law by providing support for administrative capacity and technical assistance, including at the regional and local levels; 3. Implementation of the structural and regulatory agenda in order to deepen the economic and social integration of Ukraine and its people with the EU in accordance with its European path; 4. Supporting the recovery of Ukraine's economy and society by promoting sustainable and inclusive economic competitiveness, sustainable trade and private sector development, while facilitating the country's green and digital transition. 5. Support for the recovery of enterprises belonging to strategic industries.
3.	Switch to the model of delegated management in the framework of the administration of EU structural funds	1. Obtaining Ukraine the right to administer the EU structural funds under the model of indirect management of structural funds; 2. Transition from the model of indirect management of structural funds to delegated.
4.	Complete institutional building at national and subnational levels, in line with EU best practices	1. Creating an implementation system with a clear definition of the tasks and responsibilities of the bodies involved, responsible for the formation and implementation of EU cohesion policy. 2. Raising the awareness of the staff of these bodies about the procedures and rules of cohesion policy, so that they have the necessary skills to work with the EU structural funds, the instrument of pre-accession support, and be able to work with international technical assistance projects. 3. Development of a system of multilevel governance and specialized institutions for territorial development.

3. Key expected results / key performance indicators

3.1. Main expected results / performance indicators (short-term)

stage "Economics of wartime: All for victory!", June - December 2022

Expected results

- Ukraine has received the status of a candidate for EU membership.
- Ukraine is a beneficiary of pre-accession assistance (IPA III).
- The plan-schedule for submission of legislative bills in the field of European integration for 2022 to the Government has been fulfilled.
- The plan-schedule for submission of legislative bills in the field of European integration for 2023 to the Government has been formed.
- The analysis of priority bills in the field of European integration for 2022 is carried out taking into account the following criteria:
  - whether they provide for the development of bylaws and which;
  - whether they envisage the creation of new bodies, the financing of which will be carried out at the expense of the state budget;
  - whether they provide for the establishment of additional regulatory requirements for business entities and which ones.
- The administrative structures and number of staff involved in reforming and implementing the EU acquis are in line with EU principles.
- Ukraine actively organizes contacts of Ukrainian high-ranking officials and people's deputies with high-ranking officials and deputies of EU member states and MEPs.
- Cross-sectoral measures to support the economy and deepen sectoral ties with EU countries have been implemented.
- A roadmap for Ukraine's administrative capacity to work with the Structural Funds in the framework of the EU's cohesion policy has been prepared, which will be the basis for developing an action plan to bring Ukraine closer to the EU's cohesion policy requirements.
- An accelerated procedure has been introduced for draft laws aimed at fulfilling international legal obligations in the field of European integration, which must be submitted to the Parliament exclusively by the Government. Amendments have been made to other normative legal acts (CMU regulations, etc.) on the introduction of an accelerated procedure for draft laws aimed at fulfilling Ukraine's international legal obligations in the field of European integration.
- Implement the recommendations set out in the opinion of the European Commission on Ukraine's application for membership in the European Union.
- Completed recommendations laid down in the European Commission's opinion on Ukraine's application for membership in the European Union have been fully implemented.

Key Performance Indicators

- The Commission approved a plan for the adoption of legislative bills, a list of bills and other documents required to implement the decision of the European Council on 23-24 June 2022.

- By the end of 2022, the plan-schedule for submission of legislative bills in the field of European integration to the Government has been fulfilled by at least 75%.
- The plan-schedule for submission to the Government of legislative bills in the field of European integration for 2023 is formed by mid-December 2022.
- Cross-sectoral measures to support the economy and deepen sectoral ties with EU countries have been implemented to the planned extent.
- The roadmap for Ukraine's administrative capacity to work with the Structural Funds under the EU's cohesion policy has been prepared by the end of 2022.
- The law on amendments to the Rules of Procedure of the Verkhovna Rada on the introduction of an accelerated procedure for bills aimed at fulfilling Ukraine's international legal obligations in the field of European integration has been adopted. Amendments have been made to other normative legal acts (CMU regulations, etc.) on the introduction of an accelerated procedure for draft laws aimed at fulfilling Ukraine's international legal obligations in the field of European integration.
- The number of civil servants working in the field of European integration and the EU acquis to perform tasks related to the process of Ukraine's accession to the EU is constant or increased.
- The recommendations set out in the European Commission's opinion on Ukraine's application for membership in the European Union have been fully implemented.

3.2. Main expected results / performance indicators (medium-term)

stage "Recovery, restart of the economy and institutions", 2023-2025

Expected results

- The action plan for the implementation of the Association Agreement, approved by the Cabinet of Ministers of October 25, 2017 № 1106, has been implemented by the end of 2024.
- Ukrainian civil servants provide high-quality analytical support to the EU membership process.
- Ukraine's Reconstruction Platform brings together most of Ukraine's bilateral and multilateral partners and leading international financial organizations.
- Cross-sectoral measures to integrate into the EU internal markets, ensure food security and the functioning of the logistics network with EU countries have been implemented.
- An action plan to bring Ukraine closer to EU requirements in cohesion policy has been approved.
- Increasing investment attractiveness by introducing uniform and transparent rules.
- Approval of the state program for implementation of the EU acquis.
- Ukrainian legislation has been screened for compliance with the EU acquis.
- Monitoring system Pulse of Agreement has been updated and supplemented with the module on EU acquis implementation.

Key Performance Indicators

- In 2025, 100% of the obligations under the Association Agreement in accordance with the Action Plan for its implementation have been fulfilled (CMU Resolution of October 25, 2017 № 1106).
- At least 500 civil servants have been trained in the Natolin 4 Capacity Building and other projects.
- In 2023, the Platform for Reconstruction of Ukraine will unite at least 20 participants, in 2024 - at least 30, in 2025 - at least 40 participants.
- At least 75% of such cross-sectoral measures were implemented in 2023, at least 90% in 2024, and 100% of such cross-sectoral measures were implemented in 2025.
- At least 80 percent of the measures of the action plan to bring Ukraine closer to the EU requirements in the policy of cohesion have been implemented in accordance with the set deadlines.
- 90% of government employees have improved their managerial capacity to implement the acquis through training.
- The state program for the implementation of the EU acquis has been implemented by 50%.

3.3. Main expected results / performance indicators (strategic)

stage "Structural modernization and full integration into the EU", 2026-2032

Expected results

- Ukraine's accession to the EU is supported in the member states.
- Ukraine has completed the EU accession negotiations.
- Ukraine is a member of the EU.
- Reconstruction of Ukraine in accordance to the European standards is completed.
- Ukraine uses the model of delegated management of EU structural funds.
- The quality of life in Ukraine is comparable to the quality of life in the countries of the European Union.
- The necessary institutional structure at the national and subnational levels has been developed, which meets the requirements of the EU in cohesion policy.
- Compliance with the principles of good governance of the Council of Europe, the OECD Recommendations on Effective Public Investment at All Levels of Government has been ensured.

Key Performance Indicators

- The state program for the implementation of the EU acquis has been implemented by 100%.
- Ukraine's accession to the EU is supported by at least the majority of citizens in each member state of the European Union.
- By 2032, the Agreement on Ukraine's accession to the EU has been ratified by Ukraine, the EU and its member states.

- At least 90% of the infrastructure has been rebuilt in accordance with European standards.
- The institutional and legal framework for the management of EU structural funds in Ukraine complies with the acquis.
- Ukraine implements its cohesion policy in accordance with the principles and approaches set out in the acquis, and the action plan to bring Ukraine closer to EU requirements in cohesion policy has been implemented 100 percent.
- The training and advanced training of employees involved in the field of European integration has been carried out at the level necessary to fulfill the tasks of EU membership.
- 100% of employees involved in the implementation of territorial cohesion policy have been trained in accordance with the approved programs and have the necessary knowledge and skills.

4. Approximate amount of financial resources for the implementation of tasks

4.1. Financial resources for the implementation of tasks (short-term)

stage "Economics of wartime: All for victory!", June - December 2022

№	Task, step, measure	Cost, mln $	Financing source
1.	Introduce an accelerated procedure for draft laws aimed at fulfilling Ukraine's international legal obligations in the field of European integration, which must be submitted to the Parliament exclusively by the Government.	Expenditures for remuneration of employees of public authorities (VRU staff (up to 10 people), SCMU (up to 10 people), other CEBs (up to 3 people/CEBs) involved in the implementation of the procedure are defined in the Law on the State Budget for 2023	State budget/ attracted technical assistance / grants for budget support
2.	Receive € 9 billion in emergency macro-financial assistance to support macroeconomic stability		
	Fulfillment of all necessary conditions for receiving macro-financial assistance	It does not need funding today. If the conditions of the future macro-financial assistance program include financial commitments (for example, the creation / implementation of new institutions or the improvement of institutional capacity), it will require funding from the state budget.	Possible expenditures from the state budget in the framework of commitments to meet the specific conditions of the future macro-financial assistance program
3.	Implement cross-sectoral measures to support the economy and deepen sectoral ties with EU countries		
	1. Ukraine's accession to the EU's Digital Europe program by concluding an agreement;	According to the draft Agreement between Ukraine and the European Union on Ukraine's participation in the	Does not require funding until the end of 2022

		European Union's Digital Europe program, the coefficient for calculating the adjustment of the contribution key must be equal to 0 for 2021 and 2022	
	2. Conclusion of the Agreement on Freight Transport by Road between Ukraine and the European Union;	Does not require funding	Does not require funding
	3. Conclusion of the Trans-European Transport Network (TEN-T) Map Update Agreement;	Does not require funding	Does not require funding
	4. Consultations with the European Payments Council on the conditions / criteria for Ukraine's accession to SEPA and analysis of compliance of Ukrainian legislation with EU law, which are necessary for the integration of participants in the Ukrainian payment services market to SEPA;	Expenditures from the State Budget of Ukraine are not required within the measures currently being considered by the NBU to join SEPA. Funding for the implementation of measures will be provided by the NBU and EU ITD projects. The amount of expenses that may be incurred by other public authorities of Ukraine in the framework of ensuring accession to SEPA cannot be estimated by the NBU.	NBU, other state bodies, EU's ITA projects
	6. Implementation of the "Schedule of Ukraine's accession to the EU / EFTA joint transit regime.	0,625 *	Funds of the European Commission *
	7. Ensuring support for Ukrainian exports to the EU and the world	Does not require funding	Does not require funding

	8. Obtaining the results of the previous EU assessment mission on the readiness of Ukraine's quality infrastructure for the conclusion of the ACAA Agreement	Does not require funding	Does not require funding
	9. Analysis of the organizational structure and legal framework for the functioning of the system of protection of financial interests for compliance with the acquis in order to prepare a roadmap of measures to gain access to the administration of EU structural funds	State Audit Service, BES	State Audit Service, BES

* In case of Ukraine's accession to the EU Customs Program, the relevant financial costs will be covered by the European Commission.

4.2. Financial resources for the implementation of tasks (medium-term)

stage "Recovery, restart of the economy and institutions", 2023-2025

№	Task, step, measure	Cost, mln $	Financing source
1.	Ensuring Ukraine's accession to SEPA by performing the necessary domestic and international procedures;	Expenditures from the State Budget of Ukraine are not required within the measures currently being considered by the NBU to join SEPA. Funding for the implementation of measures will be provided by the NBU and ITD projects. At the same time, the costs associated with the implementation of the technical component can be determined only after the development and coordination of a common approach to Ukraine's	NBU, other state bodies, EU's ITA projects

		integration with SEPA, as well as assessment of business requirements that will be formed based on the approved model of Ukraine's payment market participants. SEPA. The amount of expenses that may be incurred by other public authorities of Ukraine in the framework of ensuring accession to SEPA cannot be estimated by the NBU.	
2.	Liberalization of Ukrainian goods access to the EU market through ensuring preservation of the zero rates of the import duties for all Ukrainian experts	State budget	State budget
3.	Liberalization of access of Ukrainian goods to the EU market by ensuring the preservation of zero import duty rates on all Ukrainian exports		
	1. Ukraine's accession to the EU Connecting Europe Facility program	The amount of contributions will be determined during formal negotiations	State budget
	3. Concluding an Agreement on conformity assessment and acceptability of industrial goods;	Does not require funding	Does not require funding
	4. Conclusion of agreements on liberalization of transport transportation by rail and inland water transport;	Does not require funding	Does not require funding
4.	Ensure the institutional capacity of the Government, Parliament and executive bodies to carry out tasks related to the process of Ukraine's membership in the EU		

	Advanced training of civil servants in the field of European integration within the Natolin 4 Capacity Building project	1.076 EUR	Funds allocated by the EU under the Natolin 4 Capacity Building project
5.	Implement cross-sectoral measures to integrate into EU internal markets, ensure food security and operate a logistics network with EU countries		
	Creating a system for protecting the financial interests of Ukraine and the EU by implementing a roadmap of measures to gain access to the administration of EU structural funds, including strengthening the institutional component and determining the interaction of components of the financial protection system in accordance with the acquis	State Audit Service, BES	State Audit Service, BES

5. Nationwide recovery plan projects

The National Council for the Recovery of Ukraine from the Consequences of the War

Ukraine Recovery Plan: Financial System Functioning, Reform and Development

July 2022

Committee № 2

Working group "Financial System Functioning, Reform and Development"

Summary ***3***

Area: "State (public) finances" ***8***

Subgroup 1: Tax policy **8**

Subgroup 2: Customs policy **133**

Subgroup 3: Budget and debt policy **204**

Area "Development of the banking system, non-bank financial services and capital markets" ***217***

Subgroup 4: Banking system and non-bank financial services market **217**

Subgroup 5: Capital markets **274**

SUMMARY

The war significantly affected the financial system. According to national and international expert institutions, Ukraine's GDP losses in 2022 due to the russian military aggression may range from 30% to 50%. As a result of the economic downturn, state and local budget revenues are declining, while defense spending is rising. At the beginning of the war, the Parliament provided a number of benefits for taxes and duties to support business in difficult times. At the same time, the macroeconomic stability in recent years, the institutional capacity of the Ministry of Finance and the National Bank of Ukraine, and the priority measures taken allow the government to keep the situation under control in this extremely difficult period.

In order to ensure quick recovery, stimulate economic growth in the medium term and implement the European course of Ukraine, it is necessary to pursue a prudent fiscal policy, increase the efficiency of expenditures and tax/customs administration. At the same time, it is important to maintain partnership relations between business and the Government and improve the investment climate considering the social and environmental dimensions. Economic recovery requires financing, which can be provided through lending to businesses by commercial banks or raising capital through developed capital markets in Ukraine.

The purpose of the Recovery Plan is to rebuild a modern, stable and efficient financial system aimed at ensuring the financial stability of the state and creating conditions for further sustainable growth of a socially inclusive economy and improving citizens' welfare through providing efficient savings, distribution and circulation of financial resources in the economy.

The Recovery Plan of the Working Group "Financial System Functioning, Reform and Development" is divided into areas: "State (public) finances" and "Development of the banking system, non-banking financial services and capital markets".

Achieving the goal of the area "State (public) finances" is expected by accomplishing the following strategic objectives:

- **Budget and debt policy**: Implement policies that will help restore fiscal and debt sustainability, ensure budget transparency and predictability of the budget system, increase the efficiency of budget expenditures and strengthen the financial capacity of local communities to ensure complete and timely financing of state commitments at national and local levels;
- **Tax policy**: Building a tax system that takes into account the requirements for Ukrainian integration into the global economy as a reliable tax jurisdiction, that provides taxpayers with the opportunity to fulfill their responsibilities necessary for the recovery and sustainable development of the country;
- **Customs policy**: Building a predictable customs system based on EU practice, which increases the quality of foreign trade in Ukraine, balances the security function of customs and partnerships with business, and integration of Ukrainian enterprises into international supply chains.
- Achieving the goal of the area "Development of the banking system, non-banking financial services and capital markets" is expected by accomplishing the following strategic objectives:
- **Banking system and non-bank financial services market:** Ensuring the stability of the financial system and providing businesses with affordable bank lending;
- **Capital markets:** Activation and efficiency increase of capital markets and organized commodity markets, as well as integration of Ukrainian capital markets into the European financial area in order to attract foreign investment in equity and debt capital of real sector enterprises.

Current state of the industry/sector:

As a result of the performed financial sector reforms Ukraine achieved macroeconomic and financial stability, the public debt-to-GDP ratio decreased, stable banking system functioning was ensured, and all the international credit rating agencies increased Ukraine's credit rating. In recent years, Ukraine completed the following:

- Performed the financial sector reform, which contributed to the increased ability of regulators and financial market participants to withstand crises;
- Introduced large-scale customs and tax authorities transformation processes with the support of the international partners;
- Achieved progress in approximating Ukrainian law (incl. tax and customs) to the EU legislation in the framework of the EU Association Agreement and other international obligations of Ukraine;
- Initiated changes to insurance market oversight.

In the first hours of the large-scale russian invasion, a number of measures were taken to maintain the stable operation of the banking system and banking payment infrastructure, which allowed to avoid a critical outflow of funds from the banking system. To ensure price and financial stability the exchange rate was fixed and a number of administrative restrictions were introduced. To mitigate the economic shock a decision was made to introduce tax benefits and additional social benefits.

The drastic decline in economic activity and tax and customs policy changes led to a significant reduction in tax revenues in February-May. The abolition of VAT and customs duties on imports led to a decrease in budget revenues, as well as to increased imports of goods in April and May, despite the implementation of a list of critical imports. At the same time, budget expenditures have increased significantly, primarily for military needs and social programs, business support, and the reconstruction of critical infrastructure in the regions affected by russian shelling and bombing. Expenditure prioritization has been introduced. The minimal need for financing the fiscal gap, according to the Ministry of Finance, is about USD 5 billion per month.

The budget deficit from March to May was financed primarily through direct buyouts by the National Bank of Ukraine and the market placement of war bonds. Another source of funding was international soft loans, while the amount of international grants (which are credited to budget revenues) is not yet significant. Inflation and devaluation pressures remain high and are growing, in particular, due to supply chain disruptions, difficult logistics and rising energy prices.

During the war financial institutions face significant problems in their activities: the inability to work in regions where active military actions are taking place, the decrease in customer solvency, damage or destruction of collateral, and lack of staff. At the same time, the amount of clients' funds in banks increased, which ensured a consistently high level of liquidity despite the risks. The banks maintained a moderate demand for credit resources from corporations, which was facilitated by the simplification of conditions for participation in the state program "Affordable Loans 5-7-9%". In the future, the main factor influencing the financial condition of banks will be the realization of credit risk, which will significantly reduce the capital of banks.

The war has significant impact on the functioning of the financial system, but all government functions are currently being performed, and the banking and budget systems are proving their resilience, including the National Bank, Ministry of Finance, State Treasury Service, State Tax Service and State Customs Service and other institutions that continue to work together and take measures to stabilize the work. Further losses from the war and impact on the financial system depend, among other things, on the duration of the active phase of the military actions, the scale of destruction, availability and speed of receiving international aid, the implementation of policies to support the economy, transparency and predictability of the state policy in all spheres.

Key indicators, the impact of the war on the industry, the state of implementation of policy documents, etc.

This year 7 laws were adopted amending the Law of Ukraine "On the State Budget of Ukraine for 2022", as a result of which the budget revenues were increased by UAH 26.5 billion, or by 2%, the budget expenditures were increased by UAH 581.7 billion, or 38.8%, the deficit limit increased by UAH 555.3 billion, or 3.9 times.

At the same time, the increase in state budget expenditures was made, first of all, on:

- implementation of measures to increase the defense capabilities and security of the state – UAH 338 billion;
- replenishment of the reserve fund - UAH 201.5 billion (of which UAH 200 billion is aimed exclusively at implementing security and defense measures, financial support for internally displaced persons);
- social protection and social security - UAH 38.4 billion.

In January-May 2022, the revenues of the general fund of the state budget amounted to UAH 467.2 billion, which was 99.8% of the revised plan for this period. At the same time, there was an unplanned receipt of certain incomes, most of which were:

- grants, assistance and other transfers from the EU, foreign governments, international organizations, donor institutions (+38.3 billion UAH, or 13 times, mostly unplanned and received in April-May);
- part of net profits of state-owned enterprises and dividends on the state share of ownership (+36.6 billion UAH, or 14.9 times, mainly due to advance payments in March);
- value-added tax on goods (works, services) produced in Ukraine, taking into account the budget reimbursement (+16.2 billion UAH, or 23.7%);
- rent for subsoil use (+9.3 billion UAH, or 30.6%);
- funds transferred by the National Bank (+5.2 billion UAH, or 38.3%, received early in February);
- excise tax on excisable goods (products) imported into the customs territory of Ukraine (+3.9 billion UAH, or 63.7%).

At the same time, the target indicators of some revenues have not been met, in particular: value-added tax on goods imported into Ukraine (-70.8 billion UAH, or 45.1%); corporate income tax (-13.4 billion UAH, or 17.8%), excise tax on excisable goods (products) produced in Ukraine (-11.7 billion UAH, or 45.9%); import duty (-5 billion UAH, or 49.7%); personal income tax and military tax (-3.4 billion UAH, or 6%).

According to the information from the State Treasury Service for 5 months of the current year, cash expenditures of the general fund of the state budget were made in the amount of UAH 740 billion, or 74.4% of the revised plan for this period. Funding for defense and security and social benefits was a priority for spending.

In January-May 2022, the general fund of the state budget deficit amounted to UAH 270.8 billion (51.5% of the revised plan for this period), public debt repayment amounted to UAH 169.3 billion (99.5% of the revised plan for this period), payments on public debt service were UAH 75 billion (97.5% of the revised plan for this period).

State borrowings to the general fund of the state budget during 5 months of the current year amounted to UAH 376.6 billion, or 170.5% of the plan for this period. In particular, UAH 225.5 billion were attracted from the placement of State Treasury Service bonds to finance the state budget, of which UAH 200.2 billion was due to the issuance of war bonds (including UAH 120 billion acquired by NBU). External borrowings amounted to UAH 151.1 billion, of which significant funds were received from: the International Monetary Fund (UAH 41.3 billion / USD 1.4 billion); the European Union (UAH 37.1 billion / EUR 1.2

billion); the International Bank for Reconstruction and Development (UAH 22.6 billion / USD 285.8 million and EUR 0.4 billion); the European Investment Bank (UAH 21.1 billion / EUR 639 million); the Government of Canada (UAH 11.5 billion / USD 392.8 million); the French Development Agency (UAH 9.7 billion / EUR 300 million); the German credit institution for reconstruction (UAH 4.8 billion / EUR 150 million); the Japan International Cooperation Agency (UAH 3 billion / JPY 13 billion).

Since the beginning of the year, 4 Government resolutions have been made that provide state guarantees in 2022 to ensure partial fulfillment of debt obligations on the portfolio of loans of 28 creditor banks provided to micro, small and medium enterprises, the residents of Ukraine, in total almost UAH 23 billion. During 4 months of the current year, relevant state guarantees were provided in the amount of UAH 19.1 billion, of which UAH 17.9 billion in April.

Funds of budgets and other clients of the State Treasury Service on June 1, 2022 amounted to UAH 24.7 billion, including: on the State Treasury Service single account – UAH 10.4 billion, on the accounts of the State Treasury Service in banking institutions – UAH 1.5 billion, on other accounts – UAH 12.8 billion.

Inflationary pressures are rising, prompting accelerated normalization of monetary policy. Consumer inflation accelerated to 18% YoY in May compared with 16.4% YoY in April. Given the increase in macroeconomic risks in June, the NBU returned to active interest rate policy, raising its Key Policy Rate from 10% to 25%, which will strengthen the protection of hryvnia income and savings and help the NBU to ensure exchange rate stability and curb inflation during the war.

Timely coordination of the efforts of the international partners and the government of Ukraine is an important element in the implementation of post-war recovery tasks. This will be facilitated by the implementation of the Public Finance Management Strategy 2022-2025, which was prepared in coordination with international partners and adopted in December 2021, and the Strategy of Ukrainian Financial Sector Development until 2025.

Further activities on the reform and development of the financial system should focus primarily on the implementation of already adopted policy documents, a gradual return to the operating conditions, that were before 24 February 2022, and the alignment of national legislation with EU legislation.

Key challenges of the area:

- Partial or complete destruction of infrastructure and industrial and logistical facilities
- Economic recession
- Growing state budget deficit and public debt
- Decrease in tax revenues, payment of taxes in advance, uncertainty about the payment of taxes by the end of the year
- Significant burden on the state budget while reducing revenues and increasing expenditures
- Further prioritization of expenditures and ensuring their efficiency and achievement of results
- Pressure on the national currency due to the deterioration of the balance of payments and the realization of pro-inflationary risks
- Capital outflows and deterioration of the financial condition of financial institutions
- Simultaneous rapid decline in real and nominal incomes and savings of the population
- High risks to the national economy and specific enterprises in the military and post-war economy
- Legislation on the functioning of the financial system that is not fully harmonized with EU legislation slows down European integration and accession to the EU

- Failure to fully apply the practice of combating fraud and terrorism through the instruments of customs and tax policy, the use of the security function of customs authorities
- Deteriorating financial conditions in international markets due to tighter financial conditions, the slowdown in the world economy and geopolitical tensions.

Key opportunities:

- Wide access to international cooperation and support from Ukraine's partners
- Accelerate efforts to analyze gaps and bring Ukrainian legislation in line with EU legislation
- Ukraine's further integration into the global economy as a reliable tax jurisdiction, whose tax policy provides taxpayers with an opportunity to fulfill their responsibilities, and allows the state to fund its obligations
- Integration of Ukraine's financial system with the EU countries
- Providing the financial system with long-term resources and expanding lending
- Rapid development of digital channels for financial services
- Strengthening the security of financial institutions.

Key constraints / framework:

- Uncertainty about the timing of the end of military actions
- Continuation of the infrastructure destruction until the end of military actions
- High need for funding the defense expenditures and further reconstruction of the country
- Lack of internal financial resources
- Maintaining price and financial stability
- Maintaining a balance between price and financial stability and economic development
- Insufficient level of Ukraine’s investment attractiveness
- High risks for restoration of crediting of the economy
- Destruction and damage of collateral for bank loans.

AREA: "STATE (PUBLIC) FINANCES"

SUBGROUP 1: TAX POLICY

1. The main issues that need to be resolved as a part of the Recovery Plan in the field of "Finance system operation, its transformation, and development"

Impact of the war on the defined sphere of analysis:	
Key challenges (summarized for a defined scope: **Tax policy**)	1. The need to find a balance between ensuring financing of the most critical budget items and encouraging restoration of the economy 2. Urgent need to improve procedures for the administration of mandatory payments to ensure transparency, eliminate unnecessary bureaucratic processes, and reduce administrative costs 3. Urgent need to transform the administration procedure of certain taxes according to the best international tax standard 4. The need to enhance the institutional capacity of tax authorities to ensure tax control's effectiveness and increase taxpayers' satisfaction with the level of service 5. The need to ensure fiscal discipline and maintain taxpayers' tax culture in the conditions of instability of political environment 6. Accumulating risks with a high probability of their occurrence – the mass nature and catastrophic character of the damages for people and businesses due to the warfare, which will significantly impact the level of tax revenues and taxpayers' possibilities to fulfill their obligations
Key opportunities (summarized for a defined scope: **Tax policy**)	1. The opportunities for developing the tax system, which considers the requirements for Ukraine's EU integration and the global economy as a reliable tax jurisdiction, ensure possibilities for taxpayers to fulfill their obligations and possibilities for the State –to fund its obligations 2. Unprecedented support of world leaders, prospects of Ukraine becoming a candidate country for EU membership. Opportunities for gradual harmonization of the tax and customs legislation of Ukraine with EU legislation (as a condition of EU membership) 3. Introduction of new IT solutions that are compatible with EU IT solutions that create new instruments to develop a risk analysis system, provide a balance of control measures and simplification and ensure fulfillment of the candidate's criteria for EU membership in the maturity of IT systems of tax authorities
Key constraints (summarized for a defined scope: **Tax policy**)	1. Inability to predict the time of the end of the war on the territory of Ukraine and the state of the infrastructure: - constant risks of increasing destruction of logistics, customs, other infrastructure, and the complexity of planning its reconstruction - the need to take into account the limitations of business in the restoration and development of foreign economic relations and volumes of export (lost or destroyed means of production, logistics routes, etc.; difficulty in keeping labor resources, ,

Impact of the war on the defined sphere of analysis:	
	unpredictability in the planning of business preservation, and development; decrease in volume and geography of markets for sale of goods and services; dependence on foreign exchange restrictions, currency fluctuations and unpredictable trends in the financial market during the war) 2. Inability to determine the fundamental indicators necessary to assess the effectiveness of the tax system, including for the purpose of defining the directions of its transformation in the post-war period (the number of active taxpayers at the time of the cancellation or termination of the martial law, the amount of tax debt, the number of accumulated losses, the number of hired workers and self-employed who continue their activity, etc.) 3. The need to finance the expenditures of the State budget in conditions of sharply falling revenues because of the war. 4. The inability of "immediate" implementation of any significant changes, the need for time for their development and implementation, especially the in part of IT systems of the State Tax Service and other state authorities

2. Goals, objectives, and stages of the Recovery Plan in the defined scope

2.1. Specific goals

	Stage I: June 2022 – end of 2022	**Stage II: January 2023 – December 2025**	**Stage III: January 2026 – December 2032**
I. COMPLEX ISSUES			
1.1. Presence of urgent issues related to the military aggression of the russian federation (aggressor-state) against Ukraine and circumstances of martial law arising from taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance with which is supervised by the control authorities.			
Each stage's goal to be achieved to solve the problem	**Goal 1 (I):** Settlement of the issues related to the military aggression of the russian federation (aggressor-state) against Ukraine and circumstances of martial law arising from taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance with which is supervised by the control authorities. Resolution of		

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
	particular technical problems that have arisen in the administration of taxes and duties as a result of the martial law period introducing		
Deadline within the stage	December 2022.		
Risks for achieving the goal	Military aggression of aggressor-state. Inconsistency of positions of state authorities		
Measurable indicator of goal achievement	Amendments to the legislation of Ukraine have been developed and adopted (as defined in Section 4). Relevant secondary legislation has been developed and adopted to implement the approved amendments to the legislation of Ukraine		
The total amount of financial resources required to achieve the goal	Does not require additional funding		
Proposed sources of financing	X		
Connection with other areas	WG on finance system operation, its transformation, and development /WG on customs policy		
International reports, standards, and regulations	X		
The related sphere of EU law regulation	X		
1.2. Presence of issues that must be resolved in tax periods accounting for the moment of termination or lifting of martial law, related to the application of current requirements of the Tax Code of Ukraine and legislation control of compliance supervised by the control authorities.			

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
Each stage's goal to be achieved to solve the problem		**Goal 1 (II):** Settlement of the issues that must be resolved in tax periods accounting for the moment of termination or cancellation of martial law period, related to the application of current requirements of the Tax Code of Ukraine and legislation control of compliance with which is supervised by the control authorities. Resolution of particular technical problems has arisen in the administration of taxes and duties after the termination or lifting of the martial law	
Deadline within the stage		Three months after lifting the martial law	
Risks for achieving the goal		Inability to predict the time of the termination or lifting of the martial law Inconsistency of positions of state authorities	
Measurable indicator of goal achievement		Amendments to the legislation of Ukraine have been developed and adopted (as defined in Section 4). Relevant secondary legislation has been developed and adopted to implement the approved amendments to the legislation of Ukraine	
The total amount of financial resources required to achieve the goal		Does not require additional funding	

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
Proposed sources of financing		X	
Connection with other areas		WG on finance system operation, its transformation, and development /WG on customs policy	
International reports, standards, and regulations		X	
The related sphere of EU law regulation		X	
1.3. The inconsistency of Ukrainian legislation with the tax legislation of the European Union, the need for approximation due to granting Ukraine the EU candidate status.			
Each stage's goal to be achieved to solve the problem	**Goal 1 (II):** Development of recommendations on the order of processing of the EU Directives` provisions on accrual and payment of taxes and administration of taxes that are required to be implemented in the Ukrainian legislation	**Goal 2 (II):** Development of provisions and proposals for the introduction of amendments to the Tax Code of Ukraine (other legislation of Ukraine if necessary) following the results of the previous stage	**Goal 3 (III):** Preparation and adoption of legislative amendments necessary for the implementation of the EU Directives to the legislation of Ukraine **Goal 4 (III):** Development and introduction of the necessary IT solutions
Deadline within the stage	December 2022	December 2025	**Goal 3 (III):** December 2026 **Goal 4 (III):** December 2028
Risks for achieving the goal	Military aggression of aggressor-state Inconsistency of positions of state authorities	Lack of knowledge of EU legislation in the state authorities of Ukraine.	Inconsistency of positions of state authorities Lack of knowledge of EU legislation in the state authorities of Ukraine
Measurable indicator of goal achievement	Developed "The Roadmap of harmonizing Ukrainian legislation with EU tax legislation"	Developed amendments to Ukrainian legislation according to the approved roadmap	**Goal 3 (III):** Approved amendments to Ukrainian legislation developed according to challenges for achieving goal 2 (II);

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
			Development and amendment of secondary legislation to implement the approved changes to the legislation of Ukraine. **Goal 4 (III):** Developed and introduced necessary IT solutions in connection with changes to the legislation of Ukraine.

The related sphere of EU law regulation	**Ref. to** Section 7 "The main legislative acts of the EU in the sphere of taxation and their implementation in the legislation of Ukraine"		
1.4. A request of taxpayers to determine and implement comprehensive qualitative transformations of the tax system in the postwar period. Within the framework of post-war reconstruction, Ukraine will face the issue of a significant transformation of tax policy that is connected not only to the necessity of considering the peculiarities and trends of economic development during the post-war period but to reconsidering vectors of expenditures within public financing. Key internal constraints and challenges will be the need for balance-building between the desire of taxpayers, both within the framework of taxation of personal incomes and corporate income tax, provision of tax privileges, reduction of the tax burden, and general liberalization of the tax system and also requirements of the business that are ensuring a high degree of involvement of the state in providing broad-based services to cover the needs of the private sector of the economy			

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
for external financial resources and private ones to coverage not only of social guarantees but also compensation of damages caused by military actions (in particular, expansion of the state program of financing of the plan of “affordable housing”, coverage of lost income, etc.). Such a discussion requires harmonizing national tax legislation with EU law and Ukraine's integration into the world economy as a reliable tax jurisdiction. The proposed changes should ensure taxpayers' possibilities to fulfill their obligations and the state's possibilities to fund its obligations. An important requirement is to apply a comprehensive approach to the analysis of all elements of the tax system, taking into account the world`s best practices and trends in global tax policy development. Uncertainty at the first stage of the Plan regarding the amount of funding, which should be covered at the following stages through public sources, and lack of the possibility to forecast the uniformity of tax payments (because of the uncertainty of the number of taxpayers' figures, their distribution by sector of the economy, their financial condition at the moment of termination or lifting of the martial law and also their solvency and potential for economic growth) almost impossible to discuss the volume of tax incentives for their implementation in the medium and long term (from five and more years). As a result, the discussion of transformation directions should take place at the first stage, but the completion can be within the second stage of the Plan. Such a forum requires the involvement of not only national experts and business associations representatives but also international experts – OECD, Global Forum on Transparency and Exchange of Information for Tax Purposes, IMF, EU.			
Each stage's goal to be achieved to solve the problem	**Goal 1 (I):** Development of the Concept of Transformation of the Tax System of Ukraine in the Post-War Period (with the Involvement of National and International Experts, OECD, IMF, and EU Experts)	**Goal 2 (II):** Clarification and harmonization of the Concept of transformation of the tax system of Ukraine in the post-war period. **Goal 3 (II):** Preparation and adoption of legislative changes provided by the Concept of Transformation of the Tax System of Ukraine. **Goal 4 (III):** Development and implementation of necessary IT solutions.	
Deadline within the stage	December 2022	**Goal 2 (II):** Two months after termination or lifting the martial law. **Goal 3 (II):** Six months after termination or lifting the martial law. **Goal 4 (II):** Terms are defined by amendments.	
Risks for achieving the goal	Military aggression of aggressor-state	**Goals 2 (II), 3 (II):**	

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
	Inconsistency of positions of state authorities and interested parties (stakeholders) Inconsistency of the proposals developed the Concept of the position of international partners	Inability to predict the time of the termination or lifting of the martial law **Goal 4 (II):** Lack of funding	
Measurable indicator of goal achievement	Developed "Concept of transformation of tax system of Ukraine", which takes into account requirements for Ukraine's integration into the world economy as a reliable tax jurisdiction, ensure taxpayers' possibilities to fulfill their obligations and the state's possibilities to fund its obligations	**Goal 3 (II):** Amendments to the legislation of Ukraine have been developed according to challenges for achieving goal 2 (II). Relevant secondary legislation has been developed and adopted to implement the approved amendments to the legislation of Ukraine. **Goal 4 (II):** Developed and introduced necessary IT solutions in connection with changes to the legislation of Ukraine.

VIII. LOCAL TAXES			
8.1. The need to strengthen the managerial functions of the local self-government bodies; improvement of local taxes administration; strengthening the financial capability and development of local authorities.			
Each stage's goal to be achieved to solve the problem		**Goal 1 (II):** Grant additional powers to local self-government bodies in the part of local taxes and duties administration **Goal 2 (II):** Preparation of regulatory support for the introduction of real estate objects` estimated value for the aim of determining the tax base for imposing a tax on real estate other than a land plot **Goal 3 (II):** Development of IT solutions for the system of real estate objects for taxation aims	**Goal 4 (III):** Works on filling the registries regarding real estate objects` estimated value and verifying the authenticity of data possessed by control bodies **Goal 5 (III):** Introduction of requirements for applying the tax on real estate, other than a land plot, based on the estimated value of the real estate object

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032
Deadline within the stage		**Goal 1 (II):** December 2023 **Goal 2 (II):** December 2025 **Goal 3 (II):** December 2025	**Goal 4 (III):** December 2026 **Goal 5 (III):** January 2027
Risks for achieving the goal		**Goals 1 (II), 2 (II):** Inconsistency of positions of public authorities and interested stakeholders. **Goal 3 (II):** Delay with the development of an appropriate IT solution Incomplete data of the State Register of Immovable Property Rights (data not transferred from the “old registers", which functioned until January 1, 2013)	**Goals 4 (III), 5 (III):** Lack (loss) of data to fill the registers on the appraised value of immovable property. Inconsistency of positions of public authorities and interested stakeholders on the audit of the completeness of these registers
Measurable indicator of goal achievement		**Goals 1 (II), 2 (II):** Amendments to the legislation of Ukraine have been developed and adopted Relevant secondary legislation has been developed and adopted to implement the approved amendments to the legislation of Ukraine **Goal 3 (II):** IT solutions developed and implemented following the legislation changes	**Goal 4 (II):** An audit of the reliability of the tax authorities’ databases in terms of taxpayers and objects for taxation by the tax on real estate, other than a land plot **Goal 5 (II):** Requirements for taxation by the tax on real estate, other than a land plot, based on the appraised value of the real estate have come into force and applied by taxpayers and tax authorities
The total amount of financial resources required to achieve the goal		Additional calculations are required	Additional calculations are required

	Stage I: June 2022 – end of 2022	Stage II: January 2023 – December 2025	Stage III: January 2026 – December 2032

2.2. The current stage of implementation of program documents

Item of the plan	Name of the program document	Current status
1.	**Program of the Cabinet of Ministers of Ukraine's activity, June 2020 (approved by the Resolution of the Cabinet of Ministers dated June 12, 2020, № 471):** *6.2. Effective tax system* - Introduction of a "zero declaration" of income and assets to determine the zero-reference point to further introduce control over the compliance of the amounts of expenses incurred with the amount of income received. - Introduction of tax incentives for the investment of the profits of enterprises into their development. - Implementation of legislative changes to ensure taxpayers submit a single tax return for unified social contribution and personal income tax. - Implementation of legislative changes regarding the functioning of the Unified database of appraisal reports, the procedure for accessing, entering, and verifying information to/from the Unified database on a free basis, and the formation of electronic certificates on the appraised value of an immovable property. - Implementing legislative changes on electronic administration of excise tax on fuel and alcohol. - Implementing legislative changes regarding the introduction of software RRO and gradual "fiscalization" of business activities. - Revision of the environmental tax to increase its efficiency and reduce air pollution and the environment. - Effective implementation of the norms of the Tax Code of Ukraine on accelerated depreciation. - Improving the corporate tax system.	Under implementation

Item of the plan	Name of the program document	Current status
	- Settlement in the legislation of the issue of automated property valuation with the use of information and telecommunication system and the module of electronic determination of appraisal value. - Optimization of the organizational structure of the State Tax Service that is built on the functional principle. Restoration of the management vertical capable of performing the tasks attributed to the State Tax Service. - The introduction of tax incentives aimed to restore the economic activity of legal entities after the end of the quarantine established to prevent the spread of acute respiratory disease COVID-19 caused by the coronavirus SARS-CoV-2 in Ukraine. - Revision of the current international agreements of Ukraine on the avoidance of double taxation to prevent tax evasion of income and capital and to establish effective exchange of information. - Implementing FATCA legislation in terms of approving the algorithm of actions of the State Tax Service for the transmission of reports to the US Internal Revenue Service. - Introduction of legislative innovations to improve control over transfer pricing within the implementation of the BEPS action plan to increase the transparency of international transactions of legal entities.	
2.	**Strategy for reforming the public financial management system for 2022-2025 (Order of the Cabinet of Ministers dated December 29, 2021, № 1805-r):** *Adherence to the general budget and tax discipline in the medium term* *The tax system* *Improving the efficiency of tax administration and the quality of service for taxpayers* - Execution of the action plan for the implementation of conceptual areas of reforming the system of bodies implementing state tax policy. - Development of management strategy for compliance with tax discipline with the definition of segments of taxpayers and risks for each segment, development of approaches to risk reduction, and preparation of appropriate action plans. - Increasing the institutional capacity of the State Tax Service in terms of identifying and preventing threats of external and internal interference in the work of databases and information resources of the State Tax Service. - Introduction of electronic documentary audit (“e-audit”) of large taxpayers. - Surveying the level of satisfaction of taxpayers with the services of the State Tax Service. - Further approximation of tax legislation to EU legislation. - Expansion of the tax base.	Under implementation

Item of the plan	Name of the program document	Current status
	- Improving the rules of control over transfer pricing within the framework of the Action Plan to counteract the base erosion and profit shifting (BEPS). - Ensuring the creation of conditions for Ukraine's accession to the multilateral agreement on the automatic exchange of financial information. - Ensuring the creation of conditions for Ukraine's accession to the multilateral agreement on the automatic exchange of country-by-country reports. - Creating conditions for optimizing the tax burden through the mechanism of avoiding double taxation. - Introduction of tax rules for a controlled foreign company. - Amendment of environmental taxation. *Increasing the own financial resources of local governments* - Carrying out the analysis of possible ways of change of approaches of personal income tax payment charged on employees' remuneration. - Establishing the exchange of information between local governments and tax authorities.	
3.	**Strategy for digital development, digital transformations, and digitalization of the public financial management system until 2025 (Order dated November 17, 2021, № 1467-r):** *The tax system* - Improvement of the information and telecommunication system "Tax block". - Improvement of the information system for collection, storage, use of data of registers on payment transactions and program registers on payment transactions, verification of the authenticity of documents, development of free software for registers on payment transactions, etc. - Introduction of a hardware and software complex for control, including the monitoring by the Ministry of Finance of the administration of databases and information resources by the State Tax Service and the State Customs Service. *The expected results of achieving the strategic goal are:* - ensuring an unbiased, risk-oriented approach to select taxpayers for audit, increasing the quality of audits, the level of transparency and consistency, use of a unified methodology, reducing time spent by tax officers and taxpayers, the operation of a single account for payment of taxes and duties, unified social contribution, other payments; - increasing the convenience and quality of service for taxpayers, reducing the time spent by taxpayers and tax officers by switching taxpayers to use online channels, reducing the number of errors during the filling of tax returns, and ensuring its integration with the Unified State Web Portal of electronic services and its mobile application;	Under implementation

Item of the plan	Name of the program document	Current status
	- increasing the effectiveness of control over compliance with the procedure for cash operations; - identification of risks before the audit, which will significantly speed up and simplify the data analysis procedure, reduce the time spent for the audit of both officials and taxpayers, reduce human intervention in the selection of risks for verification and in-depth research; - international exchange of financial information according to the standards of international exchange of financial information on financial accounts and reporting on transfer pricing to counteract the base erosion and profit shifting.	

2.3. Determining tasks for achieving goals from subsection 2.1 (for every goal)

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
I. COMPLEX ISSUES			
1.1. Presence of urgent issues related to the military aggression of the russian federation (aggressor-state) against Ukraine and circumstances of martial law arising from taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance with which is supervised by the control authorities			
Goal 1 (I): Settlement of the issues related to the military aggression of the russian federation (aggressor-state) against Ukraine and circumstances of martial law arising from taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance with which is supervised by the control authorities. Resolution of particular technical problems, that has arisen in the administration of taxes and duties as a result of the martial law period introducing			
Stage I: June 2022 – December 2022			
1.1, 2.1	Preparation of legislative changes necessary for regulating issues related to taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance supervised by the control authorities	July 2022	
1.2, 2.2	Adoption of the developed legislative changes	September 2022	

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
1.2, 2.2	Development and amendment of secondary legislation	December 2022	
1.2. Presence of issues that must be resolved in tax periods accounting for the moment of termination or lifting of martial law, related to the application of current requirements of the Tax Code of Ukraine and legislation control of compliance supervised by the control authorities			
Goal 1 (I or II): Settlement of the issues that must be resolved in tax periods accounting for the moment of termination or cancellation of martial law period, related to the application of current requirements of the Tax Code of Ukraine and legislation control of compliance with which is supervised by the control authorities. Resolution of particular technical problems has arisen in the administration of taxes and duties after the termination or lifting of the martial law			
Stage I: June 2022– December 2022 or Stage II: January 2023 – December 2025			
1.1	Preparation of legislative changes necessary for regulating issues related to taxpayers regarding the application of current requirements of the Tax Code of Ukraine and legislation, control of compliance supervised by the control authorities	Two months after lifting the martial law	
1.2	Adoption of the developed legislative changes	One month after achieving task 1.1	
1.3	Development and amendment of secondary legislation	Two months after achieving task 1.2	
1.3. The inconsistency of Ukrainian legislation with the tax legislation of the European Union, the need for approximation due to granting Ukraine the EU candidate status			
Goal 1 (II): Development of recommendations on the order of processing of the EU Directives` provisions on accrual and payment of taxes and administration of taxes that are required to be implemented in the Ukrainian legislation **Goal 2 (II):** Development of provisions and proposals for the introduction of amendments to the Tax Code of Ukraine (other legislation of Ukraine if necessary) following the results of the previous stage **Goal 3 (III):** Preparation and adoption of legislative amendments necessary for the implementation of the EU Directives to the legislation of Ukraine **Goal 4 (III):** Development and introduction of the necessary IT solutions			
Stage I: June 2022 – December 2022			
1.1	Establish a working group to analyze the requirements of the EU Directives, which need to be implemented in the legislation of Ukraine on taxation and payment of taxes, tax	August 2022	WG “Eurointegration”, WG “Finance system operation, its

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
	administration (with the involvement of international experts) at the Ministry of Finance of Ukraine – **National project**		transformation and development" / WG "Customs policy"
1.2	Developed "The Roadmap of harmonizing Ukrainian legislation with EU tax legislation"	December 2022	
Stage II: January 2023 – December 2025			
2.1	Implementation of further steps to assess the current state of implementation of the provisions of the Directives (working with international experts) according to the roadmap	January 2023 – December 2025	
2.2	Development of provisions and proposals for amendments to the Tax Code of Ukraine (other legislation of Ukraine if necessary) according to the previous stage's results	January 2023 – December 2025	
Stage III: January 2026 – December 2032			
3.1	Preparation and adoption of legislative amendments necessary for the implementation of the EU Directives to the legislation of Ukraine Leading the decision-making process on amendments to the tax legislation and other legislation of Ukraine within the framework of the European integration process	December 2026	
3.2	Development and adoption of necessary draft normative-legal acts	June 2027	
3.3	Carry out promotional and explanatory activities for taxpayers and supervisory authority representatives on implementing changes	December 2027	
3.4	Evaluation of the effectiveness of the adopted legislative acts in the harmonization of tax legislation to determine the impact on public and tax relations and elimination or reduction of negative consequences of the adopted changes (analysis of the implementation of legal provisions and normative-legal acts, their interpretation, application of legislation by taxpayers, courts, lawyers and citizens)	December 2028	
4.1	Development and introduction of the necessary IT solutions	December 2027– December 2028	WG "Digitalization"

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
1.4. A request of taxpayers to determine and implement comprehensive qualitative transformations of the tax system in the postwar period			
Goal 1 (I): Development of the Concept of Transformation of the Tax System of Ukraine in the Post-War Period (with the Involvement of national and international experts – OECD, Global Forum on Transparency and Exchange of Information for Tax Purposes, IMF, EU) **Goal 2 (II):** Clarification and harmonization of the Concept of transformation of the tax system of Ukraine in the post-war period **Goal 3 (II):** Preparation and adoption of legislative changes provided by the Concept of Transformation of the Tax System of Ukraine **Goal 4 (III):** Development and implementation of necessary IT solutions			
Stage I: June 2022 – December 2022			
1.1	Continuation of the National Council of Restoration to work out the Concept of transformation of the tax system of Ukraine in the post-war period (with the involvement of national and international experts of **OECD, Global Forum on Transparency and Exchange of Information for Tax Purposes, IMF, EU**) – **National project**	December 2022	WG "Finance system operation, its transformation and development" / WG "Customs policy", WG "Eurointegration", WG "Economic Recovery and Development", WG "Digitalization", WG "Social Policy", WG "New Agrarian Policy", other working groups
Stage II: January 2023 – December 2025			
2.1	Implementation of further steps to clarify the parameters of the Concept and its coordination with interested parties	Two months after termination or lifting the martial law	
3.1	Development of provisions and proposals for amendments to the Tax Code of Ukraine (other legislation of Ukraine if necessary) according to the results of the previous stage, support, and adoption of changes to the tax and other legislation provided by the Concept of the previous stage	Six months after termination or lifting the martial law	
3.3	Development and adoption of necessary draft normative-legal acts	In terms determined by changes	

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
4.1	Development and introduction of the necessary IT solutions	In terms determined by changes	
II. VALUE-ADDED TAX PAYMENT			
2.1. The inconsistency of legislation of Ukraine on value-added tax (VAT) with some of the provisions of Directive 2006/112/EU dated 28 November 2006 “On the common system of value-added tax”			
Goal 1 (I): Identifying the provisions of the EU Directive 112 (Directive 2006/112/EU dated 28 November 2006 “On the common system of value-added tax”) that are required to be implemented in the legislation of Ukraine on value-added tax (VAT) and other legislation (if necessary) **Goal 2 (II):** Development of provisions and proposals for the introduction of amendments to the Tax Code of Ukraine (other legislation of Ukraine if necessary) following the results of the previous stage **Goal 3 (III):** Development and introduction of the necessary IT solutions			
Stage I: June 2022 – December 2022			
1.1	Definition of the provisions of Directive 112, as indicated in the conclusion of the European Commission, which requires priority implementation in the legislation of Ukraine on value-added tax	October 2022	WG “Eurointegration" WG “Finance system operation, its transformation and development” / WG “Customs policy”, WG “Digitalization”, WG “Energy Security”, other working groups
1.2	Work with international experts on specific value-added tax administration issues identified as a priority for implementation	December 2022	
Stage II: January 2023 – December 2025			
2.1	Analysis of the impact of the implementation of certain provisions of Directive 112 on a budget of Ukraine	April 2023	
2.2	Definition of relevant articles of the Ukrainian legislation in the part of value-added tax, which need to be changed	April 2024	

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
2.3	Development of provisions and proposals for amendments to the Tax Code of Ukraine and Customs Code of Ukraine (other legislation of Ukraine if necessary). Leading the decision-making process on amendments to the tax and customs legislation within the framework of the European integration process	April 2025	WG “Eurointegration"
2.3	Development of necessary draft normative-legal acts to introduce changes on value-added tax	December 2025	
2.4	Carry out explanatory activities for taxpayers and supervisory authority representatives on introducing changes in VAT tax	December 2025	WG “Eurointegration”, other working groups
Stage III: January 2026 – December 2032			
2.5	Evaluation of the effectiveness of the adopted legislative acts in the harmonization of tax legislation to determine the impact on public and tax relations and elimination or reduction of negative consequences of the adopted changes (analysis of the implementation of legal provisions and normative-legal acts, their interpretation, application of legislation by taxpayers, courts, lawyers and citizens)	December 2026	
3.1	Development and introduction of the necessary IT solutions	December 2026	WG “Digitalization”
III. EXCISE DUTY			
3.1. The need to perform the obligations under the Association Agreement between Ukraine and the EU (in the part of excise duty on fuel). A shortfall in revenues to the state budget. The necessity to ensure financing of special State Road Fund			
Goal 1 (I): Removal of tax privileges (duty rate “0”) for excise duty on fuel			
Stage I: June 2022 – December 2022			
1.1	Detailed analysis of the impact of the fuel price in Ukraine on the increase of excise tax compared to European countries	September 2022	
1.2	Preparation and adoption of legislative changes necessary for the step-by-step increase of excise tax rates on fuel to the pre-war level and further to the minimum level in the EU	December 2022	

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
3.2. The necessity of implementing an Association Agreement between Ukraine and the EU (in the part of monitoring the movement of excise goods). Improvement of administration of the excise duty on fuel and ethyl alcohol			
Goal 1 (I): Processing of the suggestion to improve the system of electronic administration of fuel and ethyl alcohol turnover (SEAFEAT [in Ukrainian – "СЕАРПС"]). **Goal 2 (II):** Preparation and negotiation with the Tax Service of Ukraine and business entities, the legislative amendments on reflection at the SEAFEAT the data on the owners of fuel for further identification of fake operation (currently, the records are made using the places of storage and shipment). **Goal 3 (II):** Renewing the IT solutions (systems) used by the Tax Service of Ukraine			
Stage I: June 2022– December 2022			
1.1	Elaboration of proposals for improvement of SEAFEAT	December 2022	
Stage II: January 2023 – December 2025			
2.1	Preparation and coordination of legislative changes on displaying fuel owners in SEARPS for detecting fictitious operations (at present, the record-keeping is carried out at the place of storage and shipment), discussing those changes with The State Tax Service and business and adopting legislative changes	April 2023	
2.2	Adoption of the developed legislative changes	June 2023	
2.3	Development and amendment of secondary legislation	Six months after achieving task 2.2	
3.1	Updating IT solutions (systems), which apply to The State Tax Service.	In terms determined by changes	
3.3. Pressure on business entities storing fuel for their purposes and removing the obstacles to exercise of their legal business activities			
Goal 1 (I): Removing pressure on business entities storing fuel for their purposes and any obstacles to exercise of their legal business activities			
Stage I: June 2022 – December 2022			
1.1	Preparation and adoption of legislative changes to improve the fuel storage procedure for the needs of own consumption or industrial processing	December 2022	
3.4. The need for approximation of Ukrainian legislation to the provisions of EU legislation on control over the tobaccos turnover			

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
Goal 1 (I, II): Regulatory control on the introduction of an electronic system of control over the tobaccos circulation **Goal 2 (II):** Development of IT decisions to introduce an electronic system of control over the tobaccos circulation			
Stage I: June 2022 – December 2022			
1.1	Development and coordination with interested parties (Ministry of Finance of Ukraine, Ministry of Digital Transformation, State Tax Service, and representatives of the area) draft legislative changes on the introduction of an electronic system of control over the tobaccos circulation following the developed Concept of the introduction of electronic system of control over the circulation of tobacco products	December 2022	
Stage II: January 2023 – December 2025			
1.2	Further elaboration and adoption of legislative changes are necessary to introduce an electronic system of control over tobacco product circulation	December 2023	
1.2	Development and amendment of secondary legislation	June 2024	
2.1	Development of IT solutions of electronic system of control over tobacco products circulation	July 2024– June 2025	
2.1	Putting the system into use	December 2025	
3.5. The need for improvement of licensure for facilitating doing business and simplification of administration			
Goal 1 (II): Lifting the paper-based licenses. Application of general requirements to the procedure of licenses` issuance and cancellation on all types of activities with excise goods			
Stage II: January 2023 – December 2025			
1.1	Collection and analysis of proposals for improvement of licensing	June 2023	
1.2	Development and adoption of legislative changes on the improvement of licensing on providing the possibility of application both in paper and electronic form and eliminating the issuance of licenses in paper form	December 2023	
3.6. The need for regulation of consumption level of harmful to health food products in the way of excise duty introduction on them [tax on sugar-sweetened beverages]			

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
Goal 1 (II): Introduction of excise duty on sugar-sweetened beverages for decreasing consumption of sugar-sweetened beverages			
Stage II: January 2023 – December 2025			
1.1	Analysis of the experience of EU and OECD countries on the introduction of taxes on the consumption of food products harmful to health (tax on sugar-sweetened beverages, soda tax)	May 2023	WG “Eurointegration", other working groups
Stage II: January 2023 – December 2025			
1.2	Development of legislative changes on introducing excise tax on sugar-sweetened beverages, soda tax	October 2023	
1.3	Adoption of the developed legislative changes	January 2024 – February 2024	
1.4	Development and amendment of secondary legislation	Six months after achieving task 1.3	
IV. CORPORATE PROFIT TAX			
4.1. The need to implement provisions of OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations 2022 and BEPS Actions 7, 8-10 and 13 that have not been fully implemented			
Goal 1 (I): Improvement of transfer pricing rules considering the OECD Recommendations and international taxation experience			
Stage I: June 2022 – December 2022			
1.1	Development and adoption of legislative changes on the improvement of transfer pricing rules taking into account the OECD recommendations and international tax experience	December 2022	
1.2.	Development and amendment of secondary legislation	Six months after achieving task 1.2	
4.2. The need for developing incentives for reinvestment in capital expenditures for corporate profit tax taxpayers			
Goal 1 (I): The development of incentives for replacing outdated, worn-out, lost, and damaged manufacturing equipment through reinvestment			
Stage I: June 2022 – December 2022			

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
1.1	Development and adoption of legislative changes on incentives for renewal of outdated, worn-out, lost, and damaged production equipment through reinvestment	December 2022	
1.2.	Development and amendment of secondary legislation	Six months after achieving task 1.2	
V. PERSONAL INCOME TAX			
5.1. The existence of an imbalance in revenues of personal income tax (PIT) between local budgets			
Goal 1 (II): Change PIT`s allocation mechanism according to the European rules based on information on where the taxpayers reside and vote. **Goal 2 (II):** The development of IT decisions for ensuring the PIT`s allocation mechanism using the taxpayer`s place of residence			
Stage II: January 2023 – December 2025			
1.1	Collection of information on the place of residence of taxpayers (correspondence of the taxpayer's ID and place of residence)	June 2023	WG “Digitalization"
1.2	Modeling the impact of the change of the personal income tax crediting mechanism on local budgets and the system of horizontal alignment	September 2023	WG “Public Administration", WG “Infrastructure Restoration and Development", WG “Economic Recovery and Development", WG “Construction, urban planning, modernization of cities and regions”
1.3	Development and adoption of legislative changes concerning the mechanism of the payment of personal income tax at the taxpayer's place of residence	December 2023	
1.4.	Development and amendment of secondary legislation	Six months after achieving task 1.3	
2.1	Development and introduction of the necessary IT solutions to distribute personal income tax based on the new mechanism	June 2024	WG “Digitalization"
2.2	Introduction of a new mechanism of enrolling in personal income tax	January 2025	

№	Description of the task to achieve the goal	Deadline within the stage	Depending on goals from other directions, spheres, problems
5.2. The need to introduce incentive models for the taxation of individuals			
Goal 1 (III): The development of a legal base for the introduction of family-based taxation (household taxation) **Goal 2 (III):** The development of IT solution for ensuring the mechanism of family-based taxation			
Stage III: January 2026 – December 2032			
1.1	Analysis of the experience of EU and OECD countries on the introduction of family-based taxation (household taxation)	December 2024	WG “Eurointegration"
2.1	Development and introduction of IT solutions	January 2027	WG “Digitalization"
1.2	Elaboration of the draft Law of Ukraine “On amendments to the Tax Code of Ukraine concerning Family-based Taxation”	July 2023	
1.3.	Adoption of the developed legislative changes	January 2026	
1.4	Development and amendment of secondary legislation	Six months after achieving task 1.3.	
2.1	Development and introduction of IT solutions to ensure individuals can declare and pay their obligations within the framework of a family-based tax	January 2027	WG “Digitalization”
